22 (Theognis' ironical) counsel to set your heel on the empty-headed demons,1 to be all things to all men,2 to adapt yourself to your environment with the protective resemblance of the polyp which takes the hue of the rock to which it is clinging,3 and to the demon who, by means of revenge,4 brings your power in your power and then take your revenge.5 The last precept appears almost as nakedly in one of the noblest Greek poets, Pindar.6 Plato first laid it down that the good man will not wrong even his enemy, and Plato did not apply the principle to international politics in the Tolstoyan way. Lastly, the erotic verses of Theognis—most of them, to be sure, in a separable and perhaps spurious part of the collection, dealing with themes repugnant to modern feeling—seem to us incompatible with the conception of him as a moralist and still more with the use of his elegies as a 'literature of prudential precepts and moral admonition known by the name of sophrosyne.'7 And no less a moralist in his own esteem than Isocrates recommends the study and excerpting of them as entirely edifying. At any rate, whether the erotic elements of the elegies and the occasional use of 'grammar' and other ethical terms in the political or social sense.

Not to be born into life were the best for us, creepers on earth's face,10 Never to look on the sun's burning and pitiless rays;10 Happiest lot of the living is thers who come quickest to Hell Gate Laid out quiet and stark, wrapped in a mantle of earth.12 Jobb on Antigone, 622, quotes Theognis, 403, as one of the anticipations of the untraced 'queen of Jupiter vult perdere dementis pruis.' Antigone, 607.13 Theognis, 311, echoes Aristotle's definition of 'good,' and the man who thinks that he alone is wise is himself void of wisdom. Soph. frag. 356 repeats the commonplace that health is best and justice fairest of things; 14 frag. 525 the humorous fancy that even Zeus cannot please all, whether he raise or hold up.15 But these are only conspicuous examples of an indeterminate list. When Euripides praises the man who is as true to absent as to present friends,16 way cannot be certain whether he is or is not paraphrasing Theogn 93-95, and the same holds of the coincidence between Phainias, 435-440, and Theogn. 717 f. in the sentiment that

THEOLOGY

wealth is all-powerful. Plato's saying 1 that a spirit of reverence (αἰδρία) is a better inheritance than great riches is, the present writer thinks, a distinct reference to Theog. 403b. Ilocrates, l. 19, equals Theog. 72, and i. 29, Theog. 105.

Among the chief commonplaces of Greek ethics expressed by Theognis 2 are man's dependence on the gods, the belief that what the future has in store, his duties to the suppliant and the guest, 3 and to parents, 4 the doctrine of the mean, 5 of nothing too much, 6 of ἀκόσμος and ἀπωμος, 7 the late punishment of the wicked, 8 the darkness and terror 9 of light, 10 the admission that all gains are costly, 11 that ill-gotten gains do not abide, 12 that for the lust of wealth is insatiate, 13 and that the beautiful word (εὖρος μηρα) 14 or the forewarned forecast provokes the gods and invites vengeance, the complaint that shame and reverence are exiled from a degenerate world, 15 and that men value nothing but wealth. 16 Other commonplaces, whether of ethics or of criticism of life, are the immortality of song, 17 the praise of patience, 18 the Analectic, Epicurean, Horatian Carpe diem, 19 evil communications, 20 in vino veritas, 21 there is no perfect man, 22 or the ingratitude of children, 23 the fable of censernuousness and self-praise, 24 and the generalized metaphor of the counterfeit man. 25 His convivial and social precepts, his slight anticipations of later modern morality, such as the temperance of the professional, political, 26 or worldly wisdom 27 do not further concern us here. Lines 823 and 1181 are in apparent contradiction on the justification of tyrannic. Theognis appears not to mention the condemnation of the innocent with the guilty, or the jealousy of the gods except as involved in the nemeses that attaches to the too confident oath. 28

As an aristocrat, he, like Pindar, emphasized mankind against teaching. 29 No teacher can put sense into a man, 30 or make a bad man good. Plato 31 finds a contradiction between this and the admission to associate only with the good because from them you will learn good. But it is Theognis's belief that it is easier to correct the good than to reform the bad. In lines 153-159 there is a suggestion of the nobler thought of mature Greek ethics, the idea that the mutability of fortune and our common frailty impose the duty of leniency and compassion upon all men. 32

Especially interesting are Theognis's direct appeals to Zeus. He complains that the punishment of the wicked cannot be doubted upon the moral government of the world. 33 This, however, is rather a development of the motive of Menelaus's speech in the Iliad 34 than the startlingly new thought which Croesus finds in it. 35 Theognis's pro-

1 Test against the visitation of the sins of the fathers upon the children, which results from the late punishment of the wicked, 1 invites illustration both from the Theog. 4ff. and from later ethical literature. 1 1731 ff.; cf. 292-293.

LITERATURE.—The fullest recension of the text is in the latest ed. of T. Brugger's Poetae Eleogici, Leipzig, 1915. The ed. of Immanuel Bekker (Leipzig, 1832), and the revised ed. of E. Welcker (Frankfort, 1830) and the critical literature of the subject are discussed in A. B. P. Parker's book referred to above. Cf. also T. Hudson Williams, The Essays of Theognis, London, 1910.

Paul Shorey.

THEOLOGY.—I. Definition.—Theology may be briefly defined as the science which deals, according to scientific method, with the facts and phenomena of religion and culminates in a comprehensive synthesis or philosophy of religion, which seeks to set forth in a systematic way all that can be known regarding the objective grounds of religious belief.

According to its etymological meaning, the word 'theology' denotes 'discourse or doctrine concerning God.' In this sense it was used among the Greeks to describe the work of Homer and Hesiod when they wrote of the gods and their doings, and that of philosophers like Plato and Aristotle when they speculated regarding the supernatural reality or ultimate ground of all things. In early Christian literature the distinctive appellation of 'theologian' is applied to the author of the Apocalypse, probably because he maintained the divinity of the θεός, asserting the identity of the θεός that became flesh in Christ with God (θεός). In this sense the term is applied to orthodox Greek Fathers like Athanasius and Gregory Nazianzen, who distinguished themselves in defending the personality and divinity of the θεός. But doctrine concerning God—His being and attributes—is only one branch or department of theology, as that is now commonly understood. Man's knowledge of God is part of the content of that matter of human experience which is termed 'religion,' and which includes other content also, referring to the world of nature and of man, to sin and death, to salvation and immortal life. And, as science in general deals with some definite department of human experience, it is more in accordance with the proper conception of science to regard theology as that branch of science which deals with the department of human experience known as religion, from which experience man's knowledge of God and divine things is obtained. Theology is the science which, by right use of reason, in accordance with proper scientific method, correlates, systematizes, and organizes the matter of human religious experience in such a way as to reach a unified body of coherent doctrine, fitted to satisfy the mind's demand for truth and to furnish guidance for the practical life.

As the science of religion it deals not merely with the subjective contents of the religious consciousness, or the opinions, emotions, and actions of men in the religious sphere, but also with the objective grounds of religion and the ultimate truth or reality which underlies and explains the life of mankind. Thus not merely the science of religions dealing with the various historical religions which have developed among men (though that is a part of it), but the science of religion regarded as an independent department of human science, of which which claim its own merit or no mere subjective delusion, but to have a real and rational foundation in objective reality or fact.

2. THEOLOGY AND RELIGION.—As theology is the science of religion, religion precedes and is wider
than theology and furnishes it with the matter with which it deals. In all departments of human life and activity experience, in which feeling, intuition, and volition are the predominant factors and which are not accurately described by theory or science, which seeks to exhibit and make explicit the reason, thought, or principles of truth and reality underlying and accounting for the experience. Thus the use of numbers in the relations and activities of the practical life precedes the science of mathematics; the practical use of speech precedes the science of language; the use of reasoning in practice precedes the science of logic; and the sailing of the seas proceeds the science of navigation. So too the experience and use of religion as a practical factor in life’s activities precedes the science of religion, or theology. And, as men may attain considerable efficiency and success in various departments of life without having rationalized or reduced their experience to system and exhibited its underlying principles, so men may live a truly religious life and have a rich and full religious experience without having attained to any very clear or coherent system of theology. But, while a man may be religious without being a theologian, religious experience is enabled to build up and be organized to be a competent theologian; and the fuller and richer his religious experience has been, the more likely is he to prove a trustworthy and satisfactory theologian.

Schleiermacher was so impressed with the importance of the part played by feeling or emotion in religion that he gave it not merely the predominant but the exclusive place. Over against the long prevailing doctrine of religion consisting in ‘knowing and doing homage to God,’ he defined religious piety as in its essence consisting neither in knowledge nor in action but in a determination of the feeling. The root of all religion he held to be man’s feeling of absolute dependence on some power or powers other than himself. But this dictum, while it emphasizes the important truth as to the large part played by feeling in religion, if strictly taken, is one-sided and exaggerated, in that it ignores the part played by the cognitive faculty in forming some conception, more or less definite, of the power or powers on which we are dependent and will in choosing and adopting means for getting into harmony with that Supreme Power or Being, which are elements characteristic of all religion.

An attempt to reduce the cognitive faculty, or reason, is predominant. It succeeds religion, and seeks by a right use of reason on the matter of experience furnished by religion to evolve out of it a system of connected and coherent truth to which the term ‘science’ can be properly applied.

3. Theology and science.—The aim of science in any of its departments is to apply reason, with its powers of analysis and generalization and its laws of inference, induction, and deduction, to the data of experience in that department in such a way as to discover the laws or principles underlying and relating the given facts and phenomena, and to unify the entire content of experience in that department into a coherent systematic whole or body of truth such as may be described as knowledge of reality. Inasmuch as theology seeks to do this as regards the data of religious experience in the realm or department of religion, it is rightly described as a branch of science. The instrument which the scientist makes use of in ascertaining, analyzing, and systematizing the given data of experience in the department selected for scientific investigation is the reason with its powers and laws of perception, conception, evidence, inference, etc. And reason is the instrument made use of by the scientific theologian in investigating the facts and phenomena of religious experience and building up a science of theology not less than is the scientist in the other sciences. The matter of clearness as to the place and function of reason in theology is apt to lead to confusion and disagreement as to what theology is and what are its aims and scope. Thus in some quarters it is maintained that theology differs from other sciences insasmuch as the matter with which religion is concerned is given to us by revelation and not by reason as in the other sciences. But this contrast between reason and revelation as sources of knowledge is unsound. Reason is not the source from which, in any case, we get the matter which we build up into science, but merely the instrument by means of which we grasp, analyze, classify, co-ordinate, and systematize that matter which is given to us by revelation from without in experience. This is as true of other sciences as it is of theology. As a matter of fact, the material which we build up by use of reason into the natural sciences, as they are called, such as mechanics, chemistry, biology, etc., is given to us by revelation from without in experience not less than the matter which we seek to apprehend and co-ordinate into a coherent whole of knowledge of the truth, as is the former. The knowledge got by using reason to grasp, co-ordinate, and systematize the given matter of experience is of the same kind in both cases. In both cases it rests ultimately on a foundation of faith—faith in the revelation of our faculties of knowledge (perception, cognition, inference, etc.) and on the ultimate reasonableness or cognizability of all that is given to us in experience. We go on using our powers of perception, cognition, inference, etc., in reference to what is given to us from without in experience, never doubting that the knowledge thus reached is real knowledge or knowledge of truth and reality, even though we may know and realize that our knowledge in any department of experience is incomplete and leaves room for progress. Thus the physicist may realize that he does not know the ultimate nature of matter, that the chemist does not know what makes up matter, and that the biologist may explain what space and time are, and the biologist may feel that he does not know what, at bottom, life and consciousness are.

But the point from which there remain unsolved questions of an ultimate kind, in regard to the data of experience in various departments, does not nullify or render valueless the results of scientific investigation and systematization in those departments. It merely shows that our knowledge of what is revealed to us in experience is as yet incomplete, and that an adequate synthesis of knowledge or metaphysic of being has not yet been reached by us, not that such a metaphysic is unattainable. So too with the data of religious experience. It is the function of theology as a branch of science to collect, examine, analyse, compare, classify, co-ordinate, and systematize all that is revealed to us in this department of experience, so as to reach a whole of scientific knowledge in this sphere, as in other departments of experience and knowledge. We must use our reason as far as it will goes in synthesizing the data of religious experience and validating the knowledge reached by the application of sound scientific method to the data of experience, nor deprive it of the right to be regarded as
THEOLOGY

science or knowledge of truth. It merely shows that our science in this sphere is incomplete and spurs us on to reach out towards a more comprehensive and ultimate knowledge in an adequate metaphysic or philosophy of being.

4. Theology and philosophy.—It is here that the science of religion passes over into the philosophy of religion or knowledge of the phenomena which is the consummation aimed at by theology. Science in all its departments is limited and incomplete as knowledge of reality. It leaves unsolved ultimate questions as to the nature and relations of matter, mind or mind and space and time, life and consciousness. It is the function of philosophy, as the ultimate form of knowledge, to grapple with these ultimate problems and seek a satisfactory solution of them. And it is along the lines of moral and religious experience, and the data furnished thereby, that light on such ultimate problems may most hopefully be looked for.

Kant, in his Critique of Pure Reason, began a movement in philosophy which has had far-reaching influence on modern theology as well as on philosophy. His contention is that in unifying the given matter of perceptual experience into an ordered and scientifical system of knowledge the mind or reason of the perceiving subject makes use of forms of perception and cognition which are subjective (i.e. belonging to the nature or constitution of the subject) or objective (i.e. belonging to the object or reality as it is in itself apart from its being known or cognized). Thus exact scientific knowledge, according to Kant, is limited to knowledge of the phenomenal world and cannot reach to ultimate reality. The use of those very forms of perception and cognition which give definiteness to our knowledge makes it knowledge of the phenomenal as contrasted with the ultimate real or thing-in-itself. All scientific or theoretic knowledge is thus knowledge of the phenomenal only. If there be a noumenal world of reality, and if it be in any way accessible to us, it must be something beyond that of rational knowledge. Kant maintains that access to a noumenal world of reality is gained by us, not through the pure reason but through the practical reason or moral consciousness, by means of which we may and do reach a kind of faith-knowledge of God, freedom, and immortality, which, though not rational theoretic knowledge, such as we have in science, is yet of value for the moral and religious life. This demarcation of the limits of valid, rational, scientific or theoretic knowledge, and differentiation from it of the kind of knowledge got through moral and religious experience or through supernatural historic revelation is characteristic of many theological writers since Kant. The argument of the Critique of Pure Reason is supposed to be conclusive against the possibility of our ever reaching any rational metaphysic or valid theoretic knowledge of ultimate reality. Huxley and Spencer pressed Kant's conclusion into the service of their doctrine that God or ultimate reality is an abstraction of moral and religious being by man, and that therefore a science of theology is impossible. Hamilton and Mansel endeavored to reconcile the anostic conclusions of Kant in regard to rational metaphysic with the acceptance of traditional Christian doctrine as grounded on revelation, not on reason. The Ritschlian school accept Kant's conclusions as to the impossibility of a rational, theoretically valid, knowledge of God or ultimate reality, so grounded, or rational theology as incompetent; but, while eliminating all metaphysic from Christian theology as untenable, they seek to retain in large measure the traditional Christian theology as grounded on a divine historic revelation culminating in Christ, of which Scripture is the record. As with Kant, they seek to find a grounding for this in the immediate deliveries of the moral and religious consciousness, which furnishes them with a basis for 'value-judgments' where valid theoretic knowledge fails. This sharp differentiation between the kind of knowledge got by making use of reason, our cognitive faculty, in grasping, analyzing, and systematizing the data of perceptive experience in the sphere, say, of physics or chemistry and the kind of knowledge got by using reason in the same way,—call it practical reason or what you will,—in grasping, co-ordinating, and systematizing the data of moral and religious experience is arbitrary and unconvincing. The world of reality revealed to us in experience—whether it be the world of science or the religious world which grounds our common knowledge or the moral and religious experience which grounds our religions knowledge—is one whole, and our knowledge of both the natural and the religious is possible of being synthesized as one coherent whole. The attempt of the Kantians and Ritschians to rule out all metaphysic and natural theology as going beyond the proper limits of the reason, and yet to build up a theology of value-judgments founded on the needs of the moral consciousness or practical reason or on the data of a historic divine revelation, is not satisfying to the inquiring mind that seeks for unity and coherence and consistency in its knowledge. Theology, as the philosophy of religion, is to be looked upon, not as the rival or opponent of rational science, but rather as its copetition and completion.

True theology can never come into conflict with true science. For it includes all the data and verified results of true science among its material or postulates. It seeks to co-ordinate or synthesize all our knowledge into a comprehensive and coherent whole of truth or knowledge of reality, based upon the data of human experience regarded as a whole, tested, analyzed, systematized, and systematized by rational and scientific methods.

5. Reason and intuition.—Akin to the distinction which Kantians draw between the theoretic reason, which gives us definite knowledge of a phenomenal world, and the practical reason, which gives us vague knowledge of noumenal reality, is the distinction which more recent philosophers such as Henri Bergson draw between reason, or intellect, and instinct, or intuition, as sources of knowledge. Intuition, it is alleged, brings us more immediately into touch with the living flowing stream of reality, of which as individual persons we form a part, and enables us to adapt ourselves thereto more surely and satisfactorily than reason or intellect, whose forms of thought and processes of inference are adapted to matter that is fixed or static rather than to the ever-changing creative flux of actual reality or real time. But this contrast or antithesis between intuition and intellect, like that between faith and reason, is unsound. The intuitions of a rational being are implicit and indiscernable by man, and that therefore a science of theology is impossible. Hamilton and Mansel endeavored to reconcile the anostic conclusions of Kant in regard to rational metaphysic with the acceptance of traditional Christian doctrine as grounded on...
authority and court of appeal for rational conscious beings is reason based on an ultimate inerradicable faith in the reasonableness of our experience, which is the underlying assumption of all science, including theology, subject to intuition or instinct as an instrument of knowledge is to incur moral and intellectual bankruptcy which is unworthy of a rational being such as man. It is to take a step downwards towards the brutal condition, not upwards towards the goal of true personality.

For conscious rational being the only reality which has or can have meaning is reality which is or may be apprehended by rational consciousness. In the case of reality of which we are, or suppose ourselves to be, dimly aware in subconscious apprehension or intuition, it is assumed that to a more perfect or adequate consciousness this would evidence itself as real. Reality for us means reality apprehended or apprehensible by a conscious being. To affirm an unknown reality may mean simply that we are dimly aware of the existence of some power or force which we have not yet been able to adjust to our incomplete synthesis or scheme of knowledge. But to affirm a reality which is, and which must ever remain, inaccessible to the theologian is to recognize that to affirm a contradiction in terms or to use words without meaning.

Practical reason, faith, intuition or instinct, to which some would point as the proper guides in theology rather than what they call the pure or theoretic reason, are all forms of conscious apprehension which enable us to build up the data of experience into some more or less coherent whole of knowledge. The data to be unified and synthesized in a science of systematic theology are not indeed given to us by reason from within, but by revelation from without. Reason, however, is our only proper instrument for the apprehending, co-ordinating, and systematizing of these data.

6. THEOLOGY and the Bible.—Some theologians conceive of the task of theology as that of setting forth in coherent systematic form the content of that revelation concerning God, the world, and man of which the Bible is the inspired record. But, while this points to a very important department of theology, it is too narrow a view to take of the science and function of the study as a whole. There are other materials or data for theological construction besides those furnished by the Bible, which cannot be overlooked or ignored by the theologian. Thus the discipline which takes a wide and comprehensive view of his subject. The revelation of ultimate reality given in the natural world around us with its varied facts and phenomena, which it is the function of natural science to investigate, furnishes material which the theologian must interpret and construe. So too the course of general human history, which it is the function of historical science to present and elucidate in the light of general principles or laws, affords data of experience which are of value for theological construction.

And the moral consciousness of mankind generally, the investigation of which is the special task of the science of ethics, furnishes (a) the material for the scientific theologian to help in the upbuilding of a system of theology. But the revelation given in the history and religious experience of Israel as a nation and of the outstanding personalities among the contributors to the history of mankind, is of such supreme importance and unique significance in the religious sphere that it is customary and convenient to distinguish between the general revelation to mankind as a whole in nature and history and conscience, which is treated of under the heading of natural theology, and the special historic revelation culminating in Christ, which is treated of under the heading of specifically Christian theology, and which may be regarded not as something entirely different from natural theology, but rather an unknown natural theology.

7. Classification of theological sciences or disciplines; theological encyclopaedia.—Having such a vast and varied material to deal with, theological science has many branches or disciplines with aims and methods differing according to the material dealt with and the purpose kept in view. To elucidate and classify these various disciplines is the function of what is known as theological encyclopaedia, which itself constitutes a branch of theological study.

Religion as an object of investigation has two aspects: (a) a historical aspect, under which it is to be regarded as a historical phenomenon appearing under various forms among various peoples with characteristics which furnish ample material for historical inquiry and investigation; and (b) a normative aspect, under which it appears as a present inner power of life making claim to truth and to the right to regulate individual and social life. This twofold aspect of religion furnishes us with guidance for classifying the branches of theology, which are the two main divisions: (a) the historical or phenomenological branches, including all those sciences which deal with religion on its phenomenological side as an actual appearance in history; and (b) the normative or constructive branches, including those sciences which deal with religion as a present-day reality and power, claiming to be truth by which the practical life of man should be moulded and regulated. The last distinction already referred to between natural theology and specifically Christian theology furnishes ground for suitable further subdivision of the material falling to be dealt with under these two main divisions, thus affording a basis for a convenient classification of theological disciplines or branches of study.

(a) The investigation of religion in its phenomenological aspect may be conveniently subdivided into (1) a general branch dealing with the phenomenology of the ethnic religions other than Christian that have appeared in history, which will include (1) history of religions, with a descriptive account of the methods and of the results of the study of the religions beliefs as they have appeared in history, (2) comparative study of religion, and (3) psychology of religion in so far as historical investigation can throw light upon the spiritual factor in the life and thought of mankind dealing with the phenomenology of the Christian religion. This will embrace, under the general heading of Biblical science, (4) linguistics, or a study of the Bible languages and the principles of interpretation and exegesis; (5) Biblical introduction, or investigation into text, date, authorship, and historical setting of the various books of the Bible; (6) Biblical history and antiquities, and (7) Biblical theology, which aims at setting forth by means of impartial exegesis the ideas as to God, man, and the world and their relations set forth in the different Biblical writings; and, under the general heading of ecclesiastical history, (8) Church history, or the history of the spread of the Church, (9) history of doctrine, and (10) symbolic, or the history of the different creeds and confessions in which Christian doctrine has been embodied.

(b) The investigation of religion in its normative and constructive aspect may be subdivided into (iii.) a general branch dealing with the presentation, defence, and application of the truths of natural religion in the light of the general revelation to mankind as a whole in nature and history and conscience, which is treated of under the heading of natural theology, and the special
truth of Christianity as the highest and final form of religion; this embraces (14) the apologetic of the Christian religion; systematic theology, which includes systematic ethic; and practical theology, which includes (17) homiletic, (18) liturgic, (19) catechetical, or paideutic, (20) pastoral theology; (21) ecclesiastical policy, or the scheme of missions; (v.) the final synthesis of the truths reached in the various theological disciplines, historic and theoretic or normative, which is the aim of (22) theology, in which theology reaches its consummation.

8. Method in theology.—The method to be made use of in dealing with the data of theological science in its various branches will vary with the matter dealt with and the purpose or end in view. In the historical or phenomenological branches of theology the end in view is simply the ascertainment and accurate presentation of historic fact, and the methods to be made use of are those which are appropriate to historical inquiry in general.

(1) Thus in setting forth the history of religions the investigator must make himself acquainted as widely as possible by observation and inquiry, with the features and characteristics of extinct religions as they now appear and are practised among men. He must further acquaint himself with the development of these religions by the study of such books, monuments, and other records of the past as are available. Careful observation and industrious inquiry and research are thus the methods most needful for success in this department of theological science.

(2) In the comparative study of religion the investigator must use the material furnished by the history of religions, and seek by analysis, comparison, and spiritual insight to show the relations of the various religions to one another and their grading as manifestations of the common spirit of religion. This calls for more of speculative thought and philosophic reflexion, as regards method, than the previous discipline.

(3) In psychology of religion the investigator must discuss the origin and form of religion generally from the psychological point of view, and seek to show what part the various mental faculties and capacities—intelligence, feeling, desire, will, imagination, etc.—have in religious experience, and how they enter into and manifest themselves in the religious history. By methods appropriate to scientific psychology—observation, reflexion, induction, and deduction—have proper application in this discipline.

(4) Biblical linguistics, which is the study of the languages in which the Bible was originally written, is just a branch of philology, and the methods of philological study and inquiry have here their proper application. Hermeneutics and exegesis, which deal with the interpretation of the text of Scripture, may be brought in under linguistics.

(5) In Biblical introduction the methods of the lower or textual criticism and of the higher or historical criticism have a proper place. Textual criticism investigates the various manuscripts of the Bible that have come down to us and the various readings in the texts of these manuscripts, and seeks by rational principles to get as nearly as possible at the true original text. Historical criticism investigates the evidences of compositeness in different books of the Bible and seeks with the help of the history of a known language to gain reliable knowledge as to the composition, date, authorship, and historical setting or circumstances of the various books of the Bible, and to interpret the writers' purpose and function as elements in a progressive revelation.

(6) Biblical history deals with the history of the Jewish people and the rise of the Christian Church as recorded in the Bible, while Biblical antiquities deals with the doctrine of inspiration and the history of religions as presented by the various writers of the OT and NT. It is the crown and completion of Biblical science, and, for those who accept the Bible as the inspired record of a revelation from God, it is the religion, in which theology reaches its consummation.

(7) Biblical theology (including Biblical psychology) aims at unfolding and presenting in a clear and orderly fashion the doctrine of the revelation as presented by the various writers. It is the task of Biblical theology to define the importance for furnishing material towards the up-building of a comprehensive, normative, systematic theology. But of itself it is a purely historic discipline, aiming at the accurate presentation of historic fact and recorded thought in an impartial objective way, without means taking into account the bearing of that on permanent normative religious truth. The methods to be used in Biblical theology are those of sound philology and impartial scientific exegesis or interpretation, so as to make sure that the ideas or doctrines set forth are those of the various Bible writers them-selves, unqualified by the personal bias of the interpreter. The work of adjusting the scheme of thought faithfully gathered from the Scriptures by sound impartial exegesis to a comprehensive and or- ganic system of normative systematic theology is the important task of the Christian systematic theologian.

(8) Church history, or the history of the spread of Christianity, aims at recounting accurately the gradual enlargement of the area known as Christian endom, the conflict of Christianity with anti-Christian forces, and the growth of the Church's constitution and cultus, showing how the polity and worship of the Christian Church developed as time went on, and how divisions over questions of constitution and government and cultus arose among Christians.

(9) The history of doctrine describes the dogma, or body of doctrine, accepted by the Christian Church, and traces its development along the centuries.

(10) Symbolic gives a more detailed attention to the various 'symbols'—creeds or confessions—that have been formulated from time to time in the Church's history than can be given in a general history of doctrine. These are obviously purely historic in their nature, and accurate presentation of historic facts, for the achievement of which the proper methods to be used are the methods of impartial historic research and inquiry.

(11) The apologetic of religion in general has as its function to inquire into the nature and essence of religion generally and to establish the truth of the religious view of the world over against all irreligious, antithetic, or agnostic views. It aims at discussing and exhibiting (a) the nature and essence of religion in general; (b) the nature and validity of religious belief and the relation of the knowledge of natural objects gained through perception and rational cognition; (c) the truth and reality of what is postulated and affirmed in religious belief, as against atheism, materialism, agnosticism, and other forms of unbelief; (d) the rational proofs for the existence of God or the ways in which the human mind by valid process rises to the apprehension of supreme personal Spirit as the ultimate reality, for a reductive contemplation of the changing natural world and its phenomena, of the course of human history, and of the facts of the moral consciousness; (e) the evidence contained in the general revelation of God given to all men for the immortality of the soul and a future state.
Theology and the nature of religion

(12) Closely associated with the general apologetic of religion is that systematic presentation of the truths underlying natural religion to which the name of natural theology is usually given. Its aim is to arrive at the holy love of God and to all that may be known concerning God and the world and man, and their mutual relations, from that general revelation which is given in nature, mind, and history. It is, therefore, that we call the \( \text{Christian} \) or \( \text{natural} \) religion, as philosophical theism is its apologetic.

(13) Akin to natural theology is philosophical ethics, whose aim is to ground a science of practical conduct on the immediate deliveries of the moral consciousness and the knowledge of God and duty derivable therefrom. The ethic of Kant, associated with what he described as a ‘religion within the limits of pure reason,’ may be taken as illustrative of the aims and methods of philosophic ethic, defective though it may be as a presentation of the results of such ethic, even as his ‘religion within the limits of pure reason’ is defective as a presentation of the results of natural theology. In this region of natural theology and philosophic ethic the aim is to reach not merely historic but permanent normative truth, in which the mind of the rational thinker is at liberty to pursue practical conduct can be regulated. The methods by which, at all, such results can be reached are those of speculative thought and philosophic reflection on the data of moral and religious experience—not merely of our own personal experience, but of the experience of mankind generally as far as that can be ascertained, analysed, and used as the basis of rational inference, induction, and deduction. A great accession to the material or data of experience, on which a comprehensive and satisfactory philosophic theology and ethic may be grounded, is given us when we take into account the special revelation, culminating in the fact of Christ, of which the Bible is the record. Apart from this, indeed, the data on which natural theology and philosophic ethic seek to build are so incomplete that the probable conclusions reached are lacking in fullness of content and convincing power. The new data of experience furnished by this special revelation not only add cogency to the probable conclusions reached by philosophic theism and ethic, but also bring a greater fullness of content to constructive normative theology, by which it is enriched and made more satisfying to the mind and heart of man.

(14) Christian apologetic has as its function to introduce the Christian religion, grounded on the historic revelation of which the Bible is the record, and to set forth in order the evidences of its truth. It deals with such questions as these: (a) the idea of revelation, its spheres and modes, and the manner of its apprehension; (b) the idea of inspiration and its results; (c) the trustworthiness of the Bible as a reliable record of fact and experience; (d) the evidences of a progressive revelation of different kinds given in the Bible and the significance of the fact of Christ as consummating and completing that revelation; (e) the evidences of the truth of the gospel proclaimed by Christ and its fitness to meet human need and to bring salvation and satisfaction to mankind. Christian apologetic clears and prepares the way for

(15) Christian dogmatics, which aims at setting forth in accurate and systematic manner, and in such a way as to show its consistency with all our other knowledge of truth, the intellectual content of the Christian life as that becomes our inward possession by the Christian act of faith as the reception of the truths of this nature through the receptivity of faith. It presupposes and includes the conclusions reached by philosophic reflection in the sphere of theism and natural theo-

logy, and gives added cogency and convincing power to them and greater richness and fullness of content to our knowledge of God the supreme reality, as not only intelligent personal Spirit but also love and wisdom. It deals with such questions as these: (a) theology proper, or the doctrine of God involving an exposition and justification of the Christian conception of God as trine, which was the prominent feature of Greek philosophy during the 4th cent. when various forms of unitarianism (Monarchianism, Sabellianism, Ariusism) were combated by Athanasius and the Cappadocian Fathers; (b) Christology, or the doctrine of the Person of Christ, to which the attention of the Church was particularly directed after the Council of Nicea (A.D. 325) by the theorems propounded by Apollinarius, Nestorius, and Eutyches, which were condemned at the Councils of Constantinople (A.D. 381), Ephesus (A.D. 431), and Chalcedon (A.D. 451); (c) pneumatology, or the doctrine of the Holy Spirit, to which attention was first prominently given by the Church by the theories of those which were condemned by the Council of Constantinople; (d) anthropology, or the Christian doctrine of man; (e) hamartiology, or the doctrine of sin, which first came to the front of Christian theology in the 5th cent. Augustine and Pelagius in the 5th cent.; (f) soteriology, or the Christian doctrine of salvation, which, through Augustine and Pelagius, became an important feature in Western theology, receiving fresh development at the hands of Anselm, Bernard of Clairvaux, and Thomas Aquinas, who devoted attention to the redemptive work of Christ and its application to sinful men, and engaging prominently the thoughts of theologians in the Reformation period when the doctrines of justification by faith and reconciliation with God came into prominence; (g) ecclesiology, or the doctrine of the Church and the sacraments, which first received prominence in the early Church at the hands of Cyprian of Carthage (A.D. 250), was further developed by Augustine (in his City of God) and Thomas Aquinas (in his Summa Theologica), and received much attention from Luther and Calvinistic theologians at the Reformation and from Ritschl and Anglican High Churchmen in modern times; and (h) eschatology, or the doctrine of the last things, which has occupied a foremost place in recent theological discussion.

(16) Christian ethics has as its aim to set forth the content of the Christian life as it works itself out in disposition and action on the ground of the self-activity the life produces in Christ and His Church. It looks upon the Christian life from the viewpoint of man and his duty, while dogmatic looks upon it rather from the viewpoint of God and His will. Both deal with the same subject-matter, viz. God and man and their relations to one another, but under different aspects or from different viewpoints, so that, while they belong together to systematic theology, they are most conveniently treated as separate or distinct branches of that science. Christian ethics presupposes the conclusions of philosophic ethic, just as Christian dogmatics presupposes those of natural theology. But it adds new fullness and richness of content and new power to philosophic ethic through the new data of moral and religious experience, centred in the fact of Christ, which it contributes. The first attempts to formulate Christian ethic in separation from Christian dogmatics were made by Lambert Daneau, a French Protestant, in 1557, and G. Calixtus, a Lutheran, in his Epitome Theologicarum morum in 1634. Since the time of Schleiermacher this separate treatment of Christian ethics as a branch of theology has been generally followed in Germany, Britain, and America; and numerous works on Christian ethic have appeared in which
the relevant material is dealt with under different divisions. A convenient division followed in the main by Martensen and other writers is (1) general introduction; (2) definition and scope of Christian ethics, its relation to other disciplines, and its place in a classification of ethical systems; (3) fundamental conceptions of the science as a whole, norm, and motive; (4) practical conceptions of the science, e.g., anthropological, cosmical, and eschatological; (5) the source of our knowledge of the Christian moral ideal, the content of that ideal, and the means of its realization; (ii) individual ethical ideal, with the origin and progress of the Christian life in the individual soul and its manifestation in the virtues and graces of the Christian character; (iii) social ethical, dealing with the realization of the Christian ideal in the various spheres of society—the family, the Church, the State or nation.

Practical Christian theology in its various departments treats of the Christian religion from the point of view of its power to expand and to build up Christian life in the Church. It includes those disciplines that are concerned with the application of Christian theology in the practical sphere of life.

(17) Homiletic deals with the art of sermon-making.

(18) Liturgical deals with worship and its forms.

(19) Ecclesiastical polity deals with Church government, law, and procedure.

(20) Evangelistic theology, or theory of missions, deals with the best methods of propagating the Christian religion at home and among heathen peoples abroad.

The methods appropriate for use in the building of a scientific normative Christian systematic theology, into which the content of Biblical theology as a historical discipline is taken up and adjusted, are in part the methods commonly made use of by science in general—analysis, classification, inference, induction, deduction, etc.—but partly also the less easily applied methods of philosophic reflexion and speculative thought, by means of which the philosopher must seek to bring unity and consistency into his entire knowledge of the real. The God revealed in the Bible and the whole Christian and Christ-historical experience—the truine God of Christian revelation—must be related and harmonized through rational thought with the God of the theistic proofs and natural theology, if our theology is to be at once Christian and philosophic.

(23) Philosophy of religion, which is the highest stage or form of theology, has for its data the results reached as truth by the use of scientific method in the previously mentioned theological disciplines; and its aim is to combine these elements of truth in a comprehensive synthesis of knowledge, such as will exhibit the relations of the various aspects or parts of truth and their harmonious cohesion in an organic whole of truth or reality. Its special function is to harmonize the results reached by reflective thought along the line of philosophic theism and natural theology with the results reached through believing appropriation of the Christian revelation.

If reason is indeed the means whereby we apprehend the truth of God and reality, then we should not rest satisfied until we accept as true or real what is shown to commend itself to our reason as reasonable, and so 'worthy of all acceptation.' We must therefore strive to make our theology rational or reasonable, if it is to be the expression of truth.

If, again, the Christian revelation concerning God and the world and man and their relations be true, as Christians believe it is, then the Christian philosopher must strive to make his philosophy and metaphysic religious and so adequate to embrace and express the truth of religions, and specifically of Christian, experience. Only when theology becomes religious and philosophy becomes religious can there be hope of such a unification between the two as will yield a satisfactory philosophy of religion which will also be the most adequate and satisfactory metaphysic of being. To reach such a philosophy of religion is the very aspiration of the Christian speculative theologian who, while not ignoring the importance of faith alike in science, theology, and philosophy, strives to secure that the faith on which he rests shall be a reasonable faith.

THEOSOPHICAL SOCIETY.—I. Definition and scope.—Every great religion has two parts, an inner and an outer, a spirit and a body, 'the knowledge of God,' which 'is Eternal Life,' and its dogmas, rites, and ceremonies. The inner part, 'the wisdom of God in a mystery,' spoken of by St. Paul as known to 'the perfect,' is that which has since the 3rd cent., been known in the West as 'theosophy'; in the East it has been known for ages under the name of Brahma-vidyā, 'God-wisdom,' 'God-knowledge,' or 'God-science.' Such theosophy, or mysticism, the direct knowledge of God by man, belongs equally to all great religions, as to all man's spiritual life, and may be possessed by any individual, even outside any religious organization. The Brahavadins, 'knowers of God,' in Hindisms; the Gnostics, the 'knowers,' who, Origin declared, were necessary to the very existence of the Christian Church; the shielah in Islamic Sūfism—these are typical theosophists from the standpoint of the modern Theosophical Society. No man is truly a theosophist who has not direct knowledge of God, but he may win this through any religion or by his own unaided efforts.

Theosophy, in the modern as in the ancient world, proclaims the possibility of such knowledge, as the inevitable result of the Universal Being. Man is essentially a spiritual being, his self, or spirit, being an emanation from the Universal Self, or Universal Spirit, God, as ray is an emanation from the Universal Spirit. He who knows himself, his deepest self, is to know God; he can sink in consciousness into the depths of his own being, beyond the body, the passions, the emotions, the mind, the reasoning power and the will, and he can pass beyond them all, and realize himself as separate from them, the pure 'I,' pure being. This is the universal experience of those who successfully seek the Kingdom of Heaven within, and it is followed by the recognition that this Universal Being into which the self opens transcends all the beings in which it is manifested, and is alike in all. Out of this experience, repeated for every one who becomes a knower of God, or theosophist, are built the two fundamental truths of theosophy: the immanence and transcendance of God, and the solidarity, or brotherhood, of all living beings. The realization of the first truth, man's identity of nature with God, as a fact in consciousness, and the subsequent realization of the second, his identity of nature with all around him, by a blending of his self with their self, a conscious dwelling in their forms as in his own—these sum up theosophy in its fullest and deepest sense. The man who thus reached self-realization in God and in all beings is a theosophist; and those who deliberately aim at such self-realization are also generally called theosophists.

The word 'theosophy' has further, historically, a second meaning; it denotes a body of truths, or facts, concerning such spiritual reality, and these may conveniently be classified under three heads: religion, philosophy, and science.
Theosophy is based on the system of ethics, rational, inspiring, and compelling. In considering this body of truths we are not studying a system as it is taught and published in modern days; we have to do with what has aptly been termed the Wisdom-Tradition, handed down in all civilized countries, ancient and modern, by a long succession of prophets, teachers, and writers. It may be traced in the Upanishads, Pythagoras, and epics of the Hindus, and in the six systems (darmakas) of Hindu philosophy; it underlies many of the Chinese systems, especially Taoism, and is seen in such books as the Ancient Egyptian, Persian, Brahmanical, and others.

In the Theosophical Society, all existences actual and potential, the super-life and super-consciousness in which all lives and consciousnesses inhere, eternal beneath the transitory, changeless beneath the fleeting, un-supported by matter, all containing all, the One without a second—this is the central teaching of theosophy as of all religions, the first universal truth of religion.

The Trinitarian concept of God is the second great and universal truth of religion, and therefore of theosophy. Theosophy speaks of the manifested God as the Logos, borrowing the term from Plato, the Logos and the Fourth Gospel.

Climbing from the depths of the One Existence, from the One beyond all thought and all speech, a Logos, by imposing on Himself a limit, commencing voluntarily the range of His own Being, becomes the Manifested God, and tracing the limiting sphere of His activity, thus outlines the area of His universe. Within that area the universe is born, is evolved and dies; it lives, it moves, it has its being in Him; its matter is His breath; its forces and energies are elements of His life; He is immanent in every atom; all pervading; all-sustaining; all-creating; He is its source and its end, its cause and its object, its content and circumference; it is built on Him as the sole foundation, it breathes in Him as its enclosing space; He is its life and its light, and everything is held in His grasp. The Sages of the Ancient Wisdom taught us of the beginning of the manifested worlds. From the same source we learn of the Self-antecedent Cause, who, descending into the Logos, the Root of all Being, the Will which outbreathes and inbreathes, who, being from Him the Second, unites the two aspects of life and form, the primal duality, making the two poles of nature between which the web of the universe is to be woven, the creative and the receptive, Father-Mother of the Worlds—the Wisdom, or Pure Reason, or Pure Intellect, and the powers and adventitious limbs, sustaining the universe; the Third Logos, the Universal Active or Creative Mind, that in which all archetypes exist, the source of all the forces of the universe, the treasure-house in which are stored up all the archetypal forms which are morally presented to the universe. Out of the universal Logos the evolution of the universe, the fruits of past universes, brought over as seeds for the present.

The unity of beings is the third truth universally accepted: the seven spirits before the throne of God; the primary emanations of the Supreme Trinity; the ranks of secondary Logoi, who rule congregies of solar systems, down to the Logoi of a single solar system. In such a system the vast hosts of spiritual intelligences (the devas, archangels, and angels of religions), the grades of spirits encased in human bodies, the sub-human intelligences, and 'those yet undeveloped into intelligence—all these, with the solar Logoi at their head, form the ladder of lives, and evolve within the system. The sub-human intelligences include the genii, genii, the genii, genii, the genii, genii, who play so great a part in folk-life, the living through limited intelligences who make all nature a living responsive organism instead of a soulless mechanism, whom little children sometimes see, and who are visible to the ordinary seer.

The fourth truth in theosophy is that of universal brotherhood, the inevitable deduction from the preceding; since there is but one life in all forms, all forms must be inter-related, linked together, and, however unequal they may be in development, they none the less make one huge family, are of one blood. The universal brotherhood of theosophy differs from the modern conception of 'equality,' the foundation of modern democracy, in that it postulates identity of origin and of potentiality, but recognizes varying degrees of development; the latter yielding the hierarchy of being or ladder of lives. In the theosophy resembles it, with its broad division of mankind into the enlightened and the profane, and the subdivisions of the enlightened into degrees and grades of development, and its ultimate aim of a hierarchical order and due subordination. In this both theosophy and freemasonry are in harmony with nature, increasing power going hand-in-hand with increasing knowledge and increasing

responsible. Wisdom, supported by strength and made manifest by beauty, rules in a true brotherhood, as in nature.

It is interesting to note that these four primary religious truths of theosophy, of universal religion, are but the intellectual formulation of the intuitions of the people—of the two primary spiritual truths directly contacted by the knower of the higher truths, the mystic, the theosophist. These are religious dogmas, expressing intellectually the first spiritual truth; the fourth is the expression in the outer life of the second spiritual truth. The other truths can become only in individual self-realization; they may be intellectually taught and comprehended from the religious standpoint, in theosophy. Adoration is the intellectual presentation of a truth known by the spirit, and believed on external authority.

3. Philosophical teachings.—Philosophically, theosophy is idealistic; consciousness is primary, the one indubitable fact, which can neither be strengthened nor weakened by argument. "I am" is the testimony of consciousness to itself, and ought can disprove its witness, since every disproof, every argument, must be addressed to that same consciousness, and imply its existence. To the All-Self, matter is but the limitations imposed by Himself on His thoughts, to us evolving in a universe which is the manifestation of our Logos, matter is His thought, limitations imposed on us by His thought and activity—limitations which we cannot transcend until we can escape from the prison of the human, though feeble and undeveloped, of the same nature as divine thought, and increases its power over matter with its increasing growth; thought is the one creative and moulding power, and, as evolving man realizes this, and so clarifies his lower nature that this aspect of the self can work through it, he becomes the master of that lower nature and all his surroundings, the creator and controller of his destiny. By thought, mastering the science of physical nature, he bends it to his will and utilizes it; by thought, mastering the science of the emotions, he builds virtues and destroys vices; by thought, mastering the science of mind, he subdues its turbulent energies into orderly obedience; by thought, directing will and controlling activity, he brings all things, within and without, into subjection to the self, the inner ruler, immortal.

Only by such fit rule and due subjection can man attain perfect health of body, emotions, and mind, and reach the highest good. Hence, one of the chief theosophical teachings deals with this power and control of thought.

The eternity of spirit—more loosely spoken of as the immortality of the soul—is an integral part of theosophical philosophy. It is an inevitable deduction from the identity of nature, of the human and the universal Self; ‘unborn, undying, perpetual,’ it is eternal as God Himself. The continuity of consciousness is equally inevitable, since the self is conscious and continuous, and in the self must consequently abide all its experiences, of which a successive survey is memory. The extent to which these memories are carried on by the material sheaths, or bodies, of the self—i.e. the surviving of the individual and the person—will be better considered under the constitution of man.

The method of unfolding of this continuous and conscious self in the human kingdom is by reincarnation. Reincarnation is, in fact, the only doctrine of immortality that philosophy can look at, as Hume said. It means that the self, having united with the human, descends in the human stage, from the three worlds (see below) and builds it into bodies, suitable for life in those worlds, beginning in the stage of barharism, as a savage of a lower life or creature, then living during the life of earth, free from all experiences, pleasant and peaceful; after death he meets the results of these experiences—the lower in the

intermediate world, where he suffers in the appropriate body of matter belonging to that world, and the higher in the heavenly world, where he enjoys in the appropriate body of matter belonging to that world, and converts all these experiences into spiritual and mental capacities. If he has not been converted, he returns to earth-life, bringing with him these capacities wrought out of experiences, into new bodies built to express and utilize them. In these he goes through a similar cycle, gathering, suffering, transforming, and the same process of birth brings the fruition of the preceding lives to start the new pilgrimage, and this is the inborn character and temperament mental, moral, physical. Step by step he climbs the ladder, working under inflexible and inviolable laws, until he reaches the stature of the perfect man; he passes through all the classes of the school of life until he has mastered all that this world has to teach, and is anekkath—he who has no more to learn. He is then a man, beyond birth and death, fitted for immortality, ready for work in the larger life.

4. Scientific teachings.—Theosophy differs from modern science in the fact that it includes under 'science' investigations into superphysical worlds. Its methods are the same: investigation by observation of objective phenomena, reasoning on observations, forming of hypotheses, and testing by disproof, of invariable sequences (i.e. of natural laws), repeated experiments to verify deductions, and formulation of results. It uses the senses for observation, but the sensations, as well as the other senses, in fact—responding to vibrations of matter finer than that which affects the physical senses.

As with modern science, so with theosophical—' occult science,' it is usually called—there is a body of accepted facts, laid down by ancient experts and largely verified by later experiments, and a fringe of modern discoveries, constantly added to, revised, and modified. The accepted facts have been established by generations of occult experts, and their existence is often referred to in the scriptures of various religions; the more accessible of these are being constantly verified by occult students to-day, but the larger, more cosmological facts are beyond our powers of proof. Any discoveries made by students are subject to revision and modification, as observations are repeated and the instruments of observation are improved.

(a) The constitution of the universe.—The broad outline of this comes from the sires of the past, and is largely confirmed in the scriptures. It appears reasonable to us, and is congruous with the observation of nature. We are able to verify the laws of analogy and recapitulation confirm it, for we see its outlines repeated in minature within our own range of observation, and we see sequences rapidly repeated in minature which the sires have described as occurring in a universe—as the somatic evolution of the kingdoms of nature is mimicked in the growth of the embryo in the womb. A universe consists of seven kinds of matter, or planes, of which the densest is called physical or solid; the next finer, astral, or watery; the next, mental or fiery; the next, spiritual or airy; the next, superphysical or etherial; and the two finest, divine. What are called solar systems are all on the physical plane of the universe, and a solar system repeats within itself the seven kinds or states of matter, these subdivisions of the vast cosmic plane forming its planes, or worlds.

Within a solar system these subdivisions can be mostly studied by less developed sirs, and we are in a field of research open to the occult students of our own day. We have a relation to our own earth: 'physical matter,' all formed by aggregations of similar physical atoms, similar except that some are positive, some negative; aggregations are solids, liquids, gases, and three kinds of ethers; 'astral matter,' formed by aggregations of astral atoms, the forms of these being astral, or light, or spiritual, or material, or mental; 'physical atomic' and 'mental matter,' formed by aggregations of atomic atoms, again divided into their sub-classes and again grouped as before; the 'spiritual' and 'superphysical worlds' are formed on the same basis, each having its planes and systems, and its own corresponding states of aggregation. Of the 'divine worlds' we cannot directly say Anything.

The constitution of man is analogous to that of the solar system, and hence the possibility of knowledge concerning it. As said, he is a fragment of the Universal Life, and is subject to the laws in the matter of his system. In the divine world dwells his
true self, the monad, and his consciousness appropriates matter from each of the five worlds below in order that he may know and conquer them; as the matter from the superphysical, spiritual, and the finer regions of the mental world are the most difficult to conquer. Paul speaks it grows and evolves through the whole cycle of reincarnation, and even beyond that, to death or in birth or death; probably so. Paul refers to this whole evolution of the soul as "our house not made with hands, eternal in the heavens," which he says "we build." Of course, "we" means the Ego, and the material basis of the Ego, which is the re-incarnating Ego, or individual, though the term is often used to include the physical bodies of all the lower classes of consciousness, the finer mental matter, in what is termed "the causal body," a subdivision of the spiritual taken separately. When the reincarnating Ego takes on a new physical body, it carries with it some of the coarser matter of the mental world for his 'mental body,' some of the matter of the astral world for his 'astral body,' some of the matter of the physical world for his 'physical body'; his consciousness, in thinking, uses mental matter; in desiring or sensing, uses astral matter; the feeling in the physical body is pure physical matter; these are the 'three worlds,' in which his evolution grows and evolves from without and transmigrating him, and is a personality, or person, i.e., as limited in expression by grosser matter; the individual body is closely related to the brain, through which consciousness is active in the physical world; the astral body is mainly correlated with the brain, through which consciousness is active in the astral world; it is generally in the brain and its controlling faculties as it is in the physical world, as the brain is controlled by a central brain sense of its experiences in vivid and coherent 'dreams'; it keeps in magnetic touch with its physical body. In death this magnetic touch is broken off, and the causal body of the Ego, and its causal body for a while in the astral world, called often "the intermediate world," in religious literature, in the earth. After a while the astral body dies, and the man passes in the mental body into the physical world, or, heaven, or, the abodes for a period extending to many centuries, the length depending chiefly on the richness of his intellectual, emotional, and artistic nature, and on the evolution of his body. When he has assimilated all the experiences of this nature accumulated on earth, the mental body tries to replace the coarser withdrawn to the spiritual body with all that has gathered to enliven the Ego. Then the Ego builds a set of new bodies for a new pilgrimage in the three worlds, to be utilized by them by birth. The extension of man is carried on in three worlds, brooded over by the spirit—himself—of the Ego, as he accumulates worlds of experience; he is an inhabitant of the three during waking life; of two during sleep and for a period after death; of one during his heart-monad. The lowest, the physical body, is at present the most perfectly organized, and therefore the most capable of receiving new impressions from without and transmigrating them to the consciousness. The astral body is rapidly becoming organized, and its proper senses are developing, so that it is ready to receive many impressions from the astral world, through, generally, with a lack of sharpness and accuracy; these include the phenomena of second-sight, prescience, apparitions, warnings, visions, perception of phantoms of the living and the dead, etc.; the phenomena to which modern psychology is turned. Among the most remarkable of people are "sensitive," or "psychic," and are using the supersenses, i.e., the supersensuous body, more or less organically. The mental body is becoming well organized in educated people, but more in relation to its organ, the brain, than as an independent vehicle, as a vehicle, active in any sense of the word. Consciousness, in the mental body, is in-tumed rather than outward, turned toward the Ego, the habit of special methods—meditation, concentration, etc.—artificially forced the evolution of the astral and mental bodies beyond the normal, i.e., as regards these, many centuries ahead of his time; he uses the supersenses for life in the astral and mental worlds in his waking consciousness, and thus carries on his investigations in them as the physical scientist does in the physical world. The dying of the three bodies, and the building of new ones for each successive lifespan, is the cause of the loss of memory of past lives; that memory is in the reincarnating Ego, and is shared by the consciousness when animating the lower bodies only if, in those bodies, the man has realized himself as one with the higher.

(e) The law of action and reaction is universal, and exists in the worlds of emotion, thought, and spirit as much as in the physical universe. Man can enlarge his character as scientifically as he can build up his body, and disregard of the meanest law of sowing and reaping, or of the "natural" life of growth, and laws of nature; he is thus subject to the law of the moral law. It evolves and transmigrates, or becomes, that as the nervous system—that of a root-race, when a considerable number of reincarnating Egos are ready to develop a higher quality of consciousness. The difference between the two races, was the first to assume the really human type in the middle period of its evolution—when the previous types being embryonic; the

surviving remnant of the Lemurian are the negroes and the many negroid peoples scattered over the world. The fourth, or Atlantean, race, as we have seen, has the most developed a spontaneous type of re-incarnation. These two races are represented as sub-races—the Aryans of India, the Mediterranean Aryans (Arabs, the later higher-class Egyptians, etc.), the Iranians, the Celts, and Phoenicians. Each of these has developed the various types aforesaid to the reincarnation Egos the necessary varieties for the evolution of these three racial types. Each of these races and sub-races as often as is necessary for the unfolding of the qualities characteristic of them.

(c) Human perfection.—By repeated reincarnations under invisible law, each man reaping exactly as he has sown, man reaches his ideal goal—human perfection. At the present stage of evolution it is possible for him to reach this goal in advance of the tenth root-race. The evolution of the Ego is the living of many millions of years. By strenuous exertions and noble and unselfish living, he may attract the attention of the spiritual guardians of mankind, who will teach him how to quicken his evolution, so that he may enter on the "path of holiness," pass through its five initiations—or stages of widening consciousness—and become a "master," the last of the five initiations opening the gateway of superhuman evolution. He may then pass into other worlds, or enter the ranks of the guardians of this world, as he wills. From the hierarchy of these guardians have come the founders of world-religions, the lesser prophets and teachers being their disciples.

5. The ethics of theosophy.—These are not definitely formulated into any code, but consist of the highest in the general teachings of the world's noblest saints, prophets, and founders of religions. All that is sweetest and most lofty in the world's Bibles, all that is most inspiring and ennobling in the writings of the great universal teachers, all that most clearly forms the ethics of theosophy. As man lives by the highest ethic he can grasp, he becomes capable of appreciating ethical yet sublime; the theosophist strives to live by the spirit of Christ rather than by any legal code, and, cultivating love, he hopes to be enlightened by the lords of love. Broadly speaking, that which works with the Divine Will in evolution is right; that which works against it is wrong. The Divine Will is the will of the Supreme Being, it is found in such divine men as the Buddha and the Christ. These theosophist looks up to as examples, and strives to reproduce their likeness in himself.

6. The Theosophical Society.—This association was founded on 17th Nov. 1875, in New York City, U.S.A., by Helena Petrovna Blavatsky and Henry Steele Olcott. The former was a Russian noblewoman, of Olympian breeding, and that some had been trained and cultivated to the highest point by her 'master,' an Eastern occultist; she gave up social rank, wealth, and family to seek him and to spend some years near Shigatze, when returning to the world, she gave the rest of her life to carrying out his directions. In America she met, at the famous Eddy farmhouse, a man who had won high distinction during the Civil War, Colonel Henry Steele Olcott, and he became her pupil. She endeavoured first to collaborate with the American spiritualists, but, failing in this, she, with Olcott, founded the Theosophical Society; she became its corresponding secretary, an office which she held for many years, and her president; its organization is due to him and he remained president until his death in 1907, when the present writer was elected as his successor.

The unit of organization is a lodge, of not less than seven members—men and women; in some, not less than seven, exist in any territory, they may group themselves into a section, or national society, which is self-governing, within the wide limits of the general constitution of the headquarters in New York. Mr. Olcott was president, vice-president, treasurer, recording secretary, a general corresponding secretary of the general council, each elected by his own national society, but with not less than five additional councillors, chosen by the general secretaries. It meets once a year for an annual congress under the presidency of the whole Society; but it may not meddle with the business of the sections, unless they desire it, simply as a source of information. The annual report of 1917 showed 19 national societies, 104 lodges, with 28,923 active members. Round each lodge are gathered many thousands of spiritualists, race, who are the first to assume the really human type in the middle period of its evolution—when the previous types being embryonic; the

headquarters of the Society were first in New York; in 1879 the
THEOSOPHY

founders left America for India, and fixed the headquarters in Benares; in December 1882 they moved to Adyar, a suburb of Madras, where the headquarters have since remained. The Theosophical Society owns there an estate of 250 acres, with several fine buildings, and a library which is known all over the world as the Adyar Library. A collection of 

While the Society exists for the purpose of spreading the ideas formulated above, it does not impose them upon the public. In the same way, the members, who, providing they accept the principle of universal brotherhood, are absolutely free to think as they will. Admission to membership is obtained on recommendation of Two Fellows of the Society, and the acceptance of the following objects: 

'To form a nucleus of the Universal Brotherhood of Humanity, without distinction of race, creed, sex, caste, or colour.\n
'To hold the study of comparative religious philosophy, and science.\n
'To investigate the unexplained laws of Nature and the powers latent in man.'

The following, written many years ago by the present president, states the general position of the Theosophical Society:

'The Theosophical Society is composed of students, belonging to any religion in the world or to none, who are united by their sympathy with their objects, by their desire for religious commonplaces, and to draw together men of good will, whatsoever their religious opinions, and by their desire for religious truths and the study of them in their studies with others. Their bond of union is not the profession of a common belief, but the desire to discover and the aspiration for knowledge. It is held that Truth should be sought by study, by reflection, by purity of life, by devotion to high ideals, and they regard Truth as a prize to be striven for, not as a dogma to be imposed by authority. They consider that belief should be the result of individual study and the acceptance of proof, and not a dogma which should rest on knowledge, not on assertion. They extend tolerance to all, even contradictory beliefs, not as a privilege they bestow, but as a duty they perform, and they seek to remove ignorance, not to punish it. They see every religion as an expression of the Divine Wisdom, and prefer to study to its condensation, and its practice to proselytism. Peace is their watchword as Truth is their aim.'

Theosophy is the body of truths which forms the basis of all religions, and which cannot be claimed as the exclusive possession of any. It offers a philosophy which renders life intelligible, and which demonstrates the justice and the love which guide evolution. It puts death in its rightful place as a recurring incident in an endless life, opening the gateway of a fuller and more radiant existence. It restores to the world the Science of the Spirit, teaching man to know the Spirit as himself, and the mind and body as his servants. It illuminates the scriptures and doctrines of religions by unveiling their hidden meanings, and thus justifying them at the bar of intelligence, as they are ever justified in the eyes of intuition. Members of the Theosophical Society study the truths, and Theosophists endeavour to live them. Every one willing to study the nature of life, and to live in accordance with the law of the universe, is welcomed as a member, and it rests with the member to become a true Theosophist.\n
There have been some offshoots from the Theosophy which have become independent of the central organization, but which spread the same truths. There are two international societies, with headquarters in America, and some scattered independent bodies in Germany and Austria.

A. BESENT.

THEOSOPHY.—Theosophy has characteristics which relate it closely to religion, and somewhat more remotely to philosophy. It also attempts to determine man's place in the universe and to solve the riddles of life and of death. Like religion, it aims at guaranteeing to its followers a more favourable destiny by showing them the way of healing and salvation. Like philosophy, it proposes to have recourse only to the resources which nature, on the one hand, and the human intellect on the other, place at its disposal, and it is by knowledge that it saves men. But the knowledge which it obtains is not grounded on the observation of facts which are within the reach of ordinary intelligence; it is intuitive, depending on exceptional clear-sightedness of men on a superior level, and communicated to them by their disciples. There is then a theosophical knowledge, just as there is a religious and a philosophical knowledge. Besides, it may well be that the content is through-out materially the same. Such a concept, e.g., as that of the immortality of the soul may be found in all three. By what distinctive marks then can we recognize that a doctrine is theosophical? Now we know that there is a criterion which makes it possible for us, without risk of error, to distinguish between what is philosophical and what is religious. If a doctrine has been established by means of observation, induction and deduction, it is philosophical; it is religious if there has been concerned in its origination an intuition operating under the influence of feeling and imagination; it is only at subsequent stages that the ordinary processes of the human intellect intervene. Theosophy also begins with affirmations having an intuitive basis, and its constructions may have great emotional and imaginative value. The question is: can this foundation, it may proceed, like theology, to construct, in accordance with the demands of reason, a system of satisfying coherence. The difference between theosophy and theology is not that they have neither in their ideas nor in their method. It is in the attitude which the religious man, on the one hand, and the theosophist, on the other, assume towards the objects presented. The one hopes to work, by fear, reverence, and adoration, upon the will of powerful beings for his own advantage; the other depends upon himself, upon the immediate efficacy of his own knowledge and action; religion is humble, whereas theosophy is proud.\n
1 This self-reliance the theosophist has in common

1 Thespeosy, p. 91.

1 It is to be noticed, however, that, though the suggestion of pride is justifiable in connexion with the esoteric tendencies, the prevailing influence, and result, is of a religious kind: religious economy noticeable in modern theosophical teaching, yet there is also an element of humility frequently to be found in the teachings. The classical theosophical method of reference to teachers or adepts, and it is urged that their teachings should be simplified, and that the direct and immediate efficacy of knowledge in obtaining the desired results may indeed be exaggerated and may become an instrument of error if the individual thinker is not encouraged to depend merely on his own knowledge or even on the knowledge of his contemporaries. He, therefore, has to be prepared to renounce the past and accept the teachings which have been handed down from remote ages and are rediscoverable for men of the present age when the obscure incursions upon religious systems have been removed.
with the magician. Both—the one more consciously than the other—admit the existence in the universe of hidden forces, for the control of which knowledge of them is sufficient. Both also show individualistic tendencies. They detach themselves from the religions community and break through the menial limitations to which the theosophist is recognized around them. But we may notice at least this difference between the magician and the theosophist: the one aims at using his power in an external way—he desires to gain advantage or the disadvantage of his fellows; the other is a contemplative, who acts but little except on himself and for his own sake. The theosophical spirit has left a very deep mark upon Indian thought. It is possible to trace its influence from its origin to our own day. India would be for the investigator a remarkable field for study if the chronological sequence of ideas and systems were not veiled in a darkness which up to the present time has not been penetrated. It is impossible for us to date the most important of the texts from which we derive our information. Many of them are marked by an unexpected period when the theories which they set forth were formulated. Under such circumstances it becomes exceedingly difficult to settle the debit and credit side of the account of each. However, the result may be considered to be now established: there has been in India a continuity of theosophical tendency. The systems interface with and influence one another. The intuition on which their authors pride themselves is almost indefinable, and the discovery of the 'truths' which a kind of heredity has tended to fix in the Indian mentality. The task of the great philosophical schools has to a large extent been the reconciliation of the ideas enshrined in the Upanishads. Buddhism would be unintelligible if the way had not been prepared for it, if not in these very schools, at least in antecedent groups bearing a very strong resemblance to them. And the reformers who have appeared in India in such large numbers since the Middle Ages have drunk at the same source. If, then, we cannot yet dream of giving a strictly historical presentation of theosophical speculations, it is at least not impossible to discern the order in which the principal systems have appeared. We shall follow (1) the development of this thought in circles which are strictly speaking, Brahmanic, at least closely related to Brāhmanism (the Upanishads and the Vedānta, the Sāṅkhya, and the Yoga); (2) the transformation of theosophy into religion (into Jainism and Buddhism); (3) its invasions into popular religions of long standing, with which it has associated itself, not without a certain sacrifice of its own character and significance; and finally (4) we shall see how modern theosophy in India is dominated by ancient philosophical tradition.

1. The Brāhmanic theosophy (q.v.). The Beginnings. The two tendencies which characterize Hindu thought throughout its course appear early in Brāhmānic circles. The one is the spirit of theosophy: the other, a form of theosophical doctrine characteristic of the Ṛgveda, i.e., the rule, which derives its authority simply from its antiquity, thus gradually performs only by those who are in possession of liturgical knowledge, viz. by the Brāhmanas. The dhāraṇa, i.e., the rule, which derives its authority simply from its antiquity, thus gradually extends its domination over men's minds. It becomes systematic in one of the six darśanas, the Purāṇa Mimamsa. Anxious care in observing traditional forms has created the power of the priesthood. The fathers of families have been deprived of their religious importance to the advantage of the Brāhmanas. The gulf between sacred and profane makes itself more and more evident. Contrariwise, it is the spirit of novelty which manifests itself in the other tendency. During all the Vedic period the treasury of hymns and rites is taking on an ever increasing aspect. Two facts are certain: if the gods have at first made use of these, it is not the gods who have revealed the knowledge of them. The yajñis have seen and have communicated their visions to mankind. We have preferred to have the exclusive proprietors. Signs of this double tendency are to be found even in the same texts. We may be sure that, in circles associated with writing, the religious tradition and originality existed side by side without offence. Why should they have entered into conflict? Did not both of them find their point of departure in the same hymns? Yet of the Vedic deities can scarcely be distinguished from the forces and elements in which they reveal their power. They have almost no characterization, and they represent vaguely the divine which permeates the objects and phenomena of nature. Out of this naturalism, frequently rude in character, there easily emerge the pantheistic conceptions which were so soon to dominate Indian theosophy. Besides, do not rishis and innovators alike make knowledge the essential condition of religious efficacy? Are not both of them Brāhmanas, i.e., the heirs of the magicians who were charged from the beginning with the protection of the sacred ritual from the precarious influence of evil spirits? Finally—and most important of all—do not both believe that there is in every being and in every sacred act a mysterious energy which establishes harmony and co-ordination between man and the universe? And are they not now on the earth, like the 'fathers' of ancient times and the gods in the heavens, the depositaries and the agents of the mysterious force, creator of order and of life? When there is the thought of turning the secret power of the sacrifice to the benefit of the individual, with a view to assuring him of happiness beyond the grave and guaranteeing himself against a second death which would be fatal, there are here the essential elements of theosophical doctrine—desire for deliverance from suffering and death, hope for salvation by personal effort, confidence in the saving efficacy of knowledge. (2) The ancient Upanishads. —Theosophical thought, which is to be found in germ in the hymns and in the Brāhmanas, obtains form and growth in the Upanishads. Certainly the authors of those old treatises were far from

\[1\] See art. INSPIRATION (Hindu).
having broken their connexion with the traditional cult. But they love to give the sacred actions a symbolic interpretation which will relieve them of their mechanical character. A still more singular thing is that they manifest a well-marked esoteric tendency; usually a long time is spent in appealing to the master before he consents to reveal the supreme truth, and the disciple is only allowed to approach the subject, not to touch upon it, except to a particularly dear and well-qualified person. The method of discovery is always intuition; thought proceeds by abrupt illuminations. Moving ideas are often found by a step by side with one another without concerning itself about their contradistinctions. It does not demonstrate; it is content to illustrate by beautiful metaphors and arresting subtilties.

In an yet vague form the idea of the essential unity of the universe was implicitly contained in the Brahmanic theory of sacrifice. There is now posited the existence of a Being in which all that is is real, and that Being is Brahman, the name of the energy which manifests itself in the sacred action. It is also designated the atman, i.e. the self or the soul of all things.

Thus the theme is stated which the Upa-niṣ kṣ works go on to develop and repeat as its own essence.

This Being is the only absolute. He has no determinations. One can say nothing of him except that he is. No definition is possible which may at least try to name him, so convinced are we that we know the Being of which we know the name. He is that, that is, in no sense, for he deny every quality, which would be to reduce him to a finite existence. He is the supreme reality of realities, satya satyagga. Beyond the reach of all comparisons, he is the only pure self, the only essence, one side by side with one another—especially without concerning about their contradistinctions. It does not demonstrate; it is content to illustrate by beautiful metaphors and arresting subtilties.

do not exact in affirming my existence—'I am Brahman,' provided that 'I' am demand of every quality and of all conceivable conditions of individuality. In this way, I am Brahman entire, for Brahman, being absolute, could not have parts.

Nevertheless the confusion between the subject knowing and the object known; it is also the relation which emerges between the absolute, all the same, and the differentiated, classified names and forms. To this cosmic process, more particularly, the name māyā is given. Māyā (q.v.) signifies the alternation which takes place in the present life and which is reflected in the absolute, so that it becomes itself as many as there are classifications of names and forms. By the existence of māyā the unqualified Brahman becomes the qualified Brahman, the effect Brahman, the lower Brahman. Sākāra gives to this Brahman also the name of God, Śiva; but this Śiva, the attributes and objects of which are without the lower Brahman creating, preserves, and destroys, do also exist in virtue of nescience; all is phenomenal, illusory. From the point of view we true knowers have, He is Brahman, and in effect; neither Śiva nor world; neither agent nor act; but only being unchangeable, indeterminate. Under the influence of māyā, the ātmāna becomes a jīva. The jīva becomes individualized through everything which serves as a substratum, or as a substratum is to be understood, the power of duty, of law, and the faculties of knowledge. But the attributes of the jīva have no more reality than those of Śiva. Truly speaking, the self is not a product; it is incorporeal, spiritual, insubstantial, infinite, one.

For practical purposes and provisionally, both the world and the individual exist. To both of them even Śākāra pays considerable attention. The union of self and objects of action. Their destiny is determined by karma. An act cannot be annulled; this is the universal law; or, at least, it cannot be annulled if it has worked out the end of its action produces life, and life produces action. The self which acts will be reborn, for action, and, again, for rebirth. The chain of causes and effects has not had a beginning. How could it have an end? Fortunately, cause and effect, and act and result, are the work of the self. If the self becomes nescient, knowledge, knowl-

ing will destroy. 'As long as nescience has not been abolished, the self is unfruitful, and the individual soul continues to be the sphere of good and evil.' The individ-

dual can, by a knowledge of Brahman, escape from karma and māyā. This is not only a liberation, if he has discovered how he may attain this by a severe spiritual discipline, he can, through contemplation, begin to act. 'We are to understand this by a kind of spontaneous effort, reach the 'perfect vision,' i.e., he can perceive the Self in himself and thus have an intuition of his identity with Brahman. This vision destroys in him the remnants of personality and dissipates the mirage of the individual, which in the light of Brahman, and in consequence he is, in an absolute sense, being, thought, and bliss.

(4) The Śākāra. — The Śākāra (q.v.) is of ancient origin, for its influence upon primitive Buddhism cannot well be disputed. The main pronouncements of the school are, however, of late date and go in several centuries subsequent to the birth of Buddha. Fortunately there are other works—e.g., the Mahābhārata and some ancient Buddhist writings—which mark out the path of de-

development from the Upanisads to the classical form of the Śākāra. It has now entered the third stage, the Śākāra, realistic and atheistical, is Brahmanical. It has no difficulty in including the Veda among the standards of knowledge. It may be that, originating outside of Brahmanical, it was at a later date recognized by the latter, and has paid for this advantage by an admission, more or less nominal, to the authority of revelation. Nevertheless, we find in works comparable or close to the ante-

cedents of several essential doctrines of this system, it is more probable that it has originated from the same circles as those in which the ancient Upanisads took their first expression. It can be best explained if it is regarded as a product of reaction against the radical idealism which is implicit in the Upanisads and develops in the Vedānta.

Brahmanical philosophy posits the absolute reality of the empirical world. If it is said that the world of things is the theatre of a personal being and that it is impossible to imagine a world of which all that is not personal belongs to it, his answer is that a thing is not real only at the moment when it manifests itself; it also has an absolute reality outside of its effect. For the effect is already to be found in its entirety in the cause. "If a dog is barking, it is not because it is hearing the voice of the other dog:"

Thus, over against a substance composite and changing, the Śākāra philosophy posits a simple and stable substance; with the purusa, the privy, the self, the subject, the ego, the self only in appearance. Māyā modifies on the one hand Brahman and thus creates the world; but it modifies also in appearance. Reality is not destroyed under the influence of gross, subtle, and the organs of knowledge, all depend upon purusa. This includes Ātman, as well as Śiva, since, in the living being, the Ātman must react to the process of growth and growth.

The change which emerges in the physical and psychical universe is a regular evolution, taking form a determination, a growing reality, an increasing multiplicity of the simple, creative aspect evolution brings the gross out of the subtle. At the dissolution of the world the gross resolves itself into the subject of the Śākāra, which minutely described the successive phases of the evolutionary processes, poises 24 principles against each another in a relation established the common foundation of all phenomenal existence, to the gross elements and their combinations. It is because the purusa is not simple, nor tathātā the relation of the Ātman to all things and the entire sphere of the things of the physical and mental world. It is threefold. It is composed of three aspects, themselves multiple in creative. The purusa are sattva, rajas, and tamas, goodness, passion, and darkness. It is in their presence in infinitely varying quantities, the things affect men differently. The body which in the evolution emerge between purusa at the one hand and the 24 principles at the other, is the prakṛti, which form the 'characteristic body,' the tūla śārira. The tūla śārira is subtle and is to the gross body as the cause is to the effect; it explains the imperfection and action, which distinguish individuals from one another. Whilst the gross body is causative, the subtle body is a mirror of the whole universe. The subtle body is like capital which bears as interest the quality of succeeding existence. This knowledge becomes possible through a reflection of the immediate presence of the soul. It is the form in which is expressed the relation between the purusa and the Ātman. Another word for this relation involves the identity of the soul. It is real, but it is not inherent in the soul. Because it is real, determination of the Ātman is necessary; because it is not inherent, deliverance is possible.

Both the purusa and the prakṛti have to submit to certain consequences. The prakṛti, which is the substratum, the Purusa, illuminated by the purusa, the modifications which take place in the Ātman of the individual become conscious. These again are reflected upon the soul, which thus becomes subject to all the interplay of the affections. It is in this roundabout way that the soul arrives at a knowledge of itself. For, though it is the subject of all knowledge, the prakṛti cannot know itself directly. This knowledge becomes possible through a reflection coming from the mirror provided by the internal organs. The purusa, full of light but inactive, and the prakṛti, active but unconscious, stand in relation to each other to the blind. Their association is discovered to be beneficial for both. The mode of the prakṛti, the soul itself, which is the subject of all knowledge, the prakṛti cannot know itself directly. This knowledge has no other end than to make knowledge possible for the soul—which knowledge necessarily eventuates in salvation.

A slow and elaborate process is necessary to break the bond and support the deliverance of the soul. This process is to destroy actual suffering, which on other grounds would be impossible, but which is possible in its germinal form in the disposition stored in subtle form in the internal organ. A slow internal struggle brings a man from the natural state—i.e., the meditative and the alabaster or hardened soul—which may provide the ground, but it is knowledge which is truly efficacious. The final deliverance, in the proper and figurative sense, are, we may arrive at an assertion of the truth: 'I am not; nothing is mine; this is not me.' One thus gets a direct per-

ception of the void, the voidness, and the nothingness. To establish this distinction is to destroy the bond and to see the prakṛti. But the soul is not identical with the void, as there is no other substance than itself; there is no further association with the subtle body, no reflection east by it; the soul is healed.
The Yoga also derives advantage from a deliverance which, in effect, suppresses suffering for it, inasmuch as suffering is not felt except for so long as the process is not interfered with by the soul itself. And to be creative in relation to the soul and its salvation, it ceases to be active and returns to the original condition of the gunas. Meditation had no value except for the liberated soul. "Since, notwithstanding the infinity of time, they are still souls not liberated, there will be such to all eternity."

(5) The Yoga.—It might be asked if in the history of Indian theosophy the place of the Yoga belongs to the Vedanta. It is not. If its affinities are not in an altogether different direction and with the group of systems which, though they adopted many theosophical systems, are obviously theistic and devotional in tendency. Does it not make a place for God, for that Isvara who is a soul apart, a unique Being, eternal, all-powerful, all-good, all-knowing, exposed to no suffering, to no desire or change? Does not this God show an infinitely benevolent activity on behalf of men desirous of salvation? Does He not vouchsafe spiritual vision to His elect? Does not the yogi, to obtain salvation, surrender himself to God with that consent and submission which is called prasyadhana? Finally, is not salvation obtained by means of a discipline in which the strictly intellectual processes have little place? What have the recognized means for purifying the body and delivering the soul from the gunas which organ of thought to do with the pursuit of jinda, the knowledge which brings salvation? It is easy to answer these objections. First of all we may remark that the role attributed to Isvara in the scheme of salvation is really secondary. After the preliminary process is gone through, there is no further intervention of divine assistance to fulfill the efforts of the yogi, and everything happens as if he had only his own powers to rely upon. Further, the supreme end is not, by any means, as in theistic religions, eternal life in God or near God; what is desired is the absolute isolation of the individual soul. It follows that, probably, when the Yoga came to be systematized, Isvara was merely a survival of a period when practices of asceticism and sorcery were associated with Siva, a god whose vigorous personality might seem incompatible with an exclusively human conception of salvation. In fine, Isvara was no more an inconvenient intrusion in the Brahmanical Yoga than in the monistic Vedanta. To Isvara is attributed the most indirect, the most remote, the most inconsequential influence, indirectly the sign of the penetration of the Yoga by the theosophical spirit.

The Yoga, destined to emphasize the practical conditions of meditation and saving ecstasy, would naturally disregard study and reflection, since neither of them was of service in securing the marvellous powers for which the yogi was ambitious. But, as in Brahmanizing itself it had adopted very nearly in its entirety the doctrine of the Sûkhya, there was really no need to indicate the acquisition of knowledge as among the demands imposed by the need of salvation. This acquisition could have been considered as implicitly prescribed from beginning to end. In any case it is interesting to point out that in an Upanisad greatly influenced by Yoga ideas, the Mûrti Upanisad, the examination of reflexion, had a place among the members of Yoga. Perhaps we have in this a proof drawn from a period before the Yoga became entirely allied to the Sûkhya.

In short, the Yoga, which the Yogins at first, are very closely connected with the Sûkhya which is itself faithful to the theosophical spirit. It rests upon very ancient beliefs closely related to magic. The remarkable manifestations of patience, will-power, and intelligence which the presence of supernatural faculties imply, are necessary for the new acquisition of energy. Besides, the accomplish-

lent of salvation depends entirely upon personal effort. There is no possible doubt that the Yoga belongs legitimately to the same spiritual family as the Sûkhya and the Vedanta.

Properly speaking, the Yoga is the act by which the senses of the mind are held in restraint; turned resolutely in one single direction, the mind acquires greater force and certain new faculties. The processes regarded as efficacious had already been employed in the Sûkhya. Patanjali formulated his theory of them. If, as is probable, the author of the Yoga Sûtras is the same as the illustrious grammarian of the same name, then this spiritual prescription was systematized in the 2nd cent. B.C. But, in the influence which from the beginning it exerted upon Buddhism, we have proof that it goes much farther back. The proper object of the Yoga, as supplied with doctrines by the Sûkhya, is, as the first of the Sûtras says, 'the suppression of the modifications of the thinking principle,' i.e. of the understanding. Freed from all clittsa, the purâva regains its own nature, its own freedom, its own domain.

The yogi pupil has difficult conditions to fulfil. A long and painful process of preparation is imposed upon him, which may triumph over all the obstacles inherent in the feebleness of man. It is in the first phase of this process that devotion and the practice of the discipline play an essential role. Whenever this propulsive function has fulfilled its functions, the adept may proceed to another process which lead to the mastery of the intellectual functions and the detachment of the soul. According to the authoritative scheme, the programme of this gyanic is divided up into five main phases: meditation, contemplation, and the bringing of the body under control. They comprise interdictions and exercises, proscriptions, prescriptions, and positions to be taken in meditation, and others which have for their aim the control of breathing; and, finally, the procedure which has to be followed in restraining the senses and destroying communications between the mind and the external world. There is special insistence upon the regulation of the breath, on the ground that individual life and thought are bound up with respiration, and that to control the one is to dominate the other. When, finally, the body has been purified, it becomes possible to exercise control on thought; three kinds of exercises to read it progress from the least to the severest, from the external to the individual, and from the individual to isolation.

Another method, more violent and more complicated, is founded upon the yogi's own kind of physiology. Through modifying and even stopping the circulation of the vital spirits in the channels of the body, the yogi seeks to influence the natural functions of the understanding and in exciting the power of action and of vision. Strange phenomena accompany the last phases of the spiritual process: colours appear which are invisible to the ordinary man; sounds are heard; the yogi links into a 'universe' the sounds which, to the deaf, mean too much effort ends in madness. The texts express at great length on the manifold advantages which Yoga brings to its disciples. First of all there are benefits of an entirely mundane character: health, youth, and beauty. Especially there is obtained a 'sovereign power' which enables those who possess it to realize immediately all that they desire, to make themselves at will exceedingly small or big, light or heavy; to control the elements; to guide the will or sentiments of another; to change the nature of substances, to distribute their personality amongst several different bodies, etc. But for the yogi the spiritual results have more value. In seven stages the soul obtains liberation, first of all from the external world, then from the hindrances which come to it through its association with the organs of the intelligence and the will. Liberated from the world of results, the yogi relishes in pure tranquillity, in the separation from the internal organs, it tastes the ineffable delights of eternity, and regains at last the state of integral union (kantiyogam) in which it is salvation.

Before leaving Brahmanical theosophy, we may point out that in more than one characteristic it is linked very closely with Vedantism (q.v.). Our theosophists have, like the Vedantists, a marked tendency towards monism; their anthropology has borrowed much from the Sûkhya philosophy; they authorize exercises, the first, not without analogy to those prescribed by the Yoga.

2. Theosophy as the germ of new religions.—In
THEOSOPHY

309

Brāhmaṇism the theosophical doctrines are placed alongside of the old tradition, and religious society recognizes. For that reason the theosophy is transformed into a religion, the conditions are altogether altered. Henceforth a man becomes a member of a community, not because of his birth, but because of his adherence to a certain belief; the idea of the group is to some extent more expansive. Moreover, theosophy ceases to be a mere intellectual doctrine; it takes entire possession of the individual, and aims at maintaining and unifying the unity of discipline and of life.

Two religions have sprung from the movement of thought which we find permeating the old Upanisads, viz. Jainism and Buddhism. Seeing that they are born in the same spiritual environment, it is not strange that they should have many characteristics in common. Their doctrines, their legends, their rules of life, have an unmistakable air of family relationship. The worship itself, in its outer forms, is so similar in various particulars that from the outside one might easily confuse the two systems; witness only the tale of Asvaghosa in which one finds Kaniska worshipping a Jain stūpa under the impression that it is Buddhistic. Jainism and Buddhism are both products of the process of crystallization which was a feature of the entire age of the Upanisads. The best of the Brāhmans practising strict observance of rites and a solitary asceticism, India has been familiar with what one might call wandering cenobitism. The teachers, accompanied by their disciples, go from place to place, not settling down anywhere except during the months of the rainy season. These parivrājaka, in the course of instructing their pupils, discuss the most diverse subjects. The groups are not closed. Round about a knot of faithful disciples there gathers a numerous body of adherents and friends. If Jainism and Buddhism have been able to transform themselves into Churches, the reason is that they have understood better than some other saṅghas how to attach the laity by solid bonds and to organize the community by fixed rules. There is now no doubt that Jainism is prior to Buddhism. Buddhists themselves do not hesitate to admit the fact. But Jain writings are certainly posterior—and very much so—to those of Buddhism. It may well be that, if there has been any connexion, the Jains have been the debtors. If we begin with them, they are not in order to lay stress on the relative dates, but rather because, on the whole, the Jainist Church has remained more faithful to the theosophical tradition of the Upanisads.

(1) Jainism.—Jainism (g.n.) has all the characteristics of a theosophical religion. It puts at the centre of its teaching the doctrine of karmā (g.n.), and shows itself chiefl[y interested in human destiny. It aims at delivering men from the misery of the saṃsāra. It demands that the individual should be the instrument of his own regeneration. It searches for the saving truth beyond phenomena and sensible perception, and, as a consequence, asserts the authority of persons endowed with exceptional faculties of vision and knowledge. It places itself outside the Brāhmaṇic tradition. Nothing more is heard of Śivāra. Jainism is a ‘human’ doctrine. Sākara sees in this a reason for its condemnation. Because it opposes to Vedic tradition a new rule, this theologian accuses the religious reform of being revealed. And yet Jainism also makes it a duty for its disciples to have faith in the words of an omniscient master, who made known the way of emancipation, who has triumphed on the world of death, and who, because of this, has received the surname of Jina (the Victorious).

Perhaps because the Jains appeal to omniscient teachers, they have professed a rigorous theory of knowledge, an absolute affirmation or denial. Every proposition has a relative value only (nekacintānta); a thing is not; thus in the world of appearances, things are not; and that it is not, that it cannot be spoken of, etc., only if it is understood that these products are not the mere relatives of the two extreme reservations (gupta-vādita). As far as one can conjecture from the examples which illustrate the various dialectic ‘rebellions’ (bhāna), it is not to be supposed that the system can be known except in relation to the totality of the universe, where birth, death, reincarnation, and death rule absolutely, i.e., relatively to this indeterminate universe, things are themselves indeterminate.

Everything is indeterminate by the very fact of its existence. The aim of this teaching is to destroy at one and the same time the nomistic dogmatism of the Vedánta and the nominalism of the sectarian schools.

Everything in the universe comes under one or other of the five categories of substances (dravya): soul (lecher, hi), space, merit, non-merit, and material delivery. Souls (jīvas and molecules (pudgala) are infinitely numerous; space, merit, and non-merit are single. Merit (bhārana) has the effect of furthering the progress of the soul; non-merit (abhārana) leaves it stationary. The progress of the soul is the consequence of its karmas.

In fact, the soul is by its nature limited and active. As limited, it has the dimensions of the body, which serves as its substratum; it is lessened and increased along with the body. As active, it is in virtue of its karmas an entity of variable molecules, which, according to their quality, are black, blue, grey, yellow, rose-colour, and white, and which affect the jīva by giving it or taking it away. That part of a molecule which is the bond which links the soul to the saṃsāra.

The individual who aspire to liberation has the task of purifying his soul by asceticism he eliminates the pudgala which stain it. By draining off the acquired karmas, asceticism is the essential factor in nirvāṇa, or spiritual emancipation, in other words, the end of existence. The characteristics of Jainism is the extreme importance which it assigns to action; it is not sufficient to annul the past; it is also necessary to prevent the formation of new karmas. And this desirable result is produced by discipline, by saṅgha. In its two principal stages it prevents the accumulation of karmic pudgala into the jīva; the two forms are control (gyypt) and good behaviour (kamma). By gypt the soul reproduces itself in the activity of the body, of speech, and of the mind; by kamma it so behaves as not to injure or offend any one. Reflection and meditation, as distinct ways of discipline are classified as “acts of injury against the pernicious influx. Right vision (Aa, right faith), right knowledge (gyypt), and right conduct (karma) are the three ways of discipline and of defence against the pernicious influx. Right vision (Aa, right faith), right knowledge (gyypt), and right conduct (karma) are the three ways of discipline and of defence against the pernicious influx. Right vision (Aa, right faith), right knowledge (gyypt), and right conduct (karma) are the three ways of discipline and of defence against the pernicious influx.

He summons all men to salvation. ‘The gate of immortality is open for all beings. Let him who has care come, hear the Word and be saved.’

He rejects the authority and traditional knowledge of the Brāhmans. ‘In a line of blind men who attach themselves to one another, the first does not see, the man in the middle does not see, the last does not see. Such are the discourses of the Brāhmans. The Brāhmans in which is without foundation.

He makes salvation a personal matter for each individual.

Be your own master, nor be your own master. Each man must decide for himself what he wants, for himself; and he must provide for himself for a lump or a refuge.1 You must make for yourself the necessary effort. A Buddha is only an enlightened man.

Finally, this framework of the building erected by Buddha

THEOSOPHY

is constructed almost entirely from materials borrowed from the Brahmanical schools, nurtured in the teaching of the Upanishads.

The method of salvation which Buddha preaches to men includes rules of life and truths of an intellectual character. But since it is well understood that his teaching has but one essence, there is no reason why they should not be learned in this realm, and in it, as it is, or, search for knowledge because of the practical or intellectual satisfaction which knowledge brings. Morality and learning, in intention at least, are looked on as devices for the narrow path of view of salvation. Thence come the limits within which they move. In fact, Buddha did not wish to teach either morality or science, but only a therapeutical way of the will and a transitory of the mind.

When once a man is healed from moral evil and from error, he may work towards salvation.

(5) Therapeutic of the conduct.—Only a soul purified by moral good conduct can be saved. Like good conduct, it has capacity to a spiritual value. In theosophy, connected with Brahmansm, knowledge is a working out of deliverance in a manner to follow the law of nature. The pure word, that word, the truth, the soul, and human destiny there is a body of knowledge directly efficacious for salvation. But the point of view of Buddha is that the quality of his disciples is quite different, and that what they want is to know the mind from unsatisfactory things which may hinder the individual or at least retard the soul in a true way. It can be understood how different are the conditions under which the spiritual guidance presents itself according to his views. It is well to point out the existence of the two imposssible beings, whether immaterial or transcendental or both. Buddha's aim was to show that there is no animal or human as was revealed which was not itself phenomenal, and to deduce from this proposition the consequences affecting the moral life of the individual. There are beings who know nor wished to recognize anything other than phenomena. Phenomena, both physical and psychical, constitute dhamma. In us and outside of us we reach nothing but dhamma, not because of our mental incapacity, but because neither in us nor outside of us there is anything but dhamma. The constituents of dhamma are not hung, as it were, upon a substance of which they are the momentary changes; they are the processes of the whole reality. Primitive Buddhism is thus at the opposite pole from the Vedanta, which abounds from phenomena and regards them as the real principle.

Whether subjective or objective, phenomena are incessantly changed, but to find those whose are involved in essential flux. Phenomena are just those states of individuals and objects which are being disrupted. The characteristic of consciousness, the character, the duality and homogeneity, can be permanent. The human individual is an assemblage of five kinds of aggregates, and the same from moment to moment as far as time and space are concerned. That which is called the individual (atman) is a series, more or less lengthy, of the phases of composite continually altering. The movement of aggregates, or of combinations of aggregates, does not take place by chance, or without any system. One cause determines the condition of every new combination, and this cause is the quality of the antecedent combination. With conscious individuals, who alone are interested in the theory of salvation, the causal combination is an agent, and his action produces results of two kinds; it manifests itself externally as the immediate cause of phenomena, and internally as a modification of the its own action of the whole universe. This reaction takes place generally as the dissolution of the body after death, in such a way that the leading force of one individual becomes the life of another. In the Upanishads, it has disserted every hypothesis not connected with visible forms of existence. It does not pass a table body as the vehicle of karmas, or an eva as the controller of events. Even at a distance karmas is a force which works mechanically. Moreover, the law of the universe is nothing but the combination of the congenial differences which are found among men, and of a certain tenuring. In the hearts of the faithful adhering the feeling of their moral responsibility.

Karma is far from being a doctrine specifically Buddhist. The law of Karma and the law of Dharma, the law of Samsara and the law of Nisarga, are the two sides of the same coin, both of which constitutes the main cause of the universal law of the universe. Prabhuvacana, the law of Karma, is likewise always said as its own. The Truths are suffering, the cause, its suppression, and the way which leads to suppression. What is important here is that suffering is suffering.

theosophy

Theosophy

311

in they thought that the sinner, following in the footsteps of Buddha, should become a saviour. It can be easily understood that their more powerful, infinitely varied career of the bodhisattva separated themselves perceptibly from one another.

(a) The way to arhatship.—Conversion makes of the Buddhist a samaner (i.e., an energetic and long-continued struggle to destroy himself in the adverse principles. This refers to the goal now set before him. The one is through a series of spiritual exercises: Meditation and intense concentration secure in him servile service to duty (dharma). No more of attachment, no more of desire; the very residues of desire are destroyed. The results of the illumination of the heart are clear vision (prajña) and wisdom (prajñā). The other way is that of enfranchisement (rimeseya). The path to the awakening is by ecstatic contemplation (dhyāna). From ecstasy to ecstasy the monk rises in eight stages (the snāna-patti) to a state of being which is neither thought nor the absence of thought. It is the suppression of volitional ideas, of discursive ideas, of joy, of breathing—the abolition of the world of forms by that of space, and of the world of space by that of knowledge; of the world of knowledge by that of the non-existence of things, and of the last by that in which there are neither ideas nor the absence of ideas. Arrived at this already very elevated stage, the arya enters into possession of superior power (the abhijñā). But it is necessary for him to rise yet higher. And it is necessary that samāna-patti leads to the 'dissolution of all conscious perception,' to 'the awakening of the mind' by the way of wisdom or of enfranchisement, one becomes an arhat (q.v.) a saint.

The arhat has done 'that which he had to do.' When his karma or karmic preparation is off, he will be enfranchised, but not with his last thought or his last aggregate giving rise to a further thought, a further combination.

(b) The way to Buddha-ship.—As the ideal is higher, the method is correspondingly more refined. The career of the bodhisattva (q.v.) demands a long preparation and superlative piles. There must emerge in the man the 'thought of illumination' (bodhi-kritta), that begins to form the resolution of the desire to arrive at the goal (prārthāna); that by an act of will shall assign to the Buddha the his heart and to the Buddha his actions (pāramitā). Then commences the struggle properly so called. In order to obtain illumination, the bodhisattva must proceed in a double fashion: 1. the acquisition of a double equipment of spiritual and moral knowledge. The programme has to be followed includes acts of worship, viole, and conduct, and the practices of meditation.

The object is to acquire successively the ten perfections (prārthāna), each corresponding to a spiritual world (a bhumi). At the end of this long ascent the bodhisattva obtains finally the illumination which makes him a buddha, i.e., a creator of being, an omnipresent being still sojourning for a time in the phenomenal world.

For arhat and bodhisattva the eventuality is the same—nirvāna (q.v.), extinction. What does it mean? We may quote the Blessed's authoritative disciples have said what nirvāna is? If one knows that it is the abolition of suffering and death, of relative and individual existence, that is enough to make it an infinitely desirable state. If Buddha has gained control over natures of the most diverse qualities, it is just because he has left them the liberty of imagining a nirvāna conformable to their needs and their aspirations.

Let us take a look backwards. We may agree that Buddhism has certainly characteristic marks of a theosophical system. It regards ignorance as the source of all the evil of living, and knowledge as the panacea of suffering. It seeks to deliver its adherents from the fear of death. It endeavours to upset the Brahmanical methods of salvation. It denies that texts or doctrines have any direct value for salvation, and it abhors the value of 'vision,' of intuition arrived at by internal concentration and ecstatic meditation. It demands that every man should be the architect of his own salvation, and, even though it multiplies the 'saviours,' it has lost faith in the individual the necessity of personal effort. It teaches that knowledge is power, and that spiritual excellence manifests itself outwardly in extraordinary forms. Realization and the pure meditative framework and urges the individual to work without procrastination towards his regeneration and so to arrange matters that this labour shall fill his whole life.

3 Introduction of theosophy into sectarian religions.—Brahmanism in its different aspects was only one of the forms of the religions; in every period there was also the popular current, that is, the more powerful, infinitely varied career of the bodhisattva, which in the sacerdotal tradition minutely elaborated rites occupy the principal place, gods and demons are central in the popular religion, and the worship of the ship which is given to them, mixed through the sacerdotal tradition minutely elaborated rites occupy the principal place, gods and demons are central in the popular religion, and the worship of the ship which is given to them, mixed through

— and encyclopaedia of the traditional knowledge of the Hindus is something more than a witness; it was also one of the agents, perhaps the most effective of all, in the expansion of Brahmanism in India. Before, during, and after the composition of the great epic, a mass of writings emerge to illuminate or supplement its evidence—sectarian Upānīdás, Dhār-

mikāstāra (as the first of which we may regard that which bears the name of Manu), Purāṇas, books written in prose by Brahmanic and non-Brahmanic reformers of Hinduism or under their influence. Unfortunately the investigation of this rich literature has not yet been completed.

By gaining entrance into works definitely popular, the ideas whose development we have hitherto followed in the texts of a school or in the monastic literature began to exert a powerful influence upon the general body of Brahmanical and others. It was more effectively the plasticity of religious thought than the faithfulness with which conceptions originally monistic and anti-theistic persist, almost
Theosophy

unchanged, in sects permeated with the most ancient devotion.

As in the ancient theosophy, the soul is haunted by the thought of death: '1 'Some men in their fear of death have died of fear.' 2 The world is full of hymns of Death. How few think of it! 'Do to day that which you will have to do tomorrow: do this morning what you will have to do to-night. Death does not knock at one great door and enter with what one has not done. It seizes a man as a wolf carries off a lamb.' 3 There is a word to live by to-morrow: 'The soul pass away; life wears to an end. Repose yourself and run.' 4

The new religious conceptions lure home to men the necessity of a new way of salvation: 'Let a man search for a remedy through the suppression of suffering: let him apply it without remorse. Then he will be free from misery.' 5 There is always the same hate of the body and its fugitive pleasures: 'Let one becoming an ascetic, abandon this sickly body, full of filth and urine, subject to old age and disappearance, the abode of multitudes, burnt by passions and perils.' 6

'All the joys which arise from contact with the world are a source of suffering; they begin; they end; the wise man does not find in them any pleasure.' 7

How man is to be saved? The means of salvation have become more numerous and more varied. There is nothing more interesting than to mark the persistence of the ancient ideas amongst the modern. This idea is still alive. Salvation is a part of the old. Salvation is the result of an effort entirely personal, 'Strengthens the soul by its soul, vanquish the enemy who recedes the forms of desire, and who is difficult to strike.' 9

The joy is he who finds within himself his happiness, within himself he finds his light. Let a man establish the self by the self and suffer not the self to be over- taken by another, let his soul, his mind sink into his own mind, or any other enemy than himself.' 10 Salvation is still the result of knowledge, a knowledge which is acquired by concentration of thought and meditation: 'Knowledge is the only road (for traversing the sea of the senses).' 11 To know Brahaman is to enter the secret sacrifice as its final result nirvāna; 12 it is oneself to become Brahaman.

As may be seen from the last passages, it is the solution of the Vac invited which obtains most favour of all those proposed by the Brahmanical schools. In consequence is found readily to the Saikiyana when one wishes to analyze the universe and the soul, or to the Yoga for teaching as to the practice of concentration and ecstasy; but the theory of measure remains essentially monistic and pantheistic. As far as the evidence gathered from the great epig is concerned, the doctrine which is adhered to is not the radical monism of Saikara (which was indeed later) but the monism during which the Mahābhārata was finally reduced, but the monism of the Upēnisads and of Baidāryāya: the world of names and forms is real, but it is Brahaman who is the reality of its reality. The Bhagavad-Gītā does not differ from this point of view.

The Brahaman has obtained the power to worship as a being at once universal and individual, who, and whose only self he is, extends himself to every direction. 13 The knowledge of good is that through which is seen in all beings the one imperishable Being, a whole in every particular being. 14 One portion of my soul has entered into the world of living beings, as the soul of the individual, the imperishable portion. 15 The knowledge by which the wise will perceive every being without exception in thyself and then in me, will for ever give thee a refuge from error. 16 In the Brahaman, in the ox and the elephant, in the dog and also in the eagle, the flesh of the dog, the wise man sees only one and the same being. 17 'He who sees in everything and everything in me, is never far from me, and I am never far from him.' 18

God is immanent in all beings, but He is not confused with them; He is the principle of life which animates them, the principle of all spirituality.

Finally, Hinduism not only immortality, but also transcendence. Things are in him, but He is not in them. The world of phenomena does not exist

The great Vaishnavite and Sāvaitė sects are, quite as much as Śikhism, impregnated with theosophy. Their appearance is in itself evidence of an individualism in revolt against the excessive pressure of a religious tradition. Those who assert the authority of the Vedas are ridiculed. The framework in which the divine is placed is broken; no greater pertinacity is attached to the name which the gods bear—Śiva or Viṣṇu, the label is different, but it is always the same god. The human framework is also broken; the religious values which the religious oracles asserted were called to salvation. The distinction between the sacred and the profane is abolished. Generally the first concern of the reformers is to put Sanskrit on one side in favour of an exclusive use of the popular language.

'Whoever loves the truth is pure.' 

All food and drink which come from God are pure. 

The mechanical and the excessively ritualistic elements in the old religion are removed. Religion tends to become more human, more closely connected with ordinary life; the Bhragavad-Gītā has already expressed something approaching a sentiment of human solidarity, then an idea new in India. Moreover, religious tolerance becomes almost universal; it is asserted that the Śrāmanas, Jainīs, Buddhism, Śaivism, and Vaiṣṇavism have their representatives in the same families, and the sovereigns extend their favours to all the communities. Is it not clear that religion has become an affair of the individual, and that the son is not in this respect bound to follow the example of his father?

Unfortunately the sects which were originally the boldest very soon fall into the old errors, or, rather, a new tradition, also altogether tyrannical, is established in place of the ancient tradition; or, still more frequently, the older safeguards are rescinded and most weighty concessions are made to the prevailing ideas. The popular language takes on, in its turn, a sacred character. Caste and restrictions about food recover all their influence. One returns to the old formalism and to the grosser superstitions; and the work of reform, to which men constantly address themselves, has always to be done over again.

Their admission into the popular religions was not for the propagation of philosophical ideas. They remain in the outer courts, in an altogether subordinate position. In the Bhagavad-Gītā every thing that is merely a heritage from the past, a survival, is theosophical. The elements which are truly living and fruitful are of an entirely different origin. The religious emotion and the fervour of feeling which spring up in hearts full of adoration do not come from the Upaniṣads or their derivatives. Far from celebrating the triumph of theosophical ideas in India, the sectarian writings rather indicate their failure, since they make salvation depend on the love and grace of a personal and transcedent God.

4. [Theosophy and ancient Indian philosophy.]

In dealing with the introduction of theosophy into sectarian religions we have been tracing what might be described as a lengthening of the influence of theosophy. In the Gītā and in the sectarian writings theosophical elements are largely overlaid by materials gathered from other sources. But the last few decades have witnessed a remarkable revival of theosophical teaching. This is to a great extent connected with an incursion of influences from the West and especially with the teachings of Madame Blavatsky and Mrs. Besant.

The authority of Madame Blavatsky has been largely discredited, but Mrs. Besant is still a living force and her followers are numerous. Indeed India can claim a larger number of theosophists than any other country in the world. The latest available report (1917) shows 355 Indian lodges, with a total of 7344 members, among whom are some outstanding personalities. Their literary activity is great, at least in quantity, and the flow of publications addressed to the laymen is numerous. Theosophy is to be found in the hands of thinking men who would disclaim any connexion with a theosophical society. The popularity of theosophy is not, however, always due to purely theoretical reasons. Theosophy in India glories in having no creed, and thus claims to appeal to men of all creeds and to interpret for them the hidden values of their respective religions. But, though it is not a creed, theosophy has a threefold aim which is stated by Mrs. Besant, as follows:

(1) To form a nucleus of the Universal Brotherhood of Humanity; 
(2) To encourage the study of comparative religion, philosophy, and science; 
(3) To investigate the unexplained laws of Nature and the powers latent in man.

The popularity of theosophy at the present time in India is due to the fact that it is often the only refuge of those three sins. Unless we give a very wide interpretation to the term, the two first are not particularly theosophical, but they are universally acceptable. They thus strengthen the appeal of the third—the only properly theosophical enterprise. The first aims afford an opportunity for an easy transition from religions to political activity and a reinforcement of the former through the popularity of the latter. The second sets itself in seemingly attractive opposition to the harsh judgments of certain apologists for particular religions, and appeals to that specious liberality of mind which Meniere expansion in the oft-repeated assertion that one religion is as good as another. It calls forth the retrospective tendency which seems to be inherent in all theosophy and thus enables theosophy to serve itself, as the heir of the ages. Emphasis is laid upon the idea of a hidden tradition which is traced through the magic of medieval Europe, through the lore of the Knights Templar and the mystics, through Freemasonry and the spirituality of alchemy, to the Alexandrian, until the ultimate source is postulated in the Great White Brotherhood, a vague and indefinable society which Madame Blavatsky alleges to have existed from time immemorial in the mountains of Tibet and to have delegated one of their number to act as her Master during a period of many years. This mystic brotherhood is believed still to have operative power and to have charge not only of the education and development of the human race, but also of cosmic evolution. Their doctrines embody the truths which are said to be at the basis of all religions, but, on investigating the matter more closely, we find that they are in a very special manner the fundamental principles of Indian thought. Theosophy thus gives a universal importance to Indian philosophical speculation and in so doing inevitably enhances its popularity in India. It leives contributions from all the more important Indian systems, taking from the Upaniṣads the doctrine of a fundamental unknowable and characterless Unity, and the identity of the human and the divine; from the Sāṁkarṣa the idea that spiritual advancement consists in a gradual detachment from the processes of the phenomenal world; from Buddhist the idea of karmic birth and death; and from Yoga the conception of various occult methods by which freedom of thought and

1. Cf. M. A. Macauliffe, The Sikh Religion, i. 243; cf. i. 43.

spirit may be won. Further, by an application of its ideas of graded being and of development extended over many generations, it is able to allow a moderate amount of justification even to the grossest faults of the soul. Where our vague words carry farther the process of infusing theosophical ideas into the cults of the people which, as pointed out, had but moderate success in earlier centuries.

The premise that theosophy is the ultimate Being is an unknown and unknowable ground of all things, acquiring character as a Logos with the triple functions of will, wisdom, and activity. This differentiates itself into the human monads, having a similar triad.

The human monad descends through various grades of being until it reaches the causal body, which has also a slightly lower mental aspect, uniting it with the grades of being of which even an ordinary man may be aware, and forming the basis of personality as we know it. The mental body has as its appropriate sphere the heavenly world, but the soul as it proceeds downwards enters also the astral world or the world of emotion and desire, and finally reaches the physical world. Over and over again there is incarnation reaching downwards ultimately to the physical world, and in each incarnation there are experiences leading, if rightly used, to the development of the soul.

The supreme aim of the soul is to rise upwards to its original source, and the degree of ascent will be proportionate to the use it has made of the experiences of each incarnation. The working of the law of karma is inexorable. A man will receive the fruit of the deeds done in the body, and according to the nature or quality will be the duration of the period spent on each plane before another incarnation takes place. The aim of the whole process is to get rid of the separating sheaths of personality and reach absorption in the Absolute.

Theosophy is thus definitely committed to the doctrine of reincarnation and transmigration, with, on the one hand, its plausible explanation of the inequalities of human life, its stern insistence on moral consequences, its distant prospect of negative salvation, and, on the other hand, its ethical weakness arising out of its tendency to fatalism and encouragement of procrastination. It is the law of karma as it traces the succeeding phases of individual development and promises reunion with those we love only in a 'togetherness' of absorption in which the definite character which was previously acknowledged appears.

The doctrines of theosophy claim a scientific basis in experience, but this experience is found to be very different from the experience of the ordinary man. It is dependent on the development of our latent powers, by the use of which we may acquire that knowledge which is already possessed by the masters of the human race, the adepts or initiates, and which may give to us a wonderful penetration into the hitherto undiscovered laws of nature. It is at this point that theosophy differentiates itself most completely from philosophy. Once make the initial assumption that the operation of these powers is possible and that the latent faculties can be exercised, and all is easy. We may attain a wonderful amount of detailed knowledge about the lower at least of the super-physical planes. We may discover, e.g., that even during physical life the astral body projects a few inches beyond our physical body, and that it is shaped like an egg; also that various astral bodies are formed by the vibrations of thoughts, and we canreich by an unerring affection producing bodies of pale rose colour, intellectual effort resulting in yellow bodies, devotional feeling in blue, etc. We may discover also facts on a higher ethical level,—e.g., that our prayers produce beings functioning as guardian angels and that our thoughts eventuate in actual astral existences, fulfilling the purposes into which our vague words of wish, which had opportunity waited upon our desires. In short, with an almost total disregard of the law of parsimony and of the rule against the multiplication of entities, we may explain man.

The mysteries of our present life and many of the hitherto unexplained problems of nature by simply transferring the difficulty to a higher plane and 'discovering' things personally responsible for what previously appeared to be a mysterious occurrence. It is at least doubtful whether modern theosophy in India distinguishes sufficiently between subjective imagination and the controlling power of objective facts, and this considerably lessens the force of the rebuke which it administers to our materialism, diminishes the value of its insistence upon the power of thought and prayer, and weakens its encouragement to explore farther than has yet been done the phenomena of spiritualism and telepathy as well as the more weighty experiences of the mysteries of all ages.

Conclusion: The history of theosophical ideas, far more than that of religious ideas, allows us to establish the spiritual unity and continuity of India. Moreover, we have here an excellent field of observation for any one who wishes to know the meaning of theosophy, its principles, its aspirations, its method, and its influence upon life. With the idea that Indian theosophy is typical of this form of thought, we shall rapidly pass in review its principal elements:

(a) The most obvious quality is its concentration on the self, which not only occupies the first place in its scheme of thought, but also concerns itself with the Ego as if it were the only existence—as if everything else existed only for it and in reference to it. This theosophical individualism is both proud and exclusive. The vulgar intelligences, concerned with superstitions and traditional practices, are despised, and with jealous care the precious truth is guarded for a small number of the elect. *There is nothing in common between popular religion and knowledge.* As if to show clearly the existence of a double current in religion, and its expression in the Ego, a verse in the Mahabharata 2 says that the gods, women, and the worlds have only one divinity, one guru only, but that the Brahmins have two, Agni and Brahma, the god of sacrifice and the Being without a second.

(b) It is always flattering to belong to a privileged group; esotericism was an attractive element in theosophy. And there were others. Those who were terrified by threatening death and mysterious destiny, those who were shocked by the spectacle of physical and social injustice, found in the doctrine of karma,再生劇, and moksa just the solution fitted to give them moral serenity and courage to face. All the theosophical systems teach some way of salvation; they deliver their followers from the painful prospect of a second death, from an interminable series of lives poisoned by the expectation of death.

(c) Another advantage: truth is not arrived at slowly and patiently by study and reflection; it is grasped by sudden internal vision. Once the premises have been given by intuition in rigorous dialectic can construct a system whose scientific appearance has an element of attractiveness for persistently intellectualistic minds eager to 'know.'

(d) The intuitive method of attaining, at the expense of apparently trustworthy: it is also very fruitful.

Therapeutes.-The Therapeutes\(^1\) were a radical offshoot of the movement in pre-Christian Judaism which threw up an order like the Essenes (q.v.); but, unlike the Essenes, they were purely an Egyptian phenomenon partaking of both Jewish and Egyptian elements, and with a tendency towards a schism. Their development, however, as with the Essenes, is by no means an easy matter to trace.\(^2\) The rise of the monastic movement in the Church drew their attention, and in the end their former spirit was submerged in the current of the Church, and they are now no longer a recognised sect.

\(^{1}\) See E.B.E.v. VII.278.

\(^{2}\) As the de Vl. Cen. was indubitably Philo's, the only logical way of explaining this panegyric on Christian monks was to make Philius himself a Christian when he wrote it.

treatise was finally vindicated. Whether it was composed by Philo or by some contemporary Jew is another and subordinate question. The treatise is in two parts: the first is a pre-Christian or non-Christian description of actual reclines in the Judaism of Egypt about the end of the 1st cent. B.C. or the beginning of the 1st cent. A.D. Contemporary is the standard authority on the Greek text. His translation is folklore which suggests that no other treatment of the subject has made so good a case for the hypothesis that the de Vitis Contemplativa was originally a sequel to the lost Philonic account of such reclines. The Massonian treatise which was written on the sacred vestments of the temple, 3 to signify that the Therapeutes are too humble to emulate the exalted bread reserved for the priests. This is a sequel to the treatises which Eusebius drew his information. But their interpretation of the text of the account of the Therapeutae is sometimes open to serious criticism.

2. Characteristics.—According to Philo, the Therapeutes are part of a movement which is known outside Egypt. It was the more or less organized semi-religious retreat from cities and a corrupting civilization to the simple life of retirement. Though the movement is not confined to the environs of Alexandria, is there that the Therapeutes are most numerous. 4

They are Jewish recluse who reside in simple huts, at a short and suitable distance from one another (i.e., they resembled the communities of Indian monks in a later day, and being hermits and anchorites). Each hut has a sacred chamber (μνηστήριον or σαφοντήριον), reserved for their devoted books (The Law, the Prophets, and other writings, ότι τοιούτα et ἑν τῷ σαφοντήριῳ, τό εἰς ἱερά καὶ ἱερά κατά τάσσεται ἱερήν ὅλην). After praying at dawn, they devote the day to meditation upon the sacred Mediterranean Scriptures. In the course of the day, the Pirminia (συνάστια) draw upon the ancient founders of their sect, by which Philo probably means the literature current under the names of Abraham or other. One of the most important is the Pirminia de so-called Abrahamic. The book has been regarded as the principal ascetic and recluses, the ideal progenitors of the Therapeutae movement. The study of the book is a literal interpretation of the passages found in the book, and one outcome of it is the composition of sacred hymns. Prayers at sunset close the day. Each is the life long. On the seventh day, the various recluses meet for common worship; the two meet at a fountain, sitting on the ground with the right hand between the chest and the chin, but the left tucked down along the thigh. The senior recluses deliver their orations in which all listen in tail nodding assent. A partition, ten or twelve feet high, separates the men from the women, so that no other can hear the speaker without being seen by the male recluses.

The seventh day 5 is their day for relaxation. On the other days no one eats before sunset, and some go fasting almost entirely for three or even six days, in their contemplative capture. But all use oil (as a physical refreshment, unlike the Essenes), and on the seventh day all "profess the moste of them, and the fourth the moste of the natural creatures; the diet is simply water and bread, seasoned with salt, and occasionally supplemented by hyssop. None of your drunkards or orgiasts! Philo anticipates Lucian in his scorn of these rowdy gatherings.

Once every seven weeks 6 they assemble for their supreme festival, the 1st festival of the year. The number fifty has often been cited as 7, robed in white and with looks of serious joy. At a given sign from the seniors, the leaders arrange them in ranks, raising eyes and hands to heaven 8 His hands, because they are pure from unjust gains, being stained by no pretense of material wealth. In such festival, they divested themselves of their possessions, their flocks without turning back, having abandoned brethren, children, wives, parents, all the throng of their kindred, all their friends, all their friends and acquaintances, all their necessities, which they were born and bred. 9 Philo describes this with a wistful enthusiasm, as he described the renunciation of Enoch 10 and of Abraham. 11 But he is careful to explain why they prefer solitude to cities. It is only because intercourse with the unsympathetic world would injure them, "not from any harsh and deliberate hatred of mankind"—a declaration 12

3 In this omission accidental? Or do we regard it as a part of the present day's action (cf. ERE x. 1917)?
4 De Vitis, Con. 4.
5 A trait of popular religious worship in Egypt (cf. ERE v. 2999) and, generally, x. 3880.
6 Miriam, in such a description of early mystical literature, is the counterpart of Isas, and she plays an important rôle in Gnostic speculations, as well as in the Gnostic Epistles (P.E., 10, 1904, p. 136 n.). Her popularity among the Therapeutae is probably another Egyptian goddess.
7 Lifebick. (Saints Eunice and the Colossians and to Philo, London, 1818, pp. 35, 372) took this to mean sunworship; but let us see nothing more of the Essenes than more than the Essenes did (see ERE v. 3868, note 4).
8 Unlike the Arabians, the primitive, and of the Aethiopians (Ac. 279), with whom Euniceus (I.B. 17) would fail connect them on this account, the Therapeutae did not pool their funds for the benefit of the community.
9 De Vitis, Con. 2.
10 De Vitis, Con. 2.
11 De Abrash. 3.
12 He had made the same disclaimer of misanthropy in speaking of Abraham (de Abrash. 4).
of the *odium humani* generis for which Jews were blamed by the outside world. Philo always protested against the people, whose name is not in the sects

tion, only because they lacked public spirit. He also anticipated the criticism which might be passed on the Therapeutae, that they acted from a morbid misanthropy. Hence his defence of the

They, in fact, realize for Philo what he had always dreamt of, a small (only a small) number or *θεος* of spiritual artists, acting from the highest of motives, carry-

ing through the question of making the supreme renunciation in order to attain the highest vision of God and truth.1 To them he applies his favourite Platonic metaphor of the wealth of eyes (i.e. the mystic rapture of

the soul enriched with the vision of truth); no wonder, when they possess this inward treasure, that they abandon their blind wealth (*τὸν θρόνον φαντασίασι*),2 to blind worldlings!3 For their renuncia-

tion does not empty life. It is not a mere nega-

tion; it is the soul surrendering to a higher passion for God (οὐ* ἔρωτας ἄρπασθεῖται φαντασίαν*), which enriches life past dreams of avarice. The Thera-

peutae, men of truth, is an ecstatic yearning for the positive vision of Truth. ‘It is as easy to close the eyes of the mind, as those of the body,’ Bishop Butler wrote;4 it is as easy for Philo to close his eyes of the mind, his soul be closed by luxury and money-making, and he applauds the Therapeutae for sacrificing their great possessions and position in order to keep the higher vision unimpaired.

Another feature of the Therapeutae which goes to Philo’s heart is that their allegorical interpre-

tation of the OT does not render them indifferent to the actual rites and Institutions of Judaism. He disdained the ultra-spiritualists5 who evaporated the historical element in religion, and dropped all adherence to the forms of their faith. But he delighted in people like the Therapeutae who, e.g., attached, as he did, in his own enthusiasm, a high mystical sense to the number ‘seven,’ and yet not only kept the seventh day strictly but also celebrated a special festival after every 49 days, out of their reverence for Philo’s pater- 

noster number and its multiple (7 x 7). This appeared to him to be a healthy form of mysticism. The Therapeutae appealed to Philo more than the Essenes did, because they were on old Jewish lines, adherents of the *synagog* at Jerusalem, and capable of attaining the heights of contemplative ecstasy without abandoning the lowly duties prescribed by the Torah.

A third feature which evidently pleased the gentle Philo was their freedom from angry controversy and flashy rhetoric. With his eye not only upon the quarrels of Greek sages at their symposia but also upon the rabbinic disputants at Jerusalem, he tells of the most sanitations style practised by the Therapeutic speakers, of the rapt attention shown by the audience, and of the respectful demeanour of the gathering—exalting the very virtues which Paul recommended to the showy, noisy Christians at Corinth (cf. 1 Co 4:20). Philo loves them for their quiet demeanour. The Therapeutae never wasted their time over rabbine exegesis of the letter of Scripture. They gazed placidly through that, as through a glass, into the mystical significance which held them spellbound. Their wisdom was pure and peaceable; it combined plain living and high thinking, and the sequins did not tear their tippets.

All this, added to their philosophic aspirations

B) Nor is the book of Wisdom distinctively Therapeutae, as some thought.

The emphasis on  eros and on ion in the text, rather than on the more outward  via mundi, certainly suggests that the monasticism emphasized by  is more closely connected with Jewish piety than is  in Judaism. It is not in praise of celibacy, and even if it were, the tendency to exalt celibacy in the later Judaism was not confined to the more ascetic cohabitation of Therapeuticism (see 3:4). In the Therapeutae the  is largely synonymous with the  that is measured by its content of 24:34. It has nothing whatever to do with the Therapeutic regulation  that senility was reckoned by the years the common wisdom. The allusion in 22:38 to the  being treasured to  is not altogether surprising, for with whom they were anxious to live, in order to bring forth not mortal children but 'the immortal progeny which the God-enamoured soul is able alone to bring forth of itself.' But this metaphorical description applies in the one case to men, in the other to women, and it is too general and common (cf. Sir 159, Pr 219) to be confined to the Therapeutae; in  de Juda Contemplatives,  Philo is speaking as he speaks of the Egyptian priest, the sacred priest who offered prayer at sunrise (see above) was not peculiar to them among the Jews, but that he used before the sun is giving thanks to thee, and one should plead with thee at the dawning of light) need not be a glimpse of these recusals—the legal and religious teaching is said about their eastward position by the writer of Wisdom, who is simply moralizing about the story of the sun.

5. Origin. In view of the various Oriental and Hellenistic influences which were playing upon the later Judaism towards the close of the 1st cent. B.C., a phenomenon like the existence of the Therapeutae with their celibacy, their aversion to social life, their absorption in a divine  , and their mystical speculations, all carried out 'in accordance with the most holy counsels of the prophet Moses, is not altogether surprising.

The societies of the Essenes and the Therapeutae . . . belong, just as the medieval and modern Hasidic ascetics belong to Judaism, quite as much as do any of its more normal institutions.

It is still less surprising to find such a gild or monastic settlement in Egypt. The soil of Egyptian popular religion was full of 'monastic germ'; there were men and women recusals in the Serapeum at Memphis, whose  embraced both study and mystical dreams; the very name of the  was connected with the worship of  , which also had its mystic raptures, combined with an emphasis on asceticism and celibacy; the climate itself, and the granit desert, stretching away from the cities and towns, invited those who had had the  movement of the Church first developed its varied and most distinctive forms three centuries later, and the development was no more surprising upon the basis of primitive Christianity than that of the Therapeutae or of the Essenes upon the basis of orthodox Masoeism. One of the most suggestive parallels to the Therapeutic discipline is to be found in the contemporary asceticism of the modern mages which is given by Chaeremon, the Egyptian  , cited it by Porphyry, and some sentences

3 De Vit. Conv. 8: * For they do not regard as elders those who can count their years and are merely aged, but, on the contrary, some inner circle or set of mere infirmatics, in case they have been late in embracing the vocation.*
5 cp. the Gnostic inscription, e.g., quoted by A. Mordtmann, in RA xxii (1879) 351.
6 cp. Abadon, N. 6, 8.

238 THERAPEUTAE

They chose sanctuaries (  ) as the place in which to study philosophy, since by doing so in the gods was in harmony with their later longing for vision (see above). Besides, this gave them security, owing to the reverence felt for the gods, since all men honoured these philosophers as if they were sacred creatures. They also lived in solitude, only mixing with other people at the command of authorities and for the good of their sect. They renounced every other employment and all human toils (  ), supposing that they were engaged simply to the contemplation and vision of things divine . . . for to be in constant association with divine knowledge and inspiration delivers men from all lust (  ), seduces the passions, and rouses life to intelligence (  ). They also studiously to be frugal in food and clothing . . . Their hands were always inside their garments . . . When they were not engaged in purification, they used to eat bread up with honey, as they declared by honey was extremely potent in purifying bread . . . They trained themselves to endure hunger and thirst and sun, since all their lives . . . The day they spent in the worship of the gods (see  ), singing hymns to them three or four times, at dawn and at eventide.

The origin of the Therapeutae lay in Jewish Hellenism, as that was specially affected by its Egyptian environment. Nothing more is required to explain the ascetic and mystical habits of those recusals beside Lake Mareotis. But it would be unfruitful to dismiss this problem without some reference to the question which has repeatedly been asked: Do the several traits of the Therapeutic discipline recall Buddhist monasticism—  , the combination of a cenobitic life with study and devout contemplation, and the vegetarianism? The latter at least of the marks which sharply distinguish the Therapeutae from the Essenes who were not vegetarians. But there is at least one feature of the Essenes themselves which is analogous to Indian practices, and it is open to conjecture whether some Buddhist influences had not penetrated Egyptian Hellenism by the 1st cent. B.C., as it is sometimes held to have penetrated the later Gnosticism.

Robertson Smith, after observing that 'in Egypt, the doctrine that the highest degree of holiness can only be attained by asceticism from all animal food, was the result of the political tension of a number of local cults in one national religion, with a national priesthood that represented imperial ideas,' added that 'later developments of liberal asceticism almost certainly stood under foreign influences, among which Buddhism seems to have had a larger and earlier share than it has been usual to admit.'

The Therapeutic avoidance of animal food need not, of course, be Buddhist; the practice of the Orphic societies in Egypt or of the Neo-Pythagoreanism which affected the Essenes in other ways may have account for it. Several traits of the Therapeutic discipline appear to be derived from the  , and some other features. Indeed, so far as our scanty data go, with regard to the Therapeutae, the Essenes, the evidence does not appear to warrant any hypothesis of direct Buddhist influence, although the Orientalism which had filtered into Jewish Hellenism, even in Egypt, by the 1st cent. B.C. may have contained some elements of Buddhist religious tendency. The trade connections between Alexandria and India, and the intercourse of both countries ever since the 3rd cent. B.C., makes it quite possible to suppose that Indian merchants reached Egypt by the 1st cent., B.C. who could point this out. Still, the question of the connection, detailing the Indian and Buddhist elements in Greek fiction. But the interaction

1 Cf. RE, X, 303, note 5.

4 EEFV, 424.
5 This again distinguishes them from the Essenes. C. A. Budge, in his recent paper of the Essenes (JVP xii (1931) 167), argues that the Palestinian Essenes must have cultivated song and music in the Egyptian fashion.
6 H. 507, and  , the matter. Had hymns been a prominent feature of the Essene cult, they would have been mentioned by Philo or Josephus.
with knowing; but it must open for itself a converse with the world of spirit. It would elevate and sanctify the prerogatives of soul. This broad use of the word makes prominent the fact that a common principal is the basis of all religious experience, and the differences we find in all the pretensions, both of heathen and of Christian miraclemongers. The celestial hierarchy of Dionysius and the benign elements of Paul and Peter, on the one hand; the Christian theurgy, by Platonist, by Calabist, or by saint, alike receives this success and is in effect the same with supernatural cure; so far Apollo in India and Peter of Alcantara, Ascelpigens and St. Theresa, must occupy as religious magistrates the same province. The case is otherwise in the case of the divine efficacy. This is attributed to rites and formulas, sprinklings, or fumigations, rods or incantations, of naturalistic chemical education. Some form of belief in theurgy is at least as old as history and literature. Homer's heroes are constantly raised beyond themselves and perform deeds which seem to be done through them by the Olympian deities. These to their aid Oriental as well as Grecian mythology everywhere assumes theurgic powers. The celestial Gnostics, who drew upon many popular religions and sacred books as the sources of their divine gnosis, also believed and taught that great divine powers became available to those who were initiated and who thus received something of the fullness—the Pleroma—of the Godhead.

The Neo-Platonists, especially in their later periods, gave new impetus to theurgy and were unwittingly the transmitters of it into Christian circles. Porphyry, the last of these, was a metaphysician of high rank and a noble mystic whose influence on Christian mysticism can hardly be overestimated, but he was not interested in occult knowledge or in theurgical phenomena. His Syrian successors, however, especially Iamblichus and Macrina, were concerned with the problem of discovering and applying divine powers or energies in the sphere of human action. Iamblichus, who strongly revealed Gnostic influence, by his ideas and hypostases of Platonism into divinities, i.e. personalized beings, and he holds that these 'intelligences' work wonders in the macrocosmic outside and in the microcosmic within. Many of the Neo-Platonists, however, who came into the soul of the mystic on high occasions, possess it, and enable it to do works beyond human capacity. There are, according to Iamblichus, hierarchal orders of these divine powers in varying ranks, and it belongs to mystical wisdom to know how to invoke the higher and more benignant powers and to gain their theurgical assistance. This theurgical system is set forth in Iamblichus' treatise de Mysteriis Theurgia. Of the last important name among the Neo-Platonists, was a much greater philosopher than Iamblichus, but he also expended a system of theurgy and encouraged belief in hierarchal powers, arranged in triadic orders, who work divinely and mysteriously through those who are raised into union with these higher powers. Through the Gnostics, the Neo-Platonists, especially through the Christian Neo-Platonist who wrote under the pseudonym Dionysius the Areopagite, and above all through contact with the pagan world and its wide-spread belief in magic, the Christian Church unconsciously absorbed a multifform faith in theurgy. Angels of many orders, saints who have been glorified, the Virgin Mary and her divine Son, can and do work wonders, it is believed, for faithful worshippers. Water and bread and wine and other elements of nature are by miraculous divine grace transformed into spiritual substances, become, in fact, the real divine presence, and supply to the recipient supernatural powers, with which 400 or 500 or 1000 or more scribes, Roman Catholic saints and many 14th and 15th century, mystics believed themselves possessed of special theurgical powers. Stigmata of nail-pricks were believed to be divinely produced in the hands and feet of saints of Assisi and of the real St. Siena. Others had the power to 'levitate' them,

1 Hours with the Mystics, i. 46.
selves and to soar above the earth in moments of possession. Others had the miraculous gift of shedding tears in extraordinary measure or of emitting fumes from the body in periods of ecstasy, while still others underwent profound physical transformations or radiated light like a self-luminous body. The entire field of theurgical practice was thus found in close up with the psychology of hysteric and auto-suggestion. Automatism of many types is now scientifically recognized. It seems to the subject, when parts of his own body perform functions without his conscious will, as if emission foreign to himself had entered and possessed him and were using his hands or his feet or his lips. Where the results are beneficent and constructive, it seems natural to believe that doing such things done of their own accord, and such like these. These things may seem incredible, yet read but the ensuing treatise and thou shalt see the possibility confirmed both by reason and example.

Once more in modern times there has appeared a recrudescence of theurgy in spiritualistic and theosophical circles. The element of fact in it now, as of old in taught by St. Thomas and held by what is known as the Thomistic school, who is mainly but not exclusively composed of Dominicans.

2. Historical survey. — The foundation of Thomism is incontestably due to the personal influence of St. Thomas Aquinas. It should not, however, be forgotten that Albert the Great did much to prepare the way for the birth of the new system, so that the names of both master and pupil will ever remain inseparable in the onward work. Although there were many points of contact between the minds of Albert and Thomas, the genius of the one was entirely different from that of the other. The mind of Thomas was more critical than that of Albert; the latter was much more of a theologian, the former a profound searcher. Albert, who was not a man of the world, was in his subject quite perfectly; there is a lack of precision in details and a certain want of synthesis necessary to unify his knowledge. On the contrary, Thomas possesses his matter perfectly; not above all, he has a power for order; his precision is nicer and his analysis finer; his vision is more penetrating and more embracing; and his power of analysis is on equal footing with his power of synthesis. Albert revealed to his age an intellectual world unknown to it; Thomas with the debris of the intellectual world of the ancients created a new one. Both aimed at incorporating Aristotle into Christian philosophy and theology. Albert's venture has the merit of initiative, but it remained incomplete and only provisional; Thomas with a magician's hand forwarded the work and produced a masterpiece which he embellished with a finish undreamed of by Albert.

Before the time of St. Thomas several attempts had been made to synthesize the sum of human knowledge, by bringing together philosophy and theology, and had been the result. The work of reformation undertaken by St. Thomas was so vast and complicated that it is not surprising that he was at first a little hesitating and diffident; but, as he advanced in
years and learning, his vision became clearer, and at the age of thirty he took up a position that, with regard to his method of philosophizing and final. Being perfectly familiar with all the problems discussed by philosophy and theology, and having carefully weighed the value of the respective solutions and examined the systematic points of view already attempted, he said that a perfect system necessarily demanded the unification of the whole of knowledge. This perfect ordering of the whole of knowledge which he bequeathed to the world was due to his belief in the philosophy of Augustine. It is because St. Thomas surpassed the host of thinkers of his time as metaphysician that he produced a unique work.

In philosophy he is the first to proclaim the autonomy of reason; and he has produced his philosophic works without once having recourse to an authority other than experience and reason to establish his conclusions and defend them. Starting from the 'sensible' world as from a secure basis, St. Thomas passes to the region of the absolute, to the highest and purest intellectualism. In theology he proclaims the autonomy of revelation. At this point he points out the impossibility of a real conflict between the natural and supernatural orders which have the same source of truth, viz. God. Thus he synthesizes natural and supernatural, as Aquinas and Thomas. To assimilate his thought it is necessary to understand, above all, the functioning of his general synthesis, and especially of his metaphysics, which rules the whole system of his work. Eclecticism has no meaning with regard to Thomistic doctrines; their value and strength reside essentially in the marvel of their unity and solidarity.

3 Progress of Thomism. — The Dominican order was the teaching of St. Thomas, but not without opposition; some of its members were still imbued with the doctrines of Augustinism, and these could not be converted to a new system in a day.

Robert Kilwarby, archbishop of Canterbury and a Dominican, condemned St. Thomas's theory of the unity of substantial form, on 15th March 1277. A few years later, however, the English Dominicans were among the most resolute defenders of this doctrine. In Germany Ulrich Engelbert de Strasburg (+ 1277) inclined towards Augustinianism and the Neo-Pistismon of the Arabs. Eckhart (+1239) was inclined towards Pistismon. Thierry (+ towards 1315) was an Augustinian strongly influenced by Avicenna; the latter never hesitated to combat the doctrine of St. Thomas.

In France the great adversary of the new system was Durand de Saint-Pourçain. In Italy Umberto Guidi was punished by the Dominican Provincial Chapter of Arezzo in 1315 for attacking St. Thomas; and the General Chapter of Puy (+1344) cautioned Thomas of Naples for opposition to St. Thomas. Many chapters of the Dominican order encouraged and promoted Thomistic doctrines. Worthy of mention are the General Chapters of Paris (1280), of Saragossa (1290), of Metz (1315), of Castres (1289), of Brive (1346). So great indeed was the attachment of the Dominicans to the Summa Theologica that the celebrated Spanish Arnald de Villemagne (+1311) wrote a work against the Dominicans in 1304 (Gaudios iugunla Thoms- tis), in which he accuses the Dominicans of preferring the study of the Summa to that of the Bible. Two centuries later Erasmus formulated the same reproach.\footnote{Opera Omnia, Leyden, 1763-68, III, 515.}

4. Introduction of St. Thomas's writings as text-books in schools. — At the end of the 13th century a Dominican was the principal writer, and the Sentences of Peter the Lombard was the theolog-}

cal text par excellence. The Dominicans introduced the reading of the Sentences \footnote{Opera Omnia, Leyden, 1763-68, III, 515.} in via Thomae, i.e. according to the method of philosophy and theology. For schools following this example taught the Sentences 'in via Alberti,' 'in via Durandi,' 'in via Scoti,' etc. Not until the end of the 15th cent. did the Dominicans substitute entirely the Summa for the Sentences.

5. Thomistic polemics. — The fights sustained by the Dominican order during the end of the Middle Ages in defence of their school were (1) to make a good stand against Augustinism; and (2) to defend certain doctrines special to Thomism.

(a) General. — In favour of Augustinism a great reaction was made by the Friars Minor in a work composed by William de la Mare. The Oxford Dominicans replied in a work known as the Corruptorium. A further work, Correctorium Corruptorii, was published by two Oxford Dominicans, William de Makelsfeld and Richard Knapwell. At the end of the 13th cent. another general defence of Thomism was written by Robert de Bologne, Apologeticon pro St. Thoma. Last of all a great work (sometimes was written by a celebrated Thomist, Hervé Noll de Nedeletville, in the university of Paris and master-general of the Dominicans, Defensa doctrinarum St. Thoma Her- venue Natalis.

Other important works written towards the end of the Middle Ages are Defensiones theologiae duci Thoma Aquatistii \footnote{Opera Omnia, Leyden, 1763-68, III, 515.} by John Capreolus (+1444), who was called the 'princiss Thomistarum,' and Thomistiarum contra modernos et Sociatas \footnote{Opera Omnia, Leyden, 1763-68, III, 515.} by Pierre Nicer (+1431). Diego de Deza (+1423), the illustrious protector of Christopher Columbus, wrote two polemical works in favour of Thomism, of which the more important is: Novarum defensee doctrinarum Angelici Doctoris beat St. Thomae de diversis controversia quaeritur libri (1513) and certain quaestiones, etc.

(b) Special. — (1) St. Thomas formulated the theory of the unity of the human person by making the intellectual soul the only form of the human composite. Against the Averroins (taught at Paris) which held the unicity of intellect for the human species, and against Augustinism, which held the plurality of forms, several treatises were written by Thomists—e.g., by Pierre de Tarantaise, Gilles de Lessines, William de Makelsfeld, Thomas de Sutton, Jean de Fainza, etc.

The General Council of Venice defined the Thomistic doctrine on this matter, which was further confirmed by the 5th Council of Lateran (1515), and by Pope Pius IX. in a letter to the archbishop of Tours (1857).

(2) The question of the nature of religious poverty and its practice by Christ and the apostles was hotly discussed between the Dominicans and the Friars Minor. The discussion became so divided towards the doctrine of Christ and the apostles did not possess anything, or did not perform acts of proprietorship, viz. buying and selling, etc. (12th Nov. 1829, Case infer multis).

(3) There was another theological combat between the Dominicans and the Minor with regard to the blood of Christ shed during the Passion. The Minor said that this was united to the divinity of Christ, the Dominicans that the union did not cease. Eventually Pope Pius II. forbade both parties to discuss the question further.\footnote{Acc. The General Council of Venice, 1515, cap. VIII.}

(4) The Dominicans strenuously fought against the nominalism \footnote{Opera Omnia, Leyden, 1763-68, III, 515.} of the 14th cent. of Durand de Saint-Pourçain and William Ockham were the leaders.\footnote{Opera Omnia, Leyden, 1763-68, III, 515.}
THOMISM

5. The Averroism against which Albert the Great and St. Thomas fought was renewed again at the beginning of the 16th cent. in Italy. This time the leader was Cajetan, who published a commentary on the de Animis of Aristotle (Florence, 1500). A few years later the Council of Lateran (19th Dec. 1513) condemned the teaching of Averroism on the point, and further exacted that professors of the philosophies should answer the contrary arguments, which Cajetan held only theologians could do.

6. In the 14th cent. disputes concerning the Immaculate Conception arose. St. Thomas undoubtedly leaves the question unsolved, but he was at great pains to show that the Blessed Virgin was not excluded from the redemption. St. Thomas says that the precise moment of sanctification is unknown; he therefore never proponned the question whether Mary was sanctified at the very instant of conception. He believed it better to be silent on this point, although, had he followed his personal inclination, he had without doubt concluded in the affirmative, as his first declaration witnesses in IV. Sent. 1, dist. xlv. qu. 1, art. 3, ad 3. But his superior theological sense did not let him take sides in the silence and the negative position of many theologians, and in particular the reserved attitude of the Church. The endeavour to drag St. Thomas to the negative or positive side is to force his meaning, since he voluntarily abstained from either.

6. Renascence of Thomism.—In the 14th and 15th centuries there was an intellectual decadence in philosophy and theology. Thomism could not altogether abstract itself from the influence of the time. However, even in the 15th cent. there was notable vitality among Thomists like John Capreolus, St. Antonius of Florence, and Jean de Torquemada. At the end of the 15th cent. the intellectual life of Thomism received new vigour, which manifested itself in the 16th cent. and continued for two centuries afterwards. In 1531 the General Chapter of Salamanca ordered the text of St. Thomas's writings to be used as text-books in all its schools. Hence at this time the great commentaries began to be written. Cajetan wrote from 1507 to 1522; Conrad Kollin in the Prima secundae (Cologne, 1512). Francois de Vitoria (whose commentaries remained in MSS) and Barthelemy de Medina from 1577 to 1578; Banez from 1584 to 1594; Sylvester Ferrarinis in the Summa contra Gentiles; Venice, 1566. The humanist movement of the 16th cent. had a great influence on certain Thomists. Francois de Vitoria took the lead; of his disciples the most famous was Melchior Cano († 1560), whose work, de Legis theologica, is a tribute to the humanist movement by its purity and beauty of style. Two new doctrines issued from the humanist state of thought: Ambrose Catharin († 1553) put forward new theories on predestination and grace; and Barthelemy de Medina formulated probabilism. Thomists combated the former doctrine; whilst in answer to the desire of Pope Alexander VII they combated strongly the new probabilist doctrines.

7. Thomism and the Council of Trent.—Thomists held an important part in this council. The Thomistic school had grave interests at stake on account of the dogmatic question regarding the doctrine of justification. Of the 55 members of the commission instituted by Paul III. to study this question three were Dominicans, of whom Bartholomew Spinac, master of the Sacred Palace, was the most prominent. The decree on justification was not drawn up without the help of St. Thomas. The text of the decree as regards the mode of preparation for justification is taken in its every detail from the Summa, III. qu. lxxxv. art. 5. The decree numbers six acts preparatory to justification. They are the same in nature, number, and order to which St. Thomas had pointed in his commentary on the de Animis of Aristotle (Florence, 1500). A few years later the Council of Lateran (19th Dec. 1513) condemned the teaching of Averroism on the point, and further exacted that professors of the philosophies should answer the contrary arguments, which Cajetan held only theologians could do.

8. Thomism and Molinism.—See art. Molinism ; also see below § 12.

9. Thomism and Jansenism.—In his posthumous work Augustinus (Louvain, 1640) Jansenius strove to prove that the new theology, especially that of Molina and Suarez, was against the doctrine of St. Augustine and contrary to the doctrine of the Council of Trent. This position many centuries aroused much opposition among the Jesuits. After an examination of the book, the Dominicans found that it militated not only against Molinism, but also against Thomism. Two Dominicans wrote against Jansenius—Alexander Schoultz (de Augustinis et SS. Patrum de libero arbitrio interpres thomisticus adversus Cornidii Jansenii doctrinam, Mayence, 1632), and Bernard Guguyard (Discriminatio inter doctrinam Thomisticam et Jansenianam, Paris, 1653).

10. Thomism and probabilism.—The theory of probabilism (q.v.) was unfolded by Bartholemew de Medina, a Dominican, in his Expositio in Primum Sentendae D. Thome (Salamanca, 1577). The Jesuits generally adopted this new theory. But, since the case with which any opinion could be made probable, provided the contradictory was probable, led to grave abuses, Alexander VII asked the Dominicans to combat strongly the probabilist doctrines. They did, and from that time no Dominican theologian has written in favour of probabilism.

11. Neo-Thomism and the revival of Scholasticism.—At the beginning of the 19th cent. Scholasticism (q.v.) began to revive, and there followed a revival of Thomism. The encyclical Aeterni Patris of Pius IX (Lett. pont, 1855) and the decisions of St. Thomas Aquinas as the great model and master of Catholic philosophy and theology. From that time all schools have studied the works of the master and have endeavoured to make his thought their own. The endeavour to keep in touch with the progress of modern science, and to show that the fundamentals of Thomism are in perfect accord with the latest discoveries of science, was set on foot, not, as is sometimes supposed, by the Institut Superior de Philosophie of Louvain University, but by the Thomist Sanseverino, one of the most learned and vigorous promoters of the movement. This is confirmed by his work, Philosophia Christiana cum antiqua et nova comparata. This great movement has been fostered and developed by the Institut Superior de Philosophie, founded by Cardinal Mercier at Louvain. Certain Reviews are now published in which the teachings of Neo-Thomism and Neo-Scholasticism are consistently set forth. The Review Thomistiche e Neo-scolastico di Filosofia are worthy of mention.

12. Essence of Thomism.—Thomism is above all a system of philosophy and theology. Now a
system necessarily implies harmony and solidarity among the doctrines of which the system is built up. In proportion as a system has unity, so much of its force is secured. Many philosophers and theologians have endeavoured to give systems of knowledge to the world, but on examination it is found that they lack the first essential of a system—that of thought every department. If certain principles are laid down in metaphysics, no doctrine in any department of applied metaphysics (as, e.g., in psychology, cosmology, ethics, etc.) should be at variance with those principles. Moreover, if a system claims to be a system of the whole of knowledge, both of that attained by human reason and of that attained by revelation, then no doctrine formulated by natural reason should be at variance with the doctrines formulated by faith; and conversely. It is evident that, if there be a system of this nature, it is eminently constructive or synthetic. Every stone in the structure must be in its proper place, and, if the building is to stand firm, there must be some grand unifying principle or foundation upon which it is built up. If there be any archipelago of buildings, there cannot be several foundations, but only one ultimate foundation, so in Thomism there is one fundamental principle unifying the system and insuring harmony and solidarity to every department which it embraces.

13. The fundamental principle of Thomism.—An examination of the various departments of Thomist metaphysics, of applied metaphysics, and of the whole realm of Thomist theology will show that the fundamental doctrines of each department are applications to various matters of a great principle inculcated by Aristotle in his metaphysics. It is the principle of the real distinction between act and potentiality. One has not far to seek in order to understand what is meant by 'act' and by 'potentiality.' 'Act' means perfection; 'potentiality' means absence of perfection. A thing in the state of potentiality is in an imperfect state, and is therefore capable of receiving what it lacks, viz., some perfection or an act (as it is termed in scholastic language), whereby it ceases to be in a state of potentiality and is brought to a state of having some perfection. There are, as is evident, many kinds of states of potentiality and many kinds of corresponding states of act, but it is not necessary to discuss all of them, since the doctrine underlying them all is one and the same. Furthermore, it is clear that the state of potentiality must be really distinct from the state of act; for, if this be not true, then 'to run' and 'to be able to run,' 'to know' and 'to be able to know,' 'to be hot' and 'to be able to be hot,' are one and the same, which is absurd. Hence there must be a real (extra-mental) distinction between the two states. This principle, then, may be formulated thus: Between the state of potentiality and the state of act there is a real distinction. Further, the first unfolding of this principle necessarily implies that that which is in a state of potentiality cannot cease to be in that state unless it be 'moved' from that state by something which is in the state of act; e.g., cold water has the potentiality to become hot, but it is impossible for cold water to become hot unless it be 'moved' from that state by something that actually possesses heat. It will be seen that this conclusion is an immediate inference of the real distinction between the states of potentiality and act. Hence the principle in a more explicit way may be formulated thus: Potentiality, which is really distinct from act, can never become act unless it be reduced to act by something else in a state of act. This is the fundamental principle of the entire Thomist system; established at the outset in metaphysics, it is applied without exception to the fundamental doctrines in every department of Thomist philosophy and theology. Whoever draws a single conclusion which is in any way at variance with this principle, although he may hold all other doctrines of the Thomist system, causes himself to be excluded from the Thomist.

14. The application of the principle.—(a) In metaphysics.—The Thomist doctrine of real distinction between essence and existence in created things, whereby essence is conceived as potentiality and existence as an act, is an application of the principle; likewise the real distinction between substance and its accidents, wherein substance is conceived as in potentiality to the accidents which are its acts or perfections; likewise the doctrine concerning the nature of dimensive quantity, the essence of which is not that it actually extends the parts of a corporeal substance in place, i.e. in triple dimension, but that it distributes the parts of that substance within the substance itself (which internal parts are only potentially distributed in triple dimension by dimensive quantity), and that it has the potentiality of extending those parts and of extending those parts in place according to triple dimension. Upon this doctrine of the nature of dimensive quantity is founded the doctrine of the real presencing of the whole body in a small consecrated Host; also the doctrine of the virgin birth of Christ, of His passing into a room, the doors being shut, etc. Likewise the important doctrine of cause and effect, or the principle of causality, is an application of the aforesaid fundamental principle. An analysis of 'that which begins to be (effect) must have a reason (cause) for its inception' shows the underlining great principle.

(b) In psychology.—The doctrine of the unity of the human composite, viz. that the intellectual soul is the substantial form of the body, and that it is the only form, is an application of the same principle. The 'prime matter,' a pure potentiality, which is informed by the intellectual soul (or act) receives from this act all that makes it body, and human body, and living. Through this principle it follows that the faculties of intellect and will are really distinct from the substance of the soul, because they are the acts or perfections of the soul, which in regard to them is a potentiality. And it follows also that every faculty is really distinct from its object as potentiality to act, but also that, in regard to it as object, every faculty is passive, not active. Hence the important doctrine that the human intellect is a passive, not active, power or faculty, in that it receives, and does not make, its object of thought as object.

Further (and this is most important from the point of view of Thomism versus Molinism), the human will, which is the faculty of choice, must ultimately be moved to the very act of choosing by something which is in act; and the reason is that, before the act of choosing (giving everything necessary for this action save this action itself), the will is in a state of potentiality and must therefore be 'moved' by something outside it to the state of perfection which is 'choosing.' Only God, the actus pars, can move the will to the very act of choosing; if angered else did this, the will ipso facto would cease to be free. This is the Thomist doctrine of causality treated which is a rigorous application of the aforesaid fundamental principle.

(c) In cosmology.—In this department of applied metaphysics the fundamental question concerns the precise nature of, and as body. Applying the aforesaid principle, Thomism concludes that
body, as body, is a composite of two principles, one of which is substantial form and the other prime matter. Prime matter is a pure potentiality of which the substantial form is the act; and latent in it, as a consequence, there is a real distinction.

(d) In natural theology.—The classic proof for the existence of God, viz. from the existence of motion in the world, is nothing more than a rigorous application of the same principle. Motion is here taken in its widest sense, embracing not only local motion but every kind of ‘passing from potentiality to act.’

(c) In ethics.—All the doctrines concerning habits and their formation, of the passions, of virtues and vices, of laws, etc., have their mainstay in the same fundamental principle.

(f) In theology.—For the existence of God see above (d). It is only necessary to run through the Summa to see that the same principle is fundamental in the doctrines concerning revelation and concerning inspiration (in which is implied the doctrine of cause and effect, and in particular of instrumental causality). By an understanding of the same great principle it is concluded that God alone is pure act with no admixture of potentiality whatever; hence, things are contained in both potentiality and act. It is further concluded not only that God’s essence is identically the same as His existence, but that His intellect and His will, His attributes of unity, goodness, truth, His knowledge and love are likewise identically the same as His essence. The same grand principle underlies the whole of the doctrine concerning the mystery of the trinity of persons in God. A further application is to be found in the treatment on the angels, whose existence is really distinct from their essence, whose minds and wills are really distinct from their substance, etc. Thus through the whole of the Summa one finds the same principle applied. It will be necessary to take only two more cases in order to show the solidarity of Thomistic doctrines. According to St. Thomas, the sacraments are the instrumental causes of grace; they are not more channels through which grace is infused into the soul; they are real, physical, instrumental causes which produce or infuse grace into the soul. The soul in its total intellectuality, in its potentiality, is a potentiality (potentia obducentialis), and grace is the act.

The final instance we shall take to illustrate the application of the fundamental principle of Thomism concerns the doctrine of actual grace. Just as in the natural order it was concluded that the human will is physically premoved by God to the act of choice, so in the supernatural order an actual grace is nothing more than a physical premotion in that order. Hence the Thomists speak of ‘gratia efficax ab intrinseco,’ a grace intrinsically or of its very nature efficacious, and not of grace, intrinsically indifferent, to be made efficacious by consent of the will to accept, or to remain inefficacious by refusal of the will to accept. Thus Thomism, by a relentless logic, applies the great principle to the doctrine of actual grace. To the mind of St. Thomas, whilst the apparent difficulties, of the principle, this doctrine is the only logical conclusion. For Thomism the theory of Molina or Suarez bristles with more difficulties in that the theses of the actualities of God and the Prime Mover of all things, of causality, and of the great metaphysical principle: Potentiality, which is really distinct from act, can never become act unless it is premoved by God. In short, for the sake of a difficulty in applied metaphysics (i.e. the freedom of the will under God’s physical promotion), Molina and Suarez gain no principle already established in metaphysics, just as he who, on account of some difficulty in algebra or mathematics, gainsays a principle of pure mathematics.

Any conclusion other than the one drawn above wrecks a system of the whole of knowledge in the mind of the Thomist. It is owing to the perfect consistency of this system that the single first principle aforesaid to every department of knowledge that Thomas bequeathed to the world a sublime system remarkable for its perfect unity, harmony, and solidarity of thought.

LITeRATURE.—For the history of Thomism generally: Dictionnaire d’Apologie, e.g., ‘Frères Prêcheurs, Leur éxtase’ (P. Mandonnet); CK, s.v. ‘Thomism,’ For the progress of Thomism: Acta apologetarum generalis ordinis Praedicatorum, Rome, 1893-1904, ed. by M. Reichert, ii. 196-391 (of the Dominikanerorden).

Concerning the Good: Good and Evil Christ during His Passion, M. S. in the Bibliothèque de Paris, Cat. 12960, fol. 1-73; Benedict XIV., de Servorum Dei Beatificatione et beatorum Canonizatione, ii. ii. [289]

For Thomism see Nominalism of 11th c.: C. Jourdain, La Philosophie des Thomists d’Aquin, Paris, 1897; K. Werner, Die nominalistische Psychologie der Scholastiker des späten Mittelalters (vols. i-iii), Vienna, 1883.

For Thomism and Molinism: Re L. P. Guillermain, ‘De la grace suffisante,’ Reume Thomiste, ii. 23-31 [1901-03].

Alfred Whittacre.

THRACE (Θρᾴκη, Ὀχρᾳ).—Thrace was the name given in classical times to a mountainous region lying north of Greece proper. The inhabitants (Θρᾴκοι, Ὀχραῖοι) were a barbarous people, having no close affinities to the Greeks in language, race, or government. In the last field, however, their influence on their more civilized neighbours was considerable, beginning early and continuing fairly late. In particular, they appear to have been partly responsible for the remarkable change in the spirit of Greek religion which took place about the beginning of the classical epoch or shortly before it. This change must not be thought of as something revolutionary, akin, e.g., to the conversion of most of N. Europe from Roman Catholicism to Protestantism at the Reformation; for the large majority, probably if not certainly, religious beliefs and practices changed little if at all. The change was rather the advent of a new element, which rendered possible the holding by many Greeks of ideas either unknown to their fathers or existing among them in a very undeveloped form, and largely forgotten when first we hear of them definite and distinct from the older region of the Balkans and the countries west and east of that district (Bulgaria and Greece proper), except So-scenic or the Carpathians. Driven back by the Huns, the Strobiloi tribes from the region of the Vistula, or possibly from sheer restlessness or desire for fresh
Priam's and the Thracian.

"They his Trojans habiting only not Homer and the races from Thrace. That Thracians were more honoured to be identified with the Greeks, being connected with the Thracians and the Thracian people, who are often confused with them, and the Agathys, whose name seems to indicate that they were held in no great esteem by their Scythian neighbours (the first two syllables are probably to be connected with Zend agha, 'bad'), and who appear from Herodotus to have practised the very primitive custom of group-marrying. On the whole, the northern group shows certain curious traces of the domestic tradition of the Thracians, especially, as already mentioned, with the Thracian.

3. Language.—As the Thracians seem to have had no knowledge of writing, the few inscriptions we have from Thrace are late and of little value. The Thracian remains, however, a number of glosses, some 80 of which we may take as genuine Thracian words; about 25 names of plants given as Thracian by Diodorus, and a considerable number of proper names, both of persons (including deities) and of places. From these it appears that the language was Indo-Germanic, of the E. European group, having as its nearest ancient cognates Phrygian and Armenian. Traces appear of two distinct linguistic stocks, and possibly of two races; and this we may consider along with the fact reported by Pausanias that these Thracians differed from that of the common people. The Thracian.

4. Material culture.—It has been pointed out that Homer does not consider the Thracians to be of inferior culture. In the Iliad the Thracians are for the most part the allies of the Trojans; Priam's treasury includes a cup of their giving; the son of Aeneas was brought up in Thrace and married there; Thracian comes to Triarn's aid with a strong Thracian contingent. On the other hand, some of them at least traded with the Greeks. No hint is given that they are in any sense savages; in particular, the descriptions of Thracian manners are lucidly mannerly. But there is no need to suppose, as Heilig does, that the Thracians of that day, under the Phrygians and other foreign influences, were still practising a short period of 'choise' culture which brought them for a time to higher levels than they ever afterwards attained. The true case seems to be that Homer knows nothing of the later division between Greek and barbarian, and that the Greek world was barbarous everywhere. This, he says, was the development of the Greek world; that of the barbarian. The difference was that the Greeks developed marvelously rapidly in the next 300 years or so, while the Thracians remained backward.

Passing to classical authors of the later periods, we find one chief account of the descent of Herodotus, who

towards the Thracians, while not unkindly, is clearly that of civilized man describing interesting barbarians; and this is indeed a certain judgment of the Thracians, of little importance owing to their lack of unity; their culture is on the whole uniform. That the Thracians appear to have despised agriculture, and in fact, to have considered it as 'bad', or 'not to be done', and to have lived by plunder. They have, however, some arts, as they can weave very good cloth of hand-spun wool. To this day the Greek and other authors tell us that they showed skill in making various tools and weapons of iron. They were accustomed to dye their hair red, and to have black faces; they were said to be a polygynous; that they lived under father-right, not mother-right, is clearly mentioned; and the Thracian women, being in the marital jealousy was strongly developed, though the chastity of an unmarried girl was quite disregarded,—i.e., their women were apparently thought of chiefly as valuable property, belonging to their fathers so long as they were unmarried,—hence the light view taken of their immoralities. For any child, whether they might bear out of wedlock would also belong to their own family,—but afterwards belonged to their husbands, who had paid for the exclusive use of them. When we add that as a race they were cattle-breeders and especially famous for their horses from very early times, it is clear that we shall not be far wrong in comparing them to some one of the principal Baucic peoples, such as the Amazons, before the latter attained unity of government under T. Chalko. Physically, however, they were at the other end of the colour-scale, being fair-skinned and yellow-haired.

Finally, four points should be noted as giving the clue to many features in their religion. According to the practically unanimous voice of antiquity, (1) the Thracians were desperately brave, having little fear of death; (2) they were excitable, and, in particular, short of temper, with a strong sexual passion; (3) they were heavy drinkers; and (4) they were intensely jealous of their own country, and fiercely patriotic.

In addition, their country was a mountainous one, in which caves were no rarity.

5. Religion. — They may take as our starting-point the famous passage of Herodotus, v. 7: 'They worship only the following gods, Ares, Dionysos, and Artemis; but their kings... reverence Hermes above all other gods, swear by him alone, and say that a person who is shown a dream by Hermes, and speaks in the dream, mean exactly what he said, and the Hebrew prophet who speaks of the name of his God as being 'great among the Gentiles' means his words to be startling to a heathen, a-Greek always assumes that the gods of all nations are much the same as his own and never scruples to talk of the Egyptian cult of Hermes or the Roman worship of him, meaning thereby Thoth and Juno. We shall see from when and to whom such a statement of Herodotus' statement is true of one deity only.

(a) Areas.—That Ares is a Thracian deity is a fairly widespread opinion. As far back as Homer (a) we find Thracian gods mentioned in their proper names, and this by Homer, and later writers echo Homer. Ares lies, moreover, certainly non-Greek features; his cult is wholly without any of those higher forms which distinguish, e.g., Apollo or Athena and remains throughout that of a war-god pure and simple. Homer's whole attitude towards him is one of dislike; he supports the Trojans throughout; and in his rival we find one feature paralleled in Thracian hard to parallel in purely Greek cult—the dog-sacrifice to him under the name of Enyalios at Sparta.

At the same time it must be confessed that none 1. Between Greeks as a whole and Thracians as a whole, no bitterness seems to have existed. The references to Thracians as bloodthirsty savages are mostly in comparatively late authors like Pausanias, xix. 22. 2. The mention that the delusive conduct of certain Thracian mercenaries in the Peloponnesian War was a source of shame to the Thracians must have had something to do with this, while later their savage battles against the Romans prejudiced the latter against them.

2. Herod. ii. 6, 7 ff.; xix. 22, 23, 25, 27. 3. References in Tomasek, i. 119. 4. Id. 5. References in Herodotus, x. 119. 6. Mal. 111. 7. Il. xiii. 301 and elsewhere. 8. Eph., Verg., Aes., Ill. 9. Vit. Helv. 10. St. 11. 12. References to other passages of Herodotus are cited in the notes. For fuller authorities see Tomasek, Die attor Thuker, i. 111 ff.
of the above features are conclusive against his Greek origin. Among a people brave enough, but not fond of war for its own sake, the war-god needs to retain some "functional" features; it is not wanting to be altogether neglected, too unpopular to develop. Among the traditional friends of Troy are also Apollo, Artemis, and at times Zeus himself; not unlike the Thracian god, who was made from a single god who had lost his prominence region to an obscure ritual; and the references to Thracian need mean no more than that the Thracians, being war-like, had a popular cult of a war-god. And we must remember that the cult of Artemis by old men is full of references to his name. It is not possible to appear then that somewhere after the downfall of the Homerian (Achian) culture, and during the period of reconstruction, of which very little is known, his worship crossed the border and was carried, it is no longer possible to say exactly how, or by whom, to all parts of Greece, meeting with considerable opposition, but finally establishing itself as part of the state religion and becoming largely civilized in the process, though recrudescences of its original barbarism, such as the well-known one in Italy, were always possible.

No detailed description of the cult of Dionysos in Thracian has come down to us from authors who speak of this god as Thracian are literally correct. The chief arguments in favour of this statement are as follows:

(b) Dionysos. — The case of Dionysos is very different, and there is little serious doubt that this god was by nature a war-god, and that his name is not only plausibly derived from an Aryan root, which in itself proves nothing, but has a characteristic Greek formation.

It is therefore, on the whole, that the Thracians did not originate the Greek cult of Ares, but had from very early times a war-god of their own, about whose ritual we must be content to remain ignorant. It is worth mentioning that Herodotus seems to speak of him as an oracular god in one rather obscure passage.

The old ritual of Ares Tweussebhos (Paus. vm. xviii. 4, 5) may point to Amazonianism, which is not Greek. This is exceedingly doubtful.

The forms Apesos (Hom. Ione.) and Apesse (Alk. Ind.) indicate a stem in -epes; cf. προεφωνος. The root is akin to sl. rete, \( \text{rte} \), See C. A. M. Pellens in C. U. xil. (1928) 283.

vii. 76, \( \text{εκ} \) τοιοποιοι των αυτου\( \text{ς} \)\( \text{ερεις} \) εκ των καυσωνιων. The context is corrupt, and it is uncertain who are referred to, quite possibly not Thracians at all.

The counter-theory, that he is a Cretan deity, is supported by E. Harrison (Prolegomena, ch. viii.). The argument for it reduce to (e) the fact that a cult of a god of this type did exist in Crete from very early times and remained so powerful that Zeus himself is absorbed by it; (f) the certain features of Cretean Dionysos ritual. But, in view of the overwhelming evidence for a Thracian origin, these are little weight. The former is common to many localities; the latter is naturally explained by supposing that the worship of Dionysos is transferred to the name of the god who was so powerful in Thessaly because it was so like the native worship, and so was little modified.

We must remember that the name looks as if it were a Cretan one, or the like is too absurd to deserve more than passing mention. The Thracian Dionysos has been supposed to be originally a god of agriculture, but possibly connected with the holy mountain Yaus, which is variously located but apparently Thracian in Homer.

2 Hom. Pt. Alex. vi. 319, 320.

3 The best known form of the legend is that given in Erlidis, 376, 1197; Arist. sp. Maurob. Sat. i. 34, 35.

4 Cf. art. Pneumatos.

5 C. R. S. 25: 325. Od. xxiv. 74.

6 It was an age of religious and poetical prophecy (see p. 36, 9, iii. 68.), The favourable reception of the women may have had a good deal to do with it also.

7 Liv. xxxii. 3.

8 To save a multitude of quotations, we refer the reader for detailed authorities to the 'Thesaurus Graecae Linguae' of Scyl. and the end of this article.

9 The root is possibly \( \text{φαγεω} \) (Curtius), in both names, but \( \text{φαγεω} \) is from \( \text{φαγεω} \). Enthus is derived from the well-known cry "faye!"

The present writer holds religious and sexual emotion to be essentially the same; see, e.g., W. James, \textit{Varieties of Religious Experience}, London, and New York, 1902, passim. The frequency of ‘conversions’ and the like during adolescence and the regular employment by mystics of all nationalities of erotic metaphors are among the facts supporting this view.

of Greece some time, probably not very long, before the dawn of Greek history. In Homer lie is apparently a foreign god, little known and not much regarded; of the five mentions of him two \( ^3 \) are certain interpolations, one \( ^4 \) is unimportant, the others come in the story of Lykurgos. When we come to the Homeric hymns, however, he is a well-known and important deity, and all later literature is full of references to him and to his history. It appears that somewhere after the downfall of the Homerian (Achian) culture, and during the period of reconstruction, of which very little is known, his worship crossed the border and was carried, it is no longer possible to say exactly how, or by whom, to all parts of Greece, meeting with considerable opposition, but finally establishing itself as part of the state religion and becoming largely civilized in the process, though recrudescences of its original barbarism, such as the well-known one in Italy, were always possible.
THRACE 327

327 cave.' the god visits his worshippers in early spring (the time of most of the festivals), it is welcomed by them, and is joined to them by a sort of primitive sacrament. Of the death or expulsion of the worn-out god, later in the year, we do not hear so much, but there are traces of it. In the legend of Lykurgos already referred to (p. 327), the god of the sea—the throwing of the vegetation-spirit into water is a very common rite; there was a strong tradition that he had died, and was buried at Delphi;1 and there is also a legend of his descent into Hades to fetch up Thame.2 We are therefore, in view of these facts and on the analogy of all similar ritual elsewhere, justified in supposing that his death was part of the ceremonial of his cult; and this belief is strengthened by the curious relic of Dionysiac worship found in Thrace by R. M. Dawkins,3 in which the death of one of the characters in the mummers' play is a prominent feature. Closely allied with this went the ritual representing his birth and eroding in the Μίνως, or winnowing-fan. The last detail, however, marking him definitely as a corn-god, is Greek rather than Thracian.4

In the ritual of Dionysos the forms of the god change bewilderingly. We have reason to suppose him to have been conceived as bull, goat, kid, sheep, serpent, stag, and even pig.5 For all these animal manifestations are shown to have been sacred to him, and, as he is at times said to have taken the forms of some of them, notably bull and serpent, we may conjecture that he was more or less familiar with the others as well. But the iconography he is always human, and he had human attributes, as might be expected from the human sacrifices.

(c) Divine kings—Lykurgos, Penthemon, Rhesos, Orpheus. Several of the legends seem to indicate that in Thrace, as elsewhere, there existed kings of the type described by Strabo, i.e., they were of the local god, who ended by being sacrificed, possibly demoted, by the Greeks probably never had had this sort of king—certainly had forgotten it—they naturally misunderstood the legend. The story goes in the National Gallery.

Dionysos; Potamia, Ταυροθησία; Πτυχών (Plut. Them. 12.)

2 See Plut. de Is. et Os. 352.

3 See Elian, Nup. Anim. xii. 31. The Thracian ritual seems to have been touched down almost into a normal sacrificial.

4 For a few examples see art. FEASTS AND FASTS (Greek), p. 143. For other examples see art. MYTHOLOGICAL (Greek), p. 255. For a full discussion see art. FESTIVALS AND FASTS (Greek), p. 142.

5 See Plut. de Is. et Os. 352.

8 A selection of the relevant passages will be found in C.G. v. 2001.

above mythological figures exactly correspond to the Fracian type. Lykurgos persecutes Dionysos; but the form which his persecution takes is a pursuit (probably originally ritual) of the god and his attendants and the lopping of them with the κυκλή, but which is possibly meant, not an act of good, but a whip of bull's hide, a fertilizing ἕφαρμα like the hide thongs of the Roman Luperci. He is not torn in pieces by the god's followers, as one would expect from a genuine act of inhuman cruelty, but as in the Dionysiac replicas (which varies in detail) is punished, by blindness or otherwise, and imprisoned in a cave.1 Pentheus opposes the Bakchai and is torn in pieces by them. Orpheus is a royal priest of Dionysos and is torn in pieces by the Mistrades—an act for which mythologists assign sundry fanciful reasons.2 Rhesos is a vague figure, but it has been urged that his name may be connected with ῥής (Gothic roitz) and the royal Thracian name Ρησάς. After his death he appears—the exact sense and reading are matters of dispute—to be represented by the author of the play bearing his name as having an oracular deity or semi-deity (ἀνάμνησις ék̓ θυμάμαν) of somewhat Dionysiac type.3 Add to all this the facts that the Getic priest-king was called 'god' 4 and that we get as a royal name of frequent occurrence in the god's cult the name of a certain Kotyo, it becomes at last plausible that the cult of Dionysos and other gods of the same kind in Thrace had at its head in early times 5 a priest-king who was the incarnation of the deity and ended by being devoured, naturally making the way to death to make way for a fresh incarnation.

(d) Orphicos.—Of the persons mentioned in the last section one is of such importance as to deserve separate treatment, viz., Orphicos. In the legends concerning this priest-king the tradition of antiquity is fairly constant. He is a more or less historical figure; he existed some time before the Trojan War;6 he was a Thracian,7 son of King Echion, and afterwards priest-king of the Thracian god. The later writers locate him on the coast of Thrace, near the mouth of the Hellespont. After various adventures, the most notable of which was the descent into the Under-world, he travelled into the Lykaion, 'a marvellous musician. His home, when exactly localized, is generally said by our earlier authorities to have been Mt. Pangaios, the site of an ancient sanctuary of the god. Some later writers mention a location in Euboea, near the city of Magnesia, while others place the site of his later home in the eastern Peloponesus. His name is known to us under a number of different spellings, e.g., his declaration of his intention to give oracles. The ancient evidence is to be found in H. x. 1; [Eur.] Rhes. 555 f.; Polyb. vi. 59. xxvii.

1 See Soph. Ant. 555 ff., and Jebb, ad loc.

2 For examples see Serv. on Verg. Georg. i. 510.

3 See Kinder, ι. 151, who rather too confidently assumes Rhesos to have been a far-famed god. W. Leaf (JHS xxv. [1915] 1) goes too far in the opposite direction. On the whole the present writer is of opinion that Rhesos may really have been a half-forgotten king of some Thracian tribe, who after his death was supposed to give oracles. The ancient evidence is to be found in H. x. 1; [Eur.] Rhes. 555 f.; Polyb. vi. 59. xxvii.

4 Strabo, vii. 228.

5 Presumably not in historical times, as one can hardly suppose that none of our authors would have mentioned it in that case.

6 For an isolated expression of doubt see Oec. de Nat. Deor. i. 35 (Sua). Orphicos postea doctus Aristoleos magnum fuisse, which from the context is almost certainly a denial of Orphicos' existence. His mountain may merely have meant to deny his authorship of the 'Orphic' poems.

7 Contemporary with the Argonauts, according to most versions of the myth of the Argonauts, see e. g., Plut. Mor. 30, frags. 1407 ff., 1304, 1295, 1408. He was a member of the Kastoi, i.e., of a sort of Phrygian Rhodians.

8 'Thracius Orphicos' (Var. Ec. iv. 55) is his stock epithet.

9 I.e., not a writer on the theoretical basis of religion in general, or of any particular religion, but one who describes the nature, mysteries, cults, or deities. In this sense Herodotus, e.g., is a 'theologian' (θεολόγος).
Torn in pieces by a band of women, possessed by real or pretended Dionysiac frenzy.

Next came another period, in Hades, during which the process was known apparently as the κόκυλον, or cycle of reincarnations. 2 Release from this could be obtained by a series of good lives on both sides of the grave—apparently the world was the heaven or purgatory of the other. After a triple good life on either side—three on earth and three in Hades—the soul had purged itself from the sin and was able to enter a permanent paradise, with no more prospect of reincarnation, and in the enjoyment of divine or heroic rank. 3

This theology, and much besides, was embodied in a large literature, attributed either to Orpheus himself or to his pupil Mousaios, 2 the oldest parts of which probably date from the 6th cent. b.c., while the latest representatives, the Hymns and Orphic Argumenta, are about 1000 years later. 4 Of this the greater part has perished, and especially the earliest and most valuable part; and we have of undoubted and fairly early Orphic origin only one set of documents, the so-called Petelia Tablets, gold plates found in Orphic graves in S. Italy. It appears from these that a pious Orpheus was in the habit of burying with his dead friend directions for his conduct in Hades, to aid him in his travels there, and charitable to suppose that the life just completed was the last of the series of good lives required to qualify for escape from the circle. 5

The tablets present the following picture of Hades. The soul, apparently after long and thirsty wanderings, travels along a road flanked on either side by springs. Avoiding the left-hand spring, 6 it addresses the guardian of the entrance to Hades, who declares itself to be of divine race, and begs for a draught of 7 the cold water which flows forth from the lake of Memory. The request is granted, and the soul is hailed as having 8 endured that which aforetime it had never endured. 9 It addresses Persephone and the other deities of the under world, and is admitted into their society.

The poem to which all these tablets go back is of unknown authorship and date, but it is evident that it or something like it stands behind the passages of Findlay and Plato already cited and also behind much that is to be found in other authors, mostly late. The connecting link is to be found in Pythagoreanism, which, it would seem, had found Orphism already established in S. Italy, and incorporated much of its teaching. This results in a confusion between the two systems so complete that it is practically hopeless to separate the documents, to say definitely with regard to any eschatological passage that it is purely Orphic or purely Pythagorean. Through the Pythagorean exiles which reached Greece proper after the dispersion of their communities in Magna Graecia the higher forms of the doctrine became known to Plato, in whom consequently we find side by side strong Orphic-Pythagorean influence and hearty contempt for Orphic charlatanism. Not dissimilar is the attitude of Aristophanes, who, on the one hand:

2 Cf. Proclus, in Plat. Resp. 390: Orphikos ὁ τῶν Διόνυσου ἀριστεύων τύχανον προσέρχεσθαι διὸ εὐμετάλληκεν αὐτῷ ὁ θεὸς. 3 The details varied (see Bobbe, II. 115 f.; Gruppe, col. 1139 ff.). The Orphic writings being largely kraft, has to be patched together from various sources, many of them obscure.
4 The theology does not differ from the theistic in essential; the chief departure are the insertion of the soul into the egg-laid by Night and of two of vague deities, Peisces and Erykapos.
5 T. S., transl. E. Krapp, Perséphone-Zémeda, S. 523. The Orphic writings being largely kraft, has to be patched together from various sources, many of them obscure.
6 From one side to the other; for reference to this see Hym. 392 f., and Pind. Gr. vi. 76.
7 Condemned from Plat. Resp. ii. 304 E.
8 J. B., transl. B. 615 A, B; cf. Verg. Aen. vii. 748; of these the former is probably Orphico-Pythagorean; the latter is generally held to be Orphic.
9 From this προσέρχεσθαι διὸ εὐμετάλληκεν αὐτῷ ὁ θεὸς.
10 For reference to this see Hym. 392 f., and Pind. Gr. vi. 76.
11 Condemned from Plat. Resp. ii. 304 E.
12 Orphic notion: Hym. i. 252, 256; of these the former is probably Orphico-Pythagorean; the latter is generally held to be Orphic.
13 Orphic notion: Hym. i. 252, 256; of these the former is probably Orphico-Pythagorean; the latter is generally held to be Orphic.
hand, parodies private mysteries of the Orphic type in the Clouds and, on the other, draws in the Frogs on the same type of ideas for his half-serious parody of the dominant world.

Another problem which we cannot solve with any great exactness is the amount of non-Thracian thought which goes to the making of Orphism as we know it. The very name of the founder is in doubt. We have either a Thracian name,¹ others point to the occurrence of Greek cognates² as indicating it to be Greek. As to the doctrines, it is unreasonable to suppose that the Thracians produced so elaborate and quasi-philosophical a system of reincarnation; this is rather the result of Greek exegesis on Thracian Dionysiac material. Thrace, on the other hand, is the likeliest claimant for the grotesque myth on which the whole system rests; but here again we do not know how much was contributed by obscure superstitions from backward corners of the Greek world. The asceticism we may not unfairly call Thracian, though the details of it are not definitely non-Hellenic.

Exactly what form the Orphic religion took, in its external and long line it remained a potent force, is precisely a question. Without any less what proportion of the Greek peoples was seriously affected by it. With regard to the first point, however, it would appear that Orphism had its origin in Thrace, a view which seems to be confirmed by the presence of Orphic documents in the 4th cent. A.D., but, like other productions of that epoch, they show unmistakable traces of syncretism, and of Orphism we have little or nothing outside of literature. Therefore, on the whole, we are disposed to attach less importance than Dieterich does to the undeniable coincidences between Orphic imagery, e.g., and that of certain Chaldean and Christian writings; we would look for the source of that imagery, and the many common points of ritual and belief in Christian and non-Christian cults, to the numerous Hellenized Oriental influences rather than to Orphic proper, holding that the language which once was chieftly, if not peculiarly, Orphic had become common property,³ while Orphism itself had become very unimportant. This, however, cannot be considered as settled beyond reasonable doubt.

1 See Tomasevich, ii. 52.
2 Orph. given as a Laconian name in Serv. on Verg. Buc., v. 123; Philo Judaeus; 1 Macc. vi. 28; 1 Cor. xiv. 16; 1 Tim. iv. 1; 2 Macc. xiii. 2, 18; and the root of the adj. ἄφοραν. See B. R. Æm. 826 ff. The form of the former cited is found again on Osidian tomb (G. Kehrle, IG Neele und Itaion, Berlin, 1600, nos. 1489, 1705, etc.), and on at least one which is about 1580. (G. Kehrle, IG Neele und Itaion, Berlin, 1600, nos. 1489, 1705, etc.)
3 The expression is the first occurrence of the term, appearing as the Christian refrigerate; cf. the ‘water of life’ of the NT.

We may now consider briefly the moral value of the Dionysiac and Orphic cults. That they were immoral in the obvious sense is not likely. It is true that they made us all ‘livy,’ e.g., makes out Dionysiac orgies to have been scenes of huge riots of indulgence and lust; but he is speaking of a late form of the worship, far from its native place, and has all the Roman prejudice against any secret conclave—the same prejudice that later gave rise to the same tales about the early meetings of the Christians. But in a broader sense we may say that all such cults were immoral, for they were untrue to Hellenism, replacing the Egyptian formula. They also were just as common to life with a misty other-worldliness, sure to lead to intellectual decay, however brilliant the first flowerings of its mysticism might be in such a mind as that of Plato. Not till the notion of the ancient world did such doctrines really become prevalent; and the overthrow of the Pythagorean communities, primarily political, may be thought of as also an unconscious revolt against a force traitor to Greek civilization.⁴

(e) Artemis.—Here we need have no doubt that Herodotos is not to be taken too literally. All we have any reason to believe is that a Thracian Artemis, probably of Thracian origin, was the mother of Artemis, and that we have not the faintest trace—is that some great nature-goddess was worshipped in that country. We can give at least two names of such deities. One is that of Kottys, the Thracian who, although generally spoken of as a Phrygian, was also Edonian.⁵ Another deity, who was to some extent naturalized in Greece in fairly early times,⁶ was Bendis, whose cult is mentioned together with that of Kottyo by Strabo.⁷ Of the details of her worship we know little but that the torch-race mentioned by Plato⁸ fits well enough with any deity equated with the torch-bearing Artemis, but is by no means peculiar to her; and of the native worship of her we hear chiefly that it was noisy.⁹ Probably enough there were a score of such female personifications of the fertility of nature, worshipped with orgiastic rites not unlike those of Dionysos himself, possibly in connexion with him.¹⁰

(f) Hermes.—With regard to Herodotos’ statement that the Thracian kings especially venerate Hermes, we are not aware that any very convincing evidence has been brought forward, but in few of the facts mentioned in the next paragraph, we suggest that he means Hermes Cithoniou and identifies with him some one of the deities after the patria potestas.

(g) Zoismoa.¹¹—Our chief authority for this deity is again Herodotos, who informs us¹² that the

¹ xxxix. 10, and elsewhere in his description of the Thracian-salynian affair.
² The above account of the origin and progress of Orphism, while in our opinion the correct one, has been contended against by R. Eder (Weltanschauung und Hinnehmung, Munich, 1910, ch. v). He endeavours to prove that its origin is due to Asiaic, particularly Persian, influences, and this theory is accepted by some later writers (e.g., H. A. Strong, Apokathes and After Life, London, 1910, p. 314). We hold that, with all deference to Eder’s great learning and industry, his arguments are wholly insufficient for the Orphism of the times of Pythagoras or of Plato, whatever light they may throw on the orphic system which at the beginning of the Christian era met with that name.
⁴ 149 n. c., see Plat. Resp. i. 237 A f.; cf. schol. ad loc. and commentary, esp. the close of p. 324 (Weltenmantel). We endeavours to prove that its origin is due to Asian, particularly Persian, influences, and this theory is accepted by some later writers (e.g., H. A. Strong, Apokathes and After Life, London, 1910, p. 341). We hold that, with all deference to Eder’s great learning and industry, his arguments are wholly insufficient for the Orphism of the times of Pythagoras or of Plato, whatever light they may throw on the orphic system which at the beginning of the Christian era met with that name.
⁵ E.T. ‘Hermes’ fr. 55 Dindorf: ἅμαρτεία κήρυκς εἰς Ἰαβούνειον: cf. the common royal name Kottos.
⁶ 149 n. c., see Plat. Resp. i. 237 A f.; cf. schol. ad loc. and commentary, esp. the close of p. 324 (Weltenmantel). We endeavours to prove that its origin is due to Asian, particularly Persian, influences, and this theory is accepted by some later writers (e.g., H. A. Strong, Apokathes and After Life, London, 1910, p. 341). We hold that, with all deference to Eder’s great learning and industry, his arguments are wholly insufficient for the Orphism of the times of Pythagoras or of Plato, whatever light they may throw on the orphic system which at the beginning of the Christian era met with that name.
⁸ Or in conjunction with some of the other Dionysiac deities, such as Sabazios (Thracus-Pyrganos).
⁹ Or in conjunction with some of the other Dionysiac deities, such as Sabazios (Thracus-Pyrganos).
¹¹ Ycv θυσία. For this passage, xcv. 4, tum: ἀθέτητε τοὺς θυσίας θυσίας Θρακικάς: cf. IG Neele und Itaion, Berlin, 1600, nos. 1489, 1705, etc.)
THRACE

Getai worshipped him, and so exclusively that they regarded no one else as a true god, even the heavens themselves. What his nature was we can gather in part from the rationalistic story told of him, that he was a slave of Pythagoras, who, returning home, taught him the secrets of his master's philosophy, insisting especially on the immortality awaiting the faithful. To prove this, he disappeared for a time, hiding in an underground room; after three years he returned, and so made every one believe he had been in Hades and was come again. It is noteworthy that the same story is told of Pythagoras himself, and it smacks strongly of the Elysian, Greek and other, of superhuman persons who live in caves or under mountains and thence return occasionally or in some way intervene in human affairs. With this story we must join the decided suspicion of Herodotus himself that Zalchnicos is a local divinity, not a mortal at all, and the statement of Strabo that he was worshipped in an άρτρόδες χαρίν in Mt. Kogaloon. He is clearly, like Dionysos himself, a god belonging to the under world, but not Greek (inclusively) method of excavating. Did this worth, on which, we may perhaps suppose from the myth, he was thought to appear every year, as Dionysos frequently did every second year. As an infernal deity, he is represented as presiding over so many points, and the proper term to apply to what seems to have been rather a sort of fantastic messenger service. Once every four years the Getai chose a man by lot, whom they accompanied and fed like a dying and superhuman person. If he died, he deemed to have been immortal; if not, the god had rejected him, and he was disgraced. Before being tossed, he was charged with the messages of the people to the infernal world in various forms. The idea, found amongst many races, that the dying can take to the dead the mandates of the living.

(a) Other religious practices. — Besides the cult of definite gods, we have a few facts relative to the general religious attitude of the Thracians. In particular, we have Herodotus' description of a funeral ceremony, which sounds oddly like Homer's account of the funeral of Patroclus. The corpse, if of an important man, lies in state three days, during which mourning and sacrificial feasts go on; finally there comes the actual funeral, when the body is buried or burned, a mound raised, and offerings of various kinds, the principal one being a single combat, are celebrated. This was the usual rite, and it indicates at any rate high honour paid to the dead. The duel especially as if he were 'dead' for his god, which would involve a contradiction in terms: 'They threaten the god they believe in because they don't believe in him.' The correct translation is of course Αρέας or 'Zeus'; cf. Ith. F.; εὐκρισίας Διονυσίου τοῖς τεκείνοις ... ο θεός (Zeus, not Dionysos) εὐκρισίας διότι, and many other passages in which ο θεός means 'sky' or 'heavenly bodies.'

1 Hermippus, op. Diog. Laerct. viii. 41. This story is perhaps imitated from the one in Herodotus, which probably is an invention of the Greeks of the Pontos.

2 Examples in Bohde, 111 ff. 4 ill. 285.

3 He seems to be regulariteriteri, i.e. in alternate years, by the Greeks (inclusively) method of counting. To originate in a custom of shifting the cultivation every other year, vouched for by Homer, is the most plausible theory, but gives a phallus or divine person as occurring among the Getai? Among a people backward in agriculture the practice may well have varied, the period of cultivation being altered from one, two, or three years to the districts according to the richness of the soil. The author owes this suggestion to Farnell.

4 Ith. F.; θεός τε διάζωντος (this becomes their stock phrase, which has the force of the), 2, 3.

5 The idea is particularly common in modern Greek ballads.

6 Ιτ.; 8. 8.

7 The exact interpretation given to these facts depends upon the view taken of the origin of άρτρόδες in general. The present writer holds that they do not originate in funeral ceremonies, or even divine mountain deities, but are often associated with both. The duel, however, is, like the Roman gladiatorial shows, distinctly a sacrificial rite in this case.

may reasonably be thought to have been a form of blood-sacrifice. This in some of the wilder tribes, was no mere form; beyond Krestone, we are told, lived a race which practised sati; the favourite wife, chosen, it would seem, after careful examination of the relatives, was sacrificed by her next-of-kin at the tomb and then buried with her husband. The Trausoi again made a death a subject of rejoicing, and mourned at a birth. We see, then, that the whole of Thracian religion was permeated by the idea of the vast importance of the future life.

(i) Summary: general characteristics of Thracian religion. — We find in Thrace a religion of a barbarous kind, but by no means incapable of development into something higher and more spiritual. The chief marks of barbarism, besides the revolting character of some of the rites, were (a) the largely magical character of much of the ceremonial, unconnected with anything either ethical or spiritual, and tending rather to excite than to elevate; and (b) the materialistic conception of the future life. Cosmogonists, which is live underground, occasionally intervening for the bodily good of their worshippers and rewarding the faithful departed with drunken feasts; or the receptacle for the spirits of the dead; as the Zalchnicos already quoted, in which he is represented as feasting the Thracians, and the taunt of Plato that the inferior sort of Orphics considered external drunkenness the highest possible felicity. This is not to say that Thracean religion was always of a sensual character. It is noteworthy that the northern races, or some of them, had a reputation not only for courage but also for virtue and even for superhuman powers.

Thus the Getae are the 'bravest and most righteous' of the Thracians; the holy Hyperboreans live somewhere near the Thracian region; in and around which country are the sacred and asetonic Argipalos, the just Iseodones, and the Neurid, who are all magicians, besides the Samnacountal, who are of Amazonian stock; while the glorified shade of Achilles haunts various localities of the Black Sea region.

A great part at least of this persistent attribution of saintly or magical distinction to the northern districts may well have for its justification the natural complement of the strong sexuality of the races, asceticism, which we have already seen, was a strong feature of Orphism. Another reason no doubt is simply the fact that many of these peoples were distant and unknown. Yet another is, quite likely, the existence, not of whole nations, but of castes, which were priestly. We have already seen that the Bassoi certainly, and other tribes probably, had divine kings, and this often enough, as in Egypt, means the domination of a sacrificial clan or caste.

To sum up, therefore, Thrace had, so far as we can learn from the observations of its nearest civilized neighbours in classical times, a religion predominantly eolian, other-worldly, mystical, gloomy, often cruel and barbaric, but not un-spiritual—a sharp contrast with the brightness of the characteristic Greek cult of the Olympian deities.

LITERATURE. —(A) Ethnology, etc., of Thrace: J. A. Tomn- skow, Die ältesten Thraker, pt. i. 'Ubersicht der Stämme,' SBAB cxxvii. (1855) pt. ii. 'Die Sperchonti,' SBAB cxxvi. (1865).

1 v. 5.

3 Plato (Charm. 110) uses the 'physical' of 'Zalchnicos' and appears playfully to interpret ἀνασκάλεων as referring to their skill. They were probably a sort of shaman or medicine-men, who may, like their Siberian confrères, have combined medicine and prophecy.

6 Of the piece of the Homeric Ethiopians (II. 495).
TIBET.

The Tibetans are entitled to be regarded as one of the most "religious" peoples in the world, if by 'religion' is understood not only the belief in spiritual beings, but also the binding influence of that belief, as formulated by their Church, for the better regulation of their worldly actions in everyday life, and for procuring for them by pious observance of the incalculable maxims the satisfying hope of a higher position in the life after death. Not only is this the proportion of its inhabitants which the population in Tibet which devotes itself to religion greater than that in any other country, being at least about one to eight of the population; but in its whole extent, the life of the laity is also dominated and pervaded by their religion to an exceptional extent.

1. Climatic environments.

The peculiarities in the climate and physical character of Tibet have determined its topographical position, between the two great civilizations on either side, the Indian and the Chinese, from both of which it has derived elements of its composite form of Buddhism, explain to a considerable extent the peculiarities of its religion. The vast awe-inspiring solitudes with the rigorous nature of the climate have impressed themselves visibly on the religion of the country. And Nature has contributed, by the massive physical barriers she has erected against access to that land, to maintain to the present day the isolation of that country from the rest of the world, and to preserve the monastic and archaic forms of religion and superstitions.

Perched on the summit of the great plateau of Central Asia, and stretching across over twenty degrees of longitude, in the plateau region, from the Himalayas to the Kuen-lun mountains and Western China, it includes the loftiest tableland on the surface of the earth. Although generally called a plateau, it is in fact composed of innumerable hills and mountains, cut up by ravines, the stretches of level land being relatively few and far apart. The general elevation of the permanently inhabited tract seldom falls below 11,000 feet above sea-level, while a very great extent of the country exceeds 16,000 feet, which is about the limit there of perpetual snow. Its highest border lies along the Himalayas, rising in mountains, the highest on the globe, from which its surface slopes gradually eastwards into China—a feature explained by the fact that in not very remote geological times the land of Tibet formed part of the bottom of the China Sea of the Pacific. And the writer has picked up fossil shells on the Tibetan side of the Himalayas which were of the same species as those he obtained from similar strata.

The former deals chiefly with history and ethnology, the latter with linguistics.

2 The increase of the population hitherto was that by the Chinese in 1573, which gave the proportion of the Lamas as one to three of the total population. At the present day about one to eight appears to be near the mark, in accordance with the present writer's own observations and those of W. W. Rockhill.

3 This is the estimate of W. W. Rockhill (Land of the Lamas, p. 336), and it generally agrees with that of the present writer.
also call them ‘the givers of alms’ (sbyin-blo-bag), at the same time making it understood that it is the donors who benefit most by the exercise of this charity. And certainly the last epithet is well deserved, for the Tibetans, the most priest-ridden people in the world, are among the most lavish in their religious gifts.

Notwithstanding the large amount of non-Buddhist elements in Lâmasiun, derived from the pre-Buddhist cult, the belief that it is surprising to find how deeply the everyday life and notions of the laity are leavened by the Buddhist spirit. The doctrine of metempsychosis and its korrum and the potency of acquired merit by good deeds enters into the ordinary habits and speech of the people to a remarkable extent. Their proverbs, folk-lòra, songs, and lay dramas are full of it; and they explain human as well as animal friendships on this principle. Even practices which are clearly dishonest and sinful are at times justified on the same principle, or rather by its abuse. Thus the more sordid Tibetan reconcile themselves to their misfortunes by vaguely convincing themselves that the person whom they now attempts to defraud had previously swindled him ‘in a former existence,’ and that justice demands retribution. Congenital defects, even such as blind- ness—reputed a curse and stigma—are viewed as retributions due to the individual having in a previous life abused or sinned with the particular limb or organ now affected. Indeed this is the orthodox dogma of Buddha’s own teaching and forms the basis of the Jâtakas, or tales of the previous births of Buddha, which are diffused by itinerant or friar Lâmas, and greatly impress the people; a feat of the better-known Jâtakas in many cases copy or in block-printed booklets form, with the manuals of ritual and divination, the chief books of those Tibetan laity who are able to read; and they also form the subject of the chief dramas enacted by the lady.

This wide-spread belief in metempsychosis also includes the people in the treatment of their cattle and other dumb animals. They treat these exceptionally humanely, and life is seldom wantonly taken. The taking of animal life unnecessarily, even for food, is largely prohibited, and, although in such a cold climate animal food is an essential staple of diet, the professional butchers are rare and the Profession of Lâmas is, ‘By the three Holiest Ones’—the Buddhist Trinity.

The non-Buddhist features and practices of the Tibetan religion, however, are also conspicuous, and reflect their pre-Buddhist cult, the shamanistic Bon. The physical environment of their life, in their rigorous climate where they see Nature in her roughest mood, in pitiless fury of storms and cold, terrorizing the brave as well as the timid, has impelled them to worship the more obvious forces of Nature as malignant demons which seem to wreck their fields and flocks, and vex them with disease and disaster. Their invariable craving for material protection against those malignant gods and demons, as they thought them to be, has caused them to pin their faith on the efficacy of charms and amulets, which cherished objects are seen everywhere dangling from the dress of every man, woman, and child, not even excepting the Lâmas themselves. These charms, as we have seen, are mostly sentences of scriptural texts borrowed from holy books of Buddhism, and they are supplemented by bodily and other relics of holy Lâmas, such as bits of their dress, crumbs dropped by them, nail-parings, etc.; and by these the Tibetans believe that they muzzle or bind or banish the devils.

A more cheerful and graceful side to their worship is seen in their popular practice of planting the tall inscribed ‘prayer-flags,’ which picturesquely flutter in the breeze around every village, and in the strings of inscribed flaglets which flounce from house-tops, bridges, sacred trees, and passes, and from other places believed to be specially infested by malignant spirits or demons.

As the people live in an atmosphere of the marvellous, no story is too absurd for them to credit, if only it is told by Lâmas. They are ever on the outlook for omens, and the everyday affairs of life are governed by a superstitions regard for lucky and unlucky days and the influences of unpropitious planetary portents. Although special diversions are sought from the occupation of Lâmas in the most serious events in life—in birth, marriage, sickness, and death, and often in sowing, reaping, building, etc.—each lamaian determines for himself the auguries for the more trivial matters.
of his ordinary business, for travelling, buying and selling. At home they are apt to forget that Confucius and Cicero—to mention only these instances—believed in astrological aguraries.

Pilgrimages to sacred shrines are very popular, and little is thought of the hardships and expenses of long journeys for this purpose. Every opportunity is seized to visit celebrated shrines and to circumambulate the numerous holy buildings and sacred spots.

Prayers ever hang upon the lips of the people in the intervals of their work and even during their work. But the prayers are addressed chiefly to devils, threatening them with punishment through the saints and deified Buddhas, or imploring them for freedom or release from their infictions; or they are plain, naive requests for aid in obtaining the good things of this life. At all spare times, day and night, the people ply their prayer-wheels (g.e.v.), and tell their beads and mutter especially the mystic Sanskrit six-syllabled spell, Om ma-ni pad me hum, * Om the jewel in the lotus Hnbn, * the sentence which, they are led to believe, gains them their goal, the glorious heaven of eternal bliss, the paradise of the fabulous Buddha of Boundless Light (Amitabha) or the 'Boundless Life' (Amitayus g.e.v.). Yet with all their strivings the Tibetans are sincere in order to obtain real peace of mind in religious matters.

3. Bon or pre-Buddhist religion.—The aboriginal pre-Buddhist religion of Tibet is called by the people Bon (pronounced Fon); and those who profess it are called Bon-pa, i.e. 'the Bons.' The meaning of the word is unknown. It is essentially a shamanist, devil-charming, necromantic cult with devil-dancing, allied to the Taoism of China, and, like the latter, has been largely intermingled with Buddhist externals. But it still retains its essentially demonist character. It was actively suppressed and its establishments were destroyed by the Tibetan rulers on their conversion to Buddhism from the 7th cent. A.D. onwards, at the instigation of the Lamas, as it indulged freely in animal and human sacrifices; and it is still strictly forbidden by the Lamaist hierarchy which holds the temporal rule in Central and Western Tibet. But it is still largely and openly professed over the greater part of Eastern and South-Eastern Tibet, the most populous part of the country, which, for many centuries, was under Chinese rule and outside the domination of the Grand Lamas. Indeed it was an appeal by the people of these provinces to China to protect them and their Bon religion that induced the Chinese to administer these provinces on behalf of the Bons. This unsuspected fact of the wide prevalence of the Bon religion there was brought to light by W. W. Rockhill in his extensive travels in these provinces, where he found it to be much more popular and prevalent than Lamaism. It was especially popular among the settled agricultural people, whilst the nomads, whose business led them into the territory of the Grand Lamas, were more attached to Lamaism. So numerous were its adherents that Rockhill estimated that about two-thirds of the population of Tibet were Bons. In Central and Western Tibet, where the repressive policy of the Lamas prevents the profession of the Bon cult, it is rare to meet with any Bon priest. The present writer has met only a few itinerant priests who were clandestinely performing their demonist rites for villagers who they were usually illiterate and uncouth-looking men, exceptionally dirty, with long shaggy hair, and bedecked with little tufts of wool and tiny flags; and they indulged in devilish antics and inelegant chants.

In Eastern Tibet, however, where they are free to practise their cult, the Bon priests live in large flourishing monasteries, which they call gon-pas, like the Lamaist establishments; and they have many imitations of godling and demons generally resembling in appearance those of Lamaism, but bearing different names. Their chief god they call *Shen-rabs Mi-bo, who is reputed to be the god of the demified priests of the Bonist Padma Sambhava. They have bulky printed and MS books of ritual, which Rockhill found to consist of a Sanskrit jargon for the most part interspersed with other meaningless words.

The present writer observed that the words in some of their MSS, which are written in the Tibetan script, were the Lamaist Sanskrit words spelt backwards: the lotus-jewel formula of the Lamas was spelt *Mul-nam pad-mo,* thus, while attesting their borrowing from Lamaism, emphasizing their anti-Lamaist character. The swastika also, which they use extensively, is invariably figured with its ends or 'feet' turned in the reverse direction to that of the swastika proper (the feet of the latter turn to the right in the direction of the sun's course), and thus indicate the Bon cult to be of a lunar character which is evidently not only from the bloody sacrifices, but also from the predominance of the dragon-worship therein.

A significant glimpse into the original character of the Bon cult is obtained from the Chinese annals of the 8th cent. A.D. (i.e. before the introduction of Buddhism into Tibet), where the rites of the Tibetans are described:

"The officers (Tibetans) are assembled once every year for the lesser oath of the Bon religion, which is called the 'Bon ceremony,' first breaking their legs, and then killing them afterwards, exposing the intestines and cutting them into pieces. The sorcerers having being summoned, they call on the gods of heaven and earth, of the mountains and rivers, of the sun, moon, stars and planets, saying: 'Should your hearts become enraged, and your thoughts disorder, the gods will see clearly and make you like these sheep and dogs.' Every three years there is a grand ceremony, during which all are assembled in the middle of the night on a raised altar, on which are spread savoury meats. The victims sacrificed are men, horses, oxen, and asses, and prayers are offered up in this form: 'Do you all with one heart and united strength cherish our native country. The gods of heaven and the spirit of the earth will both know your thoughts, and if you break this oath, they will cause your bodies to be cut into pieces and you these victims.'"^2

Even in the Buddhist period, in the 8th cent. A.D., similar bloody rites were celebrated by the professing Buddhist king of Tibet in concluding a treaty with the Chinese.

The attire of the Bon priest in his special celebrations is a coat of mail armour, from the shoulders of which project small flags, and a high-crowned hat bordered by effigies of human skulls and ornamented by flags and tufts of wool; a sword and shield are in the hands to fight the demons. (The black-hatted devil-dancers are of the Bon sect.) On ordinary occasions they wear a red robe, and occasionally have human skulls embroidered on their dress. Their hair is worn shaggy, and not tamed like the Lamas. They offer on their altars wool and yak hair, and images of men and animals made of dough, and such, as shown by the present writer, instead of the sacrificed animal of the primitive cult.

Whilst the present-day lion religion has acquired many of the formalities of Lamaism, many of the elements of the old Bon religion have been incorporated into the latter, just as so many of the pagan rites of Roman and Celtic heathendom have

been incorporated into the later Christianity. The reformed Lamaist Church of the Yellow-hat sect occupies a more ancient line of descent such as the necromantic expelling of the death-demon and the demons of sickness, and much of their divination-ritual. The unreformed Yellow-hat sect still retains some ancient rites to a much greater extent, including the erection of masts attached to dogs' and sheep's skulls, to 'bar the door' to the earth- and sky-demons.

Lamaism and its rites.—The various aspects of Lamaism and its sects and rites have already been described in previous articles.1

L. A. WADDELL.

TIME.—I. Introductory.—Temporal characteristics are among the most fundamental in the organism of experience, and cannot be defined by us. We must start by admitting that we can in certain cases judge that one experienced event is later than another, in the same immediate way we can assign one such object to the right of another. A good example of the immediate judgment in question is when we hear a tune and judge that of two notes, both of which come in our present series, one precedes the other. Another example, judgment about a needed fact, is made in genuine memory. On these relations of before and after which we immediately recognize in certain objects of our experience all further knowledge is built.

It must be noticed that the relation, as given in experience, connects what we may call protensive events, i.e. events that have some duration, and not momentary events. We are not directly aware of events without duration, still less of moments of empty time, and therefore are not directly aware of the relations between such objects. Momentary events, moments of time, are mere relations which order those objects which are all known only after a long process of reflexion, abstraction, and intellectual construction. This does not necessarily imply that they do not exist in nature, still less that they are subjective and arbitrary; all that is meant at present is that they are not the objects of direct awareness. Again we must notice that the relations of before, after, and simultaneous with, as given in experience, are not mutually exclusive. Protensive events may very well overlap, and therefore we must recognize that the most general relation between them is that of partial precedence or consequence. Of course, we are very familiar with the construction of momentary events and see how convenient it is to we tend to define partial precedence in terms of them and their relation of total precedence. But the opposite direction must be followed if we want to start with the experienced facts and trace the logical development from them of the scientific

3 *We shall consider later what the Theory of Relativity has to say as to the impossibility of separating time and space and as to the notion of a single time-series.*

4 It is commonly believed that, when the analysis is made into moments and momentary events, all the events in the history of the world fall into their places in a single series of moments. So too it is supposed that, when the analysis is made into material and geometrical points, all the points in the world take their places in a single three-dimensional series of geometrical points.

5 *Alleged differences.*—(1) It is commonly held that all events have temporal relations to each other, but this is not true of geometrical relations. This is denied by a small number of philosophers, notably by Samuel Alexander.
Without questionning the possibility of correlating psychical events with positions in space, we must hold that this alleged difference is a genuine one. If in introspection we contemplate our states of mind in the same sense as in perception, we cannot deny that our states of mind show no trace of being extended or standing in spatial relations, but do have duration and stand in temporal ones. Alexander would, however, deny that we can contemplate states of mind. If this be so, it would of course be quite possible that we should fail to become aware of the spatial characteristics of our mental states, even though they possess them; but of course we have no right to pass from this merely negative position to the conclusion that they actually do possess them. Alexander's positive reasons are bound up with a large and complex metaphysical theory into which we cannot here enter. In any case the present difference is merely an external one, and would not affect the essential similarity of space and time.

(2) A much more important point is that time is said essentially to involve the distinction between past, present, and future as well as that between before and after. Now nothing in space obviates the possibility of time disappearing in time.

(3) Closely connected with this alleged difference are a number of rather vague statements often made—e.g., that parts of space co-exist, but that only the present moment exists. These are, if anything, the greatest differences between space and time may be treated together. They rest largely on confusions into which it is very natural to fall. The distinction between past, present, and future is not one which, like that between before and after, lies wholly in the experienced objects, but is one that rests on the relations between experienced objects and the states of mind in which they are experienced. To begin with, the distinction between present and not-present at any rate may be usefully compared with that between here and elsewhere in space. Here means near my body, elsewhere means distant from my body. If we want an analogy to the distinction between past and future, we can find one in the distinction between things before and things behind our body. It is true, however, that this analogy is incomplete, and that for an important reason, though one extraneous to the nature of time. The reason is that our practical and cognitive relations towards the future are different from those towards the past. The former is a part of the past at any rate directly by memory, but we know the future only indirectly by probable inference. There is no analogy to this in space; our knowledge of what is behind our body is of the same kind and of the same degree of certainty as our knowledge of what is in front of it. But we may imagine that a distinction like that between past and future would have arisen for space also, if we had been able to see straight in front of us but had never been able to turn our heads or our bodies round.

The distinction is sometimes drawn that the past is fixed and unalterable, while the matter depends, in part at any rate, on our volitions. In some sense is this true?

Without involving ourselves in controversies about free will and determination, we may at least assume that the laws of logic apply to propositions about the future. Hence any proposition asserting the occurrence of any future event must be true or false, and cannot be both. In that sense the future is as determinate as the past. But two points have to be noticed. (1) However much we may know about the laws of nature, I cannot make probable inference from the future to the present; nor can we acquire knowledge of the future, but I can make probable inference from the past to the future; e.g., if I know by observation that if the sun rises the future is now determinately true or false, I may be able to judge now from my knowledge of the past, that if there is no sun, and of the laws of nature, what propositions about future events are much more likely to be true than others. (It must of course be remembered in this connection that a proposition that is actually false may be much more likely to be true on my present information than one that is actually true.) We know with regard to certain classes of events that such events never occur unless preceded by a desire for their occurrence, and that such desire is directly correlated with the occurrence of the corresponding events. But the existence of a desire for a event does not introduce any probability that the event will occur; we did we might be said to affect the past in exactly the same sense in which we are said to affect the future. Thus the assertion that the sun rises in the future but that we cannot tell when to come down to this: (a) that propositions about the future can be inferred from other propositions about our knowledge of past and present, but not conversely, because of our lack of direct acquaintance with the future; and (b) that the general laws connecting a desire for a with the occurrence of other event must be of a class as a consequence and never as an antecedent.

3. Relation of time to logic. This brings us to the very important question of the relations of time to logic. If we say of any event e that it is present, this proposition will generally be false, and will be true only at one moment. It seems, then, as if the truth of the proposition altered with time. Any other proposition asserting the occurrence of an event—e.g., Queen Anne is dead—seems to be equally at the mercy of time. Then again there seems to be other propositions that are totally independent of time—e.g., 2 x 5 = 4. These are sometimes called universal truths; they always state relations between universals, and all our a propositions are of this kind; we may say that there are propositions which essentially involve time, but claim to apply to any time; e.g., whenever it rains and I am out without my umbrella, I get wet. Thus, on the face of it, there seem to be three kinds of propositions as regards time: (1) temporal truths, which are independent of time because they deal with the timeless relations of timeless objects; (2) hypotheticals asserting relations between various events—these contain an essential reference to time, but not to any particular time; (3) propositions which assert the occurrence of particular events, and which may be true at some times and false at all others, though this is not really so. There are two points to notice about the last class of propositions. (a) All propositions about events essentially contain a reference to a time, as all propositions about particular events essentially contain a reference to the particular time at which the event happens. This reference is not always made explicit; but, until this has been done, we cannot say that the verbal form stands for any definite proposition. (b) We have to distinguish between the time at which a judgment is made and the time involved in the proposition that is judged. When the latter is not temporally determined, the judgment is not temporal; or, to put it thus, it is not a temporal proposition. Only then, if I say "It is raining," does the expression involve time, since it clearly intends to refer to a particular event, and not just the state of affairs as a "It is raining," it is not a temporal proposition, since it says nothing about the time at which it rains. Therefore it seems to be sometimes true and sometimes false. But, as actually asserted, the event would be taken to express my judgment of the proposition. "It is raining at the time at which I say it," and this judgment is true or false, subject to a further correction which we shall add in moment. In fact, whenever we are told that a proposition is sometimes true and sometimes false, we know that we are dealing with an incomplete statement about an event, and that the real state of affairs is that a propositional function of the form e happens at t' gives true propositions for some values of t and false propositions for other values. But the propositions themselves are timeless true or false.

It is important to notice that in practice there is always the possibility of any verbal statement about events, no matter how uncertain it is, being sometimes true and sometimes false. We are not directly aware of moments of time, and so can date events only by other events. And the persons who read and use our verbal statements can only by some description the event which we use for purposes of dating. Now we can never be certain theoretically that only one unique event corresponds to any description. But this is often the case, and often there is real ambiguity in practice. Take, e.g., the amended expression offered above: "It is raining at the time at which I say it," and this is often the case. To any reader of this article the
expression remains ambiguous, because he knows that the event is not determined by a very ambiguous description, 'The writer's statement of the words "it is raining"—a description which applies to dozens of different events. In practice the writer may safely infer the fact that all the manifold circumstances under which the particular conversation takes place go into the description and make it practically unambiguous. In writing, the difficulty is solved practically by using only the original of dates sequence, such as the birth of Christ, whose full description is so complicated that it is almost certain that only one event answers to it. But the theoretical difficulty remains, and so we are tempted to say that any proposition about events is sometimes true and sometimes false. The proper thing to say is that any verbal expression referring to events, no matter how carefully put, always runs a theoretical risk of ambiguity—i.e., it might with equal propriety make one reader think of one proposition which is true, and another of another proposition which is false.

We can now apply these general results to the special case of events being sometimes future, and then present, and finally past. The statement 'e is present' is essentially incomplete and ambiguous, as it is for present tense, and sometimes true and sometimes false. The first thing, then, is to fill in the special time involved in the proposition. We then get 'e is present at t', where t is some definite moment fixed by some system of dating from a well-known and presumably unique event. What does this statement mean? Assuming that there are such things as moments, it means that e is at the moment t in an analogous way to that in which an object is at a position in space. The statement 'e is present at t' may be compared with the statement 'Mr. Asquith is present at the meeting', which means that his body is in the place where the meeting is held. In all complete statements of the form 'e is at t' we must understand the word 'is' as standing for a timeless copula, and distinguish it from the 'is' of the present tense, which is contrasted with 'was' and 'will be'. Let us denote the 'is' of the present tense by 'is now'. Then the statement 'e is now present' is an incomplete statement which is interpreted in use to mean 'e is at (or occupies) the same moment as my assertion that it is e is now present at t'. Similarly, 'e will be present' means 'e is future e is at a moment subsequent to my statement that e is now present. The laws of logic are of course concerned with the timeless copula, and they presuppose that statements containing tenses are reduced in the way suggested above.

4. Past, present, and future.—We see, then, that the real source of the distinction between past, present, and future, and of the difference here between time and space, is that our judgments as well as the events judged about are in time, while our judgments about things in space are not in any obvious sense in space. These three distinctions correspond to the three possible temporal relations between our judgments and the events which our judgments are about. These distinctions are important, and they have been enshrined in language because they are correlated with important epistemological and psychological distinctions. We all know that states of mind are essentially contemporary with their objects—e.g., the immediate awareness of visual sense-data when I open my eyes. Other states are essentially later than their objects—e.g., my memories. If we exclude the present moment, we may state the important epistemological proposition that all states of mind which give us an immediate knowledge of existents are either contemporary with or later than the existents.

It is important to notice that these statements are not merely analytic. There is a psychical difference between memories and awarenesses of contemporary sense-data which is open to introspection (though, of course, there may be marginal cases where the difference falls below the threshold of distinguishability), so that the statement that the former succeed and the latter are contemporary with their objects is a synthetic proposition.

We must, moreover, take into account the facts described in psychology as the specious present. In the first place, we must say that, if an object be known directly by a state of mind which succeeds it by more than a certain short time, t, which seems to be fairly constant for a given individual, the state counts introspectively as a memory, and the object is judged to be past. If the period between the object and the direct awareness of it be not greater than t, the awareness does not count for introspection as a memory, and the object is judged to be present. To say, then, that an object has not yet been presented (as is invariably the case in (timeless) the object of an immediate awareness which succeeds it by less than t, and (b) that my statement 'It is now past' succeeds it by more than t. We have still, however, to consider what is meant by the presentness of a state of mind. This seems to mean that, if a state of mind be the object of an act of introspection which succeeds it by less than certain short period, the state presents a certain peculiarity which does not present to any other act of introspection.

We can now deal with such statements as that only the present exists, or that the present is a mere transition from one infinite non-existent to another. These phrases are mere rhetoric rooted in confusions. It is perfectly true, of course, that the whole history of the world is not a complex of co-existing parts (in the sense of parts existing at the same time), as a table is. But this does not mean that it is not a whole, or that one part of it exists any less than any other part. To say that X no longer exists, or does not yet exist, simply means that X occupies my present mental state, or that I do not perceive my statement about it. At another moment I may make another statement of the same verbal form about X, and, since this no longer stands for the moment, I occupy my present mental state, or that I do not perceive my statement about it. But this involves no change in X itself. That X exists at a certain moment simply means that X occupies that moment, and this is timeless true. Similarly, the fact that this moment has a certain temporal relation to any definite assertion that I may make about X is a timeless true. That it has different and incompatible temporal relations to various assertions of the same verbal form made by me is also timeless true, and is not merely compatible with but also a necessary consequence of X's existence at its own moment. An event must continue to be, if it is to continue to stand in relations; the battle of Hastings continues to precede the battle of Waterloo, and therefore both these events must eternally be at their own respective moments. That both have ceased to be, it is to continue to stand in relations; the battle of Hastings continues to precede the battle of Waterloo, and therefore both these events must eternally be at their own respective moments. That both have ceased to be, if it is to continue to stand in relations; the battle of Hastings continues to precede the battle of Waterloo, and therefore both these events must eternally be at their own respective moments. That both have ceased to be, if it is to continue to stand in relations; the battle of Hastings continues to precede the battle of Waterloo, and therefore both these events must eternally be at their own respective moments.
The fallacy which we have to avoid is that of confounding the subject of co-existence; in one sense the parts of any related whole co-exist; in another only those events that occupy the same moment of time co-exist. It is clear that the whole course of events is in a certain sense a tetom simul; it becomes easy to see the answer to the famous theological problem: How can God’s foreknowledge of men’s actions be compatible with the freedom of men’s wills? The answer is as follows. Whether man’s wills be free or not, every man’s future actions are as completely determinate as his past ones; this is a mere consequence of the laws of logic. If indeterminism be true, then no amount of knowledge about past actions but that it becomethat the general laws of nature or the particular habits of a man, will enable us or even God to infer with certainty what the man’s volition at t actually is, although it is eternally perfectly determinate. These two statements are clearly quite compatible. Finally, in spite of the fact that God cannot infer the man’s volition at t, He may at any and every moment be directly aware of it in precisely the same way as we are aware directly (and not merely inferentially) of certain events through memories which are themselves later events. The facts that at a certain moment t, God can have a state of mind whose eternal volition is the volition of a man at some later moment t₂, and that no amount of knowledge of events before t₂ would enable Him to infer the volition at t₂, are perfectly compatible; and they cease to be even paradoxical when we compare the ease of memory and note that there is no essential difference between past, present, and future.

5. Divinity of time.—A great many philosophers have been concerned to deny the reality of time. Their arguments fall into two groups: (1) those that depend on the supposed infinity and continuity of time, and are therefore equally applicable to space; (2) those that depend on the supposed peculiarities of time—e.g., on the distinction of past, present, and future. Before considering the arguments in detail, it will be useful to make some quite general reflections.

(i.) It is a matter of direct inspection that the immediate objects of some of our states of mind have temporal characteristics. It is as certain that one note in a heard melody is after another in the same aperiod present and that each has some duration as that some objects in my field of view are red or square and to the right or left of each other. It is then quite certain that some objects in the world have temporal characteristics, viz., the immediate objects of some states of mind. Now it is also certain that these objects exist at least as long as I am aware of them, for, in such cases, I am obviously not aware of nothing. Hence there cannot be anything self-contradictory in the temporal characteristics found in these objects, for otherwise we should have to admit the existence of objects with incompatible characteristics. Hence there is no necessity why temporal characteristics should not also apply to what is not the immediate object of any state of mind. It follows, then, that criticism cannot reasonably be directed against temporal characteristics of the second sense, and it is thought that this prevents it from co-existing in the first. Yet this is necessarily false, since it is admitted that events do have and continue to have temporal relations, and therefore they must manifestly be the peculiarities those parts have being. The confusion is increased by the belief that past, present, and future are essential characteristics of objects in time in the same way as before and after are, instead of being analysable into the temporal relations of states of mind and their objects.

When it is once recognized that the whole course of events is in a certain sense a tetom simul, it becomes easy to see the answer to the famous theological problem: How can God’s foreknowledge of men’s actions be compatible with the freedom of men’s wills? The answer is as follows. Whether man’s wills be free or not, every man’s future actions are as completely determinate as his past ones; this is a mere consequence of the laws of logic. If indeterminism be true, then no amount of knowledge about past actions but that it becomethat the general laws of nature or the particular habits of a man, will enable us or even God to infer with certainty what the man’s volition at t actually is, although it is eternally perfectly determinate. These two statements are clearly quite compatible. Finally, in spite of the fact that God cannot infer the man’s volition at t, He may at any and every moment be directly aware of it in precisely the same way as we are aware directly (and not merely inferentially) of certain events through memories which are themselves later events. The facts that at a certain moment t, God can have a state of mind whose eternal volition is the volition of a man at some later moment t₂, and that no amount of knowledge of events before t₂ would enable Him to infer the volition at t₂, are perfectly compatible; and they cease to be even paradoxical when we compare the ease of memory and note that there is no essential difference between past, present, and future.

(ii.) It is an obvious of importance to be clear as to what is the particular view of time that is attacked by special arguments. The important distinction for us to make is this: it is possible to say (a) that there are no moments of moments of time, and that events occupy some of them but are distinct from them, and have temporal relations to each other in virtue of those which subsist between the moments that they occupy; or (b) that there are no such things as moments distinct from events, but that events really do have direct temporal relations to each other; or (c) that there are no moments, and that even events only appear to have temporal relations to each other. It is clearly possible to deny (a) without denying (b). To do this can hardly be called denying the reality of time; it should rather be called denying the arbitrariness of time in favour of the relative theory. It is only philosophers who deny both (a) and (b) and support (c) who can strictly be said to deny the reality of time. It is quite possible, however, that some arguments might be equally fatal to (a) and to (b).

It will be well at this point to say what we can about the controversy between absolutists and relativists. The absolute theory strictly means that temporal relations between events are regarded as compounded out of two relations—(1) that of an event to the moment of time which it occupies, and (2) the relation of before and after between moments of time. The relative theory holds that there are no moments, but that temporal relations hold directly between events. Its most important philosophical upholder is Leibniz, though he goes a good way further in the direction of (c); it is also held, with a good deal of misunderstanding and confusion, by many modern physicists of a philosophical bent. We may say that the relative theory stands at one remove, and the absolute theory at two removes, from what we find in the objects of immediate experience. Here we find, as we have seen, an infinity of finite duration and relations of partial precedence. The relative theory replaces those objects by series of momentary events of no duration, and the relations by those of total precedence and simultaneity. The absolute theory takes the further step of replacing a whole new set of objects which have no duration and stand in relations of total precedence but never of simultaneity, and a new relation, viz., that between a momentary event and the moment which it occupies.

Neither theory has been very accurately stated by most of its supporters. Newton, for instance, one of the chief upholders of the absolute theory, was mainly concerned with the measurement of time and the desire to have a constant rate-measurer; but in his later theories, when thought out, may be reduced to what has been stated above. We may say at once that we know of no way of deciding conclusively between the two. But if some past events and momentary states may exist, we now know that all their
work can be done by certain logical functions of nothing but events and their duration and their connectedness. Hence both theories may be said to be assuming entities which are not necessary to science and cannot be either discovered (i.e., momentary events in the relative theory, and moments in the absolute theory), and the absolutes is the worse of the two. As certain logical functions of what actually exists (viz., certain classes of events) moments do exist; but whether there also exists any a priori logical connection of the type of individuals and not of that of classes is it seems folly to attempt to determine. It is, however, often convenient to continue to speak in terms of moments, and this is harmless for the reasons given above.

(1) Those based on its supposed infinity commonly confuse infinity with endlessness. They generally proceed on the assumption that what is meant by the infinity of time is that it has neither a first nor a last moment. But this would be perfectly compatible with the whole course of time lasting for no more than a second. The fractions between 0 and 1, arranged in order of magnitude, have neither a first nor a last term, and yet the interval between any two of them is less than unity. But all attempts to prove that time or the series of events is endless fail. Thus attempts to prove that they cannot have ends. The most celebrated argument on both sides of this question is contained in Kant’s first antimony. His argument against the endlessness of time, interpreted as characteristically possible, comes to the statement that, because there are definite points in the time-series—in particular, the point which we have reached when we read Kant’s argument—therefore the series must have a definite beginning point. Otherwise, Kant says, the series of events could never have reached the definite point which it admittedly has reached. The argument is, of course, a complete non-sequitur, for it practically amounts to saying that a series cannot have any definite term unless it has end points. And this is sufficiently refuted by considering that the number 22 is perfectly definite, although the series of numbers with signs in it has neither a first nor a last term.

Arguments to prove that time or the series of events in time cannot have a beginning are perhaps more plausible. It is difficult for us psychologically to imagine a first event or a first momentum, because all the events that we can remember have been preceded by others. Also there are some difficulties connected with causation in the notion of a first momentum that do not apply to a first moment or to a last event. A first event is one which no event precedes, though there may of course be moments that precede a first event. Now, the only plausible general proposition about causation seems to be that, if the whole universe be completely causes for a finite time, it could not begin to exist.1 This means that, if the universe be in the same state at any two moments $t_1$ and $t_2$ and at all moments between them, it will be in the same state at all moments later than $t_2$. Now, to say that a change happens at $t_1$ means that, if the state of the universe at $t_1$ be $s$, and if it also be $s$ at any later moment $t_2$, then there is a moment between $t_1$ and $t_2$ at which its state is different from $s$. It follows from this definition that to say that a first event happens at $t$ involves that the universe has been in the same state for a finite time before $t$. And this is contrary to our proposition about causation. If, then, we accept this proposition as an a priori truth, there is a first event, though that might be a first event in certain isolated parts of the universe (e.g., the creation of the world) provided that there had never been a first event in other parts (e.g., in the mind of God). But, of course, there remains the doubt whether our axiom about causation be not a mere prejudice masquerading as a self-evident fact.

It must be carefully noted that, if there be a first event, there need not be a first moment of time, and that, if there be a first moment of time, there need not be a first event. There must be a first moment of time and no first event, either there might be no moment, except the first, that was not occupied by an event, or there might be a duration unoccupied by events. These consequences follow from the continuity of time, and have often been overlooked by philosophers ignorant of the mathematical theory of continuity.

Leibnit was the main argument against the absolute theory of time on the fact that, if it were true, there might be a period, finite or infinite, before any event happened. This period must be definite; and yet, the moments of time having no intrinsic difference, there is no reason why the first of it should be ended or limited by one moment rather than another. If, on the other hand, we avoid this by assuming that there is an event at every moment of time, there is no reason for assuming both events and moments, for the series of events will suffice.

This argument is a sound one against assuming that there are moments, though it certainly cannot disprove it. If, however, we suppose that there were moments, they would doubtless have intrinsic differences, though we could not discover them. We must further recognize some ultimate facts, and none of these might be that the course of events is preceded by such and such a duration of empty time.

We may sum up our conclusions as follows. Arguments to disprove the reality of time from its infinity and continuity either confine themselves to criticizing infinity and continuity as such or introduce considerations about causality. Arguments of the first kind would be equally fatal to any infinite or continuous series, and therefore prove too much, for they would destroy the series of real numbers. And we now know that all such arguments do rest on confusions and attempts at an insufficient analysis of the notions of infinity and continuity. There is therefore no reason why the series of moments at any rate should not be either (a) endless or (b) of infinite length. The second set of arguments can apply only to events and not to the series of events which do not apply to a first moment or to a last event. A first event is one which no event precedes, though there may of course be moments that precede a first event. Now, the only plausible general proposition about causation seems to be that, if the whole universe be completely causes for a finite time, it could not begin to exist.1 This means that, if the universe be in the same state at any two moments $t_1$ and $t_2$ and at all moments between them, it will be in the same state at all moments later than $t_2$. Now, to say that a change happens at $t_1$ means that, if the state of the universe at $t_1$ be $s$, and if it also be $s$ at any later moment $t_2$, then there is a moment between $t_1$ and $t_2$ at which its state is different from $s$. It follows from this definition that to say that a first event happens at $t$ involves that the universe has been in the same state for a finite time before $t$. And this is contrary to our proposition about causation. If, then, we accept this proposition as an a priori truth, there is a first event, though that might be a first event in certain isolated parts of the universe (e.g., the creation of the world) provided that there had never been a first event in the universe here must be taken to include God, if there be one.

1 The universe here must be taken to include God, if there be one.
by Leibniz against absolute time, though it would presumably apply to events just as well. It is met, of course, by the consideration that past, present, and future are equally real, and that these characteristics do not belong to events as such, but in virtue of the temporal relations between them and certain psychical events.

A somewhat different argument against the reality of time has been produced by J. M. E. McTaggart. 1 His argument is that every event is past or present, and that an attempt to avoid the incompatibility of these predicates by saying that the event has been future, is present, and will be past involves a vicious circle or a vicious infinite regress. The answer is that, whenever we consider any definite statement about the pastness, presentness, or futurity of an event, we can see that there is no contradiction. Take a definite statement by McTaggart that Queen Anne’s death is now past and has been present and future. Suppose we interpret this to mean that Queen Anne’s death is not the direct object of any awareness (even a memory) which is contemporary with McTaggart, but that it is contemporaneous with some states of mind (e.g., Lord Bolingbroke’s) which prece ded McTaggart’s statement; and that it is later than some thoughts about it (e.g., William III’s), which also prece ded the statement. Then these propositions seem to be timelessly true, perfectly compatible, and to contain all that is meant in the assertion by McTaggart that Queen Anne’s death is past and has been present and future.

We may conclude, then, that no satisfactory proof has been offered even that absolute time is unreal, still less that the series of events and their direct temporal succession cannot exist.

6. Measurement of duration.—It seems to have been the question of a rate-measurer that led Newton to the theory of absolute time. Newton considers a number of periodic events which are roughly isochronous, and compares their rough isochronism with ‘absolute time, which flows uniformly.’ It is an unfortunate way of introducing absolute time. In the first place, it is of no practical use to any one. Whether absolute time flows uniformly or not, we can only observe events and must use them, or processes based on them, as our rate-measurers. Again, the statement that these processes are isochronous completely obscures. Time cannot be said to flow, for this seems to imply that time changes; and this would make time consist of a series of events in time. Nor is it at all clear what Newton meant by uniformity in this connexion. Presumably the meaning must be that the moments of time form a series like the real numbers. What we really want to know is whether we can find any periodic process such that the time that elapses between corresponding stages in each repetition is the same. But no essential reference to absolute time is involved here. We must beware of confusing the two statements: (1) there are definite intervals of a certain determinate duration, and this duration is independent of our methods of measurement; and (2) there are absolute moments of time, and their interval between any two of them has a definite magnitude. The latter implies the former, but not conversely. The real problem is: Granted that there is a definite interval between pairs of events, how are we to measure it?

1 The Unreality of Time,’ Mind, new ser., xvii. [1908] 457-474.

space, and we may have fairly good reasons to believe that it has not altered in length. The corresponding procedure in time-measurement is to find some process which can be repeated at any moment and can be assumed to have the same period whenever it is repeated. Such processes may be called isochronous. But, even when an isochronous process has been secured, it cannot be used to measure time in the same direct way in which a rod can be used to measure length. A rod will not as a rule fit an exact number of times into what we want to measure; it is therefore divided into a number of equal parts. Similarly we want an isochronous process that can be divided into equal subdivisions which can be easily recognized; i.e., we want a process which itself consists of a number of similar processes which all occupy equal times. Now, it is not nearly so easy to see that a process takes the same time whenever it is repeated as to be sure that a rod keeps the same length wherever we use it; and it is much less easy to divide a process into parts that occupy equal times than to divide a rod into parts that have equal lengths. The recognizable divisions in a process of which we are not conscious, while divisions on a rod can be fixed by us with marks without affecting the rod as a whole.

Nevertheless the assumptions that have to be made, and the peculiar mixture of observation and convention that is involved, are the same in principle for the measurement of time and of space. The fact is that we can make immediate comparisons both of length and of time with a certain amount of accuracy. We believe that these judgments are the more accurate the nearer the objects to be compared are in time and space, and the more similar the circumstances under which each is inspected. Turning to these judgments, we see reason to believe that both the lengths of rods and the time taken by processes may vary when the rods are moved or the processes repeated. But we believe that the variation always depends on the fact that change of position in space or time involves change in the relations of the rod or the process to pieces of matter, and that mere changes of position in absolute time and space—whether such changes be—makes no difference. We learn by experience what are the most important factors that determine change of length or of period, and we can allow for them. It is found that the lengths of the periods of clocks are more largely affected by changes in the surroundings than are the lengths of such bodies as steel rods.

Our method of determining an ideal rate-measurer is somewhat as follows. We begin with some process which is sensibly isochronous— e.g., the swing of a pendulum, or the time taken for a complete rotation of the earth on its axis. We can judge of this isochronism with a certain amount of accuracy by direct comparison in memory, just as we can compare lengths by looking at them. We can go farther than this. Just as we are greatly helped in our comparison of lengths by putting the objects to be compared side by side, so we can use expedients to hold our judgments of the isochronism of processes. If we start two pendulums together and then reverse their periods back to the same, the divergence will become more and more marked the longer they swing. If no divergence be noted after many swings, we may conclude that each swing of one takes the same time as the corresponding swing of the other. This does not prove that the successive swings of either are isochronous; for the period of each may be varying according to the same law. But, if we also find that the periods of one of a pair of pendulums begins to lag behind the corresponding period of some other
sensibly isochronous process which is physically very different, it becomes very improbable that there should be any law by which the successive periods of two such very different processes alter in precisely the same way. We are therefore justified in concluding on evidence that the successive periods of these sensibly isochronous processes are actually isochronous. The next step is to state all the laws of nature which have been introduced for the purpose of accounting for the equal intervals of time measured by complete periods of such processes. We find, e.g., that, if it be supposed that the successive rotations of the earth on its axis are isochronous, the laws of motion can be very simply stated and are very nearly verified by all the mechanical phenomena that we can observe. So far we are entirely in the region of what can be experienced or rendered very probable from what we experience. But now a conventional element enters. We shall probably find that, when time is measured by an actual physical process and when our laws have been stated in terms of time so measured, a new process of popular cause can be given that there are slight divergences from the laws which cannot be accounted for by mere experimental errors. The last stage in the determination of the equality of times now begins. We argue that the suggested laws are reasonable, that this is the most reasonable plan is not to keep the same time-measures and complicate the laws, but to suppose that the laws are rigidly true but the time-measurer not perfectly accurate; i.e., that the successive periods of this physical process are not perfectly isochronous. We therefore erect the laws into principles, define equality of times by them, and apply the necessary corrections to our observed time-measure. There is nothing particularly arbitrary about this. We believed, to begin with, as the result of direct judgments assisted by the use of such expedients as have been described above, that a certain periodic process is isochronous. We admitted, however, that deviations from isochronism so small as to escape the notice of any direct method are possible. We then stated our laws in terms of time as measured by this process, and found them to be simple and very nearly true; but, if they are to retain their simple form and become quite true, a small correction must be made in the assumed isochronism of the process. This correction is one which can be deduced from our experience; for we admitted all along the possibility of errors too small for direct detection. The procedure has the least trace of arbitrariness if, as is often the case, we can see the physical cause of the lack of complete isochronism in our time-measurer and can fully explain this lack in accordance with the laws which we have erected into principles. This has happened, e.g., with the earth as a time-measurer, where we can explain its small defect from isochronism, when once we have to assume it, by the frictional effect of the tides acting according to the laws of mechanics. Even when no physical cause can be detected for the presumed lack of isochronism, it is always possible to suggest a hypothetical one. But, in so far as this has to be done, our procedure does become more arbitrary; and a point may be reached where a full explanation of all the phenomena demands a real change in the form of the laws with or without a change in the time-measurer. This has happened in recent years to the laws of motion. The recent investigations on the movements of small electrically charged particles with a velocity comparable to that of light.

7. Theory of Relativity.—The next point to be considered is the difficulty of distinguishing between the phenomena and simultaneity among events which are not the objects of any one experience. We have seen that in favourable cases we can immediately judge that one event that we experience is after another that we experience. Other people can make similar judgments about events in their experience. But we cannot directly judge of the temporal relations of events which we and not others experience. Matters are on exactly the same footing with spatial relations. I may be immediately aware that one object in my field of view is to the right of another. How can I be aware of movements and be able to make similar judgments about his visual sense-data. But it remains to be seen what is meant by saying that an object which A experiences is at the right of one which B experiences; or again what is meant by the statement that of two objects which no one experiences—a.g., two atoms—one is to the right of the other. What is wanted is to be able to date events in a time-series which is neutral as between A’s experience and B’s, and shall contain events that do not fall into the direct experience of any one. In this problem we must carefully distinguish between two questions which are liable to be confused: (1) How do we know with regard to any two definite events, e1 and e2, whether e1 is before or after or simultaneous with e2? The answer to the first question is that the relations in the neutral series are regarded as having the same logical properties as those which we directly experience, or at any rate as being capable of statement in terms of the logical properties of these relations. Possibly a temporal relation as experienced by A has a sensuous particularity different from that possessed by one experienced by B; just as it is impossible to say whether the quality of what one sees at a moment is really the same as that which another sees at a moment. But we may be able to say that the relations in the neutral series are always in agreement with the relations of the same objects in the experiences of the two people. The distinction between the space and time of each man’s experience and a neutral space and time runs parallel with the distinction between the immediate objects of each man’s experience and neutral (or, as we call them, physical) objects. However we may suppose these objects are constituted, and whatever we suppose to be the relation between our minds and them, it must be assumed that physical objects are in the neutral space, and that their changes take place in the neutral time and make themselves known to us by correlated changes in the immediate objects of our experience.

It is not necessary here to consider how a number of people, M1, . . . , Mn, in their respective sense-data are all correlated with the same physical event. But it is necessary to notice that they will find, by and by, in the case of sound, that, if their physical laws are to give at all a simple and complete account of what they may expect to hear under given circumstances, they must assume that the sounds heard by various people, and all correlated by them with a single physical event, are not in general contemporaneous with each other. The greatest accuracy and simplicity is introduced into the laws of sound by supposing that the hearing of the various people takes place at times dependent on the positions of their bodies in physical space and on the spatio-temporal position of the single physical event correlated with each sound. This example brings out three very important points. (1) The determination of the temporal
relations between events in the minds or in the immediate objects of the minds of different people can be accomplished only when these events have been correlated in some definite way with supposed neutral physical events; (2) the temporal relations of the events are such as to make the laws telling us what sensations to expect in given circumstances as simple and accurate as possible; (3) it follows from these considerations that the determination of the neutral time-series and of the positions of physical objects in a neutral space must proceed pari passu.

Suppose, e.g., that we say that the velocity of sound is $v$ centimetres per second: (1) we want to connect all the known facts about the sounds which people hear under circumstances that can be directly experienced; (2) we want to do this compatibly with the assumptions which have already been made as to what heard sounds are to be classed together as connected with one physical event; and (3) we want our laws which sum up the known facts and anticipate experience to be as simple as is compatible with accuracy. We find that these ends can best be accomplished by supposing that A's hearing of $s_1$ and B's hearing of $s_2$ (as and $s_2$ being both correlated with the single physical event $S$) take place at times $t_1$ and $t_2$ respectively, where $t_1$ is the date of $S$ in the neutral time-series, and $s_1$ and $s_2$ are the respective distances between the place where $S$ happens in physical space and $A$'s and $B$'s bodies as physical objects. We must remember that the correlation of several sources of data with a single physical event and the assignment of positions in neutral space to physical events are carried out according to general principles as the dating of events in neutral time and as the measurement of distance already described; i.e., we start with instinctive judgment of distance and velocity, and then proceed to make a more accurate determination of our terms, guided by the general motive of maximum simplicity and simplicity of scientific laws.

As we have seen, sound is the first and most obvious case where it is necessary to assume different dates for different members of a group of sense-data which are all correlated with a single physical event. The more accurate researches of science necessitate a similar process for dealing with the sense-data of sight, and so the notion of a velocity of light is introduced. These velocities, once determined, furnish a criterion of before and after among physical events, and, through them, for events in different minds.

Let us denote any moment at B by the symbol $\tau_B$, and an event which happens at the point $A$ at the moment $\tau_A$ by $\sigma_A$. Let us use the same notation for events and moments at B. Then we can say: An event $\sigma_B$ precedes an event $\sigma_A$ if a disturbance leaving $\sigma_B$ reaches $\tau_A$ before it. Now, however, it is to be observed that we do not believe that any disturbance travels faster than light. It can be shown that, if the celerity of a material body in a medium is to be less if time between events at different places, there will be pairs of such events of which we have no reason to say that one is either before, after, or contemporaneous with the other.

To see this, consider the following case. Let $\sigma_A$ happen at $A \equiv t_1$. A signal which leaves $A$ at $\tau_1$ cannot reach $B$ before a certain moment $\tau_2$. Again, a signal that reaches $A$ at $\tau_1$ cannot have left $B$ after a certain moment $\tau_3$. On our criterion, therefore, $\sigma_B$ is before any moment that is after $\tau_2$ and is after any moment that is before $\tau_3$. But how are events at $B$ which happen between $\tau_2$ and $\tau_3$ related to the event $\sigma_1$? Take an event $\sigma_B$ such that $\tau_B$ is between $\tau_2$ and $\tau_3$. You cannot say that it is before $\tau_1$; for a disturbance leaving $B \equiv t_2$ would reach $A$ later than $\tau_1$. But you also cannot say that $\tau_2$ is before it; for a disturbance leaving $A \equiv t_1$ would reach $B$ later than $\tau_2$ (viz. at $\tau_3$). Hence on our criterion we can neither say that $\tau_2$ is before $\tau_B$ nor that $\tau_B$ is before $\tau_3$. Moreover, there is an infinite number of events at B of the form $\tau_B$, where $t_2$ is between 0 and 2. Thus we cannot cut the knot by saying that, since they are neither before nor after $\tau_1$, they are contemporaneous with it, or they are not contemporary with each other. Thus one and only one of the class of events $\tau_B$, can be taken to be contemporary with $\tau_1$, and the rest, so far as our present ideas go, must be held to be neither before, after, nor simultaneous with $\tau_1$. We are thus compelled to recognize that we may have no means of deciding whether a pair of events in different places in physical space are contemporary or not in physical time.

We can, if we like, accept this result, and build up our physics on the assumption that physical time really is non-consecutive; i.e., that, though all events have temporal relations to some events, none have temporal relations to all events. This has recently been done very fully and ably by A. A. Robb. 1 One may say that the course of assuming that physical time really is consecutive, but that in certain cases all criteria fail to determine the actual temporal relations which subsist between events in different places. We then must rely on a priori considerations (for example) that one particular event of the class of events at B, whose temporal relations to $\tau_B$ are left doubtful by our criteria, is contemporary with $\tau_B$ and that whatever precedes this one precedes $\tau_B$ and whatever follows it follows $\tau_B$. It is customary to assume that the event at B which comes midway between $\tau_B$ and $\tau_B$ is contemporary with $\tau_B$, but it must be noticed that this is a mere convention, though doubtless the most reasonable one to make. (On our notation this event would naturally be $\tau_B$.)

We must notice further that, for this convention to be determinate at all, we must assume that we know that the time-measurer at B goes at the same rate as that at A, and that both go uniformly. Now, if the time-measurers cannot be moved about with the same uniformity as the emitting and receiving signals from one to the other—e.g., light-signals—and, even if they can be moved about, our only test for the continuance of their synchronism, when they have been moved apart and are no longer in view together, is by light-signals. On the other hand, the question whether our tests for synchronism by light-signals are genuine tests (i.e., involve synchronism in physical time) depends on whether the velocity of light relative to the system containing the time-measurers is constant in time and the same in all directions. And this last point cannot be determined until the time-measurers in two places have been synchronized; for it is obvious that to measure a velocity we need to know the time in two places. We see, then, that the possibility of synchronizing time-measurers and the uniformity of the velocity of light stand and fall together, and that neither can be proved independently of the other. If we allow that the velocity of light relative to the system is constant and uniform in all directions, our tests for synchronism and uniformity in our time-measurers are valid; if we allow that the criteria ensure physical synchronism, the physical velocity of light (as distinct from its numerical measure on our convention) will be constant and uniform. But neither question is or ever will be capable of independent settlement; and therefore we simply have to make a convention that the meaning to be attached to synchronism in different places is agreement with the tests based on light-signals, and another convention that distances shall be so measured that the measure of the velocity of light relative to the system is independent of time and of direction.

Suppose now that the people on a system S determine their spatio-temporal co-ordinates in this way, and that another system S', moving with uniform translational velocity relative to S, determine their spatio-temporal co-ordinates similarly. Let them arrange, as they can do, that the time-measurers at the origin of each go at the same rate; and further let them arrange their units so that the velocity of light as measured by each from experiments with sources and mirrors fixed in their own system shall have the same magnitude and measure. Then it can be proved that each will find the same numerical measure for the velocity of light, even though the sources and mirrors be in uniform motion relative

---

1 A Theory of Time and Space.
to the two systems. (6) It is possible to find equations connecting the space-time co-ordinates of two systems S and S', such that the co-ordinates of the people on S give to any momentary event which they observe with those in which the people on S' give to the same event. These are the celebrated transformations of the Theory of Relativity. Now, as we should expect, perfectly reciprocal, since the relative motion of S and S' is a perfectly mutual phenomenon. But (c) they lead to certain rather startling results. (1) Lengths and times are not defined, while the motion of relative motion which are judged to be equal by the people on one system will be judged to be unequal by those on the other. The ratio depends on the relative velocity and on the value of the velocity of light which is common to the two systems. (2) Events in different places which are judged to be contemporaneous by the people on one system will be judged to occur at different times by those on the other system, and the difference of time will depend on the distance apart parallel to the direction of relative motion.

Although the observers on the two systems thus differ, they cannot criticize each other. Each has his own plan in setting out his co-ordinates and synchronizing his time-measurers. And it would be quite futile for one to claim that his results are the right ones because his system is at rest, while the other is in motion. For the relative motion is completely reciprocal, and neither absolute motion nor any consequence of it can be observed. Lastly, it is equally futile for one to say that he is at rest 'relative to the ether,' while the other is in motion; for we know that no experiment whatever has been able to demonstrate motion 'relative to the ether,' and this motion may fairly be discredited as a fiction. This is a snapshot of the matter is that there is nothing to choose between their respective judgments, and that all the laws of nature can be stated as truly and will have precisely the same form, no matter which of an infinite number of systems in uniform translational motion be taken as the basis for spatio-temporal co-ordinates. This result, with the mathematical consequences that flow from it, is known as the Theory of Relativity. Its philosophical importance is that it enables us to see the tacit assumptions that are made when we talk of events at different places being contemporaneous; and the fact that measurement of distance is entangled with measurement of time with the distance between objects at any time involves a decision as to what is meant, by the same time in two different places. Though it no more completely refutes the possibility of absolute space and time than does any other argument (for after all it only deals with our numerical measures and leaves it open whether one system of time-measurers is physically uniform and synchronous and one system of space-measurers directly represents distances in physical space), yet it helps to render the notions of absolute space and time still more spectral and remote from all possible experience than before. For it enables us to see that there are a certain indeterminateness and conventionality even in the measurement of the distance between physical objects and of the lapse between events; and that therefore what we can know is even at a further remove than we had thought from the points of absolute space and the moments of absolute time.

The Theory of Relativity sketched above was first put forward in the 'Lorentz-Fitzgerald contraction paper,' 'Über das Relativitätssnipp and die aus denselben gezogenen Folgerungen,' which appeared in the Jahrbuch der Radioaktivität und Elektronik for 1907. This may be called the restricted Theory of Relativity, that is to say, it is merely characterized as consisting of an experimental fact and a philosophical principle suggested by a great number of facts. The philosophical principle is that, since we can never observe absolute time, space, or motion, even if there be such things, the laws of physical phenomena as learned from observation must retain the same form for acts of observers in uniform motion relative to each other. This persistence of form (or covariance, as it is technically called) in the differential equations that express the laws of nature does not in general imply that the actual magnitudes measured by two observers in uniform relative motion will be the same.

Finally, an observer moving with his instruments relative to an electrically charged body will detect magnetic as well as electric forces, whilst one who is at rest with his instruments relative to this body will observe only electrical forces, but the differential equations connecting the effects noted by one observer with another and his x, y, z, and 4 coordinates will be precisely the same as those connecting the effects noted by the other observer with each other and with his x, y, z, and 4 coordinates.

This principle by itself, however, would be of little use, since it does not enable us to say what connexion exists between the co-ordinates of the two observers. But, if there be any magnitude, which is not merely covariant but also invariant as between different observers in uniform relative motion, the transformations connecting the two sets of co-ordinates which express the laws of nature for one observer with those of another who is moving relative to the first. The precise significance of Einstein's principle of the 'Constancy of Light Velocity' has been indicated above, and shown to be connected with the way in which we are forced to lay out a system of co-ordinates and to define simultaneity between events in different places. Einstein's restricted theory has claimed many triumphs. It explains at once what is known as Fresnel's dragging-coefficient for light passing through matter that moves relative to the observer. It also accounts for the change of mass with velocity which is observed when small particles move with speed comparable to that of light. The principle necessitates slight changes in the previously accepted form of some of the laws of nature. Maxwell's equations and the laws of hydrodynamics in hydrodynamics do indeed at once and without modification fulfill the condition of covariance. But the laws of mechanics, as they stand, are not in accord with the principle and need modifications which only become practically important in dealing with the motion of matter with velocities comparable to that of light.

Considerable philosophic importance, in connexion with the nature of time, attaches to the work of Minkowski.

On the ordinary Newtonian mechanics the form of the laws of nature is unchanged if the three spatial axes be twisted in space about their right angle so as to make a rigid body. Minkowski showed that the Lorentz-Einstein transformation is equivalent to a twist of the space nature performed on a set of four mutually rectangular axes in a four-dimensional space. These axes are the ordinary spatial axes, the time axis multiplied by the square root of -1, the root of which is -i. So far the theory must be regarded as a merely elegant mathematical device, since the fourth axis is imaginary in the mathematical sense, and the angle of solution is also imaginary. But, if we do not assume that the geometry of space-time is four-dimensional 'space-time,' we have an important meaning. We can utilize Minkowski's transformation of the relative transformation to those systems we suppose space-time to be hyperbolic (i.e., the geometry of Lobatchewski), the absolute transformations of common sense to be represented by a set of four real co-ordinates, and the idea simply depends on the fact that we can utilize space and space; so that really we are dealing with a four-dimensional
manifest in which space and time are homogeneous with each other, but whose geometry is not Euclidean but Lobat- istic.

The work of philosophical mathematicians since Minkowski's death has consisted largely in de- veloping the notion that the ultimate data in the world are events in space-time, i.e. events extended both in space and in time. The concept of a apecious present forms an example of such data. Space and time as used in the sciences only emerge at the end as elaborate mathematical constructions built on initially perceptible relations between extended events.

The best exposition of this point of view is con- tained in A. N. Whitehead's Principles of Natural Knowledge, which begins with a severe criticism of the concepts of classical physics and proceeds to elaborate the notions of space, time, and matter from the crude data of sense and their immediately given spatio-temporal relations. It seems hardly possible to doubt that this is the right path for further research, but it demands a combination of philosophical and mathematical abilities of so high an order that few can tread it successfully. A lexicographer's Gifted Lecturer has developed the notion of space-time with great full- ness from the purely philosophic side, but, at the time of writing, his lectures have not appeared in print and it is impossible to give an account of his views from the short synopses which are alone available.

It remains to say a few words about the general- ized Theory of Relativity. As far as we have only considered observers in uniform relative motion and have laid down a principle of relativity for them, Einstein has occupied himself in the last few years in removing this restriction and thus laying the foundations of the older theory, into the scope of the Theory of Relativity.

A particle is said to be under the action of no force if it moves uniformly in a straight line. But the question whether it moves in a straight line and whether it moves uniformly is clearly related to our spatial axes and to our measure of time. If, e.g., a particle moves uniformly in a straight line relative to the rectangular axes $x$ and $y$, it will not do so relative to axes which rotate about the origin in the $xy$ plane. Accordingly, relative to one set of axes it will be said to be under the action of no force, whilst relative to the second set it will be said to be under the force required to produce the observed accelerations. Now the 'forces' introduced by these mere changes of our axes of reference in this respect very much like the force of gravitation. They, like it, affect all forms of matter indifferently and depend only on the mass, not on the special nature of the moving body. On the other hand, a genuine force field cannot be altogether transformed away by a suitable change of axes, say from $x$ and $y$ to $x'$ and $y'$, so that the particle this can be done by choosing axes fixed in the particle, but relative to these axes the other particles in the field will still be accelerated. Now, it seems clear that a mere change of axes could not make any difference to the form of the laws of nature, and, therefore, if gravitation were capable of being transformed away merely by a suitable change of axes, the principle of relativity would assert that the presence of a gravitational field makes no difference to the form of the laws of nature. For the reason mentioned above the principle of relativity cannot be taken in this unrestricted sense. It may, however, be taken to assert that the form of the laws of nature is unaltered in a gravitational field up to a certain (yet undetermined) order of differential coefficients.

It is now necessary to see the bearing of these results on the constitution of the 'space-time' of nature.

It has been proved by Riemann that the metrical geometry of any space is completely determined when the 'linear element,' i.e. the interval between any pair of infinitely near points, is expressed as a function of the coordinates of the two points.

This three-dimensional Euclidean space is com- pletely defined by the equation

\[ ds^2 = dx^2 + dy^2 + dz^2 \]

for the linear element. Now the metrical properties of four- dimensional 'space-time' will be completely determined when we denote by $x$, $y$, $z$, and $t$ (the interval of any pair of adjacent points in it) as expressed as a function of the coordinates of the two points.

In space-time, therefore, the ten coefficients of $dx^2$, $dy^2$, and $dz^2$, etc. in space-time, therefore, the ten coefficients of $dx^2$, $dy^2$, and $dz^2$, etc. must be known in order to determine $ds^2$. In general positions of the plane will be functions of $x$, $y$, $z$, and $t$.

These equations are denoted by the letters $g_{x}$, $g_{y}$, $g_{z}$, etc. Any transformation of axes corresponds to a change in these $g_{x}$ and therefore to a change in the form of the linear element. It follows that, as regards forces introduced simply by changes of axis, it is a matter of perfect indifference whether we say (a) that the space of space-time is such and such and that such and such forces are acting, or (b) that the geometry of space-time is such as to pro- duce the appearance of these forces. Thus the requirement that forces be either (a) as completely determining the forces on a given assumption about the geometry of space-time or (b) as deter- mining the metrical properties of space-time itself. The ex- tended Theory of Relativity refers to the second view of them and to drop all reference to forces; on the first view the $g_{x}$ are of the nature of potentials. Now, in theory, any function whatever might be given for the $g_{x}$, but the actions of nature are subject to gravitation. This means that the choice of $g_{x}$ is not absolutely arbitrary, but that the uniform system of axes for describing nature the $g_{x}$ will be subject to a set of differential equations connecting them with each other and with the $g_{y}$, $g_{z}$, and $t$ of this system. These equations then express the law of gravitation and at the same time express it as a fundamental property of space-time.

It is extremely difficult to render Einstein's theory intelligible without mathematics, and the mathematics needed is somewhat formidable. It is hoped, however, that the above sketch may illustrate that extreme entanglement of time with space and with matter which undoubtedly occurs in our crude sense data and is now seen to persist even in the most refined speculations of mathematical physics. It may perhaps be added that Einstein's generalized theory, derived from the special philosophic interpretations which may be put on it, is not a mere idle speculation, but has already explained the anomalies in the peri- helion of Mercury, and has correctly foretold the amount of deviation in a ray of light due to its passing near a heavy body like the sun.

3. Historically important speculations about time.—Our knowledge of time as of space owes more to the laboratories of mathematicians and physicists than to those of professed philosophers. The sharp distinction between time and what changes, and between space and what moves in it and is ex- tended, is largely due to the development of the subject of mechanics, and latterly of electrodynamics.

To the Greeks we owe much less with regard to time than with regard to most matters of philo- sophic or scientific speculation. This may perhaps be ascribed to the late development of dynamics; the Greek approach to the problems of time was mainly by way of astronomy. Of course, Zeno's celebrated arguments have an important bearing on change and continuity, and, whatever may have been the real intention of their author, they remained the best discussion on these subjects so closely related to time until the final treatment of infinity and the development of the infinitesimal calculus in the latter part of the 19th century. Time plays an important part in the Timaeus of Plato; and, although his treatment cannot be called satis- factory, it has the merit of distinguishing time from what is in time. Plato says that God wished the created world to resemble the intelligible one as far as possible. Now, it was not possible for it to be eternal, and the nearest analogue to eternity which He could provide was to make 'a moving image of eternity.' This is time, and it is closely connected with the motions of the heavens; eternity 'rests in unity,' but the universe is 'a motion according to a number.' Before the heavens were created, there were no days, years, etc.; but, when God created the heavens, He created these divisions of time also. Time was not created with the heavens, and, if one were to be dissolved, so would the other be. But Plato does not appear to identify time with the motion of the heavens, though it is difficult to see what he supposes it to be in itself. According to Plato, past and future are created species of time which we wrongly transfer to the eternal essence; strictly 'was' and 'will be' are to be asserted only of generation in time, for they are motions. The analogy of the moving image to the eternal
is that the created heavens have been, are, and will be in all time. This view has something in common with that of Spinoza, who makes things as they really are for ratio timeless, but holds that this timeless essence is given by imagination, which represents it confusedly as duration through endless time.

Aristotle defines time as 'the number of motions relative to before and after.' Number here appears to refer to a point, and it is the birth of a monad number that is numbered. The now in borne along with the movable as a point may be regarded as moving and making up a line. So in a sense there is only one now, though in another sense there are many nows. This is obviously a very unsatisfactory metaphor, and there seems no reason to think that Aristotle was really clear as to the distinction between time and motion.

The Schoolmen in the main adopted Aristotle's views, though with certain modifications. St. Thomas Aquinas, in the tract de Instantibus, discusses time and change with some fullness. He draws a distinction between the time in which angels perform their acts and that in which men and matter operate. The time of angels is discrete, that of men continuous; the difference arises from the fact that continuity is essentially connected with the eternity of substances. An instant for an angel is the time occupied by a single act; it may thus correspond to a long period in our time. This may be compared with Royce's views about the varying lengths of the specious present in various beings.

In modern philosophy the men who have most concerned themselves with time are Leibniz and Kant. Leibniz argued strongly for the relative view of time in his letters to Clarke, who represented Newton and the absolute theory. His arguments turn mainly on the identity of indiscernibles and the principle of sufficient reason. Leibniz carefully distinguished duration from the relation of before and after, and he compared duration to the extension of matter. Leibniz's view is that time is a system of possible positions of possible events related by before, after, and simultaneous with. He holds that all possible worlds must be in time, though, of course, the particular temporal relations of the actual world are contingent. To make Leibniz's theory coherent, it would be necessary to modify it in the case of time and the time-series of the universe. He attempted to explain the relation between successive states of the universe, but by saying that the earlier ones have the quality of being desires for the later ones.

As an attempt to replace relations by qualities this clearly fails, since 'desire for' anything is clearly a disguised relation. And as an attempt to define before and after it also fails; for it is clearly a synthetic proposition that desire for $X$ precedes $Y$. Then again it seems essential to Leibniz's doctrine of the reflexion by one monad of the states of another that we should have some account of the temporal relations between corresponding states in different monads. The state of a monad at a given moment in its own time-series is presumably the reflexion of the contemporary states of other monads; but we are not told what is meant by a time-series common to the monads, nor is it clear that this would be consistent with Leibniz's dislike of relations.

The absolute theory of time has never had much philosophic support; there can be little doubt that Leibniz had the better of Clarke. Perhaps the best arguments for absolute time and space are to be found in the work of the mathematicians.

Leibniz. They do not seem to the present writer to be conclusive, and their author has lately taken a much more relativistic view.

Locke, Berkeley, and Hume insisted that the notion of time comes from the succession of our ideas. But they never made it clear how their temporal relations are connected with the time that things-in-themselves have. Berkeley and Hume in particular fail to give any reasonable account of the distinction that we certainly make between the temporal order of our ideas and the temporal order of the objects which we claim to know by them. It is not even clear what is the importance of this point in his 'analogy of experience,' though the distinction will certainly not bear the superstructure which he built on it.

He attempted to prove that an infinite number of states-in-themselves results from the permanence of substance (which he seems to identify with the chemical law of the conservation of mass) and the law of causation among experienced objects. His arguments are entirely inconclusive even to prove that, in order to make the distinction, we must believe in these principles; much less to prove, what the transcendental method always tends to confuse with this, that the principles are true.

Time plays perhaps more, and more important, parts in Kant's philosophy than in any other.

(1) In the *Esthetic* he tries to prove that it is a form of intuition, the form of time, which seems to mean that, just as we can only perceive physical objects as being in space, though there is no reason to think that things-in-themselves are spatial, so things-in-themselves are not perceived by ourselves and our mental states in introspection as being in time, though there is no reason to think that this is not the case.

This certainly seems to raise the special difficulty that, unless we know ourselves as we are and not merely as we appear, we cannot know what our forms of intuition are, but only what they appear to be, whilst Kant's argument certainly assumes that we know what they are. (2) In the *Logic*, as we have seen, Kant has an antimony about time. This apparently would, if valid, overthrow not merely absolute time but also the temporal character of events and the temporal relations between them. We have already seen how grave are the difficulties involved in any such distinction in a system in which all powers rest and do not commit errors. There is a danger that this distinction will be maintained through his arguments to prove it.

(3) In the *Analytic* time plays an important part in the difficult doctrine of the schematism of the categories. The position seems to be that the categories as pure conceptions of the understanding cannot be applied immediately to the manifold given in sense, even after that has been synthesized by imagination. They have to be mediated through time; thus the category of ground and consequent, which is purely logical, can be applied to the world of sensible experience only after it has been schematized into the temporal form of cause and effect. The whole argument here is confused and weak to a remarkable degree; the principle appears to be that the manifold is as provided with temporal characteristics by intuition; that these remain and are elaborated by the synthesis of imagination; and that then they may be analyzed in time.

The first schematized so that they and the synthesized manifold share the temporal character of common concepts. The only possible solution of his own antimony is that the infinity involved in time is not an actual infinite, as it would have to be if time applied to things-in-themselves, but only the concept of infinity which we have of always synthesizing farther than we have yet gone in constructing a temporal series. To this Lotze makes the very pertinent criticism that it surely depends on the nature of things-in-themselves whether we shall be indefinitely supplied with material to synthesis.

The modern development of our knowledge about time is due mainly to two sets of people: (1) philosophical mathematicians, like Deleclain and Cantor, who have given a satisfactory analysis of the infinity and continuity, and thus finally refuted all antinomies based on these; (2) mathematical physicists who have been led by their studies in the optics of moving systems to elaborate the Theory of Relativity. The pioneer work is Lorentz; the theory itself was first formulated by Einstein; and the mathematical and philosophical consequences have been drawn and elaborated by Einstein, Minkowski, Robb, Whitehead, and others.

It is also necessary to mention among recent philosophers Bergson, in whose works time, nominally at any rate, plays a role. Bergson holds that the attempt to treat time as similar to space is a perverse one philosophically; it may work very well in dealing with dead matter, but it
shows its falsity in biology, psychology, and philo-
sophy. He also falls foul of the mathematical theory of the continuum as applied to time; he ad-
dresses it as they cannot, but denies that it describes what anybody really means by change and motion. Bergson's arguments seem to rest partly on a comparison between change as a sense-datum (e.g., the peculiar characteristic of
what we see when we look at the second hand of a
watch as distinct from the hour hand) and physical change, and partly on the erroneous view that a whole of related states cannot be a change unless each of its terms is a change. Again, in some of his remarks about memory he seems to suppose that,
because a memory-act is a later awareness of an earlier event, the earlier event and the later awareness must somehow be contemporary. Finally, he seems to think that the ordinary view of time is refuted by the facts, of which he is strongly convinced, that no two total states of
mind at different times can be exactly alike, that
there are not, strictly speaking, distinct elements which can recur as parts of different mental states, and that no amount of knowledge about earlier states will enable us to foretell later ones com-
pletely. But Bergson's most surprising doctrines belong to the subject of change rather than to that of time.

C. D. BROAD.

TINNEH.—See DÉNÉS.

TIPITAKA.—See LITERATURE (Buddhist), vol. viii. p. 89.

TIRUPATI.—Tirupati, vulg. Tripetty (Tel. Tirupati, tiru, Skr. sri, 'venerable, pati, 'lord'), a town in Chittoor District, Madras (lat. 18° 38' N.; long. 78° 17' E.), is a famous centre of pilgrimage, situated on the Tirumalai or sacred hill, usually known to Europeans as Upper Tirupati, in contrast to the lower town at its base. The whole area is considered sacred, and up to 1870 had never been visited by Europeans. Mark Wilks states that he was on duty for eighteen months in the neighbourhood, and, though he frequently climbed the adjoining hills, he could never catch even a distant view of the pagoda.1 The belief that much crime was committed without detection in the holy town led to the issue of an order by Government that it should be thrown open to the District officers, but this policy was shortly reversed by local opposition; but European visits now cause little sensation. The sanctity of this hill-range rests on the legend that it forms part of the sacred mountain Meru. The range has seven principal peaks, each of which is sacred, and has a name and a meaning of its own. One of the peaks, known as Seshâchalam, 'serpent hill,' takes its name from the belief that it was torn from Meru by Mridu Aadi, the first queen of the Sivâ family.

1 Hist. Sketches of the South of India, Madras, 1890, i. 246 n.

strength with the wind-god, Vâyu. Vâyu raised
so great a tempest that the peak was blown away and fell to earth in its present position. Near this peak is a small hill, called Littcarl, but deniers of it, and no European has been allowed to enter it. It is a building of little architectural beauty or importance, but the cultus of the deity is interesting. It is a manifestation of local non-Aryan beliefs with orthodox elements.

Within a small chamber lighted by lamps is the idol, a stone image of Visnu, seven feet in height. It represents the god as Chaturbhuja, 'four-armed,' and, in the hands holding the discus (chakra), one of the left the conch-shell (sankha), the second right hand pointing to the earth to draw attention to the miraculous origin of the holy hill, while the remaining left hand grasps a lotus. The deity possesses 1008 titles, the most common of which are Srîvîvāsa, 'dwelling with Sîr or Laksmî,' goddess of prosperity, and Venkatachâlpatî, the title of the sacred hill, which has been adopted into Sanskrit from the Tamil vam, 'white,' Radham, 'hill slope,' thus showing that the deity was adopted into Brâhmansîm from a Dravidian cult. By visitors to Tirupati and Deccan, it is generally known as Bâlîjî, which, according to Monier-Williams,2 is the name of a human incarnation of Visnu or Krsna of whom little is known, save that he was remarkable for many extraordinary feats, and that the hill, as the inmost adja-

TITANS

often pierce the flesh of the bearer, who submits cheerfully to the torture. At the Ganganam festival held at the temple ‘language truly filthy and obscene’ is used to the goddess herself. The explanation of this custom is obscure.

Abode of Titas was believed to be in certain circumstances to bring good luck to the person against whom it is directed. On this theory the obscene may possibly be regarded as a form of mimetic magic intended to repel the power of evil from the temple, and thus advance her powers of promoting fertility.

Again, on the road leading up to the temple ‘small stones hidden under a hermit’s hat, and knots of the young date palm leaves may be seen. These are the work of virgins who accompany the parties of pilgrims. The necks are tied in order to ensure the tying of the tall strings on their necks (as marriage), and the hanging up of stones is done with a view to ensuring the birth of children to them. If the girls revict the hill after marriage and the birth of children, they unite the knot on a leaf, and disarrange one of the hearts. Men cause their accounts, whenever such a woman becomes too old to please the deity, the priests make a mark on her breast, the emblem of the god, and give her a patent certifying that she acted for a certain number of years as one of his wives, that he is now tired of her and recommends her to the charity of the public.

H. A. Stuart, however, denies that any dancing-girls attend the god; but he adds that the state of morality among priests and pilgrims was deteriorated, and that the female Bairagi and priests taking their paramours with them up the sacred hill. In the Deccan it is very common for a woman to make a vow that, if she is relieved from sickness or other trouble, she will shave her head to the god at Tirupati. After being shaved, she walks thrice round the temple, worships the image, pays a fee to have lighted camphor waved round the idol, receives a pinch of the sugar offered to the god, distributes food to the poor and to the monkeys which swarm round the temple, offers charity, and returns home. The care of children is also performed at the temple.

LITERATURE.—This art. is mainly based on an excellent account of the place by A. F. Cox, Manual of the N. Arect District, Madras, 1881, p. 146, supplemented by later information supplied by its writer. In addition to the authorities quoted, see J. B. Tavener, Journ. of India, tr. ed. of 1867 and ed. v. 1872, ii. 343. For details concerning the worship of the god among the people of S. India see also E. Thurston, Costumes and Tribes of South India, Madras, 1901, i. 195, 355, 359, ii. 451, 112 f., iii. 43, 461, iv. 310, 326.

W. CROOKE.

TITANS.—The Titans, like the Giants (p. 349), are potencies belonging to an early pre-Olympian stage of Greek mythology. The two tend to be confused by late authors, but in origin they are distinct. The Titans are distinguished from Giants by the following well-marked characteristics: (1) they are gods (θεοί), and as such immortal, whereas the Giants are mortal; (2) they are sky-potencies (Οὐρανόπασες) as contrasted with the Giants, who are earth-born (γεώτερες); Titans and Giants alike are to Hosiod the offspring of Earth and Heaven, but the Titans tend skywards, the Giants with their snake-tails earthwards. To Shakespeare Titan is the sun.

And Titan, tired in the mid-day best,
With burning eye did hotly overlook them.9

To Pausanias 10 Titan, according to the local legend of Titan, is ‘brother to the Dorians’ (cf. Gallic, who himself held that Titan ‘was great at marking seasons of the year.’ Empedocles holds a less specialized and perhaps juster view; he places side by side.

Gains and hillbrow ocean and air with its moisture.

And Titan, embracing the All in a circle.14

The Titan Phaethon is the sun and sun’s charioteer; the Titans Phoebus on the moon; the Titans Atlas and Prometheus are the sky-potencies supporting Ouranos. The Titans are an integral part of that primordial cosmos of earth and sky, ousted in Greece by the anthropomorphic Olympians, but remembered as part of their Indo-European heritage by the Northern Muses who came to Helicon and taught their lore to Hosiod.

The etymology of Gigas, ‘giant’, is uncertain; that of Titan is happily secure, and it throws a flood of light on the function of these sky-potencies of older date and explains in a flash the two Titan myths—(a) the Titanomachia, (b) the rendering of Zagreus, which, but for this etymology, must have remained obscure. Three glasses of Hebraics make it certain that Titan means simply ‘king’.

They are as follows: τάνγος basecles (the word glossed is from a lost play of Aeschylus); τάνγος (for τάνγος) ζεbascles, and τάνγος ΰζεbascles. Thus Honigs, and the τάνγος ΰζεbascles. Titan is king, ‘honoured one,’ but—and here is the interesting point, or rather series of vitally interconnected points—he is the king of the old order, the king-god or divine king; and as such he is a sky-potency, for one main function of the old king-god was to order the goings of the heavenly bodies and generally to control the weather. Here we have that odd blending of physical phenomena with human and social potencies which lies at the back of most gods and certainly of Zeus himself.

The Titanomachia is at once clear. For on the physical point of view it is, as described in Hosiod, just a half-humanized thunder-storm, Zeus, the new sky- and thunder-god, fighting the old sky-potencies; from the theological point of view it is the new anthropomorphism against the old religion of the king-god or main-caste-man who controls the weather. The Olympian religion naturally regarded these old Titan kings as criminals, rebels against high heaven, condemned to Tartarus for their sin of Zeus, just like them the counterpart of the arch-Titan Prometheus.
Tithes.

The second Titan myth, the rending of Zagreus, is less transparent, but in the light of the Titan kings ever more illuminating, for we catch the king in his earliest stage of all, when he was tribal elder or monarch, before he devoted himself to kingship. The Titans, according to a version of the story as early as Onomakritos, 1 lure away the infant Zagreus, dismember, and (in some versions) cast him down the slopes of Mount Helicon. 2 This is an initiation myth based on the familiar initiation ritual of the mock death and resurrection of the initiate. The initiates are the elders or dynasts of the tribe, the elders of the tribe. The Titans are the sons of the old-world kings, who are well in place; as a form of giant they are absurd. The name Zagreus takes us to Crete, and in Crete we find the Titans in a connexion that again points to initiation mysteries. The Cretans, according to Diodorus, 3 said that in the time of the Kourotes those who were called Titans ruled over the region of Cnosos, where were shown the foundations of the house of Rhea and a sacred cypress-grove of hoary antiquity. These Titans again must have been the old king-medicine-men, contemporary with the Kourotes and, like them, initiators into the 'men's house' of the Mother Rhea. 4 On a red-figured kylix from Attica, 5 Zagreus is depicted as actually devoured by the Titans, and these Titans wear the characteristic dress of Thracian chieftains. We may safely infer that the Titan myth of the rending of Zagreus was known from Thrace to Crete, and we may suggest that it arose in that early stratum of 'saten' speaking population known to the later Greeks as "Pelasgic"—a stratum specially addicted to the mystery-rallies of the son of Semele.

LITERATURE.—M. Mayer, Die Giganten und Titanen, Berlin, 1837. For the Titans as Oiranones, J. E. Harrison, Themis, Cambridge, 1914, pp. 453-60. The word 'Titan' was derived from the root τίτων, 'honour,' was first seen by L. Fiedler, Gr. Mythologie, Leipzig, 1854, p. 44. Its meaning as 'king' was made clear by P. Solmsen, in Indogermanische Forschungen, xxx. [1912] 25. The full significance of the 'king' meaning in relation to the mystery-rite of the anephegesis, as practised in Crete and by Thracian chieftains, was established by A. B. Cook, Zeus, Cambridge, 1914, i. 655 § 5, in relation to his republication of the British Museum vase in pl. xxxvi. The previous literature of the subject will be found in Cook's notes. On p. 655, note 2, he rightly points out that the present writer's former derivation (Prolegomena to the Study of Greek Religion, London, 1883, p. 592, infr. 19) of the word 'Titan' from the hydria, 'white-clay man,' is erroneous. As initiators the Titans probably were dapted with white clay, but the name is not derived from the disguise.

J. E. HARRISON.

TITHE.—1. Origin and purpose.—Tithes are connected, on the one hand, religiously, with other gifts of firstfruits (e.g., taxes levied on the land); on the other hand, politically, with tribute and taxation. While taxation often took the form of a tenth, the amount might vary, less or more, though the name 'tenth' (decima, &c.) was retained. Voluntary offerings to a deity soon became customary, and even necessary, especially where kings began to impose taxation and tribute, and where a god was now thought to be a divine monarch. To keep up his sanctuary was as much an obligation to keep up the royal person and court. An early example shows this. The people of Tyre paid tithes to Melkarth as king of the city, and the Carthaginians similarly sent their tithes to Tyre. 6 W. R. Smith 7 shows that in this case the tithe was as much political as religious.

The voluntary offering necessarily became tribute and taxation. A sanctuary became more elaborate, the sanctuary itself more splendid, and the attendant priests more numerous. Why a tithe or tenth should have been fixed on so generally is not clear, but probably it is connected with primitive views about numbers, or with methods of counting—e.g., by fingers and toes. 1 In Babylon, whether the tithe was native or borrowed, its use is found in the time of Nebuchadnezzar ii. Earlier evidence is so far lacking, and there is no trace of it in the Assyrian period. It was a due paid to the temple of a god from the land, and was paid by all, including the lastling, who assigned to temples founded by him an annual amount from cultivated lands and from the treasury. Numerous tablets concern tithes, and show that the peddler tale were taxed for support of the temple. Tithe was of the nature of a fixed charge on the land and even became negotiable. Such tablets may be regarded as of the nature of a receipt for payment of tithe, which was generally paid in kind—corn, oil, sesame, dates, flour, oxen, sheep, and ass—though this might be commuted for a money payment. One man sometimes paid it collectively for a group of men, and possibly this signifies a systematic collection of tithe in one district by an authorized person. 2 At the same time Babylonian kings had a tithe of all imports, and paid also Persian satraps. 3 In S. Arabia tithes were paid for accrued interest of sacred moniments. 4 Cyrus, on the advice of Croesus, caused his soldier to devote a tenth of their booty to Zeus. 5 The tithe as a tax on land was well known in Greece of the archaic period. It was paid to temples on special occasions was not uncommon. Pausanias gives many instances of this—e.g., a tenth of war-booty being set aside to make an image or a vessel for a temple.

In Egypt the use was apparently greater freedom. Temples were usually provided with lands for their upkeep, but the gods expected to receive a share of the produce of fields, vineyards, orchards, and fish-ponds. The kings in time of war dedicated a tenth of their booty to the temples, as well as of tribute levied on vassal states and of prisoners who were made slaves of the conqueror.

Zoroastrian literature refers to the fourth rank of men—traders, artisans, market dealers, &c.—who should pay a tithe to the high priest and to the king. 6 Chinese sacred literature mentions a tenth of the produce of the fields being annually levied; whether as a religious tribute or not is not clear. 7 The Confucian Analects tell how 'the Duke Gao enquired of Yew 34 whether the year is one of scarcity, and the returns for expenditure are not sufficient. What is to be done?' He desired to take two tenths, instead of the usual statutory single tithe, from the 44 districts of the kingdom against which Yew 36 protested. 8

2. Tithe in the Old Testament.—Among the Hebrews the relation of tithe to firstfruits 9 is complicated, and opinions differ as to whether they were distinct or not. Firstfruits would naturally vary in quantity. Tithe expresses more or less a fixed proportion. Perhaps the tithe represents firstfruits made systematic, or different names may have been favoured at different times and in different localities. The tithe is called 'an heave offering' in Nn 18 10, but the two are apparently separate inDt 12a. In the later legislation firstfruits and tithes appear to be distinguished.

The tithe, which is not mentioned in the Book of the Covenant, appears first in the Northern

TITHES

Kingdom in the time of Jeroboam II. as the material given for a feast at the sanctuary (Am 5:10; cf. 4:), though the feast was one for the rich at the expense of the poor. Here it appears as a fixed tribute. In Gn 28:22 (E) Jacob promises a tenth of all to God—perhaps a reflection of later custom, though not necessarily so—and Melchizedec receives a tenth of all (14:18). In I S 8:17 tithes is paid to the king, and perhaps he devoted this to the support of the Levites. In the Talmud, the Deuteronomic Code is not a forced tribute. The tithe of corn, wine, and oil, with the heave offering, free-will offering, and firstlings of herd and flock, are to be brought to the sanctuary and eaten there as a feast with Levite and Levite (Dt 12:7, 17). Here the connection with firstlings suggests that the tithe was the firstfruits of produce, or perhaps included these. This was a private feast at the sanctuary, and may have been a reform due to the fact that the ruling classes, as in Am 5:10, secured the best for themselves. It was not a direct due for the priesthood or Levite, money one-sixth part of the produce. The distance to the central sanctuary was too great for the offering to be taken there, it might be commuted for money, and this would furnish the material for the feast at the sanctuary as before (Dt 12:10). In the third year tithe was to be paid aside to furnish a feast or feasts at home for the Levite, stranger, fatherless, and widow (14:28-29).

Does the tithe here referred to form the equivalent of the firstfruits, the ritual of which, as perhaps forming part of the tithe, is detailed in Dt 26:2. Probably they are ultimately the same, including an offering of part as firstfruits, and a feast for Levite and stranger, just as in 18 firstfruits are to be given to the priests. If so, the words in 26:1, 'Thou shalt rejoice in all the good which the Lord thy God hath given unto thee, and unto thine house, thou, and the Levite, and the stranger,' would refer to the feast and be equivalent to the feast on tithes of 14:29, while the earlier part of ch. 26 would refer to the offering of part as a firstfruits offering.

In the third year's tithe additional to the tithe given each year, or is it a special form of treating tithe in the third year? Here again opinions differ, but most regard it as a diverting the usual custom of the priesthood, who would be deprived of the tithes through the new custom of feasting at the central sanctuary. Others regard it as a second tithe, and this is supported by the LXX, which renders the doctrine of the tithe as 'the second tithe,' to δεύτερον ἑσώπτερον. But two tithes in every third year would mean a large amount, and it is unlikely that such demands would be made, or, if made, carried out. In the Priestly Code the tithe assumes the form of a fixed due. A tithe of the produce of the land, of fruit, and of the herd and flocks (i.e. of their yearly increase) is 'holy unto the Lord.' If collected, the money one-sixth part of the value is to be added (Lv 27:30). This is probably the tithe of produce referred to in Nu 18:21, which was to be given to the Levites, they in turn giving a tenth of it to the storehouse for the support of the priests (cf. Neh 10:19), who received now also firstfruits of corn, oil, and wine (Nu 18:12). The tithe of cattle and sheep in Lv 27:24, which is to be paid to the Levite, suggests that the firstlings used at the Deuteronomic tithe-feast, but claimed later by the priests (Nu 18:26) as apart from the Levites, but it is not referred to in

Neh 10:9, where the tithe is described (cf. 12:42-23:19), and may be a later addition. It is, however, mentioned as paid to the priests in To 1, by Philo, and in the Book of Jubilees (39:22). Rabbinic authorities regard it as furnishing, along with a second tithe of produce (Lv 27:30), additional, therefore, to the tithe of produce in Nu 18:21—a feast for the tithe and guests at Jerusalem, as ordained in Dt 14:23. The purpose of the Priestly Code was probably to arrogate the law of the tithe in Deuteronomy, but later harmonizers did not take this view and spoke of two tithes, and even three, the third-year tithe of Deuteronomy being regarded as an additional one. The law of P is reflected in Hezekiah's legislation, which ordered that firstfruits and tithes of produce, sheep, and oxen should be brought for the priests and Levites (2 Ch 31); hence, if the tithes of animals is in addition to the original law of Lv 27:30, it may have come into force after Nehemiah's time.

In Neh 10:32 firstfruits and firstlings and firstfruits of dough were for the priests, and tithes of produce for the Levites—the latter collected by the Levites under the supervision of a priest, and a tithe of the tithes being given to the priests (cf. 12:19). Thereafter, however, the money was paid to the Levites, as Nehemiah discovered, and they had to cultivate their own land. At Nehemiah's remonstrance it was paid (13:10). At a later time the priests themselves collected the tithe, and the subsequent history of the Levites in connexion with it is obscure, while they no longer shared in the tithe, either from the time of Ezra or from that of John Hyrcanus.

The Pharisees, as well as the regulations of the Talmud, considered minutely the things to be tithed (Lk 11:42), the former even paying tithes of garden herbs—mint, anise, cumin. Under the Rabbinic system of three tithes referred to above, the first was collected yearly; the second was due in the first, second, fourth, and fifth years; the third in the third and sixth years. Two were thus taken every year, except in the seventh year, when the land lay fallow. The poor's title suggested tithing of earnings, all of which was given to them. Extravagant claims were made for the virtue of tithes: e.g., through it the priests gave and only their meat was punished in hell which is the lot of the wicked.

In Ezechiel's proposed legislation, which marks the transition to P, the first of all the firstfruits of everything is reserved for the support of the Officium. There is here set forth the price for the support of ritual and feasts out of wheat, oil, and fruits (44:24). The tithing is separately mentioned, as are the payments to be made to the priests as in P.

3. Early and medieval Church usage.—In the Christian Church the need of supporting the clergy, who were early withdrawn from secular business, was recognized, but the system of tithing was not generally resorted to for several centuries. Once it did become general, tithes were regarded, on the analogy of its use in the Jewish Church, as de jure divinum, and supported by such passages as Mt 10:8, Lk 10:1, 1 Cor 9:6—an argument which Selden was the first to show groundless, in his work on the subject. Until the 16th century little is heard of it, and the controversy regarding the matter from a totally different point of view from that which was later adopted. There are, referring to tithes in the Jewish system, says characteristic ally that Christ, as 'the firstfruits,' isiju in the liberty, set aside all their possessions for the Lord's purposes, bestowing joyfully and freely not the less valuable portions of their property.

TITHES

regards tithes as something to be far exceeded in Christian giving,1 and Epiphanius says that tithe is no more binding than circumcision.2 Augustine regards it as a fundamental duty of Christians to God, though he and others are prompted also by the finer ideal of freedom in all Christian giving. It was inevitable, however, that, as the Church spread far and wide, circumstances should make it necessary to fall back upon rule, based upon legal provision, and the old standard of a tenth was set up, and the Christian priest was commanded by the Bishop to exact tithe from his flocks and Levite. Ambrose and many other Fathers accordingly maintain that tithes should be given, but their views were not generally accepted in the Eastern Church. Even in the West there is evidence that this species of ecclesiastical property was acquired not only by degrees, but with considerable opposition.3 The moral duty of paying tithe was now generally taught, but, even after it was made a matter of law, tithe was paid reluctantly and irregularly. In A.D. 885 the Council of Mainz ordained its payment, while priests were to use it in helping the poor and in redressing the abuses of those who refused to pay it or who paid it was to be excommunicated. Other councils enjoined it, but it was not until the time of Charlemagne that it became matter of law. In one of his capitularies he ordained it to be paid to churches and clergy. Preachers had already exhorted strenuously towards its payment as tending to Christian perfection, and doubtless it was now more generally rendered. At the same time it has to be remembered that, apart from ecclesiastical law, under Roman law colonists had to pay a tenth to the State as rent from the ager publicus. This had already in large measure fallen into the hands of the Church. While the ecclesiastical tithe was usually paid to the bishop, who apportioned it, Charlemagne's capitulary regulates its division into three parts—for the bishop and clergy, for the poor, and for the support of church fabrics. In later times tithe was often appropriated to particular churches and to monastic foundations. Once the payment of tithe became a matter of legal due, excommunication or temporal penalties were decreed against those who refused to pay it. Meanwhile abuses had risen in connexion with the appropriation of tithe. Sometimes, instead of appropriating it to a church, monastery, or diocese, the payent was appropriated to his own uses or even sold it. It had also become common for ecclesiastics to grant tithes to laymen as an award for service or in recognition of their protection. These were now regarded as evils, and it was set forth as a legal maxim that all tithes are of ecclesiastical origin. Where they had been appropriated by laymen, they were withheld from the Church only by robbery or by feudal grant (decrev infuente). No layman could possess tithes without risking his salvation. Hence the Third Lateran Council of 1179 forbade detention of tithes by laymen as well as transference of them to other laymen. The Council also declared that any one who violated this decree endangered his soul, and would be deprived of Christian sepulture. As a result of this, many tithes were restored to ecclesiastical use. Towards the 19th century, tithe was also extended from the fruits of the earth, or prelial tithes, to all kinds of profit and wages. It was divided by the canonists into (1) prelial—derived from the fruits of the earth; (2) of the soil, or products derived from the soil, or those due partly to its productiveness, partly to human skill and labour; (3) personal—

received the whole teind. In other or 'patrimonial' parishes the teind belonged to the bishop, or to a religious house, and the vicar who served the church derived his stipend from the teinds, but in some cases, sometimes a small part of the vicarage teinds. When teinds first began as such in Scotland is not known with certainty, but they are frequently mentioned in charters of the 12th century, and are often mentioned in writs of that period to enforce their payment. Canons of provincial councils in the pre-Reformation period regulate this payment and appropriation. Many abuses arose regarding teinds, and the decrees of the Lateran Council were often ignored. Certain ecclesiastical lands (i.e., lands which were the property of monastic orders) were granted freedom from payment of tithe by papal privilege. When such lands were feued to laymen, this exemption also passed to them. In view of the coming Reformation, ecclesiastics frequently made grants to landowners, called titulars, conferring heritable rights to teinds by feu or by long lease. At the Reformation church lands passed into the hands of laymen by grant from the crown or otherwise, but payment of teind still continued, though the stipends of ministers were entirely at the discretion of the new owner of the amount. In 1557 the General Assembly petitioned the Privy Council to make permanent provision for the maintenance of ministers. The Council thereupon resolved that one-third of all ecclesiastical revenues should be divided between ministers and the crown. On the rent-rolls being made up, this sum was found to amount to over £6000. But, as a result of imperfect returns, remission, and refusal of payments, much less than half of this sum was available. In 1657 Parliament, under the scheme known as the 'assumption of thirds,' ordered that 'the thirteenth parts of the annual rents of this realm' be paid now and for all time coming to ministers until 'the Kirk come to the full possession of their patronimie, qhillik is the teinides.' This third was never paid in full, but the system remained in force until 1633. While Parliament thus recognized the right of the Kirk to teinds—a proprietary right fully enjoyed by the pre-Reformation clergy—that right was nullified, and teinds had been 'evicted from their former owners, diverted from their former use, and acquired and dealt with by the crown and nobles as their own property.'

An Act of 1617 appointed a commission authorized to augment stipends out of the crop, the number of stipends being decreed.

In 1627, as a result of Charles I's intention to receive surrenders of alienated church lands and teinds, and of the opposition which this roused, a commission was appointed to deal with the subject and to make provision for churches. Submissions were made to the king by those who had benefited by grants of teinds or were interested in them, and as a result he issued his 'decrees-arbitral,' which were confirmed by Act of Parliament in 1633, and commissioners were appointed to deal with the whole matter. Teinds were to be valued at 'the fifth part of the constant rent which each land payeth in stock and teind where the same are valued jointly,' or, if valued apart, the commissioners were to declare their value. Titulars of teinds were to sell them to heritors at nine years' purchase, but only so far as not already devoted locally to the minister of the parish. The valuation thus made fixed the amount of teind for all time coming, and the minister's stipend was to be paid out of the commuted teinds as a permanent endowment, with a further provision that the stipend thus formed a paramount claim upon teind. These decrees were confirmed by Act of the Scots Parliament in 1633, and still continue to regulate the right to teinds and the payment of stipends of ministers of the Established Church. The whole matter of teinds was vested in certain ministers, but was transferred under the Union of 1707 and subsequent Acts to the Lords of Council and Session, acting as a Court of Commission of Teinds. This Court of Teinds makes awards of commutation of teinds, and in particular hears all claims for augmentation of stipend out of the unexhausted or free teinds, where such exist in the possession of the proprietor of the property of a stipend. Such claims can be preferred only twenty years after a previous claim has been upheld.

In valuing teinds under the Act of 1633, the valuation was made either in grain or in money. While according to value of grain, it was valued according to civil prices of the county, as determined by a local court who strike the value for the crop and year.

**Tithes (Greek).—** It is difficult to separate tithes (λειτουργία) and firstfruits (ἀρπάγα), since the title is only a special form of firstfruits. Many nations and tribes, if not nearly all, have had the custom of setting apart a portion of their goods for the gods; and when, as was sometimes the case, the king or chief was a Sadducee, he took his share by compulsion. It seems to have been a wide-spread belief that some sacrifice was due to the local spirits whenever men broke new ground, built a settlement, or bridged a river; and it was certainly common in very early times to leave a portion of the new land to the possession of the old divinity. Perhaps for the same reason portions of the fruits of the earth were left, or otherwise given to the gods. It is not likely that this portion was always the same fraction of the whole; but the tenth was found to be a convenient fraction early and in many nations, among them the Jews. Now the tithe is the decimal part of something, or something to do with this choice. In Greece a few traces are known of the early custom just mentioned.—e.g., the sacred groves of Artemis, with game that no men might kill except in a sacred hunt.

The Pelasgians are said by Stephanus to have offered the tithe, which in later days they dedicated at Delphi; and Herodotus says how the Hyperboreans used to send their annual tithe to Delos. The tithe is not mentioned in Homer; and the earliest records come with the inscriptions, although legendary tithing is spoken of earlier. When Agamemnon returned from Troy, he and his Mycenaeans have dedicated a tenth to the gods. An epic poem, the Eurotis, two lines of which are quoted by Clement of Alexandria, mentions the dedication of tithes at Delphi. The Liparians, on conquering the mainlands, dedicated a title of the spoils at Delphi. After the Persian invasion the Greeks took an oath to tithe all those cities which

had sided with the enemy.1 Titles of that great struggle are also mentioned as being upon the Athenian Acropolis.2 A helmet exists that was part of a war-tithe, dedicated by Hiero probably from the spoils of Cyme.3 Titles of spoils are recorded on the stele of the Euryomedon.4 Tithe is a certain restoration in the inscription that records how the Cnidians built their Σπαρατός at Delphi.5 Statues on the Sacred Way at Bovotis, and we have the tradition of the tithe.6 Two colossal figures were purchased with the tithe of Plato;7 the Cilianators also dedicated another as a 'tithe from many cities.'8 A bronze Apollo in the Pythium at Athens belongs to the 4th cent.,9 and an archaic bronze figure of the 'Apollo' type bears the word 'tithe.'10 Even the private person speaks with pride of the tithe that he offered to Athens, in the amount of more than half a talent.11 Most of the dedications of arms and spoils are without the distinctive word; but the war-tithe is recorded from the following places: Apollonia, Athens, Bovotis,12 Branchides,13 Crete,14 Didyma,15 Megara,16 Sparta,17 Thessaly;18 at Delphi by Athenians,19 Capyres,20 Cnidians,21 Liparians,22 Spartans,23 and Tarentines;24 at Olympia by Cilianators,25 Eleans,26 Messenians, and many other places.

Other titles are mentioned in Anaphe,27 Areades,28 Argolis,29 Athens,30 Bovotis,31 Calabria,32 Calympa,33 Crete,34 Cyrene,35 Delos,36 Delphi,37 Didyma,38 Epidaurus,39 in Argolis, Halicarnassus,40 Ithaca,41 Megara,42 Naxos,43 Peestum,44 Paros,45 Rhodes,46 Samos,47 Thera,48 Siphnos.49 They are dedicated by men or women, or by groups of persons, to Apollo, Artemis, Athens, Demeter, Hercules, Zeus. The articles tithed are all kinds of produce, corn and the fruits of the earth, hunting, fish, gotten minerals, or the profits of trade and industry. Thus we find the Siphnians tithing the output of their mines,50 the Corinthians their fish,51 the Samians their profits.52 But the Persian invasion the farmer offers a tithe of his farm;53 other early dedications of tithes are made by fallers and shipwrights.54

We also read of a butcher,1 a courtesan,2 and others who speak generally of the kind of their work.3 Sometimes friends or relatives offer the tithe for another.4 Some of the female statues of the Acropolis were tithes.5 See also art. TLINTING—The Tlinton, who occupied the coast of Alaska from Portland Canal to Copper River, were organized into two main phratries and one subsidiary phratrial group, and the phratries were subdivided into clans. The character of their country and their manners and customs were almost the same as those of the Haida (q.v.), though the northern towns had not adopted the elaborately carved poles so characteristic of the latter, and their potlatches were conducted in a somewhat different manner. 1. Cosmological beliefs.—The outlines of Tlinton belief were like those of the Haida and indeed of all the other tribes of the north Pacific coast, but in detail they were considerably different. As to the Haida, they believed that the earth was flat and the sky a solid vault hung above it like an inverted cup and tenanted by various supernatural beings. The whites were supposed to have left the earth and light the reflection of the sea. The sun and moon were also occupied by special beings, and more regard was paid to the sun than by the Haida. Shooting stars were supposed to be live coals thrown down by departed spirits, and the northern lights were those spirits at play. Under the earth was an old woman called Old-Woman-under-the-earth, who supported a great post, on which the solid land rested. According to one story, she was the sister of four brothers, who were favourite heroes of Tlinton mythology, and who in early days travelled all over the world killing harmful animals, putting things in order, and establishing culture for future generations. One of these brothers, Kashkistik, was a powerful shaman who succeeded where his brothers had failed, and was frequently called upon to restore to life, while another, Hikayak, was always finding them into trouble by his impetuous and trilling character. He was suspected of an amour with his own sister, and, when his brothers discovered that their suspicions were well founded, they drove him away, and he became the wilder of the thunders. His sister, overcome with shame, went down into the earth at a place where the extinct crater of Mt. Edgecombe now is, near Sitka, and became Old-Woman-under-the- earth. The remaining brothers and their mother were turned into rocks while trying to cross the Stikine River, and they may be seen there at the present day. According to a version of this story told at Wrangell, the sister was also turned into rock at that place and Old- woman-under-the-earth was an entirely different person. Old-woman-under-the-earth liked to receive food and prayers from human beings, and she was especially fond of girls because they made the fires on earth which warred her. When she did not get enough attention from mankind, she became angry and put out her pole, causing an earthquake. Others said that the earthquake was caused by her anger at some persons who were teasing her, and Veni-
Tlingit

Aminoff 1 was told that it was because Raven was angry with mankind and was trying to drive her away to the south with soothing music down to the sea. Though Hikayak was said to cause thunder, it was more often ascribed, as in the case of the Haida, to a huge bird; the flapping of its wings produced the thunder and the opening of its eyes the lightning; it lived principally on whales, which it carried up into the mountains, and their bones were often found there. Still another story relates that several brothers became wizards in order to win the hand of a young woman whom a giant with which they had dragged her up on the side of a steep cliff, and, having learned to fly, afterwards became thunder beings. When a peak of thunder was heard, people shook themselves and jumped into the air, crying, ‘Take all my sickness from me.’

2. Supernatural beings.—Except in the general way common to all American tribes, we do not hear much of sky-beings. The ‘above-people’ of the Haida were said to have been first heard of through the Tlingit, however, and the conception of Täxét’s house also originated with them, although they did not recognize any special being of that name.

The four brothers have been referred to as the originators of culture and customs, but they by no means supplant Raven, whose personality, functions, and attributes are as prominent in the Queen Charlotte Islands. 2 It is ethnographically important to note that he began his career on the Nass River, and, according to some accounts, returned to its head as his final home.

In connexion with Raven we have the nearest approach to a supreme deity that the Tlingit seem to have possessed, for the heaven-god of the Haida appears to be entirely wanting among them. This personage was called Raven—at the-head-of-Nass (Nashakiyeh), and it was from him that Raven obtained the sun, moon, stars, and eagle to distribute all over the world. Some of the more thoughtful Indians at the present day elevate this being to a position far above that which he occupied aborignally, but there is no doubt that he always had a real existence. He was called in some stories ‘the king of birds,’ and Raven was therefore subordinate to him. Up to the present time, however, no account of him has been obtained in the northern Tlingit towns—a fact which may indicate that Tsimshian and Haida influence has been involved with him.

Although held in considerable regard, killer-whales did not receive a tithe as much attention as among the Haida, nor do they appear to have been associated with points and reefs. Land-owners, however, and the land-otter men (ksháthko)—the Tlingit equivalent of the goqflit—played a great part in Tlingit mythology and in the rites of shamans, and were viewed with even greater terror. We also find a counterpart of the Haida Property-woman called Tlenahidak, and a counterpart of Master-carpenter. The increased importance of hunting is shown by the conception of Mountain-dweller, who lived far back among the mountains and had a house always abundantly stocked with game. Mountains generally were called upon for a fair wind. Other patron-deities were undoubtedly believed in, but the tendency in this direction does not appear to have been so strong as among the Haida. Another belief peculiar to the Tlingit was in a race of seal-men. When one of these was seen, they poured a bucket of fresh water into the sea. The grey bears and mountain-sheep, which are wanting in the Queen Charlotte Islands, were naturally held in greater regard than there, and, when bears were killed, their skins were hung up and adorned with eagle-down and red paint, being addressed meanwhile to the bear-spirits. It is still feared that the bear’s relatives would be angry and would kill the hunter. Favourite among Tlingit myths was that of a hunter named Kata, who was captured by a female grizzly bear that killed her bear-husband in order to marry him. His children by her were a famous race of bears known as ‘Kata’s children.’ They destroyed many people and committed great depredations, but were finally killed in battle by a group of shaman warriors, which served as heraldic crests in many of the most prominent families. There were also special tabus regarding mountain-sheep and the handling of their skins.

People obtained good luck by grasping at the sun’s disk and pretending to put it upon anything that they desired to be lucky. Like the Haida, the Tlingit gave food to any thing or any being that they wished to help them, and called to it, mentioning their wants. Everything was believed to have a spirit connected with it—there was one in every trail that a person followed and in everything that he touched.

3. The dead.—The regions of the dead are said to have been three—one below and two above the plane of earth. The first was the country of the killer-whale, and was below sea level. This was the abode of the drowned, and the third, or highest, was for those who had died by violence, corresponding to the Täxét’s house of the Haida. The approach to this place was through a hole reached by a single log, and this was guarded by a person who admitted only such as had perished in the prescribed manner. The trail thither was infested by grizzly bears and other animals. All other persons passed after death to the lower country Sagi-kavu-ani (‘souls’ home’), which corresponded closely to the Giettlgai of the Haida. The person who was to go thither found himself on a trail, and, following it, came to a fork. One of the two paths had been much trodden upon, while the other was very faint. The former came out on the bank of a river, beyond which were the houses of the departed, but, however loudly the new-comer shouted to the other souls to carry him across, they paid no attention until by chance he yawned, when they exclaimed that a soul had arrived, ferried him over, and gave him food. This river was said to have been forced by the tears of his family shed over the departed, and therefore it was not good to weep much until one’s friend had crossed the river. A story recorded by Krause 3 adds the important fact that only the souls of those who had friends among the spirits got to the other side, the remainder being forced to wander about miserably, and also that the river itself was as green and bitter as gall. The souls were dependent for their food on what their friends put into the fire for them, and all had to do their own work except those for whom slaves had been killed. Cremation, which was well-nigh universal among the Tlingit, was accounted for by the belief that only those whose bodies were burned could go near the fire in the spirit-world, the others being forced to shiver near the doors of the houses. According to Venininnoff, 4 the path of those whose friends wept much was muddy and watery, but for those whose friends wept less it was smooth and even. A world for wicked persons was sometimes spoken of, called Yeilikkwakwwo (‘Raven’s home’), and the Tlingit believed that any one who committed a crime, but it is possible that the belief was due to missionary influence.

4. Rebirth.—As among the Haida, belief in rebirth was general—so much so that it is said

---

2 See BRFV, 472.
that a poor person would wish to die in hope of being reborn in a higher position in life. If a pregnant woman dreamed of some dead relative, it was regarded as a sign that he might protect his soul, and in consequence the child was given the relative’s name. A belief in four rebirths followed by annihilation has also been recorded, but this was perhaps a distorted rendering of the Haida idea. A so-called wrenched spirit, or wrenched soul, might be assisted by the relatives of the shaman who were to assist him might eat or drink. They cleansed themselves internally by drinking water and introducing a feather into the throat to bring on vomiting. At sunset all eating the uninitiated had been thoroughly cleansed and provided with new floor-planks. Then the shaman came out from behind a screen and began to run round the fire, his friends singing all the time, until the spirit came to him.

5. Shamanism.—Shamanism reached its highest development among the Tlingit, and nowhere on the coast were shamans of such exalted social rank, so well received, or so powerful when performing, the Tlingit shaman was dressed much like his Haida counterpart, but he also assumed a wooden mask, and, besides being possessed by one principal spirit, he was, if not possessed, at least accompanied, by several subordinate ones. The latter were represented on the masks by small figures round the eyes, jaws, ears, etc., of the principal figure, and were supposed to strengthen the corresponding features of the shaman. Still other spirits had charge of his rattle. With each of the masks went a certain number of songs. One of the most popular spirits was the wood-worm, which enabled the shaman to cut through any thing just as the wood-worm cuts through wood. In addition to his other neck ornaments, the shaman sometimes had a bird’s head tied in front. He also wore his highest development of paraphernalia, best time for him, and told the other people what to do. This assistant was generally the man who was to succeed to his office. According to Veniaminoff, the successor was a son or a sister’s son, but for a son to succeed to his father’s position seems to have been the exception. The right to certain spirits might be inherited, and in saying that this seldom happened Krause has gone decidedly too far.1

Not infrequently the spirit came to a novitiate shaman on the death of his predecessor, but often he was compelled to stay as long as two weeks in the mountains and woods before it showed itself. When it finally made its appearance, it usually sent him the land-otter, the tongue of which he wrenched out, catching the blood on a little bundle of sticks. Krause4 says that the shaman killed this land-otter by explaining ‘Oh! I four times very loudly, each time in a different tone of voice. He also notes that none of the sticks in his bundle were retained except those on which the blood had fallen. After the shaman drew out the tongue, he could have explained, ‘May I be skilful in my new calling,’ ‘May I be able to charm and dance well,’ etc. The tongue was afterwards concealed in the bundle, which was then kept in an out-of-the-way place, for, if an uninitiated person were to come upon it, he would lose his reason. The skin he removed carefully and preserved as a visible mark of his calling, but he buried the flesh in the earth. The part played by land-otters in shamanism and in mythology generally inspired the Tlingit with such respect and dread that, before the coming of the Russians, they would not shoot one of them.

If a person could not otherwise succeed in becoming a shaman, he might go at night to the grave of some dead shaman and take from the body a tooth or the end of one of the little fingers, and place it in his mouth. A shaman who did not observe certain regulations carefully might be killed by his own spirits, and, on the other hand, he could throw the spirit of one who did not believe in him and destroy him. The great exhibitions or performances of the shamans were undertaken only during the new or full moon. Shamans then called upon their spirits to bring good fortune and health to their town and people. From the morning of the day before that appointed until the following day, if a very close relative of the shaman who was to assist him might eat or drink. They cleansed themselves internally by drinking water and introducing a feather into the throat to bring on vomiting. At sunset all eating the uninitiated had been thoroughly cleansed and provided with new floor-planks. Then the shaman came out from behind a screen and began to run round the fire, his friends singing all the time, until the spirit came to him. Veniaminoff2 divides the spirits that spoke through shamans into spirits from above, land-spirits, and water-spirits. The first were the souls from the above-country already referred to. The land-spirits appeared in the form of land-animals, but were said to be the spirits of those who had died a natural death and who had their dwellings in the distant north. The water-spirits appeared in the forms of sea-animals, and were in fact the spirits of those animals. According to Krause,2 every Tlingit, whether shaman or not, had his own protecting spirit, but this belief is not seems to have assumed the importance which it bears among the inland Indians.

6. Witchcraft.—As shamanism had reached its highest development with the Tlingit, so also had witchcraft, which might almost be described as a diseased shamanism. A wizard accomplished his object by obtaining some portion of the person or clothing of the victim and laying it by an unburned body, among the ashes of a burned body, or on the body of a dog. When a person was suspected of being a wizard, his hands were bound behind his back and he was imprisoned in an empty hut but without food and with nothing to drink but sea-water. There he was kept until he confessed, lost his reason, or died, unless his friends were powerful enough to liberate him.

The person who confessed to having bewitched any one was forced to wade out into the sea with the medicine or compound which had caused the illness and to scatter it upon the water, accompanying his actions with certain formulas. Instead of being imprisoned, a suspected wizard was sometimes bound hand and foot and exposed on the beach for the rising tide to cover him. Sometimes he was dealt with in a still more summary manner. Any other accomplishers, wizards and witches were universally believed to possess the power of flight.

7. Charms, etc.—The principal families and many in humble circumstances kept charms to bring wealth and good fortune. They believed in all sorts of signs, which they extracted from, or rather read into, natural phenomena, and they thought that natural phenomena would be affected by the breaking of this or that taboo. After a person had died, his body was carried through a temporary hole in the side of the house, and a dog, dead or alive, was thrown out after it, either that the spirits might follow it out of the house or that the dead man might be protected in his journey to the spirit world.

LITERATURE.—The monumental work of A. Krause, Die Tlingit-Indiener, Jenae, 1833, is the authority on the subject. Most of the important mythological material contained in L. Veniaminoff’s Russian writers has been culled into it. See also J. R. Swanton, ‘Social Condition, Beliefs, and Linguistic Relationship of the Tlingit Indians,’ in 28 RLBl 459 (1919); L. Krause, Mythical and Religious Ideas of the Tlingit Indians, 28 RBBl 459 (1919); F. Boas, report v. ‘On the North-Western Tribes of Canada,’ in Journal of the Anthropological Association for the Improvement of Science, 1889, p. 501 ff.; John R. Swanton.

TOAD.—See ANIMALS.
TODAS.—The Todas are a small community, about 700 in number, living on the undulating plateau, about 7000 ft. above sea-level, of the Nilgiri hills in Southern India. They are a purely pastoral people, occupying about 1500 sq. ft. They are provided with the products of agriculture by the Badagas, a Cannarese tribe who also live on the plateau, while the Kotas, allied to the jungle peoples of Southern India, furnish their metal-work and pottery. Except for these commercial relations, the Todas form a wholly separate community and have few other relations with the Badagas or Kotas. With the Kurumbas, a jungle tribe living on the slopes of the Nilgiris, the Todas have even less frequent relations, and these arise chiefly out of the Toda belief that the Kurumbas are sorcerers.

1. Social organization.—The people are divided into two sections called the Tartharol and the Teivali, each of which is strictly endogamous, though irregular unions are allowed between men and women of the two. Each section is divided into a number of exogamous clans. Each clan owns a number of villages, or mad (commonly called madd), and takes its name from the etimation, or chief of these villages. The villages are small settlements, juts, or villages, usually only one or two houses with a dairy and buffalo-pen. They are scattered over the hills, but most of the villages of a clan are near one another. Each clan is divided into two divisions called kudr, 'horn,' which should properly be, and usually are, only two in number. These divisions are of importance only in ceremonial. Another division of the clan is the polm, by which the sharing of communal expenses, such as those incurred in the repair or rebuilding of the chief dairies of the clan, is regulated. The Todas recognize the existence of the family, or kutupel, as a social unit, and this often corresponds with the polm. One clan, the Melgarsol, has an exceptional position in that, though belonging to the Tartharol, it shares many duties and privileges with the Teivali.

Descent is always patrilineal. A man belongs to the clan of his father. The effect of fatherhood is not determined by marriage, however, but by a ceremony of giving a bow and arrow which takes place at the seventh month of pregnancy. This ceremony is performed only once in a lifetime by a person is regarded as the child of the man who was the last to perform this ceremony with his or her mother.

The Toda practise polyandry, nearly always of the fraternal type. Formerly this practice was possible in a pure form owing to the existence of female infanticide. Though girls are probably sometimes killed at birth, the practice is now less frequent. There is still a considerable excess of men, but polyandry is often combined with polygyny, producing a state which may be regarded as a variety of group marriage. In addition to orthodox marriage there is a regular system of unions in which a woman has connubial relations with one or more men called mokhkhodvaid. This kind of union may take place between a Tartharol man and a Teivali woman or vice versa, the difference being marriage proper, which is confined to members of one section. The orthodox marriage is between cross-cousins, and this institution is reflected in the nomenclature of relationship which is used in the living generation of the Todas. The cross-cousin is classified with the spouse, the mother's brother with the father-in-law, and the father's sister with the mother-in-law, as having the same rights and liabilities at law, and this practice is probably responsible for a custom of tranferring wives from one man to another which has now become very frequent. The custom seems to have been originally one by means of which a widower could obtain a wife in a community where, through the practice of infant betrothal, it was rare for a man to have no wife or many step-wives, but it has now become a process set in action whenever one man desires the wife of another.

The people are governed by a council of five called the nain, one of the members of which should properly be a Badaga. This council is chiefly engaged in settling disputes arising out of the transference of wives. It is also the business of the nain to arrange when ceremonies shall be performed, especially those of the more important dairies. There is a headman called monegor, but he is chiefly concerned with the payment of the assessment to the Government, and the institution is almost certainly recent. On the other hand, the headship of the clan is certainly an old institution. Its functions are not especially important, and this also holds good of the headship of the kudr and polm.

2. Religion.—The Todas believe in certain superior beings who may be regarded as gods, and speak of them as 1600 or 1800 in number, but these are the customary Toda expressions for an unattainable number. The two most important are On and Teikirzi. On is a male deity who presides over Amnox, the world of the dead. He is believed to have created the Todas and their buffaloes and to have been himself a dairyman. More important in the minds of the people is Teikirzi, a female deity, who is believed to have lived on the Nilgiris and ruled the people. Most of the Toda social and ceremonial laws are ascribed to her ordinance. These two deities are not especially connected with hills, but nearly all the others seem to be hill-deities, each being associated with a special hill-top. Two are rivers, associated with the two chief rivers of the district.

The ritual of the Toda religion is concerned almost exclusively with the buffaloes and the treatment of their milk. The dairies are the temples; the dairymen are the priests; and various incidents in the lives of the buffaloes, such as their movements from one grazing ground to another, the first milking, and the giving of salt, cereals, and water to the buffalo, have become associated with the performance of ceremonial which has a religious character. This ritual stands in a definite relation to the gods, for these beings are mentioned in the formulas of the dairy ritual, the general character of which indicates that they must be regarded as rice prayers. The names used for the deities in these prayers differ from those used in ordinary speech, and form part of a series of expressions called keworkam, in which special names of deities, buffaloes, dairies, utensils, and other objects are uttered, preceded by the word ith, said to mean 'for the sake of.' The dairies and the buffalo-herds form a somewhat complicated organization, especially among the Tartharol. Every village has a number of buffaloes devoid of any element of sanctity, and their milk is churned in a dairy, also devoid of sanctity, with no special ritual. Most of the buffaloes, however, belong to herds with varying degrees of sanctity, and in correspondence with these there are great differences in the elaboration of the ritual with which the milk is treated and in the ceremonial regulations of the lives of the dairy priests. This complicated system is confined to the buffaloes of the Tartharol, the Teivali having only one variety of sacred buffalo, but the most sacred kind of dairy can be attended either by Teivali men or by men of the Melgars clan, which occupies an intermediate position between the two main sections.
The lowest grade of Tarhrah dairy is called toareh. Its ritual is comparatively simple and is confined to the evening milking and churning, then the dairyman enters the dairy. If, however, he leaves and touches the threshold with his forehead, touches certain dairy vessels ceremonially, lights the lamp, and utters a prayer before the lighted lamp, he holds the churning-stick to his forehead, uttering the sacred syllable 'Ori. He then begins to dance, and thus prays the daily prayer of the dairyman.

The dairy next in order of sanctity differs in the possession of a bell (Oli). The dairyman is not allowed to put his food on the ground; both common as well as sacred are driven on the bench with the utterance of the sacred syllable; and the chieftain of the village, or the chief dairyman of this grade, neither sleeps or prays in the ordinary hut; but only on certain days of the week.

Ordinary people are not allowed to drink the milk of buffaloes tainted with milk of cows thus consecrated.

Certain villages have dairies with special features of ritual, character, and different uses. The Melgaro, for example, is the largest and most important of this class, and is so occupied, that the Melgaro, and in some cases the Melgaro dairy, is the only dairy of the village. The villagers are all allowed to wear working clothes only during the time of this occupation, as they are not allowed to touch or wear the clothes of the dairymen, who are always wearing a white robe or cloak, with a red sash and a staff. Some of the latter are also provided with a silver or golden staff, and a golden or silver mask, to be carried in procession.

The people of the dairy are divided into two classes: the Melgaro, and the others. The Melgaro are the chief dairymen, and are considered as the most sacred of all the dairymen. They are allowed to wear only white clothes, and are not allowed to touch or wear the clothes of the other dairymen. They are also not allowed to touch or wear the clothes of the women of the village, who are considered as the most sacred of all the inhabitants.

The village of the dairyman is the lowest grade, and is considered as the least sacred. The dairyman's house is the only one that is not occupied by the villagers, and is considered as the most sacred of all the dairymen's houses.

There are also certain ceremonies that are performed by the dairymen, such as the procession of the milk, the milking, and the churning. These ceremonies are performed by the dairymen, and are considered as the most sacred of all the ceremonies that are performed by the villagers.

There are also certain events that are considered as the most important of all the events of the village, such as the birth of a child, the marriage of a person, the death of a person, and the death of a cow. These events are considered as the most important of all the events of the village, and are performed by the dairymen, and are considered as the most sacred of all the events that are performed by the villagers.

There are also certain festivals that are performed by the villagers, such as the festival of the harvest, the festival of the rain, and the festival of the cows. These festivals are performed by the villagers, and are considered as the most important of all the festivals that are performed by the villagers.

There are also certain feasts that are performed by the villagers, such as the feast of the harvest, the feast of the rain, and the feast of the cows. These feasts are performed by the villagers, and are considered as the most important of all the feasts that are performed by the villagers.

monies now to be described are more occasional and depend on the commission of some act which has offended the gods and thus brought illness or some other misfortune upon the offender. In these cases the central feature of the ceremony is an offering to the gods of either a buffalo or a buffalo-calf, a piece of the cloth worn by the more sacred dairymen, or a ring.

The simplest kind of offering, often made when someone is undergoing a minor illness, is to undertake not to kill or part with a buffalo, but allow it to die a natural death. In this case there is little ceremony, the donor simply stating that he is giving the buffalo to the gods while he salutes an elder. A more ceremonial offering of a buffalo-calf is made if a misfortune is ascribed to some serious offence against the dairy, such as stealing milk or its products, quarrelling in the dairy, or going to it in an improper state. In this case the calf is given by the offender to the people of the other kudr of his clan. All members of the kudr of the offender have to leave the village for a month, at the end of which, after purification with fasting, the calf is driven across certain ceremonial stones to be received by members of the other kudr. For minor offences a piece of cloth or a ring in a similar manner is being passed in every case from the kudr of the offender to the people of the other kudr of the clan. In all cases prayers are offered, which include in some cases supplications for the health of the people and their buffaloes.

4. Divination.—The offerings just described are made as the result of the finding of diviners called teul, or god-men. The decisions are given when the teul are in a state of frenzy and in a language which is said to be Malayalam. It is believed that they are the utterances of some of the gods. The diviners are often consulted at funerals, usually to discover the cause of death or illness either of men or of buffaloes, or the cause of any harm which has happened to a dairy or its contents. In the case of illness they usually find either that the patient has committed some offence against the dairy or that he is the victim of the sorcery of the Kurumbas.

5. Birth and childhood ceremonies.—Two ceremonies are performed during pregnancy; in the first the woman is undergoing seclusion, while the second ceremony is that already mentioned in which the presentation of a bow and arrow determines the fatherhood of the child. Various ceremonies occur at the end of pregnancy; but the most serious childbirth is that of the child. Until a child is three months old no one but the mother is allowed to see its face, and at that age a ceremony is performed in which the face is uncovered and the child is allowed to look at the sun. Ceremonies are also performed when the name is given, when the ears are pierced, and when a lock of hair is cut, the last ceremony only taking place on the day after the second funeral (see below) of a Tarthar man.

6. Death.—The funeral ceremonies are very elaborate and take place on two different occasions often separated by many months. At the first ceremony the body is cremated on a pyre, the orthodox position being face downwards. Several rites are performed before cremation, among them being one in which a cloth is given by a near relative to the relatives of the deceased, who is married into the family, the cloth being then placed on the corpse by the wives of these men. In the case of a man the cremation is preceded by a ceremony in which the head is broken, the skull being wrapped in a buffalo-calf by a Teivali dairymen at a Tarthar funeral and by the relatives if the dead man is one of the Teivali. In most Tarthar clans the body is placed before cremation in a special three-roomed dairy. Buffaloes are killed, varying in number in different clans. In each case the right hand of the dead man is made to clasp one of the horns, and lamentations are uttered in which each person addresses the dead buffalo by the name of the deceased, the body is consumed, a piece of the skull is recovered from the ashes and kept, wrapped with some of the hair in a cloak, for the second funeral ceremony. In the interval these relics are kept in a special village, where they are saluted by any Todas who visit the place. Formerly the body was smoke-dried, after it had been incinerated, if the cremation ceremony was delayed.

At the second funeral ceremony the earth-throwing rite is repeated. At a Tarthar funeral a ceremony is performed in which the relics are sprinkled with the blood of a buffalo mixed with the bark of the teul tree. This is done by a Teivali man, wearing the cloak in which the remains have been wrapped, after which he touches the remains with a bow and arrow. Buffaloes are killed, as at the first ceremony, and the men of the clan are allowed to take a piece of the skull obtained from Malabar. During the following night the final ceremony takes place, in which the relics together with a number of other objects are burned within a stone-circle. The ashes are interred at an opening in the circle, and the grave is covered with a stone. A bell is then rung and a new pot broken on the stone, after which all go away without turning back to look at the resting-place of the earth of the dead.

The dead are believed to go to a place called Amnord in the west and below the earth. The god On presides over this world of the dead, where the people live much the same kind of life as on earth. The dead travel to Amnord by a definite route, which differs in some respects for Tartharol and Teivali. In each case the dead perform acts on the way by which they lose their love of the earth and regain the vigour of health. They have also to cross a bridge of thread, running the risk of falling into a river full of leeches. Those Todas who have offended against the dairy are not allowed to have been in a temple or a village on their journey to Amnord. One of the Tarthar clans, that of Taradr, has an Amnord, distinct from the rest, at Perithi in the Wainad, where there are still some Toda settlements.

7. Sacred numbers.—Many Toda ceremonies must be performed on definite days of the week, and this is probably connected with an institution in which each clan has one or more days on which a large number of activities are forbidden. Thus, on the madnol, or village day, neither dairymen nor women are allowed to leave the village, and nothing may be sold or taken away. There are various restrictions on conduct, and funeral and other ceremonies may not be held. Among the Tartharol there are similar restrictions on days sacred to each kind of dairy, so that in a village which has dairies of several different kinds a few days of the week are left for the performance of the ordinary activities of life.

Sacred numbers are very prominent in the ritual, three and seven being the most important. Many ritual acts are connected with numbers, threefold rite being usually associated in the dairy ceremonial with the utterance of the sacred syllable "Oh." This number is also prominent in the funeral rites, especially in connection with the ceremonial throwing of earth and the swinging of the body over the pyre before it is burned. The sevenfold performance of ceremonial acts only occurs in the
dairy ritual and is especially prominent in the ordination ceremonies. Several of the most ancient lamps of the dairy are said to have had seven cavities, or sixom, the token when present.  

8. Sorcery.—Two kinds of sorcery are practised, in one of which an incantation is uttered over some hair, preferably that of the person it is designed to injure. This is done in the presence of the proposed victim's hut. In the other form the sorcerer uses a bone or lime, which is then buried near the village of the proposed victim. In each case the incantation resembles the ordinary form of prayer, but with less explicit reference to the gods. It consists mainly of an enumeration of the misfortunes which it is hoped may fall upon the victim. The trouble is removed or averted by a corresponding formula as the result of negotiations of the sorcerer with whom the misfortune has been ascribed by one of the diviners. There are many points of similarity between the ceremonial of the Todas and that of the Hindus, the sanctity of the milk-providing animal being an important feature common to both. There is reason to believe that the two main sections of the Todas differ and it is probable that the Teivalirol represent the earlier comers and that they mixed with an indigenous people who practised interment of the dead preceded by some kind of mumification. The Tartharol seem to be later comers, who either brought the practice of mumification or accentuated its importance. The complexity of the dairy ritual is probably due to their influence, and they seem to have adopted the practice, so frequent in India, of employing the earlier settlers as their priests.

A point of especial interest is the relation of the Todas to the stone-circles and other megalithic structures on the Nilgiri hills. People present take little interest in these monuments, and this is intelligible if they were erected by the older stratum of the population represented by the Teivalirol, whose beliefs have been put into the background by the greater influence of the purely pastoral Tartharol. Stones of various kinds enter into the ritual of the dairy. The burial of the ashes at the entrance to a stone-circle at the end of the feast is a popular method of preventing the earth into the buffalo-pen at both funeral rites suggest that the body was once interred in a buffalo-pen, and this is perhaps confirmed by the burial of the ashes at the entrance to a stone-circle. In the sanctification of this vessel with earth taken from this spot. These features of ritual point to the circular pens as part of the culture of the older people, and in this connexion it is noteworthy that the most ancient dairies are circular and afford characteristic examples of the round house with conical roof. It may also be noted that these dairies are surrounded by stone walls, in one case by two such walls.

TOHUNGANS.—See POLYNESIA.

TOKEN.—In its broadest sense a token is any portable object serving as a sign or proof of authenticity, or by which the issuer guarantees that the claims indicated by the token will be satisfied on its presentation in the proper place. In numismatics it signifies a coin-like piece of metal or other material representing money of much more than its intrinsic value, for which money the issuer undertakes to redeem the token when presented; it is also loosely applied to tickets admitting to certain privileges, such as the holy communion, or serving instead of letters of recommendation or other forms of credential.

1. Antiquity:—Many vague statements have been made as to the use of tokens or tesserae (symbola, symphonemata) for identifying persons who had been initiated into mysteries, but nothing of the kind has been authenticated. Tesserae were largely used in Roman times for giving admission to certain places or entitled to share in the distribution of grain (des- serra frumentaria), and some of these bear Christian symbols (one is extant in ivory bearing an anchor, two others and a fragment in Augsburg). Even among pagan tesserae, those relating to religious bodies are rare. A certain number are extant bearing the names of the magistri and other dignitaries of the archs and aetes who made distributions at festivals, such as the magistri Minerales; there are also tesserae inscribed Sacra(Lan)vinsa Inven(cula), which were used at the festival of the college of Leuves at Lanuvium.

As regards Byzantine times, a certain number of tesserae of churches, convents, confraternities, and other pious institutions have been described; they may be preserved, as in the Christian tesserae, distribution of alms and also for the control of various payments due to the personnel of churches and religious bodies. Such are, e.g., an anonymous bronze tessera with the busts of the Virgin and St. Demetrios, and another with God the Father (inscription ἐνθρόνιζεν ἀνθρώπους) and a bunch of grapes on the reverse, which, it has been suggested, may have been used for the remuneration of cantors. The pieces used for charitable distributions are inscribed (in Greek) with such texts as 'He that hath pity upon the poor lendeth unto the Lord,' 'Blessed are the merciful, for they shall obtain mercy.'

2. Moneux.—The moneux of the church.—The token, or jeton de présence, issued to the clergy in collegiate churches as a record of their presence at mass, at the canonical hours, and at other offices, in order that they might claim the statutory payment for their services, was most commonly known as a moneux. The Latin word moneius (moneatis, moneatus, etc.) is of uncertain derivation. Other names met with are: plac (plate, platelet, platelet), plac (platelet), moneca caputul, sinodolum, etc. Many of these terms, signifying merely distribution-token, on the presentation of which a share in funds or privileges could be claimed, were not confined to the tokens of religious bodies, but extended to all kinds of corporations. The term moneaux was first introduced; the mention in a charter of the cathedral church of Tours (1216) of a distributio nummorum moneuariae does not necessarily refer to such moneux as in the present connexion. It is certain when moneaux capitulares were first introduced; the mention in a charter of the cathedral church of Tours (1216) of a distributio nummorum moneuariae does not necessarily refer to such moneaux as in the present connexion. It is certain when moneaux capitulares were first introduced; the mention in a charter of the cathedral church of Tours (1216) of a distributio nummorum moneuariae does not necessarily refer to such moneaux as in the present connexion. It is certain when moneaux capitulares were first introduced; the mention in a charter of the cathedral church of Tours (1216) of a distributio nummorum moneuariae does not necessarily refer to such moneaux as in the present connexion. It is certain when moneaux capitulares were first introduced; the mention in a charter of the cathedral church of Tours (1216) of a distributio nummorum moneuariae does not necessarily refer to such moneaux as in the present connexion.

1 Cf. the phrase of Tertullian, de Præscript. xx.: 'dam est illis [i.e. ecclesiis] communicacionis pascua, et appellatione fraternalis, et consociationis hospitialis.'
without any special connexion with religion. The earliest undoubted documentary reference to their use in churches seems to date from 1375, when Charles V. granted to the canons of the collegiate church of St. John at Lione the privilege of having "argent-méreaux" struck at the Royal Mint of St. Pourçain merellé for distribution to clerks and canons present at offices; they were to be of copper, lead, or tin, and to be carefully distinguished by their types, which are specified, from coin of the realm. None of these seems to have been identified. Next in date comes a reference in 1401. In a clause of his will Charles VI. ruled that the distributor of the Sainte Chapelle 'ne baille les méreaux jusqu'à la fin des heures de Notre Dame.' In a letter of 18th July 1401 he announces his intention of carrying out during his lifetime the new system outlined in his will; no one of the clergy who mishandled or absented himself was to receive "méreaux." A 15th cent. statute ordered that on every Saturday all the canons, chaplains, and clerks of the Sainte Chapelle should attend in the pay-room and bring their "méreaux" to show what each had earned. But there are extant church-"méreaux" which by their style must be earlier than the documents referred to, and the substitution of these for the custom just mentioned and observed at time, or for pricking in, or for tallies, may date from early in the 13th century. In 1557 the canons of Mâcon claimed that they had had for 'more than three or four centuries' the right of distribution of certain jetons for the payment of choristers and other clerks serving in the church; what foundation their claim possessed is not known. Nearly all the examples known come from France or the Low Countries, where "méreaux" were also used by abbeys, convenls, hospitals, infirmaries, parish churches, and confraternities. The popular English term 'abbey token' for what are really reckoning-counters must not be taken to prove the existence of the custom in England; there is no evidence for such use in this country. Such tokens were cashed from time to time by the receivers of the various funds on which they were issued; sometimes they could be exchanged by the cellarer for vienuels; and they often had a modified circulation. As long as this did not extend outside, so as to encroach on the currency of the realm, no objection was taken; but any body issuing such "méreaux." But, when it was the custom, as it was at Saint-Amé (Douai) or at Arras (where "méreaux" were used inscribed 'merellus mandati papam'), for the clergy to give away such tokens, entitling to portions of victuals, alms to the poor, it is easy to see how the circulation might extend outside. In 1577 the Cour des Monnaies had to forbid the use of "méreaux" issued by the chapter of Autun except for distributions to the clergy; they had got into circulation in the town. In the case of certain pieces, especially of places in the Low Countries, it is matter of dispute whether they are really church-"méreaux" or base coins, of which the circulation was enforced by local authorities; such are the lead deniers of the Abbesses of Manhez, which circulated throughout Hainault until they were forbidden in 1541, the copper deniers of Notre Dame de Tornemare, the 'yellow-money' of the chapter of Notre Dame de Cambrai. The rare "méreaux" of Carthusian foundations, such as the Certosa of Pavia or St. Mary Magdalen at Louvain, were struck not for the remuneration of the clergy, but for alms-giving. A similar subsidiary use of "méreaux" is illustrated by the custom at Lembke (near Eeclo, E. Flanders), where "méreaux" were struck for the distribution of alms under the foundation of G. Ker-

1 See, however, § 6 below.

were given to each of the poor who attended at catechism in preparation for communion, and of one patard to children who were zealous in preparation for their first communion.

The metal of which the "méreaux" are made is usually lead, copper, or brass; the ruder specimens in the baser metal may be cast in moulds, but a large proportion are struck from engraved dies. The slate moulds used for casting the "méreaux" of the parish of St. Martin, Paris, described in letters-patent of 1478, are still in existence. Non-metallic substances such as leather or paper could also be used, but specimens in such material, if they survive, are very rare; a find made in desolating a wall of the cathedral of Limoges seems to indicate that "méreaux" of leather were used there.

A few typical inscriptions and types found on "méreaux" may be mentioned. The St. Omer pieces are inscribed 'M(oneta) Ecclesiae' Santi Ando-

mari, 'with the arms of the chapter, and 'Presenti-

bus dabitur'; those of St. Martin des Champs read 'Distributio pro beneficiatia.' The series of the Ste. Chapelle, Paris, were earned after 1448 reads 'Capella Regi(ualis) Palacii Parisiensis.' An ordinance of that year shows that those used for pre-

bendaries and cantor bore a long cross with the letters 'IHS' and a crown; they were struck in tin, and clarks had a royal crown; other kinds then in use were ordered to be withdrawn: such were pieces marked with a cross, lance-head, and nail, repre-

senting relics in the chapel. Some series bear the name of the various offices for which they were used, as matines, prime, tierce, viesas, sexte, nonne, coeptes, complices. Dates do not appear before the 16th century. The value in money which the pieces represent is frequently expressed as 'VI. D. T.' ('six deniers tournois'). A series mentioned in the archives of St. Pierre d'Aire (Artois), and described by Rouyer, may be given as typical. There were (a) plombs des matines ou deniers Marchant, worth one denier Fauissi, distributed daily after matins, and paid from the fund known as du Marchant; these occur from 1414 to 1557; (b) plombs de la Croix or de la procession du vendredi et la plombs Lambert ou du trésorier; these represent particular foundations, and were of different values, given to canons, cantor, or other clergy; they are not men-

tioned after the 17th cent; (c) plombs oblates, i.e. moneta anniversariorum, given to those who assisted at anniversay obology services; (d) plombs des heures canoniales, Instituted 20th June 1555, and paid to each canon, each day, for the canonical hours; (e) plombs des restes, distributed in the 17th and 18th centuries at the masses said at the high altar to the canons who assisted at anniversy oboly services; (f) plombs des jours capitulaires, for ordinary meetings of chapter, term, or conference; (g) plomb de la confrérie, distributed in 1765, for chapters dealing specially with matters of cult; (h) plombs des vicaires, poor priests or clerks employed by canons to take care of their churches and chapels; (i) plomb de la confrérie de Notre Dame Paviére, or plomb de Solis, from about 1520 down to 1700, for offices at the confrer-

try.

Some specimens of the moneta anniversariorum have survived; one belonging to St. Pierre d'Aire has on the obverse a death's head, on the reverse a hone and a key in saltire between three stars. Another inscribed 'Moneta anniversarium' has a crowned A between two lilies; on the other side 'Requiescam in pace,' i.e. the form of a 1448 reads 'Obit solenel' and dated 1585; and there is a pair of 'méreaux' inscribed 'Orate Deum pro vivis' and 'Orate Deum pro defunctis' respectively.

A subsidiary use of tokens, more or less corre-

sponding to the use as communion passes, has at-

times prevailed in the Roman Catholic Church. There is a tradition that Cardinal Pole in Queen Mary's time had issued a number of such tokens, inscribed to distinguish those who conformed from those who did not. Communion certificates in the shape of tokens or tickets were given to those going to communion at St. Andrew's, Glasgow, from 1840.
 TOKEN

359

To 1850. At certain churches in Rome communicants at Easter receive them after they have been printed.

3. Tokens of the Reformed Church. — The earliest mention of méreux (marreux, marrons, marcois) in the Reformed Church abroad is in the registers of the Geneva Council; on 30th June 1590 Calvin advised their introduction, but there is no evidence that they were actually used at Geneva before 1605. On the other hand, the French Protestants immediately adopted Calvin's suggestion, and there are tokens of the Wallachia of the Church at Amsterdam as early as 1586. These tokens (which in the first Helvetic Confession are called tasseare) were used for quite a different purpose from that of the méreux of the Roman Catholic Church; they were certificates, issued to all persons considered after examination to be satisfactory in regard to religious knowledge and moral character, admitting them to partake of the sacrament of the Lord's Supper. In 1584, e.g., Mme. Duplessis-Mornay and all her household were refused tokens for communion at Montauban because she dressed her hair in the court fashion instead of the Protestant one. The extant specimens of these French Reformed Church tokens seem to be not earlier than the 17th cent.; they bear appropriate types, such as a chalice, or a shepherd holding a lamb, or the names of the churches, and sometimes dates; such inscriptions as 'Ne crains rien, petit troupeau' also occur. Copper méreux with an angel-shepherd, and the inscription, 'In unum concludam reliquum Israel. Mich. 2,' or 'Christ est le pain de vie,' of good 17th cent. workmanship, were probably made for Protestants in Paris. Another similar piece reads 'Christ habite en os nourris par fo,' and bears a flaunting heart transfixed by two arrows.

The first French church to employ this kind of méreux was at Nimes (before 1592). Except at Selan and Troyes (where it was introduced in 1594), none of the Reformed Churches of the East is known to have used it. It was especially popular in Polton, no fewer than 45 churches in that district being represented. Such pieces are commonest from 1740 to 1840, and are often very rude, being the handiwork of the elders themselves. The material is usually lead, tin, or a mixture, and they are most commonly cast. Five modern writers have found them at work in Scotland.

The French Reformed church at Erlangen in Bavaria began to use méreux in 1689, and the same mould has remained in use down to present times.

In England the books of St. Saviour's Church, Southwark, show that communion tokens were used as early as 1559. It was the custom at Southwark to collect Church dues by 'selling the communion'; thus, in 1596, 2000 tokens were sold at 2d. each; and a similar practice prevailed at St. Peter Mancroft, Norwich. At Durham and elsewhere in the 17th cent. it was the custom to take Easter reckonings of such people as partook of the holy communion, and account with them and deliver and receive tokens. The names of communicants were written down, and they received tokens which at the time of the administration of the sacrament were demanded again, so that it might be known who had paid their Easter offerings and who had failed to do so. The use of tokens in Presbyterian churches in England was derived from relations (even popish) with the Church of the 17th cent., but the earliest actually bearing a date is of 1724 (East). Tokens are known of the Established Church of Scotland, the Independent Presbyterian Church, the Free Church of Scotland. Printed cards have now, as in Scotland, generally ousted metallic tokens.

But it was in Scotland that the sacramental token was most generally used, and by almost all of the Church of Scotland, no one was permitted to come to the Lord's Supper unless he or she had been provided with a communion token, which was issued after examination had shown the would-be communicant to be of good character and properly instructed. The tokens were sometimes kept as certificates of character, serving the same purpose as ancient tasseare. The Scottish tokens were at first probably written or stamped cards; such 'tickets' were in use as early as 2nd May 1590 at St. Andrews, and continued often to be used after metal tokens were introduced; the word 'ticket' is frequently used indifferently of either. Written tickets were used as late as 1656. The date of the introduction of metal tokens has not been determined. The use of them has continued in both the Presbyterian Churches and in the Scottish Episcopal Church down to the present day, although in the larger towns they have been almost entirely superseded by printed cards.

Recently established denominations, such as the United Free Church and the Free Presbyterian Church, appear to use only the latter. The metallic tokens are most often made of lead, tin, or a mixture, but brass, iron, copper, and even leather (the last only at the Secession congregation at Ceres, 1743) have been employed; the Crown Court Chapel, London, and the Presbyterian Church at Charleston used silver tokens, and for the first Reformed Presbyterian Church of New York they were made of ivory. They are generally cast in stone moulds, but are sometimes struck from dies. The oldest extant dated piece is of 1648, but a dated one of 1589 is recorded (Glasgow). At first they were distinguished merely by the initials of the parish (and this occurs as late as 1806); later came the initials of the minister, with 'M.' prefixed. Incuse numerals sometimes indicate the date to which a communicant was admitted when the number was very large. Religious symbols (heart, burning bush, vine, lily, chalice and bread) appear towards the end of the 17th century. The Covenanters' venticole tokens bear simple text such as 'Holiness to the Lord,' without indication of parish or date; and texts are common from the beginning of the 19th century. The cross, which is common on Episcopalian tokens, also occurs on some Presbyterian origin.

In some large towns we find the burgh arms and the initials of the deans of gild. Views of churches first appear in the 18th century.

From Scotland the Presbyterians naturally carried the usage, not only to England, but to other countries such as Ireland, where the oldest dated token known to have been struck is that of the Old Presbyterian Congregation of Larn, of the year 1700. Stamps and moulds for many of these Irish tokens are illustrated by G. R. and D. Brick.1

4. Monnaies des innocens et des fous. — A curious phase of Church life is illustrated by satirical 'coins' issued by the bishops and other dignitaries (including archbishops, cardinals, and even popes) to the effect that ecclesiastical saturnalia known as the fêtes des innocens or fêtes des fous. Such festivals flourished, according to documentary evidence, from the 13th to the 17th cent., especially at Avignon, but also at other places such as Chartres, Reims, Lorraine.

1 See reference under Literature.
TOLERATION

Sonlis, St. Quentin, Roye, Péronne—cildytherefore in the north of France, but also as far south as Besançon. These dignitaries issued tokens struck in lead, bearing such inscriptions as 'John, Fournier ep.', 'M. J. Maclura', 'Stourton Pap(e)', 'Moneta ecq(oi) innocen-
(tium)', as well as texts such as 'Homo non in solo
pnone vidit(i)', 'Indica Domine nocentes me', 'Stor-
tulum infinitus est númerus.' These types are
something saints, as on John Fournier's piece just
mentioned, which was struck by the Augustinians
at Amiens and bear St. Augustine. Rebusse are also in common use. Most of these pieces come
from Amiens, and bear dates from 1490 to 1583.
The enstun of issuing tokens on these occasions
also prevailed at Théraonne, Lille, and perhaps
Aire, but in those places no attempt was made
at humour, and the types are religious or anti-

5. The boy-bishops. — The boy-bishops who were
selected at certain churches in England on St.
Nicholas' Day and held office for a week are also
supposed to have issued leaden coins. The extant
specimens, which seem all to come from Bury St.
Edmunds, all bear a head of St. Nicholas or a
figure and are modelled more or less on the graves
and effigies of the saint. In 1703 a less common
example was found, inscribed with an invocation to St. Nicholas on the
obverse; on the other side we find inscriptions
such as 'Ave rex gentis,' 'Ave rex gentis Angel.
Mile,' 'Ece nova facies quint, Ece reges Angel-
orum.' The words 'Ave rex gentis Angelorum
miles Regis angelorum' are the beginning of an
anthem for the Feast of St. Edmund. The con-
stant association of these pieces with St. Nicholas
suggests that they were issued by the boy-bishops.
On the other hand, it has been argued that they
were used for the same purpose as the métroix or
jetons de présence described in § 2. It would, it
true, be strange if such a method of distribution
were confined in this country to a single chapel
(that of the Hospital of St. Nicholas) in St.Edmunds;
but this argument cuts both ways. Another
Bury piece inscribed 'Sigillum Gilde Sci. Nicho-
ldii' round the bust of the saint on the
obverse, and on the reverse 'Congregacio Dioce.'
round the letters 'S T N,' appears to be connected
with the Guild of the Translation of St. Nicholas;
but it is probable that its inscription may perhaps
be a seal and not a token.

6. Church tokens of the Near East. — The right
of coinage by ecclesiastical authorities has always
existed in the Levant and is recorded in the periods of
Constantinople during the Russo-Turkish War the
churches and convents and the Jewish
communities of Constantinople issued much token-money
for small change. After the Peace of San Stefano
the Turkish authorities called in from the prov-
ced the metallic tokens, but many of these issues
took the form of small cardboard tickets of differ-
ent colours. Typical examples are the silver 'obol
of St. Irene' (from Smyrna), the copper of St.
George's (from Smyrna), dated 1775, and the card-
board pieces of the churches of Maronite (20, 10,
and 5 paras, 1891), of St. George at Apollonia
(Apollonia ad Rhynacum, 10 and 5 paras), of St.
Michael at Goulion near Apollonia (10 and 5 paras,
1828), and of the church of the Divine
Blessed Virgin at Uskub (1818), besides the
Seferite synagoge, the synagoge of Akrida, and
other Jewish communities are represented by both
copper and cardboard types.

2. Indian toleration.—It has been asserted that Hinduism is the most tolerant of religions. This may be true. For Hindus, because being entirely racial and hereditary, it cannot proselytize. Judaism is also racial and hereditary, but not exclusively so, because it can admit proselytes. Hinduism has no opening for such. Accordingly, it must tolerate alien faiths, unless, like Tibetan Buddhism, it forbids immigration. Assoka, the Constantine of Buddhism in India (3rd cent. B.C.), had monuments of his legislation cut in stone expressing his liberal treatment of religion as follows:

'The king, beloved of the god, honours every form of religious faith, but considers no gift or honour so much as the increase of the substance of religion, whereof this is the root—to reverence one's own faith and never revile that of others.'

The Muhammadan invasion put an end to toleration in India by introducing cruel persecution of Hinduism with a wholesale destruction of the temples; but this was intermittent, the incursions of Turks, etc., taking the form of raids, from the 11th till the 17th cent., when the Mughal empire was established in Delhi. Akbar, the most famous of the Mughal emperors, aimed at combining all the inhabitants of his religion in his own eclectic system. He held synods of Hindus, Buddhists, and Parsees expounded their views as freely as Muhammadans.

3. Greek toleration.—The toleration of the Greeks was the variety of religious beliefs may be attributed to their intellectual breadth, but also to the syncretism which admitted a plurality of deities into its pantheon. Accordingly, as Adam remarks:

'There was comparatively little persecution for religious beliefs in Greek antiquity. Religious institutions and ceremonies were carefully guarded; but in respect of dogma the limits of toleration were very wide. We may infer from a remark of the Platonic Socrates that the Athenians in general cared little what a man believed, so long as he did not attempt to proselytize.'

The Orphic believers, who, as the same authority states, were 'analogous to modern dissenters,' were tolerated since they showed no sign of abstaining from the religious services which the city ordained. The Pythagoreans, on the other hand, were attacked because they used their religious organization for political ends. The death of Socrates appears to have been due mainly to animosity against the philosopher on account of his friendship with proscribed leaders of political parties. He was in his forties years old at the time, and his daring teaching had long been tolerated without any interference on the part of the authorities.

4. Roman toleration.—It was a principle of Roman state policy to allow conquered nations to continue the practice of their indigenous religious rites ("Ocibus regio ejus religio"). The old Latin cults were not propagandist, and they admitted of alien rites for alien peoples. Nevertheless difficulties arose, imposing limits on this easy tolerance in several ways: (1) by provincials coming to Italy and even to Rome with a claim to bring their own religions with them; (2) by missionaries of these alien faiths propagating them and by Roman citizens adopting them; (3) by the enforcement of the new state worship of the emperor throughout the empire; (4) by the dread of dangerous magic and the suspicion of immoral and cruel proceedings among the adherents of the foreign cults; (5) by a notion that public calamities might have been caused by hisOWL of the worship of the old deities ('atheism').

But there were differences. The Twelve Tables had forbidden the introduction of new gods into Rome. Nevertheless, the Jews had a dispensation granted them to practise their religion in various parts of the empire, including the imperial city. But they were supposed to be confined to their own quarters in each location. In the case of the Christians, ideas, however, especially among women of the upper classes—in particular in Rome and Damascus, where it became the fashion to 'Sabratize.' At first the Christians obtained tolerance on account of their Jewish origin, and it was not till their separation from the Jews became marked that they were interfered with by the authorities; nor was it the case that once even then. The Acts of the Apostles shows us Christians protected by Roman magistrates and police when attacked by Jewish mobs. By the time of Nero, however, in Rome the distinction between the two communities had become evident, and then the Christians were no longer sheltered by the licence for Jews. Christianity was not a religio licita. It is true that many unlicensed cults were winked at, in particular the religions of Syria and Egypt—the worship of Mithra, the Dea Mater, Serapis, etc. This was due to their great popularity. Christianity was not popular; it was too new. The vices of pagsans and Jews. Raussey has shown reason for thinking that the tolerance of the Flavian emperors did not secure the protection of the Christians from local outbreaks. Nevertheless, on the whole, previous to the great Decian persecution the authorities were not disposed to initiate active measures against them. When Pliny wrote to Trajan expressing his perplexity at the Christianity of Bithynia and the consequent disruption of the pagan altars, the emperor replied ordering him (1) not to seek out the Christians, (2) to discourage informers, but (3) to punish convicted persons who had been brought before him for judgment. This rescript has been described by some as a persecuting order and by others as a decree for the easing of the case of the persecuted Christians. In fact it was both. Evidently Trajan was opposed to active persecution and favoured a policy of leniency; but his clear pronouncement requiring the punishment of definitely convicted Christians left no alternative but sentence of death for such people. This was the most formal order of the government. Previously Christianity was implicitly illegal; henceforth it was to be explicitly illegal. In this respect the rescript was a limitation on the Roman policy of toleration. The persecution which had been carried on with exceptional ferocity at Lyons and Vienne under the gentle Marcus Aurelius was stayed by his worthless son Commodus owing to the intercession of his concubine Marcia, who appears to have been a Christian catechumen. This act of toleration cannot be raised to the level of state policy. It was purely personal in its origin, and it emanated from an unprincipled character.

When the emperor Valerian was captured by the Persians, the persecution which he had instigated was brought to an end by his son Gallienus, who issued a rescript in A.D. 295. It has not been preserved. But Eusebius quotes a letter from this emperor to the bishops of Egypt written in the following year, in which he gives directions in accordance with his previous rescript in this case that he has issued an order throughout all the world encouraging all to come out of their religious retreats and ordering that no one may molest them. Eusebius adds that another ordinance addressed to other bishops in

2 See Adam, p. 555.
4 'HE' vii. 13.
which the emperor grants them permission to recover their cemeteries in which they worshipped (τά ἑρακέμορα). Galienus’s rescript has been claimed as the first Roman edict of toleration; but Ulrich von Bugenhagen has shown that Licinius was not so radical in his policy as was his predecessor. Nevertheless, although Christianity was still illegal, in point of fact, since it was not to be molested, this was a policy of toleration. It cannot be justified on grounds of consistency, but practical politics are often guilty of inconsistency and prove themselves all the more humane for their freedom from legal pedantry. In the line that Galienus was taking we see the exact opposite to his father’s calulating measures of repression, devised with the deliberate, but now hopeless, design of stamping out Christianity. Galienus’s mild policy by no means gave to the Christians the legal rights which could be expected. His edict of 311 was not an edict of freedom, but an edict of tolerance. They enjoyed in consequence a whole generation of immunity from attack; but all along this was in a condition of unstable equilibrium, since nothing had been done to settle it on a sound legal basis. We might compare the situation to that of the Stuart ‘Indulgences.’ Christianity was not yet a religio licita.

Legalized toleration did not appear till after the last and greatest persecution. It was then seen in two stages. The first of these was spasmodic, insincere, and illogical, but still definite and effective. Galerius, the fierce instigator of the persecution which bears the name of the senior emperor Diocletian, who had been his reluctant associate in it, seized with death-bed terrors, issued the most extraordinary decree ever conceived by a Roman emperor (April 311). Galerius first takes credit to himself for endeavouring to bring the Christians back to the ancient laws and discipline of the Romans, and, after a jibe at their divisions, for which he suggests he will be blamed in a future edition. He gives orders that his subjects may again be Christians (‘ut demo sint Christiani’) and hold their assemblies, ‘provided they do nothing contrary to the discipline of the Church’—Galerius copied the remarkable sentence, ‘and for this indulgence the Christians will make the prayers of loyal subjects to their god.’

Toleration was not yet the settled policy of the empire. Where it was practised, it was too much subject to the caprice of the individual ruler. Maxentius at Rome was openly anti-Christian and Maximin Daza elaborated subtle devices for the destruction of Christianity; even later, during part of his period of government, Licinius favoured the pagans to the detriment of the Christians. The final stage was reached in the Edict of Milan. That magnificent Magna Charta of religious liberty issued from a meeting of Constantine and Licinius at Milan towards the end of the year 312, after the defeat of Maxentius. Maximin’s evasion of the order of toleration granted by Galerius was the occasion which gave rise to the new edict. It was much more statesmanlike than its curious predecessor, resting on a broader basis, breathing a nobler spirit, and establishing a surer policy. It was issued throughout the whole empire in the year 313. The Edict of Milan is the work of the great emperor Constantine, who induced his colleague Licinius to join him in it.

There can be no doubt that Constantine was thoroughly convinced by the enlightened principles that it contains. His colleague’s assent must be ascribed to political necessity, and subsequent events have shown that Licinius was both willing to accept it under compulsion. Unfortunately the original rescript has been lost, but Licinius’s edition of it, sent out a few months later, has been preserved, both the original Latin by Laetantius, and a Greek translation, slightly different, with an introduction by Eusebius. The toleration granted is absolute and unconditional. It is expressly applied to the Christians, for whose benefit it clearly shows that it was primarily intended. It also includes devotees of all other religions. This went far beyond the spirit of the ancient world, and indeed only occasionally and in the teaching of exceptional and rare minds has such toleration reappeared until quite modern times, when it has been seen in Cavour’s dictum of ‘a free Church in a free State.’

Constantine did not live up to his own principle. No sooner did he adopt the new religion than he began to show a desire to stamp out all heresy. This was shown in his edict of 313. His patronage took a different turn from the protection accorded to the persicutees of Galerius. In his constitution he laid down a definition of the true faith. All who believed in one God, the Father, the Son, and the Holy Ghost, were thereby included. There can be no doubt that Constantine was not only absolutely sincere in his desire to check the spread of heresy, but that he believed in the divine authority of the Church. He was desirous of checking the schismatics, if in favour of heresy, as in the support of Arius, by Constantine and later by Valens, against the Catholics. Later emperors inherited in the Christians the policy of the Roman government towards the Jews; it was enforced at Rome under the decree of the prefect Licinius’s edition of 351, which was mainly directed against the Christians and the pagans. The procurator of Rome was enjoined to take the precaution of withdrawing the images of the gods from the temples. Nothing was done without this decree having been previously enacted by the Senate.

The Edict of Milan was based on the simple policy of tolerance, but the emperor was not entirely true to his profession.

5. Early Christian toleration.—The early Christian Fathers advocated toleration, not merely in self-defence, but on principle. Tertullian was most emphatic in asserting this principle: ‘Innumeral juris usurpationes potestates et contemptum potestatis, nec aliquot ab antiquo libertas religiosa nec religiosae et cunctae liberalitatem, nec autem mitigat, aut dispensat, debet, non vi; cum est atque libenter libenti expostulatorii.’ 1

1 De Morti Pers. 48. 2 H.S. x. 5. 3 Cf. Eusebius, Theophilus (Early Church). 4 Ad Scapiulam, 5. 5 See Dei. Inst. v. 20.
influence of the rites of the Church. But with the rise of the Inquisition in the 13th cent. a greater rigour of ecclesiastical discipline crushed out the spirit of tolerance.

The 2. Renaissance and the Reformation.—The irreligious and pagan habits that accompanied the Renaissance issued in an easy indiffERENCE which favoured an unprincipled toleration. But the Protestant Revolution showed how far it engendered went farther and gave rise to a reasoned doctrine of toleration. Sir Thomas More, while sanitoning persecution, admitted the abstract excellence of the opposite course. Montaigne's sceptical and liberal idea of life made for toleration. On higher grounds Erasmus laboured incessantly for the same end, combining inimitable wit with immense learning, exposing the folly as much as the wickedness of ignorant, narrow-minded persecution. The duty of absolute toleration was insisted on by Castellio, a Frenchman, who had been a friend of Calvin when the Reformer was a professor at Basel. Denouncing the execution of Servetus, he argued that, if the end of Christianity be the diffusion of a spirit of benevolence, persecution must be its extreme antithesis, and that, if persecution can be the essential element of salvation, that religion must be a curse to mankind.

Most of the Reformers were not advocates of universal toleration; but Zwingli regarded error as not inherently blameworthy and held that it should be tolerated. He went farther and showed a comprehensive appreciation of human excellency apart from religious differences.

Luther Socinus was a pronounced advocate of religious liberty, and a clear assertion of the principle is put forth in the Socinian Catechism of Rakow. The German Anabaptists and the Dutch Arminians also advocated this principle.

8. The German settlement. —The Peace of Augsburg (1555) was arranged between the Roman Catholics and the Lutherans; it excluded the Reformed Church, both Zwinglian and Calvinistic, as well as all the minor sects. Further, this arrangement left it to the princes of the several states to decide which of the two permissible types of religion should be adopted and imposed on their subjects. This led to a conflict between two parties concerned and the exclusion of the Reformed Churches led to the Thirty Years' War. This was concluded with the Peace of Westphalia (24th Oct. 1648), to which there were three parties—(1) the Emperor and the Lutherans, (2) the Reformers. It made provision for none of the minor sects. The princes were allowed to pass from one of the three religions to the other and to require their selected religion to be imposed on their subjects to the exclusion of all other religions, or to admit other religions, as they saw fit. This right was called the jus reformandi. It implied a limited and optional toleration.

Subsequently two influences arose to widen the conception of religious liberty: (1) pietsism, which, as both non-denominational and charitable, tended towards universal toleration; and (2) the enlightenment for freedom. From the latter it was maintained that no one should be compelled to embrace a given religion and hold it to be a fatal necessity that discussion should exist within the Church. This was the typical liberalist, basing the principle of religious liberty on his fundamental conception of law and liberty, which derives morality from law, on the ground that law is coercive while morality cannot be coerced. More is the case with religion. The difference between the spheres of the prince and the clergy is that it is the duty of the prince to coerce and the duty of the clergy to teach. The clergy of a state must be in harmony with its government by appealing to the secular arm. While urging these principles in all his writings, he treated the question primarily to the exclusion of the formulation, viz., the two 'Programmata,' Programma de tolerandia dissidentiis in controversia religiosis (1633) and Programma de tolerandia dissidentiis in controversiis religiosis (1638), and the more popular work in the vernacular entitled Das Ereicht evangelischer

9. England and America.—In the 16th cent., under the Tudors, the extreme Puritan party, which had shared with other Protestants in the persecutions of Roman Catholic times, did not obtain religious liberty. But the principle of toleration was maintained by the Baptists and the Congregationalists, although there were some limits to the applications of it. The early Congregationalists would exclude from its privileges both Unitarians and Roman Catholics, the latter as themselves a persecuting party and a danger to Protestant liberty. But John Robinson, a large-minded man, who sought to widen the sphere of the Pilgrim Fathers who sailed in the 'Mayflower' and founded New England. The first instrument of this covenant conferred equal civil and religious rights on every member of a congregation. A little later the colony of Maryland, founded by a charter from Charles I., granted toleration to Roman Catholics as well as to Protestants. Its first law runs as follows: 'No person professing to believe in Jesus Christ shall be in any way molested or discommoded for his or her religion, or in the free exercise thereof.' The Pilgrim Fathers, who had claimed liberty at home, have been blamed for the inconsistency of intolerance in their own colony when they were settled in America. The defence is that the exclusive theocracy that they established implied that they regarded themselves as a Church rather than as a State, and as such would refuse membership to unit persons in accordance with a fundamental Congregational principle. But they have not been held to be at fault in their relations with the Pilgrims, who fell into two parties. The latter were Presbyterians who had never adopted the principles of religious freedom. It was not until the separation from England that complete equality in religion was established in the United States.

10. The English problem.—In the 17th cent. neither the bulk of the Presbyterians nor the Episcopal party as a whole had any idea of toleration. Under the early Stuarts Laud and the High Church, having the upper hand, persecuted the Presbyterians. Under the Long Parliament the Presbyterians unfavourably accused of narrowness through a confusion of two different positions—that of the early settlers in New England who had come from John Robinson's church in Holland and were the real Congregationalist immigrants, and that of the Puritan settlers of the 1640s. The latter were Presbyterians who had never adopted the principles of religious freedom. It was not until the separation from England that complete equality in religion was established in the United States.
TOLeration

in composition, maintained the right of religious liberty.

Later, on the Presbyterian side, Richard Baxter laboured for large measures of comprehension, and John Goodwin, generally regarded as a Congregationalist, but by Raulin and Genet—"the rationalist Puritan," maintained that every religion, sect, or schism should be tolerated so long as there was no attempt to interfere with the security of the State. Milton, claimed by both Presbyterians and Congregationalists, was wholly committed to either party, in triumphantly vindicating the freedom of the press, pleased eloquently for religious toleration. In the Arminians, he showed that persecution was both unnecessary for the preservation of truth and a hindrance to the discovery of truth. He would tolerate all Protstants, including Socinians, Anabaptists, and Unitarians, but not Roman Catholics. On the Anglican side the more liberal-minded writers were in favour of toleration and comprehension. Chillingworth affirms that Protestants are inexcusable if they do violence to the consciences of others. He holds it to be a great sin to force on other people our own interpretations of Scripture, arguing that this was the cause of all the schisms and discord of Christianity. John Hales, in his "Defence and Preservation against Universal Conventicle and Schismatics" (1636). Jeremy Taylor, in his famous "Liber? Cornyn," (1646), was contending for freedom of speech against the tyranny of the Covenant under the Long Parliament.

The reaction at the Restoration and the passing of the Act of Uniformity (1662), followed by the Conventicle, Five Mile, and Test Acts, narrowed the State Church position and imposed great disabilities on nonconformists. These were so severe to some extent relieved a little later by James I.'s indulgences, but at the expense of the rights of Parliament. Legal toleration did not appear till the Revolution. In the Declaration of Breda Charles II. promised to respect tender consciences; but, when well established on the throne, he had not the moral courage to stand to his word.

William III. obtained his invitation to England mainly as the champion of religious liberty. His aim was to bring about an agreement between the Church of England and Protestant Dissenters. While in his own country, he had been profoundly affected by the ideas of the Dutch Dissenters. In England his most trusted adviser, Bishop Burnet, had adumbrated the policy which the king afterwards adopted in a "Modist and Free Conference between a Conformist and a Nonconformist" (1663). William first aimed at comprehension in "A Bill for Uniting their Majesties' Protestant Subjects." The failure of this measure to pass in the House of Commons necessitated another line of action.

11. The Act of Toleration.—The Act of Tol-eration, which was passed in the year 1689, gave relief to Nonconformists from their chief disabilities; but it did not grant complete religious liberty; neither did it establish religions equality in the eyes of the law. It exempted Nonconformists from the pains and penalties of the Act of Uniformity, the Conventicle Act, and the Five Mile Act; at the same time it required people who desired to avail themselves of it to promise to take the oaths of allegiance and supremacy and make a statutory declaration against Romish superstitions, and it ordered Nonconformist ministers to subscribe to the Articles of the Church of England with the exception of three—those referring to the traditions of the Church, to the homilies, and to the consecration of bishops and priests, a fourth exception, that is, the act of baptism on infants, was allowed for Baptist ministers. Further, it enacted that every Nonconformist place of worship should be certified by a bishop, an archdeacon, or a judge of the peace. Quakers were allowed in the declaration instead of taking the oaths and were required to declare their belief in the Trinity and in the inspiration of the Bible. Neither Roman Catholics nor Unitarians were included in the commissions allowed by this Act, and even orthodox Nonconformity was still illegal, the persecuting laws remaining on the statute-books, and only the exaction of their penalties being forbidden. While this measured toleration was in some respects practically serviceable as far as it went, it secured a considerable amount of toleration.

The same year (1689) saw Locke's first "Letter Concerning Toleration" published anonymously in Holland in Latin. It was translated into English immediately. A second and longer letter, and a third longer still, followed in reply to answering letters. Yet for a letter completes the series in Locke's work: this is not finished. The collection has become a literary classic on the subject of toleration. Locke bases his argument on the ground that the rightful sphere of the State is only confined to external evil, that it is not the concern of the State to干涉 to religion, which is internal. He holds that not only the doctrines and "articles of faith," but also "the outward form and rites of worship," are out of the province of the State to interfere with. Their position goes beyond toleration. Logically it involves disestablishment, because, if the State is not competent to deal with religious matters at all, it follows that it should not patronize or support a favoured religion any more than persecute a religion of which it disapproves. With regard to persecution, Locke holds that it is anti-Christian, since love of our fellow-men is of the essence of Christianity, and it cannot be maintained that persecutors are actuated by love to their victims in the cruelties which they perpetrate. But, while on these principles Locke would tolerate Jews as well as all Protestant sects, his toleration does not extend to Roman Catholics or atheists. With regard to the former, though he does not name them in his argument on the subject, he says:

"That church can have no right to be tolerated by the magistrate, which is constituted upon some principles of order; for all those who enter into it, do thereby, ipse facto, deliver themselves up to the protection and service of another prince."1

He would also exclude persons who hold views subversive of society and atheists, who, he considers, are to be included in that category.2 Thus he regards both these parties as obnoxious to the State and to be excluded from toleration, both on moral and political grounds, not for their religious views. Locke carries his idea of toleration beyond the political sphere to the ecclesiastical, arguing for liberty of thought within the Churches themselves. He writes:

1. What think you of St. Athanasius's Creed? Is the sense of that so obvious and exposed to every one who seeks it; which so many learned men have explained in so many ways, and which yet a great many profess they cannot understand? Or is it necessary to your or my salvation, that you or I should believe and pronounce all those damned who do not believe that creed, i.e. every proposition in it? which I fear would extend to not a few of the Articles of Religion. Hence we can think that people believe, i.e. assent to the truth of propositions they do not as at first understand. If ever a man is acquainted with a country parish, you must needs have a strange opinion of them, if you think all the ploughmen and milkmaids at the church understand all the propositions in Athanasian's Creed; it is more, truly, than I should be apt to think of any one of them; and yet I cannot say I believe everything, to be able to judge or pronounce them all damned; it is too bold an intraching on the perspetive of the Almighty; to their own Master they stand or fall. Under Queen Anne the toleration that had been obtained by the accession of William and Mary was threatened by the Schism Act, which made it illegal under heavy penalties for any one to keep a

2 Id. p. 410 f.
private school or teach in a seminary unless he signed a declaration of conformity to the liturgy of the Church of England and obtained a bishop's licence to teach on presentation of a certificate that he had taken the communion according to the rites of the Church of England during the preceding year. The queen's death stayed the execution of this statute. But in the colonies, it was revisited in the reign of her successor, George I. From this time onwards toleration with regard to religious views and practices was firmly established; but its limits were fixed, for the concessions of William and Mary to the Roman Catholics, whose relative freedom from persecution was the most striking feature of their reign, delimitated the test of loyalty and the limits of the liberty of conscience. The practice of toleration was now no longer allowed. But the negative policy of exclusion and prohibition led to a revival of grievances long unrelieved. Tolerance is far from religious equality. The very practice of it involves an exalted position of power enjoyed by the people who tolerate as opposed to an inferior position in which the tolerated are living. It is not inconsistent with the monopoly of privileges by the one class and the refusal of them to the other. If those privileges are rights of citizenship, toleration is even possible side by side with injustice. Tolerated may be denied political power, the parliamentary and municipal franchise, the opportunity of election as members of Parliament or of corporations, access to public office or to private society, for example, as pupils or as teachers, and a host of other national rights and privileges. So it was that under the Georges, and even throughout much of the 19th., Nonconformists, Roman Catholics, Unitarians, Jews, and others had endured various forms of exclusion. The abolition of the Corporation and Test Acts, Catholic Emancipation, the admission of Jews to Parliament, the permission to dispense with the member's oath extracted in order to meet the case of Mr. Bradlaugh, the throwing open of the universities to Nonconformists, the enlarged foundation of grammar schools, and the extension of popular education generally, irrespective of ecclesiastical distinctions, were all steps beyond mere toleration towards the goal of religious equality — a goal which in several directions its advocates have thought they completely attained.

12. TOLERATION IN FRANCE. — The fight for religious liberty which was waged principally in Germany, Switzerland, Holland, and England during the 16th and 17th centuries passed on to France in the 18th century. The Reign of Louis XIV (1661-1715) had cut off toleration for Protestants; the revocation of that Edict (1685) restored and aggravated persecuting intolerance. Bayle established the intellectual basis of toleration in his Dictionnaire and in a work entitled Commentaire philosophique sur ces paroles de Jésus-Christ : Contraire, les entret. — a refutation of the misuse of a text popular with persecutors from the time of Augustine. He holds it to be immoral to compel men to profess religion in which they do not believe, and also irrational, because it discourages the discovery of truth. No one, he maintains, has a right to claim such complete possession of truth as not to need to compare his ideas with those of other men. Montesquieu, in De l'Esprit des lois (1748), argues for religious liberty and exposes the futility of coercion. Rousseau, in his Contrat social, affirms the complete liberty of individual beliefs; nevertheless, holding that intolerance is inherent in Christian dogmas, he would abolish this and establish a civil peace on the foundations of the impersonal, well-organized social life, including that of the existence of God. But it was Voltaire who by his seething sarcasm did more than any other man in France during the 18th cent. to put an end to persecution and secure toleration for all Protestants.

The ideas of these champions of religious liberty powerfully moulded the course of the French Revolution in regard to religion and the universal principles of toleration that has since colored peace and good order under British rule. It is established in Japan and practically observed throughout the provinces of China. It is also practised in a general way in South America and Western Asia are still excluded from its privileges. The exclusiveness of Tibet is national rather than religious in character. Thus it is apparent that the policy of toleration has been adopted throughout the greater part of the civilized world.

Apart from the liberalizing of legislation, great progress has been made by means of Modernism in Roman Catholicism, and an expansion and spread of Christian charity, culture, knowledge of history, scientific methods of criticism, and the study of comparative religion, by the softening of barriers, by a new comprehensiveness and religious indifference, all tending to cool the ardour of the persecuting spirit and so to establish toleration. The champions of liberty now resent the use of the term as a synonym of licence, whether it is a part of the privileged and claim to go far beyond it in their demand for the abolition of all theological and ecclesiastical privileges and the establishment of absolute religious equality.

TOLERATION (Muhammadan). — Muslim toleration may be considered under two distinct aspects, with respect to (i) the faithful themselves, and (ii) non-Muslims.

(i) Within the circle of the Muslim Church the basis for toleration is found in the saying traditionally attributed to Muhammad: *Ikhailu 'ummati rahmatullah*; "Difference of opinion in my community is a matter of excitement, and in the case of difference with this principle, it has been possible for the four schools (madhab) of theologians and leis in to which the Sunnis are divided, viz. Hanafi, Hanbali, Shafi'i, and Maliki, to exist side by side, and for each of them to permit difference of opinion even in its own midst. There has been
abundance of controversy between these schools, but instances of open violence have been rare. 1 A similar basis for toleration was found in the traditional saying of the Prophet: "My community will be divided into seven sects, but if they differ among one another, no harm will come of it. 2" Men also differ from each other, and the duty of a ruler is to tolerate all possible the ample sectarian development in the Muslim world. Instances have occurred from time to time of the persecution of one sect by another, but the tolerant feature of the Muslim Church has been the freedom allowed to the exposition of religious doctrine, and the common sentiment of princes and people has generally condoned intolerance on the part of professed theologians. 3

3. The recognition of rival religious systems, as possessing a divine revelation, gave to Islam from the outset a theological basis for the toleration of non-Muslims. Judaism and Christianity are represented in the Qur'an as forms of the primitive faith given to man and taught by a series of prophets from Adam onwards:

"And among every nation are guides, whom We have sent down, to guide to Us. 4"

But Jewish and Christian teachers had corrupted the purity of this primitive faith, which Muhammad 5 "as the seal of the prophets" 6 came to proclaim anew.

This recognition of a common God is put forward in the Qur'an as the basis for friendly relations with the followers of rival creeds, in the following verses:

"Say to those who have been given the Book and to the ignorant, Do you accept Islam? Then, if they accept Islam, are they guided aright? But if they refuse, then their duty is to fear themselves. 7 Those who have inherited the Book after them, haveREF 8 to be fortified by the truth, that it might decide the disputes of men. 9"

But Jewish and Christian teachers had corrupted the purity of this primitive faith, which Muhammad 10 "as the seal of the prophets" 11 came to proclaim anew.

"Say to those who have been given the Book and to the ignorant, Do you accept Islam? Then, if they accept Islam, are they guided aright? But if they refuse, then their duty is to fear themselves. 7 Those who have inherited the Book after them, haveREF 8 to be fortified by the truth, that it might decide the disputes of men. 9"

But Jewish and Christian teachers had corrupted the purity of this primitive faith, which Muhammad 10 "as the seal of the prophets" 11 came to proclaim anew.

"And among every nation are guides, whom We have sent down, to guide to Us. 4"

But Jewish and Christian teachers had corrupted the purity of this primitive faith, which Muhammad 5 "as the seal of the prophets" 6 came to proclaim anew.

This recognition of a common God is put forward in the Qur'an as the basis for friendly relations with the followers of rival creeds, in the following verses:

"Let there be no compulsion in religion, 12 and forcible conversion is condemned in the words:"

"But if the Lord had pleased, verily all who are in the world would have believed together. Will thou then compel men to become believers? No soul can believe but by the permission of God. 14"

intolerance towards their Hindu subjects, made grants of money to the monastery of Shringeri, one of the most famous shrines in India, then in the possession of the present Muhammadan states in India, such as Hyderabad and Mysore, which still assign revenues for the support of Hindu temples.

Even in such a barbarous country as Afghanistan the Hindus enjoyed religious toleration in consideration of their payment of jizyah. "They were free from persecution and molestation; in time of war, they were allowed to go to their protector or the headman for a fair hearing and a fair settlement, and if their women were captured their religion was tolerated; no one tampered with their customs." 2

The non-Muslim living under a Muhammadan government was styled a dhimmi (lit. 'one with whom a compact has been made'), and the conditions under which he was allowed to be regulated by the agreements made with the Muslim conquerors as they extended their dominion over various cities and districts. As an example of such an agreement, the conditions may be quoted that are said to have been drawn up when Jerusalem came under Muslim rule in A.D. 638:

"In the name of God, the Merciful, the Compassionate! This is an agreement concluded between the upright, the just, and the com- mander of the faithful, the people of Alhil, and they, the people of Alhil. They have granted to the people of Alhil, all the goods, properties, and revenues which they had, and which they had the right to receive, and which had been given them by their enemies, or which had been made for them (i.e. a dhimmi) and lays on him a burden beyond his strength, I shall be his accuser; 7 whoever torments the dhimmis, torments me." A similar consideration for them was shown by the khilafah-Umar, who in his testament enjoined on his successor: I commend to your care the dhimmis of the Apostles of God; see that the agreement with them is kept, and that they be defended against their enemies, and that no burden be laid upon them beyond their strength. 7 Similarly, 'Ali, when he appointed Muhammad b. Abi Bakr governor of Egypt in 32 A.H., bade him do justice to all races. 8 In like spirit the treaty made by the Turkish code ordains that the dhimmis are not to be disturbed in the exercise of their religion. 9

The actual practice appears to have varied according to local conditions and the character of the local government; and by the 2nd cent. of the Hijra, when some codification was made of the law relating to the dhimmis, more harsh and intolerant regulations had come into force than those of earlier times. But in the first century of Arab rule the various Christian churches enjoyed a toleration and a freedom of religious life such as had been unknown for generations under the Byzantine government. We have the contemporary testimony of the Nestorian patriarch, Isha'yah Ibbar, III. (A.D. 650-660), who, writing to the primate of Persia, says:

9 M. J. O'Conor, Tableau general de l'Empire otoman, Paris, 1839, iii. 41.

'The Arabs, when to God at this time had given the empire of the world, behold, they are among you, as ye know; and yet they attack not the Christian faith, but, on the con- contrary, they favour our religion, do honour to our priests and the saints of the Lord, and confer benefits on churches and monasteries.'

Indeed, the Church to which this cedalistic- bended exhibited a remarkable ease under the Muhammadan rule. The agreements were sent from Persia to China and India, both of which were raised to the dignity of metropolitan sees in the 8th cent.; about the same period the Nestorians gained a footing in Egypt, and later spread the Christian faith right across Asia, and by the 11th cent. had gained many converts from among the Tatars. 2 But by the 2nd cent. of the Muhammadan era the condition of the Christians had become less tolerable. The victorious armies that established Arab rule over Syria and Persia appear to have been little swayed by religious considerations, and under the rule of the Umayyads the Christian and other non-Muslim religious communities seem to have been little regarded except as sources of revenue; but under the 'Abbasids a change in the attitude of the government made itself felt. The orthodox reaction which supported this dynasty and the union of the spiritual and temporal power which characterized it tended to make the administration of the existing laws more oppressive and to curtail the course of the faith, or shall any one of them be harmed.' 3

The theory was that the dhimmis, in return for tribute paid and in consideration of good behaviour, received protection from the Muslim government and immunity for life, property, and religion. Tradition attributed to the Prophet a warning against the disregard of this compact, 1 : Whoever wrongs one with whom a compact has been made (i.e. a dhimmi) and lays on him a burden beyond his strength, I shall be his accuser; 7 whoever torments the dhimmis, torments me. A similar consideration for them was shown by the khilafah Umar, who in his testament enjoined on his successor: 1 I commend to your care the dhimmis of the Apostles of God; see that the agreement with them is kept, and that they be defended against their enemies, and that no burden be laid upon them beyond their strength. Similarly, 'Ali, when he appointed Muhammad b. Abi Bakr governor of Egypt in 32 A.H., bade him do justice to all races. In like spirit the treaty made by the Turkish code ordains that the dhimmis are not to be disturbed in the exercise of their religion.

The actual practice appears to have varied according to local conditions and the character of the local government; and by the 2nd cent. of the Hijra, when some codification was made of the law relating to the dhimmis, more harsh and intolerant regulations had come into force than those of earlier times. But in the first century of Arab rule the various Christian churches enjoyed a toleration and a freedom of religious life such as had been unknown for generations under the Byzantine government. We have the contemporary testimony of the Nestorian patriarch, Isha'yah Ibbar, III. (A.D. 650-660), who, writing to the primate of Persia, says:

1 'It is incumbent on the commander of the faithful (may God grant thee his aid!) that thou deal gently with those that have a covenant with thy Prophet and thy cousin, Muhammad (the peace and blessing of God be upon him), and that thou take care that the faithful are not wronged or ill-treated and that no burden be laid upon them beyond their strength, and that no part of their belongings be taken from them beyond what they are in duty bound to pay, if it is related of the Apostle of God (the peace and blessing of God be upon him) that he said, Whosoever wrongs one with whom a compact has been made (i.e. a dhimmi) or imposes a burden on him beyond his strength, I shall be his accuser on the day of judgment.'

Ibn Quttin, report of Wadi 'Uyayn (1512) maintains that the majority of Muslim jurists hold that the dhimmis must be treated with kindness and consideration and not with contempt, when he comes to pay the
jizyah. Commenting on this passage nearly two centuries later, al-Burjawi (†1694) enters a protest against such fanatical glosses on Qur'an, i.x. 29, as are referred to in art. Persecution, and holds that the phrase 'being humbled' implies only conformity to the regulations of Islam in regard to the dhimmis, and that these words give no justification for the rough treatment sometimes inflicted on a dhimmis when he paid jizyah—e.g., that he might be required to stand with his head in the dust and back before the collector of the tax, who should slap his face and pull his beard—for (as he rightly says) there is no evidence that the Prophet or any one of the khalifas acted in such a manner.1

A powerful influence in the direction of toleration in a period when feeling was acerbated against the Christians, and when the disorder in Muhammadan administration made their position more precarious and exposed them to the tyranny of local officials, was the extension of the religious orders, especially that of the Qadiriyya, and the popularizing of that mystic school of thought. The Qadiriyya was the offshoot of a movement of religious thought in which devout Muslims found consolation after the devastations of the Mongol conquests. 'Abd al-Qadir al-Jilani (†1166), the founder of the order referred to, entered into an mystical acquaintance with the essence of God, and his attitude and that of his followers towards the Christians was kindly and sympathetic.2 The tendency of Persian mysticism was opposed to any emphasizing of religious differences, and the teaching of the poets who wrote under the influence of this mystical movement often made for tolerance; a well-known example is the story of Abraham in Sadi's Badin, in which the poet rebukes God for refusing his charity to an aged fire-worshipper on the ground of his infidelity. But in the present article attention may rather be drawn to instances of toleration in contrast to the fanatical usage of legislation; e.g., though the so-called Pact of 'Umar forbade the building of new churches, there was considerable variation of opinion among the Muslim legislators themselves on this question, from the more liberal Hanafi doctrine, which declared that, though it was unlawful to build churches and synagogues in Muslim territory, those already existing could be repaired if they had fallen into decay, while in villages where the tokens of Islam were not apparent new churches and synagogues might be built, to the intolerant Hanbal ruling that they might neither be erected nor be restored when damaged or ruined. Some legislators held that the privileges varied according to treaty rights: in towns taken by force no new houses of prayer might be erected by dhimmis, but, if a special treaty had been made, the building of new churches and synagogues was allowed. But, like so many of the labors of the Christian legislists, these prescriptions bore but little relation to actual facts. Schools in the Muhammadan world might agree that the dhimmis could build no houses of prayer in a city of Muslim foundation, but the civil authority permitted the Copts to erect churches in the new capital of Cairo. The fact that 'Umar b. 'Abd al-Aziz (717-750) ordered the destruction of all recently constructed churches, and that more than a century later the fanatical al-Mutawakkil (847-861) had to repeat the same order, shows how little the prohibition of building new churches was put into force, whether by the government and both Christian and Muhammadan historians.

1 For example see Arnold, The Persecution of Islam, pp. 65-68.

were applied.1 It is recorded of Khayr b. Nu‘aym, a judge in Egypt about the middle of the 8th cent., that, after hearing the cases of the Muslims inside the city, he would sit out on the steps outside the gate in the afternoon and hear the cases of the Christians and Jews, testing the value of the evidence of the witnesses by inquiring into their credibility among their co-religionists. The underlying principle is that the toleration of Muslim rule is the fact that persecuted Christian and other sects took refuge in Muhammadan lands, to enjoy there the undisturbed exercise of their several cults, the Byzantine emperor, Leo, in 714, instituted a persecution against the Montanists and the Jews, forcibly compelling them to submit to baptism, while some burnt themselves alive rather than suffer the loss of religious freedom, others fled for safety into the neighbouring Arab territory.2 The persecuted Spanish Jews at the end of the 15th cent. took refuge in Turkey in enormous numbers.3 The Calvists of Hungary and Transylvania and the Unitarians of the latter country long preferred to submit to the Turks rather than fall into the hands of the fanatical house of Hapsburg;4 and the Protestants of Spain, of whom some, looking eyes towards Turkey and would gladly have purchased religious freedom at the price of submission to Muslim rule,5 The Cossacks, who belonged to the several tribes of Don, those parts of Russia, and the Ukraine were persecuted by the Russian State Church in 1736, found in the dominions of the sultan the toleration which their Christian brethren denied them.6

1. Toleration in Muhammadan world generally may be said that it was more operative in the earlier centuries of the Hijra than in the days of the decline of the khilafate or the unhappy period of the Mongol conquests or in modern times when the pressure of Christian Powers exasperated Muslim feeling. The civil government has as a rule been more tolerant than the clergy, and the regulations of jurists have seldom been put into force with all their rigor; though practice has varied with time and place, the persecutions 8 that have occurred have been excited by some special and local circumstances rather than inspired by a settled principle of intolerance. The judgment of A.de Gobineau is on the whole justified by the facts of history:

Si l'on sépare la doctrine religieuse de la nécessité politique qui l'accompagne, on constate que le pouvoir religieux est moins tolérant, on pourrait presque dire plus indifférente sur la foi des hommes, que l'État. Cette opposition apparente est d'ailleurs une formidable force de cohésion, car elle a laissé aux enfants des royaumes de l'Islam une inaliénable prudence, et de respect pour la religion de leurs ancêtres. Il est donc impossible de parler de tolérance en appliquant le terme au royaume de l'Islam. Il y a eu des régimes religieux persécuteurs, mais il y avait des régimes persécuteurs chez les chrétiens, chez les jésuites, chez les protestants, chez les autres. Enfin, il y avait, comme partout, la crainte de l'influence que cela pouvait avoir sur les peuples. Le fait religieux n'y est invoqué que comme prétexte et, en réalité, il reste en dehors.1

To this sober conclusion of the historian may be added the eloquent outburst of one of the Spanish Muhammadans who was driven out of his native country on the occasion of the last expulsion of the Moriscos in 1610:

Did our victorious ancestors ever once attempt to extirpate Christianly out of Spain, when it was in their power? Did they not only most of them, at the same time that they were led, at the same time that they were loved? is not the

TOLSTOY

369

TOLESTOY

— i. Early life and manhood.—Lev Nikolaievitch Tolstoy (1828-1910), novelist, social reformer, and religious mystic, was born on 28th Aug. (O.S.), 1828, at Yasnaya Polyana ('Bright Glade'), the home of the family, in the government of Tula, about 200 miles from Moscow. His eldest brother was the youngest of four sons. His mother having died when he was three, and his father five or six years later, the boy went in 1840 to the university town of Kazan in Siberia, under the charge of an aunt, whom he held in grateful remembrance. After two years' study he left the university without a degree. The blame is usually laid upon the professors, but some portion of it must be attributed to Tolstoy's own dissipated and irregular life. Returning to his estate, he interested himself in the life of his peasants, with the disappointing results recorded some years later in his A Landlord Proprietor, and The Inheritance—and planned The Cossacks, sold ten years later to pay a gambling debt.

Childhood (1832), Boyhood (1834), and Youth

TOLSTOY

(1856) form an autobiographical fragment, thinly disguised under fictitious names. Here, as elsewhere, Tolstoy doubles himself, to bring out the dual nature, the natural and the spiritual man of which he was always conscious in himself. Irénée represents the lower nature, his friend Neklyudov the higher. The latter reappears in the Landlord Proprietor and in Resurrection, just as in War and Peace Pierre Bezukh, and in Anna Karenina Kitty. Tolstoy, in the struggle between flesh and spirit which ended only with life. There is truth in Leo Wiener’s statement that even the Christ of his religious writings is still the image of the author, and the real Christ is Christ-Tolstoy that becomes the final and lasting stage of his spiritual evolution. 1 This autobiographical fragment reveals Tolstoy as an awkward child, morbibly sensitive to his appearance; a boy, confessing frankly every shade of evil in his heart, such as the rise of sexual feeling; and a youth in search of an ideal, whose one faith was in the possibility of virtuous perfectibility. Beyond this, his father’s death, the crisis of the Orthodox Church, had become dust, ready to crumble at a touch. Yet we see the beginnings of many things which appear and reappear in his writings to the end—a shame of being rich while others want, a dejection of injustice, the clear poetic vision of Nature and her loneliness.

The Cosmocrata (1863) represents Tolstoy’s revulsion from the artificial and vicious Life of cities and his class. The natives and their vices, but they sinned naturally and frankly, and thus escaped the deeper corruption of hidden immorality. In contrast with their bold outdoor life, Tolstoy saw himself (the Ordinary of the Synod) as a degenerate refined being. Joining the army in 1851, Tolstoy commanded a battery at Sevastopol; and in his three sketches—Sevastopol in December, 1854, Sevastopol in May, 1855, Sevastopol in August, 1855—we find the seeds of thought that were to fructify in his War and Peace, and many an indignant denunciation of the violence by which nations are governed. The conviction of the sheer wickedness and brutality of war sank deep into his soul and grew with the years. The sketches probably saved his life; by the emperor’s orders the young man was removed to a place of safety. On the fall of Sevastopol in 1855 he was sent with dispatches to St. Petersberg, and returned to the Orenburg Cavalry.

Of this period, and up to his marriage in 1862, Tolstoy could never afterwards think without shame. Between 1857 and 1861 he travelled in Germany, France, Italy, Switzerland, England, and Belgium, to study their educational methods, wrote many books on education, and started schools for peasant children on his estate. Yet alongside this generous interest in ‘the people’ the ties of the passions of the natural man never ceased to flow. His own words in his My Confession 2 frankly reveal this moral duality:

1. I cannot recall these years without dread, loathing, and anguish of heart. I lived peaceably, and challenged to duel to my sword; I lost money at cards, wasting the labour of the peasants; I was a non-believer. Lying, stealing, acts of lust of every description, drunkenness, violence, murder—there was not a crime which I did not commit, and for all that I was praised, and contemporaries have regarded me as a comparatively moral man. Thus I lived for ten years.

On 23 September 1862 Tolstoy married Sofia, second daughter of Prince Behrs of Mordovia. Behrs of Mordovia bore him thirteen children, several of whom died in infancy. Fifteen years of unbroken domestic happiness followed. Tolstoy was busy with his schools, his work on the management of the estate, and, above all, the writing of his greatest novels, War and Peace (1869-94) and Anna Karenina (1877-79).

(1873-77), in which appear all the problems round which his mind never ceased to work—war, the peasants, the land and the serfs, education, the universal duty of manual labour, and, at the root of all, religion and the ethical duties flowing therefrom. There and to-day, at sixty, in the modern world, Tolstoy cast aside the art in which he was acknowledged the greatest living master, and devoted the remainder of his life to moral and religious work and to the reform of the Gospels, the Creed, and the foundations of violence on which he believed the entire system of civil government rested. His literary ambitions had been treason to the deepest convictions of his soul. The literary caste set up to teach what they did not know, and for the sake of his family he had shared their delusions:

The new conditions of my happy family life completely drew me away from all search for the general meaning of life. All my life during that time was centred in my family, my wife, my children, and, therefore, in care for the increase of the means of existence. The striving after perfection, which before had given way to the striving after perfection in general, after progress, now as an almost incomprehensible and as comfortable as possible for me and my family. Thus another fifteen years passed.

The struggle to break away from this treason to the higher life led to great family unhappiness, and ultimately to his mysterious and tragic end.

2. Ethical and religious ideas.—Tolstoy’s principal works after the Resurrection are The Kingdom of God is Within You (1893), What Is Art? (1897), and Resurrection (1899), his last great novel, in which he sums up his indictment of the Church and its methods, and the end of the idea of society. It is from this vast mass of literature that we must now attempt to deduce the religious and ethical convictions into which, with endless vacillations, Tolstoy finally settled.

(1) Tolstoy’s fundamental conviction is that the one purpose of life is to know God by bringing all relations of humanity into harmony with His will. In reply to the decree of the Holy Synod which excommunicated him in 1901 he states his creed:

1 I believe in God, whom I understand as Spirit, as love, as the beginning of everything. I believe that He is in me and I am in God. I believe that God’s will is most of all clearly and humbly expressed in the teaching of the man Christ, whom I understand to God and pray to consider the greatest blasphemy. I believe that the greatest true good of man is the fulfillment of God’s will, but His will is this, that men should love one another as God loves them. For the whole sequence of this causal situation is this: as they wish that others should treat them, as, indeed, it says in the Gospel that in this is all the law and the prophets. I believe that the meaning of the life of every man is, therefore, only in the augmentation of love in himself; that this augmentation of love leads the individual man in this life to a greater and ever greater good, and gives after death a greater good, the greater love is in man, and at the same time more than anything else contributes to the establishment of the kingdom of God in the world, that is, of an order of life with which the now existing discord, deception, and violence will give way to free agreement, trust, and brotherly love of men among themselves. I believe that there is but one means for success in love, and that is in war, not public prayer in temples, which is directly forbidden by Christ (Matt. v. 5-13), but such as Christ has given an example of, and by which he contributed to the establishment and strengthening in our consciousness of the meaning of our life and our independence of everything except God’s will.

(2) Tolstoy warns us that, when he calls God the Father’ and speaks of His ‘will,’ he is not to be understood as meaning that God is a personal being. He elaborates this, when he says that it is consistent with his doctrine of the impersonality of God: it is a necessity forced on him by the fact that he himself is a person. The doctrine of the Trinity is both blasphemous, Metaphysically, and it conceals God; nothing reveals Him but love in its

1 My Confession, ch. iii. (Works, xiii. 16).
2 Answer to the Decree of the Synod (Works, xii. 235).
application to human life. The fundamental idea of The Kingdom of God is within you is that God is, in every man, the revelation of life and the power by which man lives and acts upon the world. Whatever applies itself to the God within has divine sanction and right. Since God thus acts naturally through man, miracles are impossible.

(3) Tolstoy's conception of Christ passed through many fluctuations. In the Crimes he dreamed of a new Christianity 'purged of dogma and mysticism,' giving happiness here on earth. At his brother Nikolay's funeral he projected a Life of Christ as a Materialist. After reading a German work on the Gospels he inclined to agree with the Author that Christ never existed. In the end, while admitting his existence, he denied indignantly His divinity. 'To recognise Christ as God is to renounce God.' The theory of His divinity the Temptation becomes absurd—'God is tempted by God Himself.' The miraculous Birth is an invention to cover His mother's shame. The Resurrection is 'a trite, contemptible invention,' contrary to reason and needing the invention of other miracles to support it. He is 'the living Christ,' but the sense in which He lives on lies in the spirits of those who come after them. Jesus is grouped with other great religious teachers of the world, such as Confucius, Buddha, Lao-tse, Thales. The chosen of God was asserted with the earnestness: 'I am standing with one foot in the grave, and I have no need to fear.' The truth is that Tolstoy had almost a personal interest in thus establishing the human side of Christ: he found in it those elements of weirdness of which he was conscious in himself. The Temptation, the shrinking of His soul at the visit of the Greeks, the agony in the Garden, the cry 'My God, my God' on the Cross, seemed to bring Him nearer to his own weaknesses and vacillations. There was even a moment, he held, when Christ resolved to use violence against violence and advised His followers to sell their garments and buy swords; and it was only in the Garden that He was able to overcome the terrible temptation by prayer.

(4) Tolstoy's attitude to Scripture settled down into acceptance of nothing that did not commend itself to the God within himself. The OT is non-essential to Christianity. The Church doctrine of the infallibility of Scripture—myths, miracles, contradictions, immoral stories, and all—only commits the Church to the will of the Father. Of the OT stories and the Gospel parables as the highest form of art, taught them to the peasant children in his schools, and advocated that cheap unbridged copies be given them, not one word omitted:

'The book of the childhood of the race will always be the best book of the childhood of each man.... There is no book like the Bible to open up a new world to the pupil and to make him without knowledge love knowledge.'

After giving elaborate interpretations of the Four Gospels, he warns his readers against all interpretations: let each man read for himself in the spirit of a little child. To get nearer the original meaning he learned Greek; and he used his new-found instrument in the most uncritical and impartial way. For example: the words were the heart of the Bible; the Sonorn on the Mount was the heart of the Gospels; and a few sayings of Christ formed the heart of the Sermon. Whatever is written by which man lives and acts upon the world—his sayings and Tolstoy's vast 'private interpretation' of them was set aside without scruple as no part of the true original teaching; and, as one has said, it is no wonder that the disciples of the Church, he created others of his own.

absolutely to protect them by force. The worst that can happen by not resisting is death, whereas to resist is to act contrary to the law of Christ, which is worse than death. We need to stress that Tolstoy says that this carries the blame to the point of insanity. The natural instinct of a normal conscience is to protect the weak and the defenseless from a drunkard or a madman.

(5)  *Waige ne wert (Mt 24:45–48, Lk 12:42, 7—).* The five commandments are here elaborated into five wounding chapters. The first addresses the individual heart—harbour no anger; (2) man and woman, the family—avoid carnal lust; (3) private worldly relations with others—blind the conscience by oath or promise; (4) relations to the State—resist no evil by force; (5) the human race—regard no nation as orphans of God. Out it’s evil, do good, and wage war. It is absurd to say that Christ, who forsook anger and lust, and lead angry, and murder, which is the fruit of anger, to communities and nations.

From the Servostuk sketches, on *War and Peace, The Kingdom of God is Near at Hand,* and *etc.,* Tolstoy never ceased to strip war of its 'glory' and to hold up its naked falsity, cruelty, and bestiality. Under all its fine names its true purpose is murder. Three causes are named: (1) the unequal distribution of property, that is, the robbing of one class of people by another, (2) the existence of a military class, that is, of people educated and destined for murder, and (3) the false, for the most part consciously deceptive, religious teaching, in which the young generations are forcibly educated. 1

*Patriosism* is the chief war-criminal—a sentiment fostered by pamphlets which hypocritically the people into 'loyalty.' by alliances with or against other nations, based on an unequal love and a crooked patriotism. Under patriotism, the aim of all patriotism being that of 1 Deutschland unter Alles, to exalt our own nation over others, by violence if need be. It is this sentiment that puts into the hands of rebels a diabolic weapon, making possible military conscription and all the cruelties, and the 'chivalry' of war and battlefields. The one remedy is the substitution for love of country of love for man as man, and the refusal of individuals to submit to the misgovernment of officers, be the consequences what they may. Tolstoy had a profound distrust of peace congresses and courts of arbitration, because the decision of the court of arbitration against the military violence of the states will be executed by means of military violence.

(6) Following out his doctrine of human freedom, Tolstoy attacked all current forms of education as the forcible ruin of life and ethics. The schools on their estate were based on absolute freedom. The children came when they pleased, sat where they liked, ate what they liked, and had no homework, or no lessons to torture them. Yet the order and attention were perfect. The teaching included walks in the fields, explanations of natural sights and sounds, history, folk-tales, stories and parables from the Bible, by far the finest instrument of education. Tolstoy wrote a series of tales, which had a great success in Russian schools; but he held that it is better to correct children than teach them to write, not we them: they are nearer the original harmony of beauty, truth, and goodness than men, whose education has been a system of destroying that harmony. His views are summed up thus:

1 I am convinced that the school ought not to interfere in that part of the education which belongs to the family: that the school has no right and ought not to reward and punish; that the best police and administration of a school consist in giving full liberty to the pupils to study and settle their disputes as they know best. 2

2 He opposed 'popular education' because it was not popular, but compulsory, based on violence, and hated by both parents and children, who forgot its artificial results as quickly as they could.

3 Schools which are established from above and by force are not a shepherd for the flock, but a flock for the shepherd. 4

4 From the school to university the system was arbitrary, mechanical, and out of relation to life and its needs. To compel all child-natures to pass through a standardized system, without freedom of choice, is torture. In fine, education has become an elaborate system of demoralizing child-nature, which is good, in the interests of the world and its evils. At an early age it severs the natural bond of parent and child, and of the great mother, Nature herself, and it does so in a way which fosters lying, hypocrisy, and vice, and destroys individuality.

(7) In *What is Art?* Tolstoy sweeps aside with contempt all theories of mere aesthetics and 'art for art's sake,' and reduces the criteria of art to the following two: one, the artist's feeling from a genuine feeling in the artist; (2) this feeling must have the power of infecting others with the same emotion; (3) it must have the power of uniting men by this infection of a common hope, joy, love, or whatever else it may be. If this union is not widely it unites men, the more worthy is it of the name. 'Upper class art,' dependent on an artificial training, springs from no living emotions in the artist, who has to write, paint, etc., to please his rich patrons, who lead idle, artificial, and parasitic lives. Such art grows ever narrower in its appeal, and its patrons ever prouder of its exclusiveness, whereas 'great works of art are only great because they are accessible and comprehensible to everyone, like the story of Joseph and the parables of Christ. Whole generations of artists, singers, poets, players, artisans, workmen, who are practical, and not the theorists of an exclusive art—an art which is simply the expression of the pride, sensuality, and weariness of life of the men and women who pay them.

All good art springs from universal emotions which unify men by emotion. What these are is revealed by 'the religious perception' that all human good is contained in 'the fraternal life of all men, our love-union among ourselves.'

Hence 'the Christian art of our time can be and is of two kinds: (1) art transmitting feelings flowing from a religious perception of man's position in the world in relation to God and to his neighbour—religious art in the limited meaning of the term; and (2) art transmitting the simplest feelings of common life, but such, always, as are accessible to all men in the whole world—the art of common life—the art of a people—universal art. One of these two kinds of art can be considered good art in our time.' 1

The name of art is denied to emotions which divide men, as patriotism, or religious sectarianism, or the honour given for wealth, education, rank, or profession. The theory has met with much ridicule; but, making allowance for some exaggeration in Tolstoy's dislike of the conventional forms in which every art seeks expression, we may agree with Kropotkin that *What is Art?* is a much-needed protest against the over-artificiality into which modern art has drifted. 2

(8) Tolstoy's treatment of the future life may be described as a kind of pantheistic immortality. His novels overflow with studies of death and the process of dying. The higher ranks meet death with reluctance and complaining, the poor with cheerfulness and faith. Of Natalya, the old stewardess in the home of his childhood, he says: 'She executed the best and highest act of this life—she died without regrets or fear.' During the period of his life his thoughts of suicide became so strong that he had to hide a rope that hung in his dressing-room and could not trust himself to go out hunting with a gun. There was no meaning in his life and no end for his suffering. He was saved from suicide by the discovery that the end was God,God in whom he lived, and moved, and was. The fear of death is a 'superstition' due to the false notion that man lives in a state of ignorance of their own nature and of the world, and this the lower fragment of their carnal and personal being, instead of their rational consciousness in its relation to the sum of things. Art, which is given to be a ministry of life to the world, is given to leave nothing to the world, and is given to leave nothing to the world, and is given to leave nothing to the world. 3

1 What is Art?, ch. xvi., ir. Aylmer Maude, London, 1905 (of this ir. Tolstoy in a Preface says: 'I request all who are interested in my work, to read only to judge of its true value in its present shape.' The tr. is from the original MS, and is free from the mutilations of the Russian censor).

intrigues, and when the old man of eighty-two was fast breaking up in both body and mind. At 3 o'clock on the 25th Oct. 1910 he left his home for ever, accompanied by his daughter Alexandra and his disciple Dr. Makoviovsky. His son Symon, in his Reflections on his father's life, puts the

it lasts just so long as this ministry is being ful-

filled. To cast it away in suicide when it becomes

unpleasant to us is sinful, partly because just the

same act committed as a public act, becomes a min-

istry truly begins. Moreover, it is in this life of universal

ministry that man finds the only true immortality.

Personal immortality is impossible, because true

life is in the animal, and since the animal's end

Resurrection and reincarnation would be nothing

better than a return to the carnal and personal

relations which are spiritual death. Life is an

ever-ending movement of reaching for the love,

and the only real death is to arrest the movement

at any given point. Live onward beyond the old

self, and life becomes a living part of the grow-

ning good of the world. This is the life eternal

and the only true immortality for man.

3. The last phase.—The life of the great Russian

ended in a mysterious tragedy of conscience. For

many years his life consisted of a struggle to bring

his practices into harmony with his principles by

escaping from his class, his wealth, his family.

In My Religion, written in his fifty-sixth year, he

lays down five conditions of human happiness:

(1) a man does not break with the Earth Nature

—the open sky, sunlight, fresh air, soil, plants,

animals; (2) work, physical labour, giving appetite

and sleep; (3) family life; (4) a free and living

inner life, with all the various moods of man-

kind; (5) health, and a natural and painless death.

These conditions are open most widely to the

peasant, and grow narrower the higher you rise

in the privileged classes: the Tsar, e.g., holding

interests, or the home but a few of his jailers.

Hence Tolstoy's later years were one long effort

to transform himself into a peasant; and the

asceticism which formed part of his strangely

conquered passion for the final strugle of a third

condition, the family life. He transferred to his

wife the responsibility of managing his estates,

and, although he continued to live in the family

mansion, it was, as far as possible, as a poor man

working with his hands. It was a compromise

which gave no peace of conscience. More than

once he left his home intending never to return,

but always found always drew him back. The

dramatic friction which resulted is portrayed in

the form of fiction in Walk in the Light, while ye

have Light (1888). One's sympathies are not

entirely on the husband's side; the countess had

much his own responsibility; she was burdened

with the children, the estates, and the publication of

his books was transferred to her shoulders. In spite

of a true affection between them, they drifted apart.

Tolstoy's actual departure from his home came about

through the question of the copyright of his works. From

1855–53 the countess, to counterbalance her husband's neglect

of the estate, because the publisher of his writings; and in

1851 she deposited in a public museum for safety large

quantities of his manuscripts, producing evidence afterwards

in 1874 that they were given by her Tolstoy. This was done, evidently,

to restrict herself from a deliberate attempt by one of his

disciples, V. G. Tchertkov, to deprive her of them and of all

control of their publication. In 1891 Tolstoy, having convinced

himself that to make money by his moral and religious

writings was sinful, made public announcement that any one was free to

publish his works written from 1851 to the time of his

death. About the same time he gave Tchertkov the right

of first publication, in Russian and in English, of his future

writings, and he was at that time published. Tchertkov was not

satisfied with it, and set about a long series of

intrigues to induce Tolstoy to make a will in his own favour.

and without the knowledge of the countess, on the ground

that only through him would his works be published in accord-

ance with his wishes. As a man of marked family

interests the aspect of the affair is that his youngest daughter, Alexandra, was in

the family, and many years later his daughter-in-law

will be drawn up and signed, a final one was made on 23rd

July, 1909, bequeathing all his productions and the manuscripts

he was at all times to be possessed of the full possession of

2 Banforth, For, Bl. 317, 375.

TOLTECS 373

TOLTECS.—I. Origins.—The beginnings of the

Toltec peoples are enveloped in the fog of mythology. Their origin is rather mysteriously

attributed to the acts of a certain hero-god, Quetzal-

coatl ("a twin"), compounded of two words quetzalli,

a plume of green feathers, and coatl, a serpent, in

other words, a plumed-serpent (-god). Some

wild speculations and pious conjectures have identified

him with St. Thomas, and others with the Messiah.

Another mysterious hero-god (personage) who has

been closely linked with Quetzalcoatl was Yotan, the

reputed founder of the civilization of the Maya,

for a time a contemporary and rival people with

the Toltecs.

In the pre-Toltec period of history in Mexico and

Central America the Nahua and the Maya were

the two adjoining civilizations. Quetzalcoatl, the

plumed-serpent divinity, was the creator of man,²

the founder of the new order of things among the

Nahua peoples. Like the Maya peoples of Yucatan

and Central Mexico, the Nahua were in the late

18th century.
their colonies or activities to any one area of territory, though their main settlement was on the plateau of Mexico. In the 6th and 7th centuries the Toltec Chichimec tribes, representing the Mazatlan Toltec, settled down on the Mexican plateau, in proximity to the wonderful lakes of that region. 1 Of the Nahua tribes who made their homes in this region the Toltecs were one of the prominent sections, the last being the third at the time. Their independent existence cannot be sharply ascertained. 2

2. History.—At the opening of historic times the Toltecs were in possession of Anahuac (a section of the plateau of Mexico) and ousting territory. While the civilization was old, the name Toltec was new, possibly derived from Tollan or Talon, the original capital of the empire. The boundary lines of the Toltec sovereignty cannot be fixed, though it probably did not exceed that of the Aztec domain of later times. It is thought to have extended so far west as to have covered Michoacan, which was never conquered by the Aztecs, and stretched eastward to cover their farthest extent, including also the Tonatoc territory of Vera Cruz. The many tribes and peoples of the Toltec empire was composed cannot be identified by name with accuracy. In the pre-Toltec period, the Toltec, as side the so-called Toltec empire, the peoples, particularly in the north, were regarded as barbarians and were popularly known as Chichimecs.

From the 7th to the 12th centuries, the Toltec empire was made rigid in the main rule by a confederacy which resembled the alliance of a later time between Mexico, Tezcuco, and Tlacopan with capitals at Culhuaucan, Otompan, and Tollan respectively. Each chief of the confederacy in turn became the dominant force in the confederacy. Tollan on the river Quetzaltzali is reputed to have reached the highest point in culture, splendour, and fame. It is now represented by the little village of Tula, about 30 miles north-west of the city of Mexico. Culhuaucan was the only one of the three capitals of the confederacy to survive by name the bloody revolution by which the empire was finally overthrown, and to maintain anything of her earlier greatness. The confusion and often contradiction between the numerous reports and records and manuscripts of the native and Spanish writers lays a heavy burden upon a historian, but he has endeavoured to be apparently faithful to the best evidence available in those writers. Let us make a survey of the history and constitution of the Toltec empire, so called, during its brilliant period of empire domination in the central plateau of Mexico, based on the representations of Bancroft and NadaiUc. 3

The pre-eminent personage in the beginnings of this new organization of tribes and peoples was Hueman the prophet. It was through his line that a powerful priesthood ruled the destinies of the Toltec empire from its inception to its downfall. The government was in reality a theocratic republic, in which each leader directed his own tribe both in war and in peace, but all were more or less subservient to his spiritual leader in all matters of national import. Seven years after the arrival of these peoples in Tollan the heads of families and chiefs met in assembly and composed their fate of government, and establish a monarchy, in order to consolidate their strength and prepare for the future challenge to a new monarchical people. On this advice of Hueman, the chiefs sent an embassy to the reigning king of the Chichimec to ask for a son or other relative to be a husband to his daughter. This was a provoking requirement of agreement on the part of the Chichimec king that the Toltecs should ever be a free and independent people, owing no allegiance whatever to the Chichimecs, although the two powers would enter into an alliance for mutual defence and aid. With conditions of this sort there was no such an opportunity, and sent with back the embassy his second son was sent with the promise to be married to the daughter of the Toltecs at Tollan under the royal name of Chichihuatl. 4

1 New v. ch. iii. 2 Pre-historic America, Engt. tr., new ed., London, 1895. 3 The Toltecs and accession to the throne took place about the first quarter of the 8th cent., between 719 and 720. 4 Immediately after his accession the young Toltec king, in accordance with the law that the time limit of a king should be 52 years, at the end of which he should abdicate in favour of his oldest son, to whom he would be succeeded, and that no king over 85 years of age could die before the time limit had been reached, the unexpired term should be filled by a selected successor. The immediate task of the king was to find a wife to provide an heir to the throne, so that the dynasty might be perpetuated. The ablest young king left his choice entirely to his subjects—the records say—to their joyous satisfaction. Their choice fell upon the danger-fraught princess, who was pronounced the candidate for the throne when it was proposed to found a kingdom. Two Nahua documents give a rival story of the beginnings of the monarchy, but the main features are not so widely different.

Chichihuatl Tatocac, the first Toltec king, died at the end of 52 years and was buried in the chief temple, about A.D. 771. His son and successor was Itzliocueuhuac. He had a peaceful and prosperous reign. The signal event of his reign, and near its conclusion, was a meeting of all the wise men under the direction of the old prophet Hueman. This assembly collected all the Toltec ancient and modern documents, and after a prolonged conference and careful investigation, compiled the Toltecozli, "book of God." On its pages they inscribed the Nahua annals from the creation down; also their religious rites, their governmental system, laws, and social customs; their methods of agriculture and science, and especially their history and astronomy; their methods of computing time and interpreting their writings. To these valuable pages was added a chapter on the forecast of the future events of the kingdom, including the disaster through which it was crushed and destroyed. The third king of Toltec, succeeded so reigned for 77 years. The fourth king, Tocetep, sometimes given as the second king of Culhuaucan, continued the Toltec's dynasty. He stretched and banded it down at the same time limit to his son Nanacue, the fifth king at Tayan, who was succeeded by Najuyihi, or Min. This sixth was succeeded over 100 years, during which these six reigns there was great advance made in building new cities, beautifying old, erecting magnificent temples, and especially magnificent at Quauhtnahuac and another at Tollan rivalling even the Temple of the Sun at Teotihuacan, a city which surpassed in extent and in grandeur the most famous of all empires. More than 800 years saw the Toltec empire well and prosperous established over a large territory and many centuries.

Looking back at some of the details of those reigns, we gather a few significant facts. The annals of Culhuaucan mention Tocetep (the fourth Toltec king) as the second king of that city. He waged several successful wars, not notably, but the province of Huitznahuac, where he found, conquered, and married a princess Chimalmaro, who bore him an heir named Cenecatl Quetzalcotlli. This notable scion of the royal family succeeded in establishing certain laws of succession which prevailed down to the end of the empire; but the most far-reaching act was the conclusion of an alliance between the crowns of Culhuaucan, Otompan, and Tollan. Each king was to be independent of the other, but in affairs of general interest the three rulers were to constitute a council, in which the king of Culhuaucan was to rank first, with a title almost equivalent to that of other. The next rank and Tollan the third. The date of the formation of this confederacy or empire was about A.D. 856.

After Quetzalcotlli had ruled in Culhuaucan about ten years, he met obstinate opposition to his authority from his enemies. He was a radical reformer whose ideas ran counter to those of the reigning pontiffs. He modified much of the religious ritual and art and introduced new ideas. He sacrificed had had a first place from pre-Toltec times at Teotihuacan, and more or less general acceptance in Culhuaucan and Tollan. He absolutely prohibited them in the temples of Tollan, and so stirred up the envy and hatred of the nobility of Teotihuacan and Otompan and Culhuaucan. The nobility of Tollan also, who represented the curbing of their religious liberties, became jealous of their brothers of equal rank among the people. A new order of priests, called the Chichimecs, was established, and the result was the establishment of the cult of Tollan. Nevertheless, Tollan became the metropolis of the confederacy. In the magnificence of her palaces and temples, in the skill and fame of her artists, if in her popularity Tollan was surmounted by any city on the plateau. This was too much for the other centres, and active aggressive opposition, political, 1 New v. 244 f. 2 Ibid. v. 246-250.
magical, and religious, raised its weapons of warn-
ing. Quetzalcoatl’s aversion to the shedding of
blood is said to have caused the abandonment of
his throne, against the ardent wishes of his more
warlike friends, and his crossing over to the eastern
part of the plateau, to succor the Chichimec. A
successor in Toluan, Nachaxoc, known under several
other names, was the fifth king of the Toltecs.

The reign of Nauyotl, or Miti, the sixth king of

The Toltecs were once a great and powerful race,
peace. His entire energy and strength were
devoted to the promotion of the glory of his city,
where he re-affirmed and carried out the reforms
of his predecessor. Cholula, a rival sacred city,
really stirred him to vigorous action, in building
greater temples and more attractive shrines to
prevent pilgrimages from Toluan to the rival city.
He also built superb temples in other provinces to
the south outside the boundaries of Anahuac.

Nauyotl, or Miti, at his death, was succeeded by his
queen, Xiuhtlaltzin, who reigned four years. She showed wonderful
wisdom and piety and direction of public affairs, and her death
was greatly lamented by her subjects. Her son and successor
was Matococztli, whose reign covered 969 to 973; he was
replaced by Teopanzolco, who reigned from 973 to 1015, and who
was followed by Tecapalcantli. The records of this period
are abundant, and the reigns of the Toltec sovereigns were
successively described in Tecahuitlapan (1015), and the latter
in 985 by Tepetehu, the second king of that name.

Even the apparatus for the descending of the Toltec
empire was an indication of the severity of the annals
of this period. The battle at Cholula was fought in
the year 969. The allies of Xiuhtlaltzin were
led by the Chichimec, and the war was

Spanish writers still speak of Toluan as the empire, but Nahua
documents found in that city the occurrences which caused the
destruction of the Toltec power. Whether this is the truth or
not, it seems that a battle was fought between the Toltecs
and Chichimec, and the war was continued for a number of years.
The annals of this period are scarce and the history of the Toltec
empire is confused and confused. The extensive records of the period of
the downfall of the Toltec empire are confused and confused.

They abound with tales of marvels and mystery, as
intending to throw dust into the eyes of the reader.

TONGANS

I. Introduction.—Tonga—or at least the Tonga of this article—is the name of a group of islands in the Western Pacific, lying to the north of New Zealand, the east of New Caledonia, and south of Fiji. They are sometimes known as the Friendly Isles, the name given by Captain Cook. The Tongans who inhabit this group are a tiny nation of the Polynesian race. Although few in number—about 20,000 only—their nationality is clearly marked, and they can easily be distinguished from their neighbours the Fijians and Samoans. Typical Tongans are tall, long-limbed, of a light coffee colour, with upright forehead and straight hair; but a little acquaintance with them shows that there has been an admixture with a race that was short and had receding foreheads. This agrees with their traditions, which state that, when the Tongans came to the group, some five or six centuries ago, it was already occupied by an aboriginal race. Traces of these have been found in one of the volcanic islands, but the vestiges have not been scientifically examined. Still it is clear that the Tongans, and Polynesians generally, have emigrated from a distance; and the most probable theory is that of Fornander, that they came from the Moluccas or the Gulf of Tadjoura.

Old navigators used to speak of the 'Tonga as 'the most splendid savages in existence,' and they were certainly the terror of the neighbouring groups, all of which are said to have been once conquered by them. They acknowledge themselves to be mentally inferior to the European; but it cannot be said that they come very far behind; and occasionally students at Tahiti College have achieved results that could be equalled only by the best pupils in English schools. A fair measure of the size of their brains may surely be found in their language, which contains, it is estimated, at least 10,000 words in use. The verbs have about 20 voices, and the pronouns are developed to such an amazing extent that there are more than 100 ways of saying 'our,' against two in English. The adjectives and the adverbs, too, have many degrees of comparison, and there are more than two articles, shades of meaning can be produced to an almost infinite extent. That the Bible translates well into a language like this is not surprising; but geometric treatises, and such works as Milton's Paradise Lost, can also be well rendered. Physically, then, and mentally, the Tongans stand high; and it comes as a surprise that their spiritual development, as represented by their old religion, was low. Their pantheon was a medley, and their ceremonial unenlightened, giving any gleams of philosophy as in the religion of India.

2. The gods of Tonga may be divided into three classes.

(1) In common with other parts of Polynesia, their gods comprise the two groups of the Tangaloa and the Maui (pronounced Motu;—Motu is now). The Tangaloa were the earlier group, and consisted of Tangaloa 'Eiki ("Lord Tangaloa," or "Tangaloa the Old Tangaloa"), the gods of the sea; and Tangaloa 'Atulongolo ("Tangaloa the Sender-forth-of-sound"). The Maui group consisted of two sons: Maui Motu'a ("Old Maui," or "Maui the Father"), Maui Los ("Maui the Tall"), Maui Buku ("Maui the Short"), and Maui Atlangata ("Maui the Vigorous Planter"). This last had a son called Maui Kikijiki (pronounced Kitakika;—Maui the Violent, the Miscellaneous), who was, of course, the grandson of Maui Motu'a. There were, however, older gods than any of these. One called Tama—boe Tama ("Junior Tama") was known to the Tongans as 'Son-of-the-Darkness-that-can-have-a-dawn.' Some accounts represent him as the original deity. Another of the primitive gods was 'Eitu-matub'a ('Einu-of-the-oldest-time'). He is sometimes spoken of as the father of the Tongan people. Another of these gods was Hikule'o, the Tongan Satan. Hikule'o means 'the echo,' and there is no doubt that this was the original signification of the name; but as it might mean 'Watching Tail,' the legend grew up that the tail of this deity was so long that when he, the god, went about, the tail kept watch at home. But even now the Tongans, when they hear an echo, say it is Hikule'o walking in the woods; and the other explanation was evidently an afterthought. These with others were the original gods of Tonga. By and by a division of departments took place. To the Tangaloa was assigned the Sky (or Heaven); to the Maui group the Underworld; and to Hikule'o the World and Bulotu (Hades). But in order to keep Hikule'o in his place, as he was a god that delighted in mischief, a cord was attached to him, one end of which was held by Tangaloa in the sky, and the other by a Maui in the underworld, to prevent his leaving Bulotu to damage the world. This division was effected by an old god than any of the Maui, Taufahi ("Father- Upsetter-of-the-land"), who also assigned the sea to Hemoana, and the woods and dry land generally to Lube (the Dove). Hemoana's name is sometimes pronounced Heimoana, and the present writer believes that Tangavaileva spoke of him as Hea-Moana, though he is unable to speak positively on that point. Hea-Moana would signify 'Hea-of-the-deep-sea'; Hemoana would be simply 'the Deep Sea,'—Oceanus. His shrine was the banded sea-snake. These were the Olympian gods of Tonga; but, with the exception of Hikule'o, they were rarely worshipped, and few if any temples were erected in their honour. The exception is due to the fact that Hikule'o was a mischievous god, and must therefore be propitiated.

(2) The second class of gods were an inferior race, who had their shrines in animals, birds, fishes, trees, whales' teeth, clubs, and even stones. Yet these were the gods worshipped by the people, and their temples were to be found in every village.

Here are a few of them: "Tutu蒂 Tutu of 'Ahanu,' whose shrine was a volcanic stone of peculiar shape; Tu'i Lulotonga ('King of Raro-tonga,' or perhaps of the world below Tonga), whose shrine was the dragon-fly; Tali'ai Tubon (the god of the reigning dynasty while yet heathen),
TONGANS

whose shrine was a shark. [Mariner renders Talivi Tabou by ‘Wait there, Tabou,’ which is certainly incorrect; it is likely the name of a deity, rather than of a person, or a place, or a king); Bulahe Katao (the Pleroma of the Spirit World, who presided over hurricanes, and agriculture), whose shrine, we think, was a tree at Kasamisen. Mariner renders Bulahe Katao by the generic writer has never heard of: Toubon Toutai (‘Toubon the Mariner’); Toubon is the familiar designation of the king, and one of his family is usually called Toubon Toutai); Bulahe Matau (‘Eight Ways’); Vatuho (‘Alowana’), the god of the wind and weather, rain, harvest, and vegetation; Tu’i Buloto (‘King of the Spirit World’). Other gods resided in the turtle, the cuttle-fish, the kingfisher, etc. Fonokitangata’s shrine was a war-club. These, so to speak, the private gods of the people, and the shrine of each was tabu to its worshippers. Thus the people of Tonga, who are not inconsistent, would be expected to resent the present being the shrine of their god. In the neighbouring villages, however, it would be freely worshiped. In Nunnuka one particular family were thus debarred from eating turtle, while the rest of the town were from eating fowl, of that delicacy.

(3) In addition to those there were a number of supernatural beings whose position in the Tongan pantheon is not clear. They were looked upon as gods, but no term expressive of divinity or spiritual deity was applied to them; but they were never worshipped, nor were temples built to them. On the contrary, they were looked upon with contempt, and their follies freely portrayed and laughed at. It is curious to see these ascriptions of high divinity and expressions of contempt standing side by side. Is it that these were the gods of the inferior race with whom the Tongans found in the group when they landed?

Take an instance or two. Jiff and Palga were two goddesses in this class, who had set their affection on a Tongan of great mass and beauty called Bajikole. His, like their attentions pulsed two large baskets of cocoa-nut leaves, put one goddess in each, and, shoulderling them like a chimpanian, conveyed them into the bush, and hung them on the branch of a tree, and left them there for two years, until the baskets rotted, and they fell to the ground. They made another attempt on his affections, and he finally got rid of them by inveigling them into his fish traps, and leaving them at the bottom of the sea, where they lay until Tongaloo took pity on them, and sent a god to release them. Take another instance. In this case also it was two goddesses who fell in love with a mortal lover. Bulahe Matau, one of them, was a mortal lover. While waiting for him, they took off their heads to dress their hair as a sign of sorrow. They were heard by a hurry of the gods, and got rid of again; but in the hurry one of them put hers on behind; and when she attempted to move, her face went one side a bit, and another. It is characteristic of the natives to meet with tales like these, referring to those to whom the titles of highest deity are given; and yet, after all, they do but recall the vagaries of the Olympian deities as described by Homer, when

‘Unexpectingih laughter shook the skies.’

On the subject of ancestor-worship, Mariner speaks positively (vol. ii. p. 97): ‘That there are other Hotoaos or gods, viz. the souls of all deceased notables and materiales. The present writer was disposed to agree with him at first, especially as it was a custom of the people to go to the cemeteries to pray, even after a sacrifice had been presented at the temple. But further inquiry has convinced him that they did so because they fancied themselves nearer the spirit-world in such places. Intelligent chiefs like Valu, who were acquainted with heathenism, are equally positive in the other direction, and deny that they looked upon the spirits of deceased chiefs as gods. We think the truth lies between the two statements. Mariner has himself given us a key to the solution of the question. In vol. i. p. 376, he speaks of Feenow as being frequently invoked by the spirit of Mumi (a late king of Tonga). Now we can readily understand that in such circumstances Mariner might have supposed the meaning of the word to be ‘missing’ (hala), and one of the gods would join him; so that in time Mumi would be looked upon as a god. This would account for such gods as Tu’i Laotonga, Tu’i Ahau, Talai Honga, Tu’i Buloto, and Tubou being the names of deceased chiefs, and enable the writer negative the assertion that the spirits of chiefs as a general thing became gods. We may then look upon the gods of the first class as primitive, brought up by the gods from their original home, and the third class as the gods of the aboriginals whom they conquered. The second class contained also some primitive gods, but were recruited from among the first, i.e. the spirits of certain deceased chiefs by whom kings and notable personages fancied themselves to have been possessed.

The other point the present writer made special inquiries about was whether the Tongans worshipped the clubs, whales’ teeth, animals, trees, stones, etc., before which they placed their offerings, or the god who was supposed to be temporarily residing in them. The answer was decisive. The clubs, trees, etc., were simply the vaka, the god itself was spiritual. Vaka signifies a ‘mode of conveyance,’ usually a canoe, but also a carriage, or anything by which one is conveyed from place to place.

Probably we may see here a development of their spiritual ideas. The oldest class—Tangaloa, Mani, Hemoa, Heketa—in all probability undoubtedly certain individuals performed all the functions of human bodies, and they were inflamed with human passions. But the Tongans had long ceased to pray to them, and scarcely any vestiges of their worship remained when the missionaries came. The third class of gods, too, were corporeal, but there are no signs of worship being paid them at any time. These two classes existed side by side; but long before the introduction of Christianity had been discarded as objects of worship, which was paid only to the second class. In other words, the Tongans had worked out a theology, which had, at any rate, this noble foundation, that God was a spirit, and that they worship Him must worship Him in spirit.

The general Tongan term for supernatural beings is fa’ataheke. This is often shortened into fa’otou, and when the adjective hoa ‘great’ is added, fa’otahoi—the idea conveyed is that of full deity. Fa’otahoi signifies properly ‘a party, a side’ (as in cricket); or it may be short for fa’otahoi ‘a kind, a class, race, species, genus.’ Ehe =‘other’ (ehe, not Mōno), so fa’otahoi is ‘different folk,’ ‘other kind of people.’ The usual word for ‘God’ is Otona. Mariner says: ‘It is very probable, but not very likely, that the whole inverted comma represents a guttural, a half y, which is one of the difficulties of the dialect. It seems to be the name of the god of the sea, and is also used as a general name for all the Arin in Hebrew which is applied to all the peoples of Polynesia and its derived name for the wind. The Tongan name has failed to find any derivation for Otona, or meaning other than ‘God,’ and believes it to be a primitive Polynesian word.

The other great word is IE’u (‘Lord’). which is used in English for both earthly and heavenly gods. Hence it is not so high a term as Otona. Indeed it seems sometimes to mean only ‘supernatural.’ Thus a corpse is called ha mea i’u fa’otikī, which apparently signifies ‘ a thing belonging to the spirit world.’ Probably Mariner was thinking of this when he said (vol. ii. p. 130): ‘The human soul after its separation from the body is termed holo ʻa, i.e. a god or spirit.’ He is certainly wrong in that statement. It is clear that I’u was not the original form of the word, which the laws of the language point out to have been ʻΈu. We must not pass over the fact that the members of one of the dynasties of kings were regarded as gods. This was the earliest line of kings, and their title was Tu’i Tonga (‘King of Tonga’). They were certainly looked upon as in some sense divine beings; and instances are on record of prayers being offered to them. Words applied only to the gods were used in addressing them; such as ‘Ei, already referred to, hece, and ʻafio, used of the movement of the wind. The title of the ‘King of Tonga’ was termed the ‘sky,’ and to inquire the presence of the representative of the gods, were presented the ‘first-fruits.’ This ceremony, called the imai, or portion, is described by Mariner (vol. ii. p. 193). When a Tu’i Tonga died, his body was placed on a bed, and other gods would join him; so that in time Mumi would be
of steps. This was called a *lenj*, or 'heaven'; and many of them remain in tolerable preservation, and excite the wonder of the visitor by the huge size of many of the stones, some of which measure over 20 ft. in length.

Many, probably most, of the names of the Tu'i Tonga have been preserved, and their history curiously reminds us of the story of the Carolinians and Morovians in France. One of the Tu'i Tonga, called Takalaua, was murdered, and his son and successor Kau'ulufonuafekai, from weariness or fear, devoted the duties of government on his younger brother, reserving to himself the honours and emoluments of the office. His brother assumed the title of Tu'i Ha'a Takalaua ('King of the Takalaumas'), and soon got all the power into his hands, the Tu'i Tonga becoming a *roi fainant*. After a few generations, however, the Tu'i Ha'a Takalaua became effete, and the government was handed over to another branch, called the Tu'i Kanokula ('King of Kanokula'). This is the title of the present dynasty. Representatives of the two other lines, however, still exist, but the titles are not used. The representative, however, although being killed on the day now set apart as a quasi-sacred position, and is still addressed as the gods used to be; and words sacred to deity are used for all his movements.

Mariner mentions another of these person called the Veschi. This part of his narrative is very perplexing, as neither Veeon nor Thomas nor any of the modern chiefs knows anything about him.

The word used all over Polynesia for 'religion,' 'worship,' 'prayer,' etc., is *lotu*. Fortunately this has a meaning in Tongan, and signifies 'a seeking for something that is hard to find.' Thus when famine prevailed, the people *lotu kai*, i.e. go all over the land looking for food. It is also used for the restlessness of a caged animal seeking an outlet, and for the cry of an animal for its mate or companions. This is not the only word common to Polynesia which finds its meaning in Tongan. *Tabu* (or *taulo*), now of world-wide use, signifies in Tongan that something which might be opened is closed. These and other considerations lead one to think that the Tongan language comes nearer than most of the dialects to the original Polynesian tongue.

3. The religious rites of the Tongans were few. There was nothing in their religion corresponding to our idea of worship. If they wanted something—rain, fair winds, good crops, successful fishing—or anything else, they would seek for it by prayer—such as sickness, death, hurricanes, war—they would seek the favour of a god, would offer sacrifice and pray. But to come into his temple, to worship, to sing his praises, to dwell upon his attributes—this was a foreign idea altogether. Hence there was very little in the Tongan religion to cultivate the conscience, or to control the passions, or to elevate the thoughts. Mariner thinks otherwise, and we would gladly believe his favourable report of the Tongan character. But all our information—and much of it goes back to Mariner's time—contradicts his statements. He even contradicts himself. The Testament is highly esteemed, as the minister of iniquity; and there is no doubt that for centuries theft, murder, lust, treachery, and almost everything in the catalogue of evil, have been rife in Tonga. Not one of the property, and no woman's honour, was safe for a day.

They never went to their gods empty-handed; a piece of kava root for making the native drink was *sine gnaun*. Baskets of food, too, were usually brought in addition, and presented to the god or his priest. One of the party would then state the object of their visit, and implore the deity to grant their request, or use his influence with the gods of Bulotu in their favour. Sometimes the priest would remain silent; at other times he would object that their gifts were too small. If he spoke at all, he would speak as the oracular Tonga, supposed to be dictated by the god at the moment. John Thomas says (Farmer's Tonga, 128): 'Often there was another person present, the friend of the god, who acted as mediator, and addressed the priest on behalf of the god. Thomas, in the same writer, is described to the present writer how she and others would take baskets of food to the door of Talaii Tubon's temple in Nuku'alofa, and, bowing down, would implore the god (or *sio*foot) to be protruded from beneath a curtain, which they would kiss and then retire. If their object was to deprecate a calamity, as in a case of sickness, the rite assumed a darker hue. Fingers were cut off, wrapped in banana leaves, and presented; or children were strangled, and their bodies brought as a sacrifice. When prayers were offered to Fonokitangata, the sacrifice was always an animal. God, if doubt, was the community was hunted down and killed, and his body brought in a basket and laid before the priest; but Mariner speaks of a chief of rank being killed instead, and his body dressed in old and dirty mats, and wearing necklaces of chestnut leaves, would squat on the ground at a distance, and weep and beat his breasts, while the priest, kneeling in his hand, would kneel in the shrine of the god, would listen to their prayers with his eyes fixed upon the club or upon the ground. Sometimes he would reply in his ordinary voice, but more often in unnatural tones, as if some one were speaking in him; and frequently he would begin to shake as if in a fit, and to roll about and foam at the mouth. Any words he might utter whilst in this condition were eagerly caught up as the direct utterances of the god.

After a while the shaking would cease, and the priest, striking the ground with the club, would announce that the god had departed. Mariner (vol. i. p. 160) has a good description of this kind of possession; and he evidently thought that the phenomena were not altogether voluntary, but that a real possession of some kind took place—a belief which was shared by some of the earlier missionaries.

4. The Tongans believed in the immortality of the soul. Mariner, Veeon, and Thomas are agreed on this point.

Veeon says (Farmer's Tonga, p. 131): 'One day they were conversing about a person who was lately dead, and said, "He goes to the island through the sky." "How can he be," said I, "in that place, his body is dead, and his bones are buried? How can he not bury him some moons ago?" But all they answered was, "But he is still alive." And one took hold of my hand, and, squeezing it, said, "This will die, but the life that is within you will never die"—with his other hand pointing to my heart.'

Mariner and Veeon, too, agree in stating that this immortality is enjoyed only by the upper classes: the souls of the Tu'a's, or common people, die with their bodies. This, as a doubt, was the belief of the upper classes, who looked down upon the Tu'a's as little better than animals; but it is no evidence of the belief of the Tu'a's themselves. Thomas says there was truth in the belief of the common people there was no certainty.'

The 'island' referred to was called Bulotu, and 'through the sky' meant 'over the horizon.' Bulotu is, the present writer thinks, a primitive Polynesian word, and is the name for Paradise in all the dialects. It was situated west of Tonga, and could be reached by sea. At least the ballads speak of canoes touching there; but how this was done is not stated. Mariner tells us (vol. ii. p. 101) that Bulotu was believed by the Tongans to be a large island, stocked with all kinds of useful and
ornamental plants in a state of high perfection, and that when these were plucked others would immediately occupy their place. The whole atmosphere was fragrant as of incense from a temple. There were also beautiful birds of all kinds, and abundance of hogs—all of which were immortal unless killed to provide food for the gods. At the moment a bird or a hog was killed, another living bird or hog took its place. Existence according to him gives another account of Bulotu brought by a canoe which touched there:

'The crew landed, and proceeded to plant some breadfruit; but to their great annoyance, they could find no place for the trees to take root, and to their still greater annoyance, they could not find any water, or at least no water which could be drunk. They walked through the woods and forests, and passed through the vegetation of the island without feeling any resistance. They at length saw some of the gods, who passed through the substance of their bodies as if there was nothing there. The gods were supposed to have no canoes, not requiring them; for if they wished to be anywhere, there they are the moment the wish is felt.

Now, is this again a development? For the ballads, which date from a time long antecedent to the visit of Mariner, give a very different description of the landscape of the island of Bulotu was material. Its entrance was guarded by a woman with eight tongues. There was a large canoe for the gods to voyage in, which was called Langotanga (the 'human-roller'), because it was built of human beings and dog rollers, each being a human being. The same trees grew as on earth: cocoa-nuts, breadfruit, yams, etc.; and provision was made for the favourite pastimes of chiefs. There were eminences for netting wood-pigeons, reefs for shark-catching, 'tilua to be fished, and gigantic clams to be dived for. Ovens of food were cooked as on earth, and houses were prepared and drunk. The houses had solid posts, and the roofs were constructed in the usual way. One of the halls in Bulotu was panelled with the pupils of men's eyes 'which spake to each other'; and the ground was lined with mirrors—a veritable crystal palace.

There was a Vaiola, or Fountain of Life, whose waters were so potent that a child plunged into it grew up to manhood in a few days. There was also a Vaiola-tafoafoa, or Fountain of Perfumery, and other delights of women (see 'Voyage of Faimalise,' Tubou College Magazine, vol. iii. p. 39).

5. Cosmogony.—The earliest chapters of Tonga are the production of an old chief who was well versed in the science of botany and the laws of nature. He lived at the time of the decay of the great plantation Ma'ulagi, and was instructed by one of the 'beautiful men' who accompanied Tongaloa from the内地. He was a very sagacious and philosophical person.

Some seaweed and slime clung together, and were carried away by the sea, and washed up on the island of Totai in Bulotu, where they grew and made them a large metallic stone called Towa-Tutuna ('Frequent-ownder-turner-of-the-land'). The next was a girl called Hotolotolopupa ('Lately-wanderer').

The second pair had a girl called Vele Lahi, and the third pair a girl called Vele Jifi. ('Vele signifies 'having' or 'desire'; Vele Lahi=Desire of the Elder, Vele Jifi=Desire of the Younger')

Stickly and Slimy created a new land called Tonga Mamo's ('His land') where they built a town on it Taufaila and Taufaila-tafoa-Tauil.] The next incident is unprintable, but is a realistic setting of the theory of the world. Gapatua and his wife, and his wife, and were not ashamed.' They were ignorant even of the sexual function, which they discovered only by accident. The result was a boy called Hiko'io ('The Echo,' the Tongan Satan: see above).

The Tongans said to Vele Lahi and Vele Jifi, 'Come and name your brothers as I have done, for there is no man for you.' They did so, and Vele Lahi gave birth to the Tongolele, and Vele Jifi to the Tongoselala family. They divided the heaven and earth as stated above.

The inhabitants dwelt in an old red-Tangledonga "Atolongongonga to go down and see in what condition the world was. So he entered into the Kiu ('Sea-lark'), and went down, and flew in all directions, but could not see any land, only shallows. Then went in a very large vessel and reported to Tongaloa who said there was no land, only something that looked like shallows. Said the host that he would set out another day, and he went home, and again came to see; so Tongaloa 'Atolongongonga remained seven days in the sky, and then went down to look at the shallows. The bottom being full of water coming up, and by a bit of land, there he saw, to his astonishment, 'It looks like a reef.' He said also, 'I can find nothing to stand on there.' So they said, 'Go to the Smith, and let him throw down the dust of the jemice he sharpens his axes with.' So Tongaloa Tufufinga did so, and they rowed with all their might and grindstone, and produced a great wave of 'Eua. On this being reported, Tongaloa was sent down to stand there and be drowned, and by a bit of land, it become dry, and ultimately a large land grew up, which consisted, however, only of sand. Taungaloa reported, 'My land is large, but nothing was grown on it.' Then said Lord Tongaloa, 'Take this seed, and set it in the land you have discovered.' It was a fish's father; and so he set it, and it is now to come land. Then said he, 'There is vegetation enough, but no people; and Lord Tongaloa and the other heavenly chiefs replied, 'Go and split the root of the tree.' He did so, and it rooted and produced a grub. So he reported to the sky, 'A great thing is taking place in the leaves of the tree of life (Vono). By and by to call the head Kohal ('Who is it?') and the tail Koaun ('It is I'). He did so, and both parts became men; so did also a little piece that had adhered to his back. This was named Mono ('Little Bit'); and he with the other two were the first men.

Now at that time Maui the Elder ordered his family to go on board a canoe, and sail out to land. There were two Canoes in the land: Maui Lioa, Mau, Mauk, and Maui. 'Atalanga with his son Maui Kijikijii; and they took their mother Vele with them.

She was the eldest daughter of the great chief Manuka, a part of Samoa that was already above the waters. And Maui Kijikijii, a plant had already grown, and sprang, as the wise man ordered him, When the chief's wife, he ravished her; and she, taking kindly to him, revealed her husband's secret, that the magic fish-boat, which would carry them to the earth, was only a real one, but an old and rusty hook, stuck in the reeding. So they got the hook, and because it successively necessary to sharpen it bodily, and pulled up Tongas and many other groups of islands. When they came to 'Eua, and saw the three men, they asked whether they could get any of their own on their land. They went and fetched three, so that they might have one each. At that time the fish was very low, and an abundance of fish that stood in Tonga reached quite up to heaven. So 'Eku-Matsubu's was went to climb down, and visit the earth; and, cohabiting with a woman, had a son named Mau-Atalanga.

Now the Maui dwelt in the under world, but one of them, Maui 'Atalanga, was his brother. He have no objection to my living on the earth, if you visit your old home again.' And they said, 'No.' So Atalanga went up to the earth, taking his young son, and married him. He went to the Father of the earth, married a mortal wife. Now Maui 'Atalanga did not plant in Vava'u; for the purpose was not to plant, but to make life possible; so he had his plantation in the under world. He kept this, however, a secret from his son Kijikijii, for he was such a mischiefs. But Maui Kijikijii tracked his father by his footprints, and, seeing him lift a bush and descend into the earth, waited a while and followed him. Many tricks did he play, until one day his father sent him to Maui the Elder to get a fire-stick. Kijikijii kept quenching the fire and going back for more. At last Old Mau told him to take the whole log. This was of enormous size, but the young Maui took it up easily. Old Mau, who had not recognized his grandson, perceiving that he was a superhuman being, challenged him to wrestle—with the result that the elder Maui was thrown and left for dead.

'Atalanga, hearing of it, strikes his son with his spade and nearly kills him. On going, however, to see how his father was faring, he finds the old man unharmed and rather pleased with the defeat by his grandson, and angry with his son for having killed him. They apply, however, the leaves of the tree of life, and Maui Kijikijii was saved. Old Mau was then told that he, the Father of the earth, was in the under world to earth, in spite of the efforts of his father to prevent it; and they then devoted themselves to making life possible, with and destroying the mournful animals that infested the world—a huge rat, a gigantic cock, and the Moa, a lizard, and some carnivores. Maui 'Atalanga was favored by a huge dog that lived in a magic cave which opened and closed automatically, and was able to please Maui the Elder, and take the grief for his father, etc.

PRELUDE.—The principal authorities on the state of Tonga in early times are not difficult to find, as, among others, William M. Gaskell, in 'The Valleys of the Tonga Islands,' London, 1855; G. Veron's 'Abbeatique Navigations,' Fours Years Residence, and Later Voyages, London, 1818; S. S. Farmer, Tonga and the Friendly Islands, vol. 355. (Mariner's is a valuable work. He gives evidence
of being possessed of no common ability, and of an excellent memory; and, if the present writer has ventured to differ from him, (1) the following reasons: (1) the "Mariner" stayed only 4 years; (2) his obvious want of acquaintance with the niceties of the language; (3) the considerable time that elapsed between his going and the writing down of his reminiscences; (4) the fact that the present writer's acquaintance with the facts and legends over a period of 21 years; (5) that most of his information was taken down from the lips of the "last of the Bards", a once heathen chief called Tongvalaveho, who was the history of their folklore and beliefs; (6) that he has had access to the unpublished journals of the Rev. John Thomson, which were written in 1625, and was the first missionary to make a lengthened stay.

J. EGAN MOUTH.

TONGKING.—Ethnographically Tongking is divided into two parts: South Tongking, the special domain of the Annamese race, and North Tongking, bounded on the north by the Annamese-Chinese frontier, on the east by the sea, on the west by the range where the waters separate into the Red and Black Rivers (Song-Kol and Song-Bo), and on the south by a line bisecting the provinces of Kwang-Yen, Bao-Giang, Thai-Nguyen, Tuyen-Kwan, and 2.—Day. This Upper Tongking has an area of 54,700 square kilometres, and a population of 374,528, belonging to 26 different ethnic groups. There are no Annamese or Chinese except officials and merchants; the country is peopled chiefly by Tai, Mu, Nung, Laotians, Mong, and a very small number of representatives of far more ancient ethnic groups, such as the La-teh (La-ti) and the Kent-Lao.

TONGKING.—The Tai are strong and of a lively disposition, careless, fond of pleasure and play, and extraordinarily indulgent. This race seems to be on the decrease; there are few births, and infant mortality is very high. They are not absolutely averse to mixed marriages; their daughters may marry Chinese or Annamese if they choose, and their sons take wives from any variety of the race whatever, even from the Man; these mixed marriages produce a stronger and more provident race than pure Tai.

The Tai live in the plains and low valleys by preference. Their houses, as a rule, built on piles, on the ground-floor being reserved for live-stock and poultry, the upper story for the habitation of several tribes distantly connected with the Chinese; the rest of the Tai follow the Annamese fashion, but wear much brighter colours—indigo blue is almost universal—silk and Chinese brocades. Rice is the staple food. The Tai also use beans, sweet potatoes, and gourds; pork in their most usual dishes. Annual festival is the "nine days", at the end of which they also eat fish. Tea is their chief beverage, though they sometimes drink too much wine or spirit made from fermented grain. The use of tea and betel is practically universal among them; opium is confined to the rich.

The Tai are essentially farmers. They cultivate rice, maize, buck-wheat, beans, peas, sweet potatoes, and sesamum. Industry and commerce are practically non-existent owing to the indolence of the race. They can, however, distil alcohol, weave cloths, make rich embroidery, and do fine basket-work. The Tho even spin a little silk. 3.

2. Religion.—On their original animism the Tai have superimposed a confused mixture of Taoist, Buddhist, Confucian ideas, derived from the Chinese and Annamese. A few priests or lectors-men have a vague knowledge of the cosmic system of the di-kinh.

They believe that the primordial principle of nature gave birth to the male and female principles, from which issued everything and every being. The male principle is the sun, the sky, the intellectual soul of men; the female is the dark earth, the unconscious and second soul of men. The sun has three subtle souls, or hien, which emanate from the male principle, and seven or nine (according as the sex is male or female) vaginae or egg-vessels or yoni. At death these vest return to the earth whence they came, while the hien go to the infernal regions. This doctrine of the transmigration of souls and their purification by punishment. After undergoing the punishments which they have merited, they may approach the throne of the emperor of jade, the supreme Tai idol.

The great majority of the people, a most superstitious race, confines themselves to the worship of the evil spirits which infest the air and lie in wait for men in every insignificant actions of their life. They have a great many thought and offerings, and especially by the help of more powerful good spirits which are rendered propitiation by devotion worship. Among the good spirits the deities of the hearth and the sanctuary of the village are held in the highest honours of the evil spirits, which have different names in the various Tai groups, the most dreaded are the spirits of people who have died a violent death and the chicken-spirits that insinuate themselves into people, especially women, and give them the evil eye. Of course the Tai believe in white and black magic, spells, lots, and philtres.

Their priests are chiefly sorcerers, who earn their living by offering sacrifices to the spirits, exorcising the sick, and warding off all the evils invoked against man. They also choose the material with which to build villages, houses, the propitiatory, or for beginning any work, etc. Among the Tai they are nearly all connected with an official cult, but there are independent sorcerers and sorceresses.

The only couples that the Tai possess are small rustic pagodas, nearly always dedicated to the tutelary genius of the locality.

Their religious festivals are borrowed from the Annamese; but among certain tribes, particularly the White and Black Tai, there are some festivals which seem peculiar to the race. (1) Kin lao moe (‘drink,’ ‘alcohol,’ ‘drunk’) takes place in September. All the inhabitants of the village meet in one of their houses for a banquet, which is followed after sunset by music and singing. The feast lasts three days, during which no one may enter or leave the village. (2) Keo pong (‘to eat bread’) takes place in January. It is characterized by round dances to the accompaniment of chants. Among the White Tai it is the women who dance, among the Black Tai the men. (3) Kin tra (‘to eat coined money’) takes place in December in honour of the dead. It lasts three days, with banquets, dancing, and singing. Both men and women take part.

Ancestor-worship exists among the Tai, but only a more or less slavish imitation of Annamite ritualism. It is practised chiefly among the Tho, who preserve the names of their ancestors to the fourth generation, make offerings at prescribed times, and exhume and then children to honour the dead as the protectors of the hearth. Only those who have died a natural death have a place on the family altar; those who have died a violent death, out of doors, have only a small outside altar, usually built in the garden. 3.

3. Myths and legends.—Among all the Tai is found the tradition of a universal deluge, from which the god of the earth saved only a brother and a sister—a poor but pious couple — who shut themselves at his command inside a hollow pumpkin, with some rice for provision. After the subsidence of the waters the present-day races were born from the union of this couple.

4. Medicine.—The Tai regard nearly every illness as the work of evil spirits, and the best medicine is the sorcerer; the more enlightened members of the race sometimes admit that there are natural remedies, which they treat with simples and mineral products borrowed from the Chinese pharmacopoeia.

It should be noticed that the Tai know nothing of the profession of vowed men, nor do they tie by calling Ancestor festivals, the doctrine of the transmigration of souls, the idea of the patrimony reserved to meet the expense of the cult of the dead and the upkeep of the tombs. As a rule after a few months, at most after four years, the Tai have nothing more to do with the tombs.
5. Marriage. — Although the manners of the Tai are not so free and easy as those of the Laotians, youths and maidens meet freely to sing and dance and to make amorous allusions to each other; all that Tai morality requires is that there be no tangible proofs of these relations, and hence recourse is had to abrasive measures or the suppression of children.

The father is the unquestioned head of the family, yet it is only among the highly Ammonitized Tai that he chooses a mate for his child; among the Tai of the right bank of the Red River the parents have a free hand in the choice of their young, only that the proposal is made by a go-between; the young man pays a dowry, and the engagement is settled after a sorcerer has compared the genealogical forecasts of the couple, in order to see whether any super-

natural influence opposes their union. The engagement is generally long—from three months to three years—and is rather expensive for the fiancé, who is expected to give a great number of presents. The engaged couple are bound to observe the strictest reserve; they are not allowed to take any notice of each other until the wedding-day, while they have complete liberty in their relations with other persons of both sexes.

The marriage-ceremony itself is borrowed from the Annamese.

The outstanding characteristic of marriage among the Tai is the giving of the Thô in the west, the Nung, and the Thô-Ti—is the quaint custom of separating husband and wife after the celebration of their union; among some tribes the wife spends a fortnight with her parents and a fortnight with her husband; among others she cannot go to her husband except when invited.

This state of affairs comes to an end with the appearance of pregnancy, or, in cases of sterility, at the end of the fourth year of married life, when the wife takes her place at the family hearth. As the separated husband and wife retain complete liberty of behaviour outside with people of their own age, Tai morality suffers some strange drawbacks from this custom. The Tai youths marry usually between twenty-three and twenty-five, the girls between sixteen and eighteen.

The Thô of the west and some other tribes practise marriage by adoption and marriage by contract also. A poor young man can enter a rich family without paying the usual dowry, on condition that he takes his father-in-law's name, and lives, as far as possible, for his father-in-law. Should he wish later to live apart with his wife, he is liable to pay an indemnity to his father-in-law. A young man can also marry without paying a dowry and without changing his name, by under-

taking a contract to serve his wife in her father's house for a stated number of years—from four to seven. If he dies before the contract has expired, his widow is responsible for his debt. These two forms of marriage, which are not held in high esteem, entail no long engagements and no costly wedding-feasts.

Polygamy is allowed by the Tai, but seldom practised; the number of wives is usually limited to two, only the first having honour and authority at the hearth, the other being practically her servant. Among the White Tai, however, the daughter of a chief has the rights of first wife, no matter when she is married. The Tai woman, though she enjoys a life of perfect freedom in her youth, becomes after marriage a sort of beast-of-

burden, and the hardships in the fields and in the house fall on her. She has no real individuality till she becomes a mother. Divorce is rare; by right only the husband can seek it; in actual life it is the wife who applies for it. Repudiation is still more rare and is nearly always due to sterility.

6. Birth. — The house of the mother is forbidden to strangers during and for a certain time after confinement. If they did enter, they might themselves be attracted by the beauty of the child. The confinement is made known to those outside by a branch of shaddock and a piece of coal among the Thô of the west, by a piece of wood, a knife, or a green branch among the Thô of the east, fastened to the ladder of the house. The first visitors to enter the house of the mother have to pass over a burning brand or a pail of water, into which red-hot iron is plunged. The Tai woman is not allowed to take a sitting position, holding on to ropes with her hands. The eastern Thô alone light a brazier on the camp-

bed whither she is afterwards carried. The placenta is secretly buried by the midwife. The birth is announced with libations to the ancestors by the head of the family. A propitious day is chosen for putting the child in the sack that does duty as swaddling. The choice of a name is sur-

rounded with the same superstitions as are found among the Annamese, and the same unpleasant designations are chosen.

7. Death and disposal of the dead. — The Tai originally buried their dead in the earth and still do so for certain chiefs. As a rule they have now adopted burial. Funeral honours are paid only to men over 18 years of age and to married women. The remains of children are burned, and the ashes poured into the river or the sea, after a ceremonial obsequy preceding the funeral. The medicine-man determines the position of the coffin and the situation of the grave. The deceased is dressed in his best clothes and a pair of new sandals, and is put into a coffin containing about 10 kilogrammes of ashes. On the bier are placed some duck-feathers to help him to ford the rivers of the other world, and a pencil and paper for him to make his wishes known. On the day of burial—usually the third after death—the corpse is placed on a paper catafalque and taken to the ceremonies with great ceremony. The one idea at this juncture is to prevent the dead from returning to torment the survivors at home and at the same time to protect him from evil spirits. It is for this purpose that the medicine-man is employed; he brandishes his sword at intervals round the coffin and the mourners, who stroll the road with gold and silver paper in order to tempt the evil spirits to stop and gather it up. The coffin is then put into the grave under the protection of the medicine-man's sword; food is placed on the tomb, near which a bottle full of water should contain the dead in the other world. Among the Chong-

Kia Tai, when the coffin has to cross a river, the children stretch a piece of cloth from side to side for the souls of the dead to keep them from wandering. Commemorative rites are not observed regularly by the Tai, except where they are very much under Annamese influence.

8. Tabu. — There seems to be only one kind of tabu among the Tai, viz. the entering or leaving a village during a local festival. Strangers are warned to turn back by notices placed outside the villages.

II. MAN. — This Chinese name, which means 'barbarous,' ' rude,' is applied in Tongking to the ethnic group of the children of Pan-Hú or Phien-

Hú, who claim to be descended from the union of the dog Pan-Hú with the daughter of the emperor of China, whose inveterate enemy had been van-

quished by Pan-Hú. The Man, or Yao, probably inhabit the high parts forming the bosom of the two basins of the Li-Kiang and the Pan-Hú, which reserves a number in N. Tongking and much more numerous in the west than in the east. Their various groups have been classified in six great families issuing, they say, from the six sons of Pan-Hú: the Man Thô, or termed Man; the Thô-Ti, or ....
Man, the Man Lan-Tien, or ‘indigo-tinted Man’; the Man Quan Trang, or ‘blue-trousered Man’; the Man Quoc Coe, or ‘short-trousered Man’; and the Man Cao Lu, or ‘great rainbow Man.’ The Man Coe, most numerous and most important, live in the middle parts of the country. Lower down are the Man Thien; the Lan-Tien hardly ever are found at a greater altitude than 300 metres; the others follow by various stages to the borders of the delta plains. By a rule, they all find life in the valleys uncongenial.

1. Physical characteristics.—The Man are not so tall as the Tai, but are more robust, more intelligent, and much more active. As they have no rice, their staple food is maize, vegetables, and yams. They eat meat sparingly, chiefly pork, rarely buffalo or ox, never the fish for which this is rich country. They do not chew betel, but both men and women smoke tobacco and the rich consume opium.

Their houses are built sometimes on the ground, sometimes on piles, and sometimes half-and-half. A random group of these houses forms a village, and the village is scarcely ever surrounded by a wall. The Man borrow their style of dress from either the Chinese or the Annamese according to their locality. Women are embroidered on the skirts, facings, neck, and sleeves with bright red and blue designs to intricate and elaborate that it takes three years to embroider one costume. Their hair-dressing is also elaborate, and is nearly always finished off with a large barban having coloured edges and embroidery.

The Man are essentially agriculturists; but they are also good hunters, blacksmiths, and, to some extent, even their women use, and also paper from bamboo-fibre. They are good fishermen and hunters.

2. Religion.—Their beliefs are like those of the Tai, but very much absorbed—certain notions from the three great religions of China; but the mass of the people are animists, though not quite so superstitious as the Tai. Ancestor-worship is held in great honour amongst them. They have the same flood legend as the Tai. The Man have only a few pagodas dedicated to the tutelary deity of the village. They are nearly always built against a fruit-tree. They have medicine-men who present offerings, exorcise devils, and perform magical cures. The reputation of these sorcerers varies with the Man Coe according to whether they have or have not received initial initiation to the third degree. Among the other tribes initiation generally comprises only one degree. The Man worship consists in sacrifices, songs, and dances. They observe the Chinese feasts with varying regularity. They have also two curious local feasts celebrated with great festivity by the Man Coe. The first one takes place every three years in certain tribes, every five years in others, and commemorates the rescue of the Man race when—so long ago as to be in the region of hypothesis—it was shipwrecked in sight of the Chinese coast on its way from an island in the east. The second feast, called ‘the great feast,’ comprises five days of extraordinary pomp, and occurs only once in ninety years. We have no data of any value on its origin or symbolic meaning.

3. Medicine.—Their medicine comes from the Chinese, but the Man would not believe in the efficacy of any medicine that is not accompanied by incantations and exorcisms.

4. Metamorphosis.—The Man believe that their neighbours, the Mao, have a third cutting of teeth in their old age, and after death escape from their graves and reappear as tigers.

5. Marriage.—The Man do not attach much importance to virginity. When a child is born before marriage, it is suppressed without a thought of the laws regarding a bastard a child born in the wrong season. Violence is also punished by a fine. The young people themselves, and not their parents, arrange their marriages. The young man makes his choice of a girl, and the girl’s parents and all make proposals to the parents of the girl. After examining the genealogical forecasts, the go-between may, at a second visit, dismiss the amount of the dowry and the presents to be offered by the suitor. The engagement is concluded when the young man himself brings all or some of the presents. All intercourse between the engaged couple is strict until all the wedding rite is over, and the rite is signalized by the customary banquets; the couple drink a cup of rice-wine together and prostrate themselves before the ancestral aitar.

They live together after the marriage ceremony. The daughter-in-law must scrupulously avoid touching her husband’s parents, though she serves her father-in-law at table.

The Man are also familiar with marriage by adoption and contract. Among the Man Cao Lu the newly-married couple do not live together until two or three months after the marriage ceremony. Among the Man Quan Trang the marriage is preceded by a term of three years spent by the young man in his future father-in-law’s house, the girl being usually about thirteen or fourteen at this time. The youth may marry her at the beginning of the third year, or if, as is more usual, at the end of the third year, he marries her, but without so much as an invitation or receiving anything; if he is dismissed, he can claim an indemnity for the service rendered. After marriage the couple serve seven years in the parent’s home of the husband.

Polygamy is practised among the Man; the number of wives is usually restricted to two, the first alone having authority in the house. The Man Quan Trang allow polygamy only in exceptional cases. The material status of woman is high among the Man, the men doing all the heavy work; her legal status is different: she is the property of her husband, who can give her away and repudiate her. She, on the other hand, is not allowed to leave him. In cases of adultery the husband has the right to send his wife back to her parents and reclaim the dowry that he paid for her; if he keeps her, he can claim damages.

6. Birth.—From the third month of pregnancy sexual relations cease, and the woman abstains from fat, green vegetables, and garlic. She is not allowed to sew or embroider except outside her house. The first child is delivered by the Man Coe. They believe that, if a pregnant woman were the first to cross a new bridge, it would fall; that the touch of such a woman spoils rice and alcohol; the Man Quan Trang, on the other hand, believe that the man should buy the things for her own sake, in case they should cause miscarriage. The birth is announced to outsiders by a bunch of grass hung on the door among the Man Coe, by threads stretched across the door among the Quan Trang; no announcement is made among the Lan-Tien. The Man woman is delivered sitting on a little stool. No fire is put under the bed after delivery. The placenta is taken far away and hidden in a hole in a tree; or it is buried under the mother’s bed among the Man Lan-Tien; if eaten by an animal, it would bring misfortune on the child. Children born out of wedlock among the Quan Trang belong to the mother; but the father, if known, is liable to pay a fine and give two months’ service free in the house of the mother’s parents to repay them for the loss of work caused by the birth. They practice adoption freely and willingly into their families many Annamese children as their own.

7. Death and disposal of the dead.—The Man Coe used to burn their dead, and this custom survives west of the baron river. The Lan-Tien nearest the delta buried only those over fifty; the Quan Trang buried all the heads of families. The burial rites are copied from the
TONGKING

383

Annamese. The Man Coe do not make 'the white silk soul' or catalaqua; a sorcerer of the second degree excoriates the tree from which the coffin is to be made so that the tree-spirit may not come to torment the dead.

III. PA-TENG.—The Pa-Teng, about 200 in number, live near the Man on the heights separating the Red River and the Clear River (Song-Ks). They are somewhat beard-like, but are of small size, and are really separate linguistically. Their beliefs and customs are practically those of the Man.

IV. ME0.—The Meo, or 'eats,' numbering 21,000, live in Thay-Ho, Cao-Lac, Lao-Ky, and Coe-Len as well as in the provinces of Thai-Nguyen and yen-Bay. They claim to have come originally from the Chinese provinces of Yen-Nan, Kwei-Chu, and Tse-Chuen. Their last invasion into Tonking, in 1860, was very violent.

1. Physical characteristics.—The Meo are little and squat, very vigorous on their short legs; brave, hardy, and independent; they can be very abominable, but are inclined to eat and drink heavily. Maize is their staple food; they eat very little meat, and drink a great deal of alcohol; hot tobacco is not used and betel is unknown among them. Their rusty huts, of palm or mud, are dirty to repulsiveness.

2. Religion.—Their traditional beliefs are borrowed from the Mand and are very unprepossessing and wavering. They dread evil spirits.—among others, the souls of beheaded people and of the unburied dead. A vague form of ancestor-worship is practised, in the prayers and offerings of food, which are quickly consumed by the survivors. They are familiar with the flood-legend of the couple saved in the hollow pumpkin. Their priests are sorcerers.

3. Marriage.—Paternal authority is not strong. The young people make their own choice of mates, and marriage is accomplished through a go-between. In some districts the suitor has both to pay a dowry and to serve his future parents-in-law for two years before marriage. The Meo marry freely with other ethnic groups. Marriages are always accompanied by dances, songs, and games; if the bridgroom cannot afford the expense, he may leave it for his father-in-law to bear, on condition that he and his wife give so many years' work in payment. Marriage by capture is also found, women being caught by the girl who has not been denied him, and he atones for his offence by paying a heavy dowry. Polygamy is allowed, but is not practised except when the first wife has no children. In adultery the husband has the right to kill the adulteress but as a rule is content with repudiating his wife and taking back the dowry.

4. Birth.—There is nothing to mark the house on the occasion of a birth; the mother is delivered sitting and remains indoors for 33 days. The placenta is buried in front of the house, if the child is a boy; under the fire-place, if it is a girl.

5. Death and disposal of the dead.—The Meo bury their dead. The watch by the corpse consists of three days' feasting and dancing; the children of the deceased invite him to join in the banquets, and even slip a piece of food between his teeth. By the side of the corpse, which is dressed in new clothes and fixed in an upright position to a wall of the hut, a dead dog, killed for the purpose, is placed. The two are bound together by a strip of paper going from the dog's mouth to the dead man's wrist. The dog's duty is to guide his master in the other world. The coffin and the body are taken to the grave separately; the body is carried on a litter and is followed by the sorcerer, the latter points with a stick to frighten the evil spirits. When the grave is filled in, the litter is broken over it, some food (which must be renewed for several days) is placed on the tomb, and the funeral-procession returns to a banquet at the deceased's house.

V. LOLO.—The Lolo, a people almost certainly originating in the Brahmaputra valley, are about 2500 in number in Tonking; and live chiefly in the region of Hao-Lac.

1. Physical characteristics.—Of medium height, uncomely and well built, with fine regular features and a copper complexion, they compare with the Westerns mind the Bohemians of Europe. They are luxurious and indolent, marrying only among themselves; but their race is degenerating through the use of opium, which is cheaper than rice, and meat, and goods, meat being reserved for festivals. They make alcohol from fermented maize. They use no betel and very little tobacco, but indulge in opium to excess.

Their houses are built on piles in the rich villages; in poor villages they are built in Cao-Lac on holes. The dress the Lolo resemble the Chinese or the Tho according to locality, but the garments (those of the women in particular) are shorter and much more elaborately embroidered. The Lolo are great agriculturists and hunt and fish a little.

2. Religion.—Their beliefs and psychological life vary according as their villages are next a Tai, Man, or Mee clan. Their chief cult appears to be that of evil spirits, and they countenance ancestor-worship, theoretically. They also have the story of the flood and the survival of their ancestors in a pumpkin.

3. Marriage. —Marriage, which takes place during the night, comprises no religious ceremonies, but simplygo-between and payment of a bride price. The wife lives only two or three nights with her husband, and then returns to her parents until pregnancy privileges her to take her place in her husband's household. If the marriage is not practised, the captord paying a double dowry. Adultery is punished by the death of both offenders. Polygamy exists only in theory.

4. Birth. —Birth rites connected with birth have no peculiarities among the Lolo. Adoption is of frequent occurrence, either by free consent or as the result of a bargain, and is the occasion of great festivities.

5. Death and disposal of the dead. —Burial takes place, without ceremony and in presence of relatives only, three days after death. For nine days in the ease of a man, eight for a woman, and six for a child, the family keep a fire burning on the tomb, and after that take no more trouble. Certain tribes exhume the dead, after one or three years, with great pomp, and put the head or all the bones into a little wooden box, which is then placed on a neighbouring rock, where the survivors can see it while at work. Their ancestor-worship is very crude. The place of the tablet is often taken by a representation of the dead made from an orchid stem and leaves; or a needle against a partition or between the wall and the roof of the hut.

6. Tabu. —Women after puberty are forbidden to eat pork, chicken, duck, or dog, and must not even cook their food in dishes which have been used for preparing these foods; hence the necessity of two fire-places and two utensils in a Lolo house.

VI. MUONG OR MON. —The Muong or Mon are an ethnic group centring in the province of Hao-Binh. They are of uncertain origin, but appear to be closely connected with the Annamese; among whom they resemble strongly in physical type, dress, and customs. Their no survivors can see it while at work. Their ancestor-worship is very crude. The place of the tablet is often taken by a representation of the dead made from an orchid stem and leaves; or a needle against a partition or between the wall and the roof of the hut.

6. Tabu. —Women after puberty are forbidden to eat pork, chicken, duck, or dog, and must not even cook their food in dishes which have been used for preparing these foods; hence the necessity of two fire-places and two utensils in a Lolo house.
same way as among the Annamese. The placenta is in the mouth, and the whole body is laid beside it. The dead are buried in accordance with the Annamese rites. The corpse is placed in a coffin made from a hollow tree-trunk and set up in front of one of the doors of the hut. Outside, and facing it, there stands on a tripod a lamp containing a little black dog killed for the purpose, some rice, alcohol, and incense-sticks. A special cord binds the tripod to the coffin. After the coffin has been let down and the grave filled in, the mouth of the jar is emptied near the stone which marks the position of the dead man's head; and, if rain-water comes and fills this jar again, it shows that the grave has been well chosen and it brings a thousand blessings to the survivors. The bodies of the quan-long (village chiefs) are kept, it appears, for three years before burial in the ancestral altar; a long bamboo tube leading from the hermetically-sealed coffin right up beyond the roof of the hut preserves the hut from mephitic vapours.

VII. KEU-LAO.—The Keu-Laou, of whose origin and customs we know next to nothing, form an ethnic group of seven families in the neighbourhood of Dong-Vaú.

VIII. LA-TEH.—The La-teh or La-Ti are about twenty in number and live in the village of Chau Long near the upper valley of the Long-Chai. Though resembling the Annamese of the delta in physical type, they claim to be aboriginals. They are very little known and seem to live like the Mio. Their characteristic trait is their abstention from pork, which is contrary to the custom of the Tonkin, La-tchi and Montagnards.

Antoine CABATON.

TONGUE.—I. Physiology.—The essential organ of taste is the mucous membrane which covers the tongue, especially its back part, and the hinder part of the palate.1 Here are found certain cells, arranged in groups which are known as taste-buds and are connected with two cranial nerves. Sensations of taste are intermingled with accompanying sensations of touch, and often of smell.

There appear to be distinct terminal organs for bitter tastes, for sweet tastes, for acid tastes, for salt tastes, and possibly for other tastes, all differing from the terminal organs for tactile sensations, and from the structures, whatever they may be, which are concerned in general sensibility.2 Modern knowledge of the physiology of taste began (1655) with Malpighi (1628–94), who employed the newly invented microscope.3 The sense of taste was grouped by Aristotle under that of touch, both operating only through immediate contact. Pliny notes that the human palate also possesses the sense of taste, and he gives many details about the variety in the tongues of animals.4 An Anglo-Saxon leech-book, in prescribing 'for men in whom the string under the tongue is badly swollen,' says that 'through the string first every disorder cometh on the man.'5 But the chief significance of the tongue for primitive thought is obviously in regard to the faculty of speech, to which it is related together with the throat and lips, in the modulation of the voice. That vibration of the vocal cords which is called 'voice' is modified by the varying shape of the resonant chamber formed by the mouth. The tongue, however, is much more than a mere organ of speech. Huxley refers to a case in which conversation remained quite intelligible though the tongue had been completely amputated.

2. Localization of the Physiological Function.—This characteristic of primitive thought concerning the physical organs1 is frequently illustrated by primitive practices in regard to the tongue. Since the nerves of the tongue and the minuter structures of the tissues were unknown to the ancients, the tongue was thought to possess an inherent faculty of speech, as something residing in it, so that the faculty and its special qualities could be transferred by acquisition. The operation of the tongues of specially gifted animals or men.

Thus, among the Tingits of Alaska, the chief of the spirits sends the candidate for cannibalism a river-otter in contact of which an animal is supposed to be the whole power and secret of shamanism. . . . If, however, the spirits do not visit the would-be shaman and give him any opportunity to cut the otter-tongue as described above, the neophyte visits the tomb of a dead shaman and is supped an awful sight, looking as if his mouth filled with the fingers of the dead man or one of his teeth! This constrains the spirits very powerfully to send the necessary otter.16 In Korea the tongue of a native is cut from the living animal on St. George's Eve and placed under a person's tongue to secure the gift of eloquence. In the North American Indian thought that brandy must be a decotion of hearts and tongues, "because," said he, 'after drinking it I fear nothing, and I talk wonderfully!' In S.E. Australia 'one of the Wodjebora was observed to take the tongues out of a certain grey and white huntsman called Bungo, and give it to his little son, a child of about thirteen months old, and gave as a reason for doing so that after eating the tongue his child would soon be able to talk.'17

3. Ordeals.—The idea of the localization of psychical function and its ethical qualities underlies different forms of the tongue-ordeal.

Lady Anne Boleyn, recording an interesting case in connexion with a dispute as to the parentage of a child: 'The matter, as all such matters are in the desert, was referred to arbitration, and the mother's assertion was put to the test by a live coal being placed upon her tongue.'18 Here the original thought seems to have been that the truth would be elicited when the inherent falsehood of the tongue was, if necessary, burnt out. Similarly, in case of theft among certain W. African tribes, use is made of a needle which the operator ' thrusts through the tongue of each member of the household in succession, to discover the thief, it being believed that it will fail to pierce the tongue of the person who committed the theft.'19

Reference to the tongue-ordeal among E. African nates was recently made in the British House of Commons. A native chief was investigating a case of cattle theft in the presence of

8 E. Crawley, The Mystic Rose, London, 1902, p. 111. The throbbing out of the tongue in derision or contempt (Is 574; Lvy, vii. 15; G. P., v. 66) is a characteristic feature of a concentrated cure.
9 G. P., v. Spirits of the Corn and of the Wild, ii. 208 f., where numerous examples and parallels will be found.
the District Commissioner, Mr. Dundas. The chief called on the "March to the Cross" and, after going through the native form of the ordeal by fire, by licking a hot wire. Mr. Dundas did not prohibit this procedure, but took care that the knife was not afterwards used for cutting the woman's tongue, which is considered as an ordeal of a different kind is undergone by the medicine-men in certain parts of New South Wales and Australia. The tongue is mysteriously mutilated, and remains throughout life perforated in the centre with a hole large enough to admit the little finger. 2 But the ordinance of the ceremony in some cases is the permanent practice of mutilating an organ before its usual place in order to be used in the circumcision, and to permit the application of a second dressing.

4. Religious usages. - The tongue is not often named in a separate offering in the rites of sacrifice. The Homeric Greeks concluded a feast by casting the tongues of the victims upon the fire, over which they poured the drink-offering. 3 According to some accounts, the tongues of the victims were assigned by the Greeks to Hermes, as the god of speech, or to his human representatives, the heralds. 4 The Tukot made a special sacrifice, for a sick man's recovery, of tongue, heart, liver, consuming the rest of the meat themselves. 5 In the horse-sacrifice of the shamanists of N. Asia the tongue of the sacrificed animal is torn out (in order to make its spirit dumb under the shaman's control). 6

Honey was placed on the tongue of one who was being initiated into Mithraism, as was the custom with newly-born infants; 7 we may compare with this the ceremonial tasting of milk and honey by those being baptized into the Christian faith. 8 In this connexion may be noticed the miracle of the Homeric warrior, Melanippus of Thessaly, who anointed the tongue of a dumb girl with oil after exorcism. 9 The wide-spread rule of silence (q. v.) during particular religious ceremonies falls beyond the scope of this article, but the idea of the localization of the voice is probably underlies the Indian usage recorded by Devendrashan Tagore:

"On another elephant sat the Rajpur (religious preceptor of the god of war) in the Homeric acrostic's bright-colored robe, and silent. He had his tongue encaised in wood, lest he should speak." 10

5. Penalties. - In the light of these illustrations of the fundamental idea of localized function (or "differential consciousness"), we may better understand certain barbarous mutilations widely practised by way of penalty or revenge. These have often survived into times relatively more civil than those of their origin, when the idea that first prompted them has been lost, viz. the idea of penalizing the guilty organ in which the original evil resides.

The Laws of Hammurabi enacted that in certain cases an accused denying his new parent was to have his tongue cut out. 11 According to 2 Mac., when the seven brethren were being tried by the High Priest, "he commanded the tongue of him that had been their spokesman" (Ch. Judas Macaeonos, "cutting out the tongue of the impious Nasiocor, that he would do no harm to his brethren") (59). Maximus and two other opponents of Monothelitism were dragged from Rome to Constantinople by their tongues and right hands were cut off, before they were driven into exile. 12 Blasphemy for the fifth time was punished by excision of the tongue, according to a law (1247) of Philip of VALois (1505-1550). Evagriusocrates of the heretic Nestorius: "I learned from one who wrote an account of his demise, that when his tongue had been eaten through with worms, he departed to the greater and everlasting judgment which awaited him." 13 The instinct which doubtless

TONSURE - See CHORISMATA.

TONSURE. - Tonsure is the shaving or cutting of the hair after a particular fashion as a sign of reception into the clerical order and to the privileges pertaining thereto, one of the modes of ordination, as it extends to the reception of holy orders, and is administered by the bishop or by a mitred abbot or by certain privileged priests in whom its administration has been vested by the pope. At first it was part of the ceremony of ordination, but was separated from it towards the end of the 7th century. The origin of the tonsure is obscure, but from passages in the Fathers it is clear that long hair in men was considered effeminate or worse, and this was particularly true in the case of monks. Epiphanius enumerates some Mesopotamian monks for their long hair against the rule of the Church, and such excesses is partly responsible for the Custom at the custom. 4 A monk's hair had thus to be cut short, though not shaven, as this was the custom with the priests of Isis. 5 The earliest tonsure was probably putting the hair into a close coiffure or braid of the entire head, though this may have become a shaving of the whole head after the manner of the 6. 'Figurative' usages. - The selected evidence already given will prepare us to recognize a deeper meaning in certain phrases of incident literature which the modern mind is apt to dismiss as simply figurative and poetical. The Biblical usages will sufficiently illustrate this. The quality of ' backbiting' is called ' an idle tongue' as ' an angry countenance' (Pr 25:25); a lying tongue hates those that it wounds (25:29); the tongue devises wickedness, like a sharp razor (Ps 52:2); Job asks more literally than most readers suppose, ' Is there injustice on my tongue?' (6:9). The Servant of Jahweh declares that his Master has given to him the disciple's tongue, that he may know how to help the weary by his word (Is 50:20). In the Messianic future the tongue of the prophet of justice will be prompt to speak plainly (32:12), the tongue of the enemies of Israel will consume away in their mouth (Zec 14:19); the tongue is not named in the well-known narrative of Isaiah's call (Is 6), but the cleansing of his lips by the live coal illustrates the principle of the localization of psychological function. So in the NT, when the tongue is said to delute the whole body, as a restless evil, the gift of the Holy Spirit there is a hidden intensity of meaning derived from primitive thought. The importance of this is seen in regard to such a phenomenon as "a shaman's tongue," which implies that the local and quasi-independent organ has been taken possession of by the Spirit of God. This is more difficult for the modern mind to conceive sympathetically than it was for the ancient, largely because we have lost touch with the idea of the localization of psychological function and ethical attributes, and have replaced it by that of the cerebral centralization of consciousness.

LITERATURE. - J. G. Frazer, Q.P., pt. v., Spirits of the Corn and of the Wild, London, 1912, ii. 321 (where a number of primitive practices in regard to the tongue are collected in a long footnote); J. B. Mayer, The Epistle of James, id. 270, 1910, pp. 219-231, discusses the ethical aspects of the use and abuse of the tongue. See also H. Wheeler Robinson, ed. 'Tongue' in DAC.

TONGUE - See CHORISMATA.

TONSURE - See CHORISMATA.

TONSURE. - Tonsure is the shaving or cutting of the hair after a particular fashion as a sign of reception into the clerical order and to the privileges pertaining thereto, one of the modes of ordination, as it extends to the reception of holy orders, and is administered by the bishop or by a mitred abbot or by certain privileged priests in whom its administration has been vested by the pope. At first it was part of the ceremony of ordination, but was separated from it towards the end of the 7th century. The origin of the tonsure is obscure, but from passages in the Fathers it is clear that long hair in men was considered effeminate or worse, and this was particularly true in the case of monks. Epiphanius enumerates some Mesopotamian monks for their long hair against the rule of the Church, and such excesses is partly responsible for the Custom at the custom. 4 A monk's hair had thus to be cut short, though not shaven, as this was the custom with the priests of Isis. 5 The earliest tonsure was probably putting the hair into a close coiffure or braid of the entire head, though this may have become a shaving of the whole head after the manner of the...
the Nazarites and those under a vow (Nu 6, Ac 21).

There is no mention of tonsure, and no regulation as to the method to which it was to be adopted. It may be remarked that the tonsure adopted by the Benedictines, in the 227 original rules of the Buddhist order of monks, in the Khandhaka, or collection of subsidiary and supplemental rules, completed at the end of the Pali canon, and written after Buddh’s death, we find the following paragraphs:

1. You are not, O Bhikkhus, to wear long hair. Whosoever does so, shall be guilty of a minor breach of the regulations (i.e., of a dukkha). I allow you, O Bhikkhus, hair that is two months old, or two inches long.

2. You are not, O Bhikkhus, to smooth the hair with a comb, or with a snake’s head (i.e., with an ivory instrument so shaped), or with the hand held in that shape, or with pomade, or with hair-oils.

3. I allow you, O Bhikkhus, the use of razors, of a bone to sharpen the razor, of powder, so as to prevent them rusting, of a sheath to hold them in, and of all the apparatus of a barber.

4. You are not, O Bhikkhus, to have the hair of your heads or on your face cut by barbers, nor to let it grow long.

5. You are not, O Bhikkhus, to have your hair cut off with a knife.

We should not draw, from the fact of these paragraphs being found among the subsidiary rules, any conclusion that they belong to a later time than the original rules. The subsidiary rules refer quite often to what were evidently older customs in the order, and only legalize and give authority to practices already followed, though not mentioned in the older rules. But we should notice in the first place that there is no mention of scissors. The reason of this is curious; scissors had not then been invented. This is confirmed by an exception to rule 5 above, in which you may cut a sore on the head, and the hair round it could not be removed by a razor, then a knife might be used.

In this case no doubt, if scissors had been
then known in the Ganges valley, their use would have been allowed, at least as an alternative.

The mother of the child, however, was not to be shaved not only on the face, but all over the head; and the shaving had to be performed, not by a barber, but by fellow-members. Why was this the rule? Undoubtedly because this was the custom most followed by the majority belonging to the other orders that we know to have been older than the Buddha's time. It was only natural that men who had devoted themselves to the higher life of the monk were the first to learn by heart and the repetition of texts dealing with the higher life as they conceived it, should have thought it becoming to themselves to avoid, not only the use of fashionable clothing, but also the elaborate hair dressing then habitually used by men of the world. The medallions carved in bas-relief on the stone railings round the Bharhat tope may serve as illustrations of their turban-like arrangements, in which strips of brocaded cloth are intertwined with the hair (left long), the faces being clean shaven. 2 Though the sculptures are later in date, earlier texts confirm the story, and by description ambiguous without the help of such illustrations.

There is one passage in a very early text, about the same age as the five paragraphs, which confirms the above statement. If those paragraphs only gave us the earliest customs as to shaving followed in the order. That is Digha, i. 90, in the Ambattha Sattanta, where a Brahman, reviving the adherents of the new movement, and in fact referring to the Buddha himself, calls them 'shavedings, shorn friars, the off-shewing of our kinsman's heels.' 3 It is clear that, in the view of the compilers of this passage, the members of the order had their heads shaved. Another such passage is preserved in the popular anthology called Dhammapada, 264, which says: 'Not by his shaven crown is one a samana' (a member of any order of religious, a 'religious'), if he be irreligious. It should be noticed that the technical word used is not bhikkhu (a member of the Buddhist order), but samana, which included non-Buddhist orders also.

In the much later legend of the Great Renunciation—it is at least about seven centuries later than the event which it purports to relate—we are told that the first act of the future Buddha after he had 'gone forth' was:

'Shavedings, in his right hand, and holding the plaited tresses of his hair, and its twisted decoration with his left, he cut them off. So his hair became two inches long, and lay close to his head, emerging from the nape, and so remained his life-long; and his beard the same.' 4

Now the oldest representations of the Buddha that we possess— the so-called Greek-Buddhist bas-reliefs and statues—are an endeavour to reproduce the coifure thus described. This story, therefore, as to the imperfect form of the tonsure habitually followed by the Buddha himself, must have been credited, incredible as it seems to us, at the date of those sculptures, not only in the Ganges valley, but also beyond the present frontiers of India, in the extreme north-west. In the second place, the inventors of the story ascribe to the Buddha the belief that every religious—not only Buddhists, for there were none then—should have the hair cut quite short. In other words, they claim a pre-Buddhist origin for the custom followed in the Buddhist order. Perhaps the whole episode is merely invented as a popular explanation of the odd rule as to two inches in Digha, ii. 134, Tr. Dhammavat. Texts, ii. 190. 5

The whole episode is translated in Rhys Davids, Dialogues of the Buddha, i. 112 ff.

Jātaka-nidāna, p. 64 (Vol. i. of the Jātakas, ed. Fausboll).

At the present time the bhikkhus in Burma, Siam, and Ceylon hold theoretically to the two-inch rule, but practically never appear in public without the head and face clean shaven. The numerous sects of Buddhists in Tibet and Mongolia, China, and Japan have long ago forgotten, if they ever knew, the ancient rule. But we have no exact particulars as to when and where they have enacted and carried out any newer rules of their own.

TONGSERS (Chinese).—1. Confiacian.—Confucianism, being a system of ethics, has no priests or monks. The tonsure is therefore unknown in it.

2. Buddhists.—(a) Monks.—The Buddhist tonsure was brought into China by monks from India. The whole head is shaved once a month or oftener. With boys brought up in monasteries, being either dedicated by their parents to a religious life or bought by the monks for that purpose, the tonsure takes place when they are between eighteen and twenty. At the reception of a novice the liturgy directs that the introducer of the candidate shall ask the chapter assembled that the tonsure may be granted. This acceded to, the vows are taken. 6 A rite which is apparently a constant sequel of the tonsure consists of the binding of the head with from three to eighteen small circular spots. In spite of one or more fingers is also sometimes undergone. An explanation of the Buddhist tonsure given by some of the Chinese is that it indicates the 'desire to put away... everything of the world, so that the monk does not claim as his own even his hair.'

(b) Nuns.—Aspirants are received at the age of ten into the nunneries, and their novitiate continues till they are sixteen. During these years only the front part of the head is shaved, but all the hair is shaved when they become nuns. A woman desiring to become a nun must obtain the consent of parents, husband, or guardians.

1 Of these must act as sponsor for her at the time of initiation and monastic vows. To be employed in shaving her head to the Prior who is to perform the ceremony.

3 Taoist.—(c) Monks.—Taoist monks shave all about the head, and cut the rest of their hair. They may suffer it to grow long and is gathered together into a top-knot fastened by a wooden article like the back of a tortoise. 

4 In some cases all the hair is allowed to grow.

(b) Nuns.—Taoist nuns do not shave their heads, but have their hair done up on the top of their heads.

4 Dislike of the tonsure.—Though Buddhism has benefited largely in the past from the favour of emperors, the tonsure has often been very obnoxious to the governing classes in China, who doubtless took it as the outward sign of the celibate priesthood, which separated its connexion with the family, entirely against Chinese ideas of the paramount importance of domestic life. Monks become a schism against it. The following are instances of this.

Tonsure (Hindu)—Tophet

8. Tonsure—(Hindu).—Chaddh, 'tonsure,' is the name of an ancient rite in India, also called chaddakarvana or chaddakarvam, claustration, which is performed on boys, sometimes on girls also, and derives its name from the tuft of hair left on the top of the boy's head (chadda). According to the ancient rule, this rite is to be performed when the boy is three years old, or, in the lower castes, in his fifth or seventh year. The boy is dressed in new clothes, and placed on his mother's lap. A barber cuts his hair with a razor, while sacred verses from the Vedas are recited. The hair is then thrown on a heap of cow-dung, and afterwards dug into the ground (see Hillebrandt, Ritualliteratur, Strassburg, 1897). It is interesting to note that this rite, as pointed out in Gerini's monograph on the tonsure to be found in Siam, has spread into Siam, together with other Brahmanical institutions. In India it has been invested with some legal importance, the Sanskrit law-books stating that a boy on whom the ceremony of tonsure has been performed is no longer a member of his family or of his sect, and no longer liable of being affiliated to another person (see Jolly, Tagore Law Lectures, Calcutta, 1885). The tonsure rite is carefully kept by many castes of the present day, though the time of its performance differs. Thus the Kanok Brahman of Poono perform the rite when a boy is from six months to two years old; the Lingayatras, after a year; the Vanis, at any time from six months to five is seen to be the usual period. Sometimes the child is taken to the village temple for the ceremony, or after its performance (see the Bombay Gazetteer, passim; Bai Bahadur L. B. Nath, Hinduism, Meerut, 1899). The tonsure rite is supposed to belong to the common heathenism of Indo-European nations, because similar rites and superstitions occur in the Areves of the Zorastrians, and, particularly, among some Slavie nations, such as the Servians and Bulgarians.

J. JOLLY.

Tophet.—Although the OT references to Tophet, the scene of the Moloch sacrifices in the Valley of Hinnom, leave no doubt as to its great importance in the popular religion of Judah in the period before the reformation under Josiah, the place itself is mentioned only in the following places: 2 K 23:10, Is 30:8, Jer 7:19. 11-12, 13-14. The similar word in Job 17:18 is clearly not to be understood in this connexion. The original pronunciation of the word, which is transliterated in the LXX Taepi or (p), is unknown, the Masoretic pronunciation in this case, as in others, being due to the substitution of the vowels of p, 'shame.' Moreover the etymology of the word is quite uncertain, and it cannot be determined whether the final t is radical or is merely the feminine ending. In Is 30:8 indeed the form is 'p, which, if the text could be trusted, would be evidence of the former alternative, unless the word should be understood as having a double feminine ending such as p. (P's 3). But against this supposition is the fact that the word is construed as masculine in its immediate context. In any case, since, with the exception of Is 30:8, it always has the definite article or is capable of being so pointed, it is evident that it is not strictly a proper name. We may reasonably infer that there were several Tophets, although we know only of the one which was situated in the Valley of Hinnom.

Robertson Smith, arguing from the fact that 'at the time when the word first appears in Hebrew, the chief foreign influence in Judean religion was that of Damascus (2 K 16),' sought to connect the word with the Aramaic Šiwa, which means a 'stand or tripod set upon a fire,' of which we might, according to known analogies, have an Aramaic variant Šiwa. The corresponding Hebrew word is 'p (for šfath), which means an ashpit or dung-hill, but primarily must have denoted the fireplace.' But this explanation is superseded by the account of an Aramaic religious rite which takes for granted that the cult practised at the tophet, or at any rate the precise ritual of the cult, was a comparatively new-fangled thing in the 7th cent. B.C., and there were grave difficulties in such an account. Even if Ahaz did bring from Damascus a new connotation for burning the children's bodies, why should it have kept in Hebrew its Aramaic name, when the Hebrew language itself possesses the same word with the ordinary dialectical difference? When the same king introduced in Jerusalem the innova-

1 The Religion of the Semites, p. 371.
tion of a great stone altar, it was called by the Hebrews 'mahal,' or altar, but by the Canaanites, 'athar. Moreover, it is extremely improbable that such a practice as the sacrifice of the first-born should have been suddenly introduced into Jerusalem as late as the 5th cent. B.C. When it is considered how hard debased superstitions have died in our own country—if indeed they are dead—we can understand the survival or even the recrudescence in the religious superstitions, but not the adoption of so terrible a rite as the sacrifice by a people who had reached an altogether higher level of religion. The OT is unintelligible unless it is recognized that the population of Palestine in the days of the kings of Judah and Israel was not so homogeneous as later writers imagined it to have been, and that the true-born Israelites were in a minority. In a fusion of races there is, no doubt, a tendency for the higher to be drawn down to the level of the lower. When a man of fairly good intelligence, but not possessed of any strong religious convictions, marries a thoroughly supersti- tious woman, it is the wife's superstition rather than the husband's intellect that will be the dominant factor in the household. And that the sacrifice of the first-born was a deeply-rooted Canaanite cult is proved not only by the excavations at Gezer and Megiddo, but also by the evidence of one passage in the OT. It is most significant that the document of the Pentateuch represents God as commanding Abraham to sacrifice Isaac (Gen 22), and that the same document in its legislation (Ex 22:23) puts the first-born of men and cattle on exactly the same level, not requiring the redemption of the former as is ordered in Ex 34:19. And that a law allowing, if not requiring, the sacrifice of the first-born was at one time issued in Jahweh's name is evident not only from Ezek 22:29, but also from Jeremiah's protest (7:4; cf. 19) that Jahweh had never commanded or contemplated any such cult. Although Ahaz is the first king of Judah of whom it is definitely stated that he sacrificed his first-born, it would be unsafe to conclude that he was the first who actually did so; for what had been done by earlier kings unhEEDED may well have called forth a vehement protest in the days of Isaiah. Certainly, if the stories of David recorded in the books of Samuel are based on a somewhat similar and not necessarily what later prophets of the non-reforming party thought David must have done, there would be no diffi- culty in supposing that even David had presided over the Molech cult at the tophet in the Valley of Hinnom. On the other hand, it must not be forgotten that, as the story of the Rechabites proves, certain strata of the population remained till a late period aloof from and unaccompanied by the Canaanite elements, and it is doubtless these non-Canaanite elements that we ought to credit with the attempts made from time to time to abolish the worst of the pre-Israelite superstitions which threatened to swamp the religion of Jahweh. There is no reason to question the statements in the book of Kings that reforms were attempted in the days of Asa and of Jehoshaphat.

While it is not improbable that the method of burning the bodies at the tophet in the Valley of Hinnom was the same as that adopted elsewhere, it is by no means clear that either the place or its ritual came from Damascus. It must not be overlooked that the tophet, or at any rate the place of the tophet, is called in Jer 19:1-32 the 'high place of the Baal.' The point of Jer 7:31 that in the massacres which may have accompanied the expected corpses not slain in sacrifice will be buried at the tophet—proof of the impotence of the tophet sacri- fices to avert the divine wrath, is a naive and misinformed statement. In discussing the meaning of Is 30:3, writes as follows:

'It appears that Tophet means a pyre, such as is prepared for a king. But the Hebrews themselves did not burn their dead, unless in very exceptional cases, and burial was equally the rule among their Phoenician neighbours, as is plain from researches in their cemeteries, and apparently among all the Semites. Thus, when the prophet describes the deep and wide pyre "prepared for the king," he does not draw his figure from ordinary life, nor is it conceivable that he is thinking of the human sacrifices in the valley of Hinnom, a reference which would bring an utterly discordant strain into the imagery. What he does refer to is a rite well known to Semitic religion, which would not be lost to those that may be expected to have a large audience among the Semites. The tophet, the place of sacrifices, would have suggested the ritual of the Valley of Hinnom; the prophet declares with grim Hebrew irony that a tophet has indeed been pre- pared for a king; only in this case the king will be the victim, not the victim of the sacrifice. Thus the tophet-a name which appears to be secondary, and, even if Josiah tried to put a stop to the cult, there may have been a recrudescence of it after his death; and beyond the limits of his diminutive kingdom it probably continued considerably later. It is diffi- cult to see why Jeremiah should have published his denunciation of the tophet in the fourth year of Jehoakim, if it had been abolished once for all in the eighteenth year of Josiah. And it, as seems probable, Deuteronomy is to be dated at the 6th cent. B.C., it is evident that as late as that time it was still necessary, at least in some parts of Palestine, to protest against the sacrifice of children (Dt 18:10). Moreover, the prophecy in Is 30, though based on a genuine utterance of Isaiah, bears many evidences of having been modified long after the date, and, if further, as in 11:13 and 15:20 (cf. Ezr 6), means the Seleucid empire, the king referred to in the present form of the passage may be Antiochus Epiphanes. It is certainly not impossible that in some outlying districts of Palestine, such as Ammon, Moab, or Edom, the cult associated with the tophets held its own until the 2nd cent. B.C.

TORAH. See Law.

TORCH. (Greek and Roman).—In common with other races, the Greeks and Romans held many festivals at night, when torchlight was a practical 1 The human holocaust is not burned on an altar, but on a pyre or fire-pit constructed for the occasion. This appears both in the north-west, the Pilos and Hercules and in actual usage. At Ermanno of the Romans, the fire is erected yearly for the burning of heretics; in the Carthaginian sacrifice of boys the victims fall into a pit of fire; and lastly, in the Roman sacrifice the victim is fastened to a grating placed over a vault filled with burning fuel; finally, in the Topheth, some other device is adopted filled with wood exactly like the tery trench in which, according to Arabic tradition, the victims of 'Amr b. Hind and the

1. Who author is this text?
necessity, and need have no particular religious significance. But the torch was also important in various ceremonies where its presence was not merely utilized as an aid to vision, but may have been originally used for merely practical purposes it acquired a sacred or symbolic meaning. In agricultural festivals, e.g., the use of fire is a well-recognized symbol of fertility; and in many ancient agricultural festivities it may be doubted that the torches were used merely in a practical capacity. Marthardt and Frazer have collected a large number of customs which illustrate fire-ritual as a means of promoting the growth of crops and animals.\(^1\) The underlying idea may sometimes be a belief that earthy fire represents the sun; and torches, carried over the fields, may be the means, by sympathetic magic, of 'making sunshine.' It is more probable, however, that the fertility which the use of fire is believed to cause is to be explained by its purifying power.

In Greek myth and ritual the torch is specially connected with Demeter. According to the Homeric hymn to Demeter,\(^2\) Persephone, with lighted torches in her hands, rushed wildly in search of her daughter. The hymn deals with the Eleusinian mysteries, and it is probable that the actual rites originally initiated by the goddess were inspired by the example of the torches. The Eleusis\(^3\) included a 'torch-day' (lampadun dies), where the mothers roamed along the shore with torches. They supposed themselves to be imitating the wanderings of Demeter; but the original meaning of the rite was doubtless to purify the land and ward off pestilence from the crops. In the same way the early Eleusinians seem to have purified their children by making them pass over the fire, as the myth of Deuophoon, in the same hymn, appears to indicate.\(^4\) The most solemn ceremonies at Eleusis took place at night, when the hall of the mysteries (mysteries δύσω) was lit by torches. One of the chief officials was called the 'torch-bearer' (φαρδως), and a priest bearing the same title took part in another festival (the Lemeis), and assisted at a rite of purification or atonement of sin.\(^5\) Juvenal\(^6\) speaks of the torch as the special emblem of the Eleusinian priest.

The torch is an attribute of various Greek deities besides Demeter. Persophone bears the same emblem as her mother. In literature and art we find the torch regularly associated with Hecate, perhaps as a moon-goddess.\(^7\) Artemis is also commonly represented with a torch in literature\(^8\) and in art from the 4th cent. B.C. Here the torch may be understood as a weapon of the goddess; but in the lines of Virgil and of Statius,\(^9\) who hold that Artemis was originally an earth-goddess, thinks that it belongs to her as a deity of vegetation. The torches which in art are a frequent attribute of the Muses are perhaps best explained by reference to their nocturnal festivals. Finally, Ares sometimes carries a torch, an appropriate emblem for the god of war.\(^9\)

In Greek custom the most conspicuous example of the use of torches is in the torch-race (λαμπαδικάρια, λαμπαδιορία, or, most often, simply λαμπάρδα). This competition is best known as Athenian; but it is also recorded for other Greek states, and Alexander included it in most of the festivals which he established in various cities. In Athens the torch-race was a feature of various festivals, in honour of Prometheus, Athene (in the Panathenaic), Hephaestus, Pan, Bendis, Hermes, and Theseus. It was carried on for many years and is still kept up.\(^10\) The date of its institution is unknown, but it was first held in honour of Prometheus, the fire-bringer, at whose altar the competitors lit their torches. At the festival of Pan, we know that the race was instituted after the battle of Marathon. At the Bendides it was run on horseback, and was a novelty in the reign of Socrates; elsewhere the race was on foot. The competitors were apparently chosen from the several Attic tribes. The torch was passed from one member of a team to another, at fixed intervals along the course, and the victory rested with the team whose lighted torch first reached the goal—an altar on which fire was kindled with the torch. This procedure gave rise to the famous simile of Lucretius ('et, quos curseros, vitalis ignis, laudabilis / summus / corsque est / ignis imitator') and the name which is found in Plato.\(^11\) An equally famous line in Æschylus\(^12\) also refers to the torch, although the exact point is doubtful.

Æschylus might perhaps have meant that all the runners in the winning team have an equal share in the victory, the last no less than the first; but more probably he refers to the fact that the winning torch was handed in by the last man in the team. This man would be first in relation to the rival teams, but last in relation to his own.

The Greeks themselves explained the torch-race as a commemoration of the gift of fire by Prometheus;\(^13\) but the original motive must have been something more than a mere commemoration. The essential feature seems to lie in the transference of fire from one altar to another at the greatest possible speed. It is probable, therefore, that the underlying idea is the need of carrying fire from a pure source to take the place of a polluted fire. At Athens all fires were extinguished before the race began (at least in the Promethea), and were rekindled from the new fire. A belief in the pollution of fire is shown in the Argive custom of extinguishing fire after a death, and rekindling it from another source by μεταφέρεσιν.\(^14\) Similarly the fires at Platea were defiled by the presence of barbarians, and new fire was brought from the sacred hearth of Delphi. The attraction of such a rite to the cults of Prometheus and Hephaestus needs no explanation. Athens, too, might well have adopted a torch-race, as being the patron of handicrafts and metal-working, for which fire was a necessity; but there is no proof that the Athenians made such a rite the supreme head of the city. The race seems less appropriate to the other gods, with the possible exception of Pan. The theory that he was a sun-god cannot be accepted; but fire certainly played a part in his ritual, and an ever-burning lamp was maintained in his cave under the Acropolis. Most probably, however, the Athenians instituted the race in his honour to commemorate his appearance to the Greeks at Thermopylae after the battle of Marathon. Once established, the race became popular, and was attached to other festivals without any special religious fitness. The Romans had no torch-race, and the torch was less prominent in their ritual than in Greek religion. But the same ideas can be traced in Italy as appear in Greek fire. And although it is not always possible to distinguish the indigenous from the borrowed element; e.g., the festival of Diana at Aricia (Nemi) no doubt belongs to a primitive Italian stratum, but it is impossible to say how far Greek influence may have modified its

TORTURE

details. In this festival women whose prayers before child-birth the goddess favourably heard bore lighted torches to her shrine. It is difficult to say whether this custom is a survival of a purificatory rite (Diana representing a forest deity of the goddess of agriculture) or whether the torch is only a symbol of the moon-goddess, who was the natural patron of women in child-birth.

In Greek and Roman private life the torch was an important feature in marriage, as the bridal procession took place at night or towards evening. As early as Homer there is mention of this torch-light procession. It was the duty of the bride's mother to light the nuptial torch. In Italy the bride was also escorted to her new home by torch-light, under the protection of Juno Domitaca or Iterdona. Hence the god of love, both in Greece and in Rome, is often represented with a torch—an idea no doubt assisted by the common conception of love as a 'fire.'

The torch had also funeral associations to the Romans, being used to light the pile on which the corpse was burned. Those who applied the torch averted their faces. The 'two torches' of marriage and death) are mentioned by Propertius and Ovid.

TORTURE.—Quassio, said baldus de Periglis, an interpreter of that word of dire significance in Roman law, 'is a certain kind of inquisition made for the purpose of tearing out the truth (' cruciame veritas') by torments and bodily pain.' Few institutions have more signally failed even to afford rational excuse for their evil existence as a method of extracting evidence. Starting from a deep instinct of violence, it consistently made manifest its inherent viciousness, which no fundamentally good intention in its origin and no humane after-thought of qualification and exception could withhold from pernicious and cruel consequences. Unlike the ordeal (p. 341), which was in some measure an appeal to divine authority, torture was without even the negative virtue of offering a percentage of probabilities of right and truth in its results. It is difficult to think of any principle which could make it really assist in evoking truth from reluctant witnesses or reliable confessions from accused persons. The one point of affinity to ordeal was the resort to torture when there was a deficiency of direct legal evidence. Its basis in injustice is shown not only in its penalizing the innocent and unconvicted, but in the fact that its applicability was long confined in both Greece and Rome to slaves—significant of its palpable unfitness for freemen. It was universal, though in ancient use among Assyrians, Egyptians, Moslems, and Japanese; it does not appear in the early laws of Chinese, Hindus, or Jews. There is no mention of it in the OT record. The metaphoric leaping of coals of fire on the head probably refers to torture, as appears from a Muhammedan penalty of a live coal laid on a lascivious pulm. From a remote age torture prevailed in Greece for slaves, and, actually, freemen were generally exempt, the exemption was overborne in cases of conspiracy and murder. Slaves in Athens were subject to torture in cases civil as well as criminal. At times the actions were determined by balancing the testimonies of the slaves of the opposing litigants put to the torch; thus the ladder, the rack, or the burning tile. Greek practice has not transmitted any code; that was reserved for Roman law, which unfortunately hardened in permanence in the crude tradition of force which it shared with Greece.

In this exposition we are not dealing with torture as a method of punishment, to which some speculations give an earlier place than belongs to the torture of witnesses or accused persons. It is as a process for obtaining testimony or confession, chiefly in cases criminal, that torture has historically played its most unreasoned and baseful part. In the Roman Republic it had wide currency in spite of sharply delimited restrictions which instructively exhibit the efforts, too tardily made and not thoroughly going enough, to modify and restrain an institution for which ablation was the only remedy. And yet credit must be given to the insight and humanity of some of the distinctions made. The exemption of freemen gave way under imperial impulses which less majesty was retained. The general safeguard that there must be velent presumptions of guilt before resort to the torture was clear enough in theory, but was widely ignored in practice. Most curious fact of all perhaps is the frankness of the authorities grouped in the Digest on the primary desirability of doing without torture, on the frailty and peril of the method as an engine for ascertaining facts, on the delusive character of confessions induced by modes which were tests not of truthfulness but of physical endurance, and on the danger to third parties from the allegations wrung from men willing to say anything to save themselves. Evidence of slaves under torture was declared inadmissible against their masters, but there were exceptions of some intricacy. The apostle Paul (Ac 22:28) pleaded with success his right as a Roman freeman as a protection from examination under the scourge. Mainly used only in cases criminal, the institution made good its footing in some civil causes also. Exemptions of minors, patricians, priests, and pregnant women, and charges of treason were made. The direction of Antoninus Pius that torture was not to be used to secure betrayal of alleged accomplices was as wise as it was law, but the very thought of getting at other culprits came ultimately to be a main occasion of its employment. The provisions of the Digest and the Code systematize several contradictory doctrines 'de questionibus' illustrative of a considerable development. The emperors were not long in discovering what Dante was to illustrate by extreme examples, that treason was the worst of crimes. This was the creed too of Anglo-Saxon as well as of later feudal criminal law, and it encouraged violent processes of detection. In Rome the kind of torture with widest currency was that of the cynodeus, or rack, which passed on as perhaps the worst legacy of Roman law to medi eval Europe.

The abolition of the barbarian ordeal by the Lateran Council of 1215 left a vacuum which was partly filled by a still worse expedient—the Roman method of 'tearing out the truth,' Under the Salic law ordeal and torture had co existed, but the latter for slaves only, the provisions obviously echoing Roman precedents. The Frankish code apparently courtained ordeal alone. The re-
TORTURE

France and italy it seems to have re-established itself during the 16th century by the Inquisition. The tortures cited by Du Cange1 gave exemption from torture. Its French name, gecken, was fit enough. There were many names — the brodopus, the estrapado, the chevalier—all used in the question préparatoire, preliminarily in the trial, and in the definitive question préparatoire after conviction to disclose accomplices. In England, though without place in the common law, it was practised as an alternative to the inquisitorial methods, and in King John's process of extracting treasure from the Jews. The peine forte et dure, however, or torture by pressure of weights to compel a prisoner to put himself 'upon the country' or 'verdict of a jury', appears about 1300. Under Edward II, in 1311 papal inquisitors in the trial of the Templars applied torture admittedly never legally countenanced in England before. Though long without regular sanction in the courts for crime, the practice of torture crept in with what may be called council government under the Tudors. As always, secret courts favoured secret methods, and torture loved the darkness. With Shakespeare and other Elizabethan dramatists 'rack' and 'strappado' were household words. Coke might excommunicate the institution from the law. As Coke and Bacon alike countenanced it in practice when the scent of treason was strong.

In Scotland the law and practice appear to have nearly paralleled the state of things in England. Isolated examples of torture, such as that given by way of punishment to the murderer of James I., may have been preceded, as one annalist asserts, by judicial torture at his trial. So late as 1542 the inquisitors were established in Scotland, and the confession procured by torture was null. George Buchanan, in spite of the risks that he himself had run from the Inquisition, recognized without censure the obtaining of proofs by torture. The deplorable insanities resulting from the witch-craze, nurtured in Scotland by the sapience of the demonologist James VI., and absolutely paralleled by the like frenzy in England and France, were a distressing combination of the mischiefs of torture with a recrudescence of the ordeal. The victims were often old, miserable, and insane; the pitiful and pitiless mania, however, was not merely a British and a European disease. Its creed and its State on the Continent was of one context with that in Britain; everywhere the witch-finders used the same methods of pain. It was the last stage of a sort of common law of torture, although the variety of local usage shows a wide range of divergence in detail. In the Covenant a last outbreak of persecuting zeal revived the decadent engine of violence. A dubious tradition traces the thumiblins in Scotland to a Russian origin.2 Museums of torture such as those of Nuremberg, the Hague, and the Tower of London—competitions in horror as they are—unite in a kind of commonplace of malignancy. Authorities on torture in like manner dwell with the same tedious insistence on the indicia, or preliminary evidences needed to justify torture, and on the conditions of its infliction. The Summa Anglica, a great cyclopedia of instruction to confessors, enjoins the interrogations to judges in confession whether they had put people to torture without sufficient indicia, which was very rightly classified as a deadly sin. Now and again the crude and common law and practice of torture, such as that of Paulus Grillandus, breaks away from its companions in the great folio vol. xi. of Zilettus (1834) by its superior realism. Grillandus

distinguishes with grim precision the five degrees of torture: a succession of torture, the placage on the rack for the space only of an Ave Maria or a Pater noster, now a graver suspension for the space of a Misereere, now for a period which might reach into hours, and, last degree of all, where the victim's limbs, weighted down, were jerked and twisted till the agony was greater than the amputation of the hand. It is marvellous how men endured such tortures, but that they did so is attested by occasional judicial and legal records or assessments of court who wrote the treatises. Grillandus, e.g., drawing upon his experience at Pisa and at Rome, registers the wonderful case of a most cunning thief whose absolute impassiveness was ascribed to certain words that he whispered when the torture was applied until a slip of paper was found bearing as a charm the Scriptural text (well known for its use in amulets) "Jesus autem transiens." Finally, however, with the charm removed altogether, this stout malefactor defied the torture again by his whispered invocation so that it was necessary to abandon the torture. And still greater cases, the commentator concludes, were seen at Milan and Rome when certain words touching the milk of the Virgin enabled the victim to go through the torment as if he slept. This particular word of charm was less effective as a counter-charm, but Grillandus shows no faith in its potency as an aid to the prosecutor.

An unfortunate feature of torture was its adoption by the inquisitorial courts of the Church for the investigation of charges of blasphemy, heresy, and the like. Was persecution not, like the Inquisition itself, a confusion of a secular with a sacred function, in which the analogy of treason to an earthly potentate carrying priests of religion to extremes not compatible with the conception of a majesty which, though wounded, was divine? Whatever of error lurked in the concept itself, the tribunal which was its executive of vindication added to the wrong in principle by a series of false directions of the practice in prosecution. It surely was a blander worse than a crime to adopt methods which doubtly branded with public odium courts which were designed by processes of barbarism to repress the freedom of the human mind. The fact that already by the middle of the 13th cent. papal dispensation of torture was admitted as a matter of regularity in the use of torture casts a lurid light on the procedure. No safeguard of institutions is so sound as publicity—the liberty of moderate criticism, the freedom of defence, and the avoidance of the abuses which wait upon invisible dungeons and courts. Sorely inevitably means tyranny and obscurantism. The refusal of counsel for the accused was a fundamental and far-reaching error in a 'court of inquisition into heretical depravity,' which by its very object tended to unite the zeal and interest of both prosecutor and judge against the heretic. The double sanction of royal and ecclesiastical authority sometimes enabled the machinery against heresy to be used for political rather than spiritual ends. The most notorious persecution of the 16th cent. was in the Netherlands, and torture was the keynote of its procedure. The Renaissance had not wholly escaped the persecutions which rose to their evil eminence during the transition period in which the swaying boundary-line came to stand between Lutheran reform and Roman orthodoxy. In 1536 the Confederation of Charles V. codified for Germany a system which incorporated torture among the fundamentals of procedure. His establishment of the Inquisition in 1550 inaugurated a period of steel worse than any other in human history. Philip II. of Spain found in the Duke of Alva a spirit of
TETEISM

393

TETEISM.—I. Introductory. — The word 'tomet' is derived from otoetum, which in the Ojibwa and cognate Algonquian dialects means his brother-sister kin. Its grammatical stem, meaning the consanguine kinship between uterine brothers and sisters, the group of persons recognized as by birth or adoption collectively related together as uterine brothers and sisters who cannot intermarry, is never used alone. The word was introduced into the English language by J. Long in the form of tometh. This word was wrongly defined as a new one, and savages (Chippewa or Ojibwa) is a mark on him from the savages

This totem they conceive assumes the shape of some beast or other, and therefore they never kill, hunt, or eat the animal whose form they think this totem bears.

The totemism as exemplified in N. America and Australia, where it has been found in the fullest development, is a form of society distinguished by the following characteristics: (1) it is composed of clans or bands of men each united among themselves by kinship real or fictitious, a kinship frequently extending beyond the limits of the local tribe; (2) the clan is distinguished by the name of some species of animal or plant, or more rarely of some other natural phenomenon, such as the sun, rain, etc.; (3) the species or object which gives its name to the clan is conceived as related to the clan, and to every member of it, in some mystic way, often genetically; and in this case every individual specimen of this object, where it is an animal or plant, is regarded as belonging to the clan; (4) such species or object is usually the subject of a religious or quasi-religious emotion, and every individual of the species is the subject of tabus or prohibitions: subject to certain limitations, ceremonial or in self-defence, it may not be injured or killed, or (where edible) eaten; (5) more generally, and in all societies organized on the basis of kinship, the members of the clan are entitled to mutual defence, protection, and resentment of injuries. They may not marry or have sexual intercourse within the clan.

These characteristics are general, but they vary to some extent not merely from area to area, but from tribe to tribe. After detailing a few typical examples, it will be necessary to mention others where totemism seems to be decadent, and then to consider whether it has ever prevailed among peoples where it is not now to be found, and lastly to inquire into its origin. Various influences tending to modify, submerge, or destroy it will then be indicated from time to time in the course of the article.

3. Typical examples.—(a) American.—Some what fuller accounts than that of Peter Jones are now available on the totemism of the Ojibwas. They were divided into about 40 exogamous totemic clans, of which those of the Crane, Catfish, Loon, Bear, Marten, and Wolf were the principal ones. All have been the original. The other clans are said to have been formed by the segmentation of these. Nearly all the clans are named from animals of either land or water. Members of a totem-clan were held to be closely related to all other persons of the same totem, even though belonging to different tribes. We have no information whether the Ojibwa clans regarded themselves as having descended from the totemic names their forefathers bore, but the clans of some other Algouinian tribes claim such descent. Thus, among the Delawares or Lenape the Tortoise, Turkey, and Wolf clans (the three chief clans of the tribe), among the Sunks the Fox, Eagle, Bear, Beaver, Fish, Antelope, and Raccoon clans, among the Menomini the Bear, Golden Eagle, Wolf, and other clans, and among the Ottawas the Carp clan, are specified as tracing their lineage to the animals after which they are named; and in the last-mentioned tribe the Bear clan ascribed its origin to a bear's paw without explaining the precise nature of the relationship. However this may be, we may consider the Ojibwa to hold to resemble the bear, its totem, in disposition. The members were surly and pugnacious, the acknowledged war-chiefs and fighting men of the community; the war-club and war-club were committed to their custody. The Crane clan took its name (Bus-in-as-see, 'Echo-maker') from the loud, clear, ringing cry of the crane; members of the clan were thought to possess naturally a loud ringing voice, and they were the acknowledged orators of the tribe.

(b) European.—We are not informed whether in their personal appearance, dress, or ornaments the Ojibwa totem-clans were ordinarily in the habit of imitating the totem-animals, as some other tribes do. The Abenaki, also an Algouinian tribe, painted their totems on their arms, breasts, and legs. An Ojibwa sometimes had the figure tattooed on him, or carried some

other token by which his totem might be known.1
Unfortunately our reports are chiefly confined to the social aspects of the Ojibwa organization, so that we have little or no information as to the religious outlook. Religion is inextricably mingled with other aspects of savage life; hence we may be sure that it reacted upon social and political life. Among their neighbours, the Sanks or Musquakies, dances in honour of the totems were held. Of these or religious exercises—
those who partook were covered with masks and
dresses to resemble the totemic animals, so dreadful—
that the women were seriously frightened, and
the old women were therefore destroyed and milder
ones substituted.2 Special ceremonies were per-
formed by the Bear clan of the Ottawas to soothe
a bear when they killed it, including an offering
to the dead animal of its own flesh. When a
member of that clan or of the Carp clan died, he
was buried, whereas by command of the totem a
member of the Great Hare clan was cremated—
least, whenever he died at a distance from home.3 Among the Menomini a member of the
Bear clan who, when hunting, met a bear would
apologize and ask forgiveness before killing it;
and no member of the clan could eat the meat
(though members of other clans might do so)
except if the bear was killed by the person who
was permitted to eat of the paws and head, the bones of the head
being carefully preserved in a place of honour in
the wigwam as a relic of the totem-animal to which
due reverence must be paid.4 The Ojibwa reckoned
descent and kinship through the father only;
but there is some evidence that they formerly reckoned
through the mother only—a change possibly
accelerated by white, and particularly missionary
influence. Such a change is known to have occurred elsewhere.5

The Iroquois, a confederacy of six tribes in what
is now the state of New York, on the other hand,
were matrilineal. They were organized in totemic
clans, of which all of them possessed three—the
Bear, Wolf, and Turtle—some of them eight.
There is some reason to think that the larger
numbers were derived by segmentation from the
three original clans, though it is possible that, in
some of the cases at all events, the number of the
clan may have been augmented by the absorption
of members from other clans which formerly formed
separate clans. The clans were exogamic, but in
the eight-clan tribes they were formed into two
phratries. The members of the clans were not allowed to marry indiscriminately into any other
clan; they marry only into a clan of the opposite
phratry, the phratrie thus becoming the exogamic unit in place of the clan. On the social
side of Iroquoian totemism we have fairly full
information. The members of a clan were united
for mutual defence and the resettlement of injuries;
and the phratries, where the tribe was organized in phratries, had certain important functions at
the death of a chief and the election of his
successor.6 On the religious aspect, however,
our information is sadly deficient. There is one
account by a chance traveller, in which the
Iroquois were stated to believe in their descent
from the turtle (or tortoise), the bear, and the wolf—their three chief totems; and among their
mythologies one has been preserved by a scientific
inquirer relating how the turtle became a man
and the progenitor of the Turtle clan.7 But
neither L. H. Morgan nor Horatio Hale, to whom
we are indebted for nearly all that we know of
the organization of the Iroquois, has told us any-
thing concerning the intimate relations between
the totem and its clan, or the aspect in which the
totem was regarded by the clan, or the members
by one another.

The Iroquois, however, had one custom common to a number of N. American tribes. Each clan had a stock of personal names appropriated to it,58 which other clan of the same name were not permitted to use, so that, if a person’s name was known, it was possible to say to what clan he belonged. To such a length was this custom carried by some tribes that, when the clan organization began to decay, a child could be assigned to another clan. When the
child was born, by the simple process of giving him one of
the personal names belonging to the latter clan—all events
if the clan recognized the child and thereby confirmed the
choice.2 The clans of some of the N. American tribes per-
formed ceremonies for the control of their totems for the
common good of the tribe. This was the practice, e.g., among
the Oimus.3 But its utmost development is found in the south-
west of the United States among the various tribes of Pueblo Indians.4

(8) Australia.—In Australia totemism has been
crossed, and among some tribes superseded, for
exogamic purposes by a system of marriage-classes.6
The consequent variation in the social arrange-
ments of the different tribes introduced a confusing factor into the totemic organization.
Among those tribes whose organization has been
least affected is the Dieri, inhabiting part of the
Lake Eyre basin in S. Australia. They possess a
number of a totem which of the names 57 are
known. Their totems belong chiefly to the animal
world; but the list includes some vegetable totems
and such objects as rain and red ochre. It seems
to be common to all the tribes in the Lake Eyre
basin, though it is not ascertained whether all the
totems are recognized by every tribe. Each tribe, like some of the Iroquois tribes, is divided into
two modifying or phratries, some of the clans be-
longing to one phratry and the rest to the other.
These phratries are called by the Dieri Kararun
and Matteri respectively; and, as among the
Iroquois, not only the clan but also the phratry is
exogamous. Thus a woman must marry a Dieri
woman, and conversely a Matteri woman a Kararun
man; but within the limits of the opposite phratry
the mate may belong to any clan. Both the clan
and the phratry descend in the female line, so that
the children in all cases taking those of the mother.8
The Dieri clans do not claim their totemic animals
or plants as ancestors. More than one legend
accounts for these.

According to one story, the totems (murdurh, properly madurh)
came out in an unfinished condition from the earth in the midst
of Lake Permigini and lay on the sandbanks around the lake
until the warmth of the sun strengthened and raised them up
as human beings, wherever they separated in all directions.
Hence the madurh (totemic clans) are now scattered all over the
country. According to another story, a salamander or mudurh,
{or supernaturally being, was killed by the people for his misdeeds,
but came to life again. He followed footprints, and, finding
the people busy fishing, opened his mouth and swallowed
water, fish, and men. Some escaped, running off in all direc-
tions, and to every one as they ran he gave a name. In proof of
the story, rocks are pointed out which are said to be the body of
the mudurh in question, and his teeth.9

If we may trust one account, the Dieri do not
regard the animal or plant which is their totem as
sacred, but will kill or eat it.10 It is not, however,
certain that we can rely on this statement. Its
author, for a long time a mounted constable in the
district, and hence brought much into contact with
his kinsmen, is untrustworthy,11

TOTEMISM

may probably assume that they are.

Whether these ceremonies are ideologically magical is a question of terminology, though it seems certain that the performers are under the influence of emotional excitement such as we usually connect with religious rites.

Little is known about the relations of the clansmen in Australia among themselves. From vague references by Howitt and others it would seem that they enjoyed mutual defence and responsibility. But offences were brought before a ceremonial court by whose decision blood-revenge was purged in a quasi-legal manner and, if resisted, ultimately involved the whole tribe in the blood-feud.

(e) Africa.—Another area in which totemism has been found is that large portion of Africa which is occupied by the Negro and Bantu races. Of the totemism of some of these peoples, particularly of the Negroes, our information is fragmentary. Concerning the Tsni-speaking Negroes of the Gold Coast we have on the whole most information. They are divided into totemic clans, or 'families,' of which the principal are twelve in number, viz., Leopard, Parrot, Palm-oil-Grove, Abadzi, and Dumina or Dwinina. The meaning of the names of the last two clans is uncertain. The last is probably to be considered a variant of one or other of the names, Naonna, or Bush-Cat, clan, and, according to some accounts, Abadzi, which may mean 'cannibal,' is another name of the Ntwa, or Dog, clan. About certain of the clans little or nothing beyond the name is known, and questions of identity arise on some of them. These difficulties are incidental to traditional lore where we are dependent upon natives who are not familiar with all the clans about which they have been made. The Red-tailed clan or leopard is sacred, though members of it are reported now to abstain from the flesh of all the felidae. No man may kill a leopard; if he were to do so by accident, he would exclaim, 'I have killed my brother,' and would put palm-oil on the wounds. If he sees a dead leopard, he must scatter shreds of white cloth upon it and anoint the muzzle with palm-oil, as a sign of respect and sorrow. If a dead leopard is brought into the town, the members of the clan smear themselves with chalk (a sign of mourning) and bury the body. If on a journey a member of the clan were to meet a leopard, he would turn back, but on the return of Bush-Cat, Dog, and Parrot clans abstain from eating the totem-animal. The Bush-Cat clan, it is said, abstains from killing not only a bush-cat, but also a crow, under penalty of sores on their bodies. Formerly, if they found a crow or a bush-cat dead, they would bury it, and with the crow a piece of white cloth, with the bush-cat a piece of speckled cloth. The traditional accounts which have reached us of the origin of these clans do not generally claim genetic descent from the totem.

One account states that 'people originally came from the earth, sky, sea, mountains, and the animals, etc., that came with them are their totems'; e.g., the Parrot clan came with the parrots on their heads; the Dog clan came from a river with a bough and with a dog carrying fire.

Other clans, fewer in numbers and conjectured to be of more recent origin, claim that they are descended from an actual animal which possessed the power of assuming human shape at will. In the case of two such clans tales belonging to the Swan Maiden type are told to account for them. The totem-animal is represented as 'grandfather,' a title of respect used in addressing the kings of Ashanti. It is supposed to help the clansmen in various ways; and restraint is said to be placed upon them to correspond to the great wishes of the tribe. There are no marks or devices distinguishing the clans; but, when a member of

the Leopard clan dies, the mourners (clansmen) make spots on their bodies with red, white, and black clay to represent a leopard, and scrape the figure of a leopard on the wall of the house and on the coffin. The Nsonna clan in the like case put white clay or white cloth round their necks, because the crow which the clan respects has a white neck. There is always a matrilineal and exogamous; and it has a common burial-place. There is said to be a belief that at death a clansman becomes or transmigrates into an animal of the totemic species, and, further, every clansman’s life is bound up with one such individual, so that, if it dies, he will also die.¹

The Bantu have for the most part advanced from maternal to patrilineal descent, though among some tribes we find an intermediate stage. This has not been without its effect upon their totemism, which in several ways varies from the pattern of true matrilineal totemism. The Bechuana, who occupy the centre of S. Africa, are divided into a number of independent ‘tribes’ generally called by totemic names and having totemic practices and beliefs. In many cases, however, these ‘tribes’ are not distinguished. The life always goes to reside with her husband, the result of the change to patrilineal descent is to collect the members of the clan together, instead of distributing them among individuals. The clan tends to be re-admitted to the geographical and political tribe. Every Bechuana tribe is ruled by a chief, whose totem is recognized as that of the tribe. The political conditions were such that before the European occupation the country was divided into tribes (probably 100) of Crocodile and Lion.¹

The Bechuana word for ‘totem’ is siboko, which has led Van Gennep to propose the name ‘sibokism’ to distinguish the S. African variety of totemism from that of the Bechuana.¹

Thus the Banok, ‘they of the perceptus,’ are reported to ‘sing,’ ‘eat, worship or revere’ that animal. ‘When they see any one maltreat that animal, they afflict themselves, grieve, collect with religious care the quills, if it has been killed, spit upon them and rub their eyebrows with them, saying: “They have slain our brother, our master, one of ours, him when we sing.” They fear that they will die if they eat the flesh of one.’ Yet they doctor a newborn child with it, mixed with the juice of certain plants.¹

The Bakusu, ‘they of the crocodile,’ call the animal their father; ‘they celebrate its festivals, they swear by it, and make an incision in the ears of their cattle, by which they distinguish them from others.’ They call it ‘one of them, their master, their father.’ Similar practices are recorded of other clans. ‘No one dares eat the flesh or clothes his hide with the skin of the animal the name of which he bears. If this animal is hurtful, as the lion, for instance, it is not killed without great precautions being made to it and its pardon being asked. Purification is necessary after the commission of such a sacrilege.’¹

The Ntata, ‘they of the lion,’ carefully abstain from touching his flesh as other people do; for how could one think of eating his ancestor? No one wears the chief dare to wear, like other chiefs, a lion’s skin by way of royal mantle.¹

2. J. C. Brown, F. D. James, Narrative of an Exploratory Tour to the N.E. of the Colony of the Cape of Good Hope, tr. J. C. Brown, Cape Town, 1840, pp. 176 ff.

But totemism is decadent among the Bechuana, and has been so for a period which probably dates from the coming of the European, due partly to the change to patrilineal descent, partly to the political conditions, and partly to the keeping of hordes of cattle, a custom that seems to have been adopted from the Hottentots.

America, Australia and New Zealand are the three chief areas in which totemism has been found widely spread and fully developed. It will be perceived that each of them has its own type, though with an overlapping in detail among the tribes and peoples. The remaining areas are India and Melanesia.

(d) India.—In India totemism is found only among the non-Aryan tribes, and chiefly among the Dravidians. Of these we may take the Orâons on the plateau of Chotâ Nagpur in Bengal as representing the type. Though they have to a great extent emerged from the hunting and pastoral stages of culture, totemism still forms the fundamental feature of their social organization in so far as kinship, marriage, and relations of the sexes are concerned.¹ They are divided into a number of exogamous tribes, or clans, each tribe is supplied by ‘the fauna and flora of their past and present habitats’; and to these, with the acquisition of a knowledge of agriculture and the use of metals, a few totems, or clans, have been added.¹ The animal and vegetable names amount in number to 62. There are also (probable of more recent origin) two mineral totems, those of Iron and Salt; two which may be called place totems, viz. Bandh, an embanked reservoir of water, and Jabb, a marsh or surface-spring; and two which belong to a class known elsewhere, called ‘split-totems’ as involving tabus of a portion only of an animal or vegetable, and frequently known by the name of that portion. Among the Orâons these split-totems are Anvim (rice-soup) and Kispôtâ (pig’s entrails). Sexual union within the totem-clan is reckoned incestuous, though at the present day, if a marriage takes place in which the rule is infringed wittingly or unwittingly, the offending pair, after paying a fine and giving a feast to the clansmen by analogy with the usual caste penalties in India, are formally re-admitted to the tribe and their union is thus legalized. The remaining ordinary totemic tabus are observed. ‘An Orâon must abstain from eating or otherwise using, domestico eating, killing, destroying, and the like, of any animal, plant, or other object regarded with fear and reverence.’¹

Thus members of the Faddy clan abstain only from eating the thin scum on the surface of rice-soup when left standing in a cool place; members of the Salt clan abstain only from taking salt; the taboo not extending to food or drink in which salt is an ingredient or flavour; members of the Iron clan abstain only from touching iron with their lips or tongue; members of the Fig clan are forbidden only to eat the head of the fig, and members of the Salt clan, if the fig clan is the totem, may eat the fruit whole, but not by dividing it in two.

On the other hand, the tabus of some clans have been extended to objects having a real or fancied resemblance to the totem or bearing the same or a similar name.¹

Thus members of the Tiger clan not only have to observe various tabus in connection with the tiger, and to refrain from eating the tiger’s flesh, skin, and so on, but also must abstain from eating the squirrel’s flesh, since the squirrel is striped like the tiger, and they must not cut trees in the month of Magh (December-January) because the name Magh rhymes with bâga, the Hindi word for ‘tiger.’¹

In this case the foreign word *touch* points to a late and highly artificial origin for such a tabu, which is obviously due to the timidity of superstition. Aveding a tabu is one that has been suggested to be due to the fusion of clans, just as some "split-totems" may have arisen from the opposite process of the division of clans.

The general attitude of an Orono to his clan-totem is that of a man to his equal—to his friend and ally,' though some periodical practices seem to indicate a more religious regard—at any rate for its efficacy. But totemism is now in decay, as it is over the rest of India. An unintentional breach of a tabu is no longer believed to entail any serious consequences, though looked upon with social disapproval. There is no difference between the clans in personal dress or adornment, nor is a man supposed to partake of the qualities of the totem. There are very few traditions of the origin of totem-names. Such as there are do not reveal any belief in the descent of the clan from the totem, but rather in some other relation between the totem and the human ancestor of the clan. The Orons are patrilineal.

*(c) Melanesia.*—In Melanesia (including New Guinea and the islands of the Torres Straits) there is a tendency to associate with the principal totem of a clan a number of subordinate totems which have been called "secondary," "subsidiary," or "linked" totemisms. The western islands of the Torres Straits have for many years been the scene of successful missionary enterprise. Under this influence the totemism which formerly existed among the people has almost disappeared. But twenty years ago there was a London Missionary Society Expedition, and a Cambridge Anthropological Expedition, who spent some time on the islands, were able to recover very definite evidence of its existence. The population was divided into a number of exogamous totemic clans. As a rule each clan had subsidiary totems in addition to its chief totem. ‘In some cases two or more clans might have the same chief totem, while differing in their subsidiary totems’—which looks like the fusion of an original clan. Members of a clan were distinguished by wearing an emblem of the totem, or more rarely bearing it in circlets or koloids on the flesh. Personal belongings also, it is said, were adorned with a representation of the owner’s totem. Descent was reckoned in the male line; but adoption seems to have been practised. In conformity with patrilineal reckoning there was a general and widespread division of the islands.

This, however, was apt to result in quarrelling; and the missionaries had accordingly succeeded in inducing the people, at all events of one of the islands, to abandon the localization of the clans.

"The solidarity of the totem-clan was a marked feature in the social life of the people, and it took precedence of all other considerations; yet still, there was an intimate relationship between all members of the same totem (clan) irrespective of the island or locality to which they might belong and even warfare did not affect the friendship of totem-brethren. Any man who visited another island would be looked after and entertained as a matter of course by the residents who belonged to the same totem as himself." 13

The clans were grouped in two classes or phratries. On the island of Malabing those two phratries were respectively known as 'the children or people of the Great Totem' and 'the children or people of the Little Totem.' The former comprised the Crocodile, Cassowary, Snake, and Dog clans, and the latter the Dugong, Shovelled Skate, Wolf, Sparrow, and Green Turtle clans (all water animals). On this island there is no sufficient evidence that the phratries regulated marriage during recent times; but there is reason to think that they were exogamous on some other islands. An Orono authority has been suggested as the first dugong or turtle caught, but might partake of those subsequently caught. They performed ceremonies to entice the animals to the island and ensure their continued presence. They could, on the other hand, by magical rites with the contrary intention, prevent them from coming. A mysterious relation was held to subsist between the totem and the clan. He was said to be 'all same as relation, he belong same family.' The Cassowary, Crocodile, Snake, Shark, and Hammer-headed Shark clans were reputed to be truculent and to like fighting. The peaceable clans were the Shovelled Skate, Ray, and Sucker-fish; while the Dog clan was sometimes peaceable and at other times quarrelsome—all like the totem-animal. Certain of the clans, possibly all, had formulae which they repeated in totemistic invocation. These might be either magical or in the nature of invocations to the totem. The prayer is in some stages of civilization near akin to the spell.

4. *Decadence of totemism.*—The foregoing examples will sufficiently indicate the chief characteristics of totemism in the five great areas in which it has been found. It is apparent that in each area totemism was by no means a new phenomenon. It arises in a low condition of savagery and is connected in its typical forms with patrilineal descent. But, even before contact with Europeans, it had begun to assume forms very divergent from what we understand by normal totemism, leading in some cases to degeneration and disintegration.

*(d) America.*—Among the discoveries found in N. America those of the coast-dwellers of the north-west are the most remarkable. The Tlingit, inhabiting S. Alaska, are divided into two exogamous phratries or classes, called after the raven and the wolf respectively; and two such phratries are again divided into a number of totemic clans. The members of a clan are believed to be related to one another more closely than to those of other clans even of the same phratrie. They reckon descent through the female line; but children are not gathered at one place, but distributed as social groups and not geographical. Yet each clan usually derived its origin (and most of them, at the present day, their names) from some village or camp which it once occupied. They seem, however, to have had alternative names (if F. Boas's account is correct) derived from the animal, or one of the animals, which they claimed as a badge. In point of fact the emblems or representations on the north-western coast, generally called totems, are rather badges or crests. The clans of each phratrie, indeed, all use the totem of the phratrie; they also use a number of other badges, some of which are the special property of the clan, or of some sub-clan, and are guarded with much jealousy. They carve and paint the badge on the so-called totem-poles erected in front of the dwelling-house, or on grave-logs. These poles are, however, less frequently erected by the Tlingit than by some of their neighbours. The badge is also exhibited on many other articles of property, worn on a mask or vase used as a dish, as a shoulder-patch, potlatches, and funeral ceremonies, and painted

1 Haddon and Rivers, op. cit., p. 151-152.
4 J. B. Swanton, *Rd REW* [1909], p. 407, suggests that these two phratries may have had a racial origin.
on the faces of the clansmen. It is not now held that the clan or phratry is descended from the totem or animal represented, though it may be suspected that in former times this was believed. At present stories are told by the clan or sub-clan claiming a badge of its acquisition by an ancestor through an adventure with the animal in question. Such animal being often conceived as of superhuman power.

As Frager points out, many of these tales have the true totemic character of the old folk-tales. The story of the totem is one narrative of saying that the present people are supposed to be descended from the totemic animals.1

Thus the wolf gene will pray to the wolves. "We are your good canny, don't hurt us!" But notwithstanding this fact they will hunt wolves without hesitation.2

The truth is that the more or less permanent settlement of all the tribes along the coast—at least from the Tlingit to the Kwakwktl—in villages and their increasing civilization, have led to the division of the population into ranks or castes and to a continually higher value being set on the crests or badges as marks of rank and wealth, and as symbols, if not guarantees, of descent from a distinguished ancestor. This has resulted in an accumulation of crests, some clans or sub-clans obtaining a larger number than others; and some of these crests are used by more than one clan.

The great majority of Tlingit personal names referred to some animal, especially that animal whose emblem was particularly valued by the clan to which the bearer belonged.3

Of these names many seem to have been peculiar to one or other of the clans. The solidarity ordinarily subsisting between members of a clan is found even among the Tlingit, rather between the numbers of a phratry.4

According to the unwritten Tlingit law it was incumbent upon everyone belonging to a phratry to house and feed any other animal and a member of its clan is considered related to him from how great a distance he might come; and it was a mark of regard in the community, therefore of high caste, not to abuse such hospitality.5

Any serious collision at a potlatch arising out of the rivalry of opposing parties of dancers was avoided or stayed by the hosts' people, who rushed between them bearing the emblem of their phratry or making the call of the animal whose name was that of the phratry. When a man died, the funeral ceremonies were conducted by the opposite phratry, who were afterwards entertained at a mourning feast by the relatives of the deceased. On the whole it may be conjectured that the two phratries represent original totem-clans, out of which the existing clans or groups, whether social or local, have developed. There was also reckoned among the Tlingit population a small group at Sanya, called the Nevaldi ('People of Aaw'; a creek in the neighbourhood), who stood outside both phratries and might marry into both. They bore the Eagle crest or badge and had personal names having reference to the eagle. They were doubtless a small intrusive population, which Swanton, the latest investigator of the Tlingit, suggests as perhaps of Athapaskan derivation.6

Coming down from north to south along the coast and islands of Alaska and British Columbia, we find a similar organization, differing however in detail, among the various peoples, with an increasing emphasis laid on rank and the possession of crests, until we reach the Kwakiuti. The totemic groups (Southern Kwakiuti), as they are often called to distinguish them from the Heiltsuk, their northern congener, are organized in tribes, which in turn are subdivided into

1 Report of 50th Meeting of British Assoc. 1898, p. 819.
3 T. B. W., pp. 256-419.

exogamic groups distinguished not, as a rule, by ethnic or totemic marks, but by the name claimed as that of an ancestor, by geographical names, or by 'names of honour.' The evidence seems to show that they are neither definitely patrilineal nor matrilineal in descent, but in a state of transition, since a child may belong to any 'clan' or exogamic group to which one of its ancestors belonged at the arbitrary discretion of its parents. Each exogamic group, like the ordinary kinship or social order of the tribes east of the Rocky Mountains, had a number of personal names appropriated to it; and to assign a child to such a group it was enough to give it one of these names. In this way it appears to have become ipso facto a member of the group; it might even belong to more than one at the same time. What was more important in Kwakiuti society was the possession of crests and the privileges that they carried. These were obtained in three several ways: (1) they might be inherited by direct patrilineal descent from an ancestor who acquired them through an adventure in the course of which he obtained the protection and guidance of a monasie, or spiritual helper, for himself and his descendants; direct inheritance of this kind, however, was comparatively rare; (2) more usually they were obtained by purchase; the payment of a price secured not only the bride, but also the right of membership in her 'clan' or exogamous group, the crest and privileges of the bride's father, and a good deal of other property; (3) the third method was to obtain them by killing the owner, as in the case of the position and privileges of the King of the Wood of Nemi. The privileges include not only the use of the crest but also the right to the membership in certain societies and the ownership and exclusive right to practise certain dances connected with the ceremonials of the societies. They are, however, not acquired for the benefit of the son-in-law in the case of marriage, but for his successor, whoever he may be. Seeing, moreover, that the number of noldmen is fixed, and there is only one person at a time who personates the ancestor and has his rank and privileges, the person entitled must wait for a vacancy before he can be admitted to them. He may wait in vain; for before a vacancy occurs the owner may change his mind, or even after the person entitled has obtained the privileges he may change them and confer them upon some other successor.

This is manifestly not totemism, for the societies operate only during the winter, when they dominate the social organization to the exclusion of the kinship and local groups. It may have been influenced by true totemic conceptions, from which it may even have sprung. But its cause must be sought in the increasing power of wealth, the consequent development of rank, and the desire for display.1

The transformation that thus seems to have overtaken totemism among the Kwakiuti is in process also among the Pueblo tribes of New Mexico and Arizona. Here the case is different. In these tribes, originally organized in totemic clans and phratries with matrilineal descent, the struggle for existence in an arid country has evolved a sense of dependence upon the supernatural powers and a religious ritual and elaborate ceremonies, partly religious and partly magical, for the protection of man and womankind. At first these ceremonials appear to have been performed by the appropriate clans, as we have found in other areas. In some cases they are still, as among the latter, but sided and supported by the priests of the various deities. In other cases
as among the Hopi, the Snake clan has been superseded for this purpose by an 'order' or society, the members of which are probably at the beginning recruited exclusively by the clan. The rule is not somewhat less strict, embracing others besides members of the clan, though the members of the society are limited. In fact the latest inquiries appear to show that the societies or fraternities hold inwardly away a totem quite independent of the clan organization.  

(b) Australia.—Turning to Australia, we find that among the Central tribes the totemic clans have been divided by a religious division of labour, so that complete conversion into societies performing magico-religious rites, the object of which is the multiplication of the totemic animal or plant. The Warramunga hold that the totem-clans originated each from a single ancestor, half-beast, or half-plant, from whose body emanated a number of spirit-children; and the descendants of the clan are all animated by these spirit-children. The ceremonies are here performed by the clan in a definite order, representing in dramatic fashion the traditional history of the clan. The Warramunga and the tribes to the north of them are definitely patriarchal and exogamous, the male members of the clan in every generation are believed to be continual reincarnations of deceased ancestors. The Arunta, on the other hand, have ceased to regulate their marriages by totemic exogamy and now regulate them solely by class-divisions consisting of the pristine moieties of the tribe, which have been doubly subdivided, so that they are now eight in number. There are various places in the territory of these tribes which are centres believed to be haunted by the spirit-children of the original ancestors. One of these spirit-children is held to have entered the body of every pregnant woman, according to the totemic centre near or at which she first felt herself pregnant. In this way the 'clan' of the child is ascertained, and in no case does it depend upon that of the father or mother. The resulting group passing under a totemic name is clearly no true clan.

There is no such thing as the members of one totem group being bound together in such a way that they must combine to fight on behalf of a member of the totem group to which they belong.

Inasmuch as every death is supposed to be due to witchcraft the body has to be taken by somebody. Normally this duty would fall on the nearest kinsman of the deceased. But among the Arunta it would seem to be the members of the local group who undertake it.

In fact," say Spencer and Gillen, summing up the subject, 'it is perfectly easy to spend a considerable time amongst the Arunta tribe without ever being aware that each individual has a totemic name; but the fact of his belonging to one or other of the divisions governing marriage is soon apparent. These groups thus passing under totemic names perform under the direction of their respective headmen from time to time, as the headman concerned decides, the ceremonies known as intichiam. These ceremonies are not, like those of the Warrumunga, the property of the entire group, but each of them belongs to a specific individual, who alone has the right of performing it or of requesting others to do so. One consequence of this is that they are not performed in a definite season; they are fragments and may be given in any arbitrary order. They have ceased to be a representation of the traditional history of the group; they have become mere magical rites. Further, in some tribes both south and north of the Central group, consisting of the Arunta and their immediate neighbours, a man is forbidden to kill, injure, or eat his totem. In some of the tribes, although pathologically it applies more or less absolutely to the totem of the clan-man's mother—probably a relic of an older matrilineal condition. Among the Arunta, however, there is no such prohibition. Indeed the members of a totem-group are expected to eat of the totem during the ceremonies; and they have liberty to do so at other times, though only sparingly. The conclusion from these and other facts is irresistible that the Central tribes of Australia are finding their way out of normal totemism, and that of these tribes the Arunta and their immediate neighbours to the north (the Kaitish, Unmalja, and others) are the farthest advanced in the road. Their totemic organization is not merely decadent; it is obsolete. Such remains of it as persist are preserved only as societies held together for the performance of certain magical or religious rites and as the carriers of certain religious traditions, but no longer as organic social groups.  

But decadent totemism often takes another course in its transformation. In most totemic systems the customary process of initi- 

ToTOTEMISM

1 The various minutely detailed accounts of the Pueblo Indians and their ceremonies have been admirably summarized by Frazer, Ill. 100 ff.

19 Spencer-Gillen, pp. 34, 131-327, 167-211, 467-473; Spencer- Gillen, pp. 142-235.  
by the women and other non-initiated that they are put to death and brought to life again. They are instructed in the religious, personal and moral rules to which they must in future conform. Various prohibitions are enforced during and after their retirement. If approved for the purpose, they may become fetish-votaries or medicine-men; otherwise they become simply adult men, ready to take part in public life. This is obviously little more than the puberty rites of ordinary totemic societies. There is reason to think that the Nkima tends to become more marked in its purified view. Those who have passed through it have acquired a character in some degree sacred and mysterious; a special tie is established between them; they regard one another as brothers and render mutual aid. Another society called Ndenbo, often confounded with the Nkima, exists on the Congo.

A Ndenbo is not held periodically, but once is established whenever the elders of the village direct. It appears to have a specially sexual aim: men and women are admitted, and sexual licence is said to be encouraged in the camp; and to such a length is the comedy of death and resurrection carried that, on returning after the conclusion of the ceremonies, those who have been subjected to them pretend to have lost all remembrance of their previous life, act in the most foolish manner, and are only gradually recalled to the sacred and sacred objects. The object of the Ndenbo appears moreover to be more specialized, more definitely magical, than that of the Nkima. It seems probable that at least some secret societies have been developed from, or at least deeply influenced by, the initiatory rites of totemic tribes.

The Herero of S.W. Africa, who have been massacred and almost entirely destroyed by the Germans, offer a peculiarly difficult problem, not yet entirely solved. They were divided into clans called enada (plur. omwanda) reckoning descent exclusively through the female line.

A tradition of their origin is related, deriving it from a pair who emerged from the trunk of an omborobonga tree in the far North, whose children were all daughters fructified by contact in some way or other with various objects of the external world. These objects became the totems of their descendants. Among them may be enumerated the sun, rain, the tree, the marmot, the koodoo, the chameleon, becoming or assumed by them in whatever way the names in dispute. The members of an enada called themselves brothers-in-law (not brothers) of the totem. The blood-feud attached to the enada, which moreover, like the enada itself, was exogamous. Side by side with the enada stands another organization, apparently of more recent origin, the oruo (plur. oruwo). The oruo descends exclusively in the paternal line. It is also totemic; and among the totems appear the chameleon, the sun, the koodoo, rag, necklace of beads. The members of an oruwo are distinguished by the mode of dressing their hair, by their food-tabs, and by special locational regulations. The colour and shape of the horns of the cattle which an oruwo possesses also differ from those of every other oruwo. The institution of the oruwo is attributed to the medicine-men; and there can be little doubt that it is special religious organization for the maintenance of the sacred fire of the family and the worship of ancestors. All cattle belong to the oruwo, for the Herero are a pastoral people, and a cattle constitutes of cattle until the Germans deprived them of their stock. The cattle never descended to or through females, at all events if there was a male descendant to it. The food tabs of the Herero are probably not all totemic badges or signs. The totemism prevalent among them is thus widely divergent from the African type. Its twofold organization is manifestly the result of a conflict between matrilineal and patrilineal institutions. How that conflict originated is obscure; but it is obviously not unconnected with the growth of ancestor-worship and the introduction of cattle among a hunting and perhaps rudely agricultural people, and the consequent changes of mode of life and social arrangements. The country which they now inhabit is semi-desert, almost desert, and quite unsuitable for agriculture. After the rains there is for a time an abundant pasture, which at other seasons must be sought in the deep and sheltered dales with which the land is intersected. The change to pastoralism may be supposed to have occurred when or shortly before they penetrated to their present possessions, not probably more than five or six centuries ago. The consequent development of their institutions is even yet incompleteness.

At the other extremity of the area occupied by the Bantu are found the Baganda, the most highly civilized of the race. They were governed by kings probably descended from a Hamite stock which conquered the country seven centuries ago.

'The Baganda are divided into a large number of totemic clans, the members of which observe the two fundamental customs of non-consanguineous marriage and not to injure their totem and from marrying a woman of the same clan.' Each clan has a principal and a secondary totem, and takes its name from the former. 'Both totems are sacred to members of the clan, who may neither kill nor destroy them. Other people, notably the nomadic tribes, have no connection with these objects, or even of such a purpose, without hurting the feelings of members of the clan.'

The Baganda trace their lineage in the male line; but a woman's children were taught in infancy to respect her totem and to avoid them. When they grew up, they adopted their father's totems and ceased to regard those of their mother. Yet they were forbidden to marry into their mother's clan. For these and other reasons it seems clear that descent had originally been reckoned in the maternal line, and that, as in the case of the Herero, though on different lines, the transition had been recently and incompletely effected. Like the clans of certain American tribes, each clan had special names appropriated to its children; hence the clan to which a man belonged was recognized by his name. The king had a large harem. His children, however, especially his daughters, were regarded as the property of their mother; and it was naturally deemed an honour for a clan to give a king to the realm by means of the union of one of its female members with the king. From this homogeneity, the earlier races were excluded for reasons which are now unknown. To obviate this some of the excluded clans joined more favoured clans, so that their daughters might marry the king and have children who might be in the succession to the throne. Another reason for the union of clans was to better the position of a despised clan. Clans so associated obtained the right to use the totem of the more honourable clan; yet they were so little regarded as relations by the members of the latter that intermarriage between members of the two clans was not forbidden. The French king, and (least of all) was also in an exceptional position in that it is in the institution not subject to the rule of exogamy. The totems are usually some species of animal. A few species of trees and other vegetables are found as totems, besides certain other objects. The Baganda, like the other Baganda, are a pastoral people, and their articles of commerce are cattle until the Germans deprived them of their stock. The cattle never descended to or through females, at all events if there was a male descendant to it. The food tabs of the Herero are probably not all totemic badges or signs. The totemism prevalent among them is thus widely divergent from the African type. Its twofold organization is manifestly the result of a conflict between matrilineal and patrilineal institutions. How that conflict originated is obscure; but it is obviously not unconnected with the growth of ancestor-worship and the introduction of cattle among a hunting and perhaps rudely agricultural people, and the consequent changes of mode of life and social arrangements. The country which they now inhabit is semi-desert, almost desert, and quite unsuitable for agriculture. After the rains there is for a time an abundant pasture, which at other seasons must be sought in the deep and sheltered dales with which the land is intersected. The change to pastoralism may be supposed to have occurred when or shortly before they penetrated to their present possessions, not probably more than five or six centuries ago. The consequent development of their institutions is even yet incompleteness.

3 Vol. XI., p. 26
TOTEMISM

faeture; and 'split-totems' and other anomalous totems (as a tailless or a spotted cow, and rain-water from roofs) are not unknown. Notwithstanding the existence of a system of law and administration of justice, the sense of clan-solidarity remained strong. The blood-covenant was practised and was considered more binding than common oaths. Murder was rare; but cases of murder and theft, when they occurred, were taken up by the clan. The clan of a murdered man might accept and share a fine, instead of insisting on the punishment of death; and, on the other hand, the clan of the wrong-doer contributed to the payment. 'When a member of a clan wished to buy a wife, it was the duty of all the other members to help him to do so'; when a person got into debt, or was fined, the clan combined to assist him to pay the debt or fine. Thus the totemism of the Baganda, while preserving many, if not most, of the essential features normally present, departs widely from more typical totemism. The religious, the sense of clan, the sense of not quite absent, has fallen into the background before polytheism and the cult of the dead. The kingship and the organization of the kingdom have been imposed by a non-Bantu conquering people, which has broken all of the old totemic class, into groups assimilated by the bulk of the people when the English occupation took place. This people probably introduced domestic animals, some of which have become totems; and its influence is perhaps also to be traced in the 'split-totems.' Secondary totems are met with elsewhere, as we have seen.

Totemism is decadent also among the tribes of the Congo. If there manifests itself chieftainry in tabus, though totemic tabus are only a few of the tabus observed. Among the Bangala of the Upper Congo the totem-animal may not be killed or eaten. A woman after marriage observes her husband's totem as well as her own. A child born to them takes the totems of both parents, until a council of both families determines which totem it is to take permanently—usually the father's. The Bangala are patrilineal.4

(d) India.—In continental India the decadence of totemism has been caused chiefly by the spread of Hinduism, and with it the extension of the caste system. The origin of caste has not yet been entirely cleared up. Within the Hindu caste system it is largely, if not mainly, occupational. As applied to the Dravidian and other races of the peninsula, it is transforming, or has transformed, independent tribes and castes, and by the mixing of some of them doubtless consciously forged to manufacture claims, these tribes have succeeded in gaining religious and often strongly contested admission as castes into the Hindu social hierarchy. The Reddi or Kupu, the largest caste in the Madras Presidency, are probably descended from a Dravidian tribe which in the early centuries of our era was powerful in India. They are now a great caste of cultivators, farmers, and squatters in the Telugu country and rank next to the Brâhmans in Hindu society there. They are divided into a number of sections, for whose names fanciful etymologies have been found, and for some of them legends have been invented. One of these sections, the Panta Kâpuss, are again severed into two endogamous divisions. But they are said also to have true totemic septs, of which the following are examples:

1. Magili (Pandanus fascicularius): the women of this sept do not, like those of other castes, adorn themselves with the flowers of this tree. This habit is said to have come down to refuse to purchase some bamboo mats, because they were tied with the fibre of this plant; (2) patur (Cassia tora): this tree and its products must not be touched by members of the sept; (3) Pachulis (Scrophularia): these seeds may not be used or touched by members of the sept; (4) Ficus (water-melon): the fruit may not be eaten by members of the sept.

Moreover, the names of various exogamous Kâpân septs are suggestive of totemism, such as the Cow, Grain, Buffalo, Sheep, Fowl, Goat, Elephant, as well as various other plants of common occurrence such as Cart, Army, Hut, Harrow, Woman's Skirt, Plough, are more doubtful. This is not an uncommon type of caste. It suggests that the caste is in question is an exogamous tribe, and that the restrictions of the caste originate from totemic clans, many of which retain their totemic names and some of their tabus, though other subdivisions have forgotten them or originated in a different manner. The Kângars are a low caste of village watchmen and deer-hunters in the Central Provinces, almost certainly of non-Aryan origin. They are divided into numerous exogamous septs, all of which are said to be totemic. The members of the sept usually show veneration to the object from which the sept has taken its name. Thus the Bâra sept is named from bâra, 'pig'; this sept worshipping the pig; the Chini from chiya, 'bird,' this sept revering sparrows; the Giygoti from giper, 'horse,' towards which the members practise certain observances; the Kasgogot from kusus, 'bel-meta,' which is tabooed by the sept; the San from san, 'hemp,' pieces of which are placed by the sept near the dwelling place of the god. The Hanumã sept is so called from the monkey-god, and the Vâgu sept from Vâgu, 'god,' worshipped by it.

In the United Provinces there are also many tribes and castes, probably of Dravidian origin, among whom totemism is traceable. Such are the Agariya of Mirzapur, who have seven septs, all totemic and apparently of totemic origin; the Mâkâmân named from the tortoise, which the members will not kill or eat; the Gôrôt from a certain tree which they will not eat; the Parawâm from a tree (Butea frondosa) which they will not cut and whose leaves they will not use for platters; the Sanwâm from hemp (sân), which they will not sow or use; the Barâgâr from a tree (Ficus indica) which they will not cut or climb and from the leaves of which they will not eat; the Bûnjakâr, said to be named from bûnj, 'frog,' which the members of the sept will not kill or eat; and the Gihîb, the members of which will not kill or even throw a stone at a vulture (gihî). The Agariya are patrilineal; and they have been deeply influenced in other ways by Hinduism. Indeed they call themselves Hindus in religion, though they worship none of the regular Hindu deities. There are, however, traces of a previous matrilineal condition. They practise tattuing, and many of the marks inscribed on their bodies are probably totemic in origin, but the real meaning has now been forgotten, and their impression is now more as charms to resist disease and other misfortunes, and for the purpose of mere ornament. The social and political conditions of India are such that almost the only possible relics of totemism consist in the names of the septs and the prohibitions of marriage within the clan and of eating, killing, or using the totem. Hindu influence leads to the exorcism of descent to human beings rather than to animals or plants, concerning which tales are told to account for the totemic name and observances. The organization of the tribe or caste by means of a council and the police regulations render it unnecessary for the union to continue for mutual protection. Hence, and owing to the universal tendency of caste to subdivision, the sense of solidarity is greatly weakened and is daily decreasing.

(e) Melanesia.—There are signs that totemism was developing in the islands of Torres Straits into an anthropomorphic cult. Traditions are found of culture-heroes associated with various clans. Sigai and Maiau of the island of Yam appeared first in the likeness of a hammer-headed shark and a crocodile respectively. For each of them a shrine was erected, the essential feature of which was the stone representing either a hammer-headed shark or a crocodile; under each of these was a stone in which the spirit, the so-called augud (‘totem’), resided.

Unmarried persons were not allowed to visit these shrines, nor did they know what they contained; they were aware of Sigai and Maian, but they did not know that the former was a hammer-headed shark and the latter a crocodile; this mystery was too sacred to be imparted to uninitiates. When the heroes were addressed it was always by their human names, and not by their animal totem names. "Each was associated in his animal form with one of the two piranhas or groups of totem-clans. When before going to battle prayed to them. Totem-dance was also performed. Both in the exterior and in the interior of each to which they belonged. On Mabuig and Muralug the hero was Kwoiam, a warrior-hero, who himself was called an augud. In the Muralug group of islands he was the big augud and the augud of every one in the island."

He is said to have made and worn two crescentic objects of turtle-shell, which blazed with light when he wore them at night-time, and from which he nourished the children of cooked fish. These objects were termed augud;... and they became the insignia of the two piranhas into which the old totem-clans of Mabuig were grouped. "When attacking an enemy the warriors formed into two columns, each of which was led by a head-man who wore the Kwoiam emblems." Like Sigai and Maian, he possessed a sacred shrine. It was situated on the island of Fohn; there his crescentic emblems were kept, and these they were taken with certain ceremonies to be borne before the appropriate phratry in war. "A similar evolution has been observed in Fiji..."

‘The people of the interior of the island [of Viti Levu] form a number of independent communities which may probably be regarded as tribes, and each of these has a number of divisions and subdivisions, which in the relatively high development of Fijian society have departed widely from the character of the separate tribe. The Polynesian-aboriginal community is replaced. The animals from which descent is traced, and whose flesh is prohibited as food, are usually associated with the larger groups which therefore tend to replace the former. The divisions of the tribe often have sacred animals or plants peculiar to themselves in addition to those which are tabu to them as members of the tribe."

Rivers goes on to give examples. The tabued animal of the people of Cawana is an aquatic creature called the dra-nara, from which they believe themselves descended; and none of the divisions have restrictions peculiar to themselves. The sacred animal of the Nodrau or Navuta people is the kigilaga; some of its divisions have restrictions peculiar to themselves, the Wallawa division eating neither the dog nor a fish called daban, the Kalivui respecting the snake. Other animals were held sacred in other parts of the island, the people wearing in their dresses wigs formed from the tabu animal of the tribe, sometimes from that of the smaller subgroups. Marriage is regulated by kinship alone, and there is no evidence of any system of totemic exogamy. Of the most significant that this kind of totemism is widely divergent from what is usually reckoned normal totemism. Nor is this to be wondered at, seeing how far Fijian civilization has progressed. Yet it presents "the three characteristic features of the institution: belief in descent from the totem, prohibition of the totem as an article of food, and the connection of the totem with a definite unit of the social organization."

Tribes and Cities of W. X. Provinces and Osth. papua; and the other objects referred to in Crooker’s collection of totemic observations. Cf. also Crooker’s observations in P.R.G ii. 148-155.

2 P. 134.

... among these hill-tribes ‘that the sacred animals had become gods, which had, however, retained their animal form definitely.’ Certain rules of totemism are due to the Nadians of Viti Levu. They would not eat porpoises. They regarded the kigilaga showed an early stage in the evolution of a god from the totem-animal. In the kivas in the low country things had gone further, for the ordinary and sunken, a name which usually showed no sign of an animal origin, has become impregnated with notions of the totem clans, and the name of the totem-animal is passed along and turned into the skins of the animal. Thus the people of Lasakau, who descended from a totem-clan which was impressed with the idea of catching a bird called toe. ‘The bird could not be eaten, and, as in the hills, it was clear that the restrictions were imposed on the whole people and was not limited to either of the two divisions of which the Lasakau people were composed.’ These are the only cases which he mentions; but they are probably enough to render the evolution plain.

It is almost unnecessary to remark that totemism may decay, especially when it comes under European influence, by simple neglect.

Thus the Winnebago, a Siouan tribe of N. America, tracing their descent from animals which were transformed into human beings and became ancestors of the various clans, treat the totem-animal in no way differently from other animals, hunting it and eating it, feeding it, and protecting it, and used always to take a name of his father’s clan; but this is falling into desuetude. The reckoning of descent has become irregular; and the relation between the division of the clan and the division to which it passes out of clan-possession.

Thus, in the Descent of the clans was all totemic. Descent is paternal. Clan exogamy is still observed by many of the clans, but not by all. Some, like the Blue Wild-Cat clan, regard the totem-animal as brother. But many of the clan names have ceased to be totemic, and the clans have become, or are becoming, numerous groups. The clan name is no longer taken as a personal or family surname under modern conditions.

Such cases may be found elsewhere than in America.

Traces of totemism among non-totemic peoples.—Over a large area of the globe, embracing Europe, the greater part of Asia, S. America, and Polynesia, the north of Africa, and the extreme north of N. America, inhabited by the Eskimo, totemism is now unknown. But among many of the peoples of these regions certain beliefs and practices have been reported which seem to bear traces of a former prevalence.

(a) Polyneis.—Rivers’ discoveries, just referred to, in Melanesia find their analogies in Tonga and Tikopia.

In the former he learned that ‘each family had its otsa (a Polynesian word for a written or unwritten totem). It was the name of an “ancestor”, some of which were animals and some stones, and while a man might have a name derived from one of these with the otsa the turo, the flying fox, and the pigeon... An animal was never eaten by those whose otsa it was, and I was told: he says, that this is the definite totem of the family and of the animal.” Similarly on the island of Tikopia he found a number of animals which were the totem of the tribe. These animals belong to the whole community and may be eaten by no one on the island; others belong to one or other of the four sections into which the people are divided. Thus the totem of the eighth is the iau of the Rakia; but it is forbidden as food not only to them but also to the whole people. The Tasmano may not eat the seal or a bird called rupe—prohibitions limited to this division of the people. The Fangieule may not catch an eel. The Tatau may not eat the fresh-water eel, the flying fox, or the turtle, the two latter “being also prohibited as food to the whole community, though regarded as especially sacred to the Tatau.” There was also evidence that the Rakia were believed to be descended from the octopus, the Tasmano from the seal, the Tatau from the flying fox, and it was believed that one man of this division became after death a fresh-water eel, while two men of the Fangieule became the one an octopus, the other a moke bird. There are also plant and vegetable autes, to which corresponding restrictions attached.

Thus there is evidence that this totemism had at one time existed and had left traces attributable to no other cause. Elsewhere in Polynesia there are relics more or less distinct of the same condition.

(b) Egypt.—We are naturally reminded of Egypt. The origin and early development of Egyptian religion are obscure. What we find is that in the earliest period known to us by the
monuments each nome or district had its own peculiar object of adoration in some animal, which was regarded with indifference or, in consequence of local quarrels, with hostility in the adjacent nomes. Moreover (in spite of changes during the country's long history) in spite of the evolution into higher polytheism and of the syncretism which gradually won its way, at all events among the educated classes), the same attitude towards these animals corresponded to the end. One nome venerated the ibis, one the crocodile, one the cat, one the gnat, one the ram, one the oxoryxynchos fish, and so on. Some of these are domesticated animals; in the earliest period, however, domesticated animals do not appear. The monarchy seems to have been introduced by a people which invaded Egypt and conquered the aborigines. The invaders carried the standard of a falcon, from the name of which (heru) that of Horus, later regarded as the last of the gods who reigned over Egypt, is derived. When the objects of adoration took human form, becoming anthropomorphic gods, these were also domesticated, and are represented on the monuments with the heads of the appropriate animals. The animals remained sacred, as their numerous mummies attest; and various legends were told to account for their relations to the protective gods, in which case the cat was venerated, the goddess Bast had her seat; Ombos, where the crocodile was honoured, was the sacred town of the crocodile-headed god, Sebek; the ram-headed god, Khnum, or Ammon-Ra, was worshipped at Thebes, and there precisely was the place where the sheep was revered. As a result of the unification of the country under the kings, syncretism in theology spread, and the various gods tended to be identified with one another and with the animals honoured in the different towns. At length the myth and worship of the culture-hero, Osiris, prevailed throughout the land; and his myth included a story of how the various gods fied, 'disguised in brutish forms,' from the rage of his enemy Typhon. In short, all sorts of devices are adopted to account for the local gods and animals venerated in the different cities and districts and to unify the religion. These devices were probably known to, or at least accepted by, the educated classes only. All the other classes remained attached to the old gods. The evidence points to the prevalence at one time in the valley of the Nile of a form of totemism, which possibly included various trees and other vegetables (for these, though less prominent than animals, are not unknown in Egyptian religion), and which by a series of steps was slowly merged and elevated into a polytheistic worship tending ever in the minds of the educated more and more to monothelism.1

Of the original social organization, however, we know little beyond the fact that it was monarchical. The woman was mistress of the house; the husband on marriage was received as a guest or went to reside with her. Those men who could afford it kept harem, the members of which were under the governance of the chief wife. It is a probable conjecture from the available information that society was constituted of clans, in later ages directly or indirectly giving birth to trading and other guilds. The custom of the husband going to reside with his wife secured the local concentration of the population, and facilitated the reformation of the clan-settlement into the nome and the dominance of a single animal-totem in each nome.2

All this was doubtless the result of the agricultural occupations of the people. What were the relations of the members of the clan to one another or to the totem we are not informed.

(c) Greece.—Scientific controversy has raged over the question whether totemism is directly or indirectly observable in ancient Greece. Salomon Reinach, Touxan, and Van Gennep have been the protagonists. Andrew Lang pointed out the various kinds of totemistic relations in various peoples;—in Thessaly the Myrmidons claiming descent from the ant and revering ants; in the Trood and the islands the mice sacred to Apollo Smintheus and a tribe referred to by an oracle as mice; the adoration of the wolf at Delphi and Athens and of the sheep on Samos; the descent of Tenes, the hero of Tenedos, from a swan; the invocation of Hecate as a dog and the sacrifice to her of a dog;3 the Arati of Arcadia, identified with Calliste, a nymph who is fabled to have been metamorphosed into a she-bear, from which the Arcadians claimed descent; the similar tale of the Brauronia of Athens, where little girls called bears, dancing with the gait of bears and probably in archaic times wearing bear-skins; and a hundred other such myths, rituals, and metaphors.4 Nor has he been alone in discerning that such types of primitive totemism have been outgrown and misconstrued before the dawn of authentic history. The social organization of Athens has also been examined. The ἀγάπατοι and ἀγάπηται have been pronounced parallel in all essentials with the organization of the Australian totemic clan and phratry.5 There are good reasons for suspecting that originally matrilinial descent was the rule, of which vestiges subsisted down to historical times.6 Though this view has been challenged,7 and it is undoubtedly agnostic descent prevailed in historical times, the suspicion is not without solid foundation. Probably the pre-historic population of the period called the Mycenean age was matrilinial and was conquered by a patrilinial military people from the north, who formed the dominant classes in the Homeric age, and under whom Greek society was transformed and reorganized. On the whole we are justified in accepting with L. R. Farnell the theory that various remarkable cults—the Arcadian worship of Zeus Lyceus and of Artemis Calliste, the Athenian worship of Athena nike, the Attic worship of Theseus, and some others—can be explained only by a survival of what is in effect totemism.8 But, if so, then other cults and myths of which the connecting links have been lost may with the more likelihood be assigned to the same origin.

(d) Ireland.—Over the rest of Europe the traces of totemism are still more uncertain. They will be found, as in Greece, if at all, on the side of belief and practices which may be called quasi-religious rather than in social observances such as marriage restrictions; or under the dominance of Christianity and the social ideas, Hebrew and Roman, carried with it. History has been shaped for two millennia. In Connemara and the islands off the west coast of Ireland persons bearing the name of Conneely, who are descended from the clan Conneely, an old family of In-Connaght, claim 'that they have seal's blood in them, and that is why they are such good swimmers.'9 A story is told of some members of the clan who at a distant period went out into sea and claimed that the clan Conneely can kill a seal without afterwards having had luck.

Sole is said to be regarded with profound veneration. They are called Conneelys, and are said to be the souls of departed friends. We are told that "in some places the body has its name, or a part of it, cut off from the body."

Both in Ireland and in the Scottish isles are stories of clanns which pets which pertain to an extinct totemism as the best explanation; and the same explanation has been offered, with more or less probability, of various beliefs and practices in Wales and England as well as in other European countries.

(e) W. China.—In W. China among the Lolois, an aboriginal mountain people of Szechwan, there is something more than traces of totemism.

Their "surnames always signify the name of a tree or animal, or both tree and animal," and "these are considered as the ancestors of the family bearing the name. This name is often arithmic. Thus the surname Bu-luh-buh is explained as follows—Bu-luh is said to be an ancient name for the citron, which is now known as bu-luh. The common way of asking a person what his surname is, is to inquire "What is it you don't touch?" and a person of the surname just mentioned would reply "We do not touch the bu-luh or citron." People cannot eat or touch in any way the plant or animal, or both, which enters into their surname. The plant or animal is not, however, worshipped in any way.

People of the same surname may marry if there is no obvious relationship on the part of either to any other person of the same or three surnames amongst whom intermarriage is forbidden; and no explanation of this is given. There are also groups of three surnames who are called comrades, and intermarriage amongst them is favoured.

The Chinese themselves are on a higher plane of civilization and totemism is unknown. But from sundry prohibitions its existence has been suspected. Among some other peoples of S.W. Asia and various islands of the Indian Archipelago totemism has been either found or suspected. In Madagascar and in the Polynesian islands a number of superstitious have a sanctioned with more or less probability to an original totemism no longer forming part of the social organization.

(f) America.—In Central and South America totemism is unknown. But from sundry prohibitions its existence has been suspected. Among some other peoples of S.W. Asia and various islands of the Indian Archipelago totemism has been either found or suspected. In Madagascar and in the Polynesian islands a number of superstitious have a sanctioned with more or less probability to an original totemism no longer forming part of the social organization.

Central and S. America is known under the name of nagualism (Quicke, *nagual*, 'the knowing one,' or 'sorcerer'), in which some natural object, commonly an animal, is believed to have a parallel relation with a human being, so that for well-being, good health, or for the protection of the dead, it is necessary to have an acquaintance with or a knowledge of the meaning of the animal. Thus the *nagual* is a purely personal acquisition and is not inherited like the *sulitla*. It should, however, be pointed out that neither the belief of the Bororo nor the *nagual* or *nunali* of other tribes has the marks of true totemism. It has no relation to a clan, nor is it in any way related to the social organization: where the *nunali* descends, it is only to the children of remoter issue of the original possessor, and in such case the descent has only been taken place under the influence of patrilineal kinship.

(q) Australia.—In Australia among the Kurkuri and some other tribes of the south-east the two sexes have animals respectively regarded as their protectors, with whom the life of individual members of the sex is supposed to be bound up. Fights between the sexes occur to a lesser extent than between the sexes of other tribes, and the result of such fights is usually to the advantage of the male. The same animals are often called, as a rule, or alternately, by a common name, and the two sexes are not exclusively associated with the same animal. There are, however, certain animals which are peculiar to the male sex and certain to the female sex. These animals are supposed to have been adopted by the men of the tribe, either for the sake of the food or for the sake of the fruit of the tree or plant associated with the animal. It is believed that by eating the food of the animal or the fruit of the tree associated with the animal the men will be enabled to become successful in the hunt or to become strong in body and spirit. But it is also believed that by eating the food of the animal or the fruit of the tree associated with the animal, the women will be enabled to become successful in the hunt or to become strong in body and spirit.

6. Origin.—The origin of totemism has been the subject of much discussion and speculation among anthropologists. It is only necessary here to refer to a few of the hypotheses offered. That which is identified with the name of Hill-Tout has already been incidentally dealt with. Though accepted by some American anthropologists, it has not generally formulated on either side of the Atlantic. Frazer, having previously adopted the theory that the totemic clan was in its primitive form and purpose a society for the multiplication by magical ceremonies of the vegetable, and so ensuring a continuance of provision for the food and prosperity of the community, so far as the totem-animals and vegetables were edible or otherwise available for use, has relinquished that hypothesis. Instead, in his latest conjecture he is now inclined to the opinion, suggested by observation on the part of Spencer and Gillen of the peoples of Central Australia, and on the part of other travelers and explorers in other parts of the world, that totemism originated in a primitive explanation of conception and child birth. The latter people hold that their mothers were impregnated by the entrance into their wombs of spirit-animals or spirit-fruits, and that they themselves are severally nothing but the particular animal or fruit which effected a lodgment in the mother and that in due time was born into the world as a human being. Hence they partake of the character of the animal or fruit in question and refuse to eat all such animals and fruits. The supposition is that these beliefs become in particular cases hereditary and result in the evolution of clans or groups on either side of the Atlantic. Frazer, having previously adopted the theory that the totemic clan was in its primitive form and purpose a society for the multiplication by magical ceremonies of the vegetable, and so ensuring a continuance of provision for the food and prosperity of the community, so far as the totem-animals and vegetables were edible or otherwise available for use, has relinquished that hypothesis. Instead, in his latest conjecture he is now inclined to the opinion, suggested by observation on the part of Spencer and Gillen of the peoples of Central Australia, and on the part of other travelers and explorers in other parts of the world, that totemism originated in a primitive explanation of conception and child birth. The latter people hold that their mothers were impregnated by the entrance into their wombs of spirit-animals or spirit-fruits, and that they themselves are severally nothing but the particular animal or fruit which effected a lodgment in the mother and that in due time was born into the world as a human being. Hence they partake of the character of the animal or fruit in question and refuse to eat all such animals and fruits. The supposition is that these beliefs become in particular cases hereditary and result in the evolution of clans or groups on either side of the Atlantic. Frazer, having previously adopted the theory that the totemic clan was in its primitive form and purpose a society for the multiplication by magical ceremonies of the vegetable, and so ensuring a continuance of provision for the food and prosperity of the community, so far as the totem-animals and vegetables were edible or otherwise available for use, has relinquished that hypothesis. Instead, in his latest conjecture he is now inclined to the opinion, suggested by observation on the part of Spencer and Gillen of the peoples of Central Australia, and on the part of other travelers and explorers in other parts of the world, that totemism originated in a primitive explanation of conception and child birth. The latter people hold that their mothers were impregnated by the entrance into their wombs of spirit-animals or spirit-fruits, and that they themselves are severally nothing but the particular animal or fruit which effected a lodgment in the mother and that in due time was born into the world as a human being. Hence they partake of the character of the animal or fruit in question and refuse to eat all such animals and fruits. The supposition is that these beliefs become in particular cases hereditary and result in the evolution of clans or groups on either side of the Atlantic.
external soul, that is, in the belief that living people may deposit their souls for safe keeping outside of themselves in some secure place, where the precious deposit will be less exposed to the assaults of disease and to violence than while it remained in the body of its owner.1 This hypothesis, though founded on a widely spread practice, is not, and has not, be

It but the The or external frankly remained German names, existence toerate having themselves with topics appears to be insufficient to justify us in regarding it as the source of the whole institution.

Another, towards the close of his life, was led to emphasize the social aspect of totemism. He advocated a theory similar to that first pronounced by Herbert Spencer, and adopted by the German scholar, J. Fricker,2 that the origin is to be sought in names. According to this theory, bands of men, having been given names from outside, either by way of distinction or as nicknames, accepted these names and came to fancy that they themselves were in a mystical connexion with them, or rather with the things signified by the names, and then the course of social organization, from one cause or another, led first to the preference for wives of another band having a different name, and subsequently to a positive prohibition to marry a woman of the same band and necessarily having the same name—in other words, to clan-exogamy.4 The influence of names, and the instinct which regards a name as a real objective existence belonging to and having a mystical connec

tion with the person or thing signified by it, are practically universal in the lower culture. But why these names were appropriated and accepted by the various bands is left unexplained. Lang apparently agrees with Frazer that the institution of exogamy is distinct from totemism, and that totemism is a fact of which exogamy is a consequence.5 It certainly is universal, but not quite invariable, accompaniment of it. Lang indeed offers explanations of the origin of exogamy, but it cannot be said that his speculations are more satisfactory than those of previous inquirers.

A. C. Haddon sometime ago hazarded a suggestion of the 'possible origin of one aspect of totemism.' It is that there were numerous small human groups in favourable areas, each occupying a restricted range in which a certain animal or plant or group of animals or plants might be specially abundant, and that they consequently utilized these as a food-supply and for other purposes, the superfluity of which should be bartered for the superfluities of other groups. Thus 'the group that lived mainly on crabs and occasionally traded in crabs might well be spoken of as the "crab-men" by all the groups with whom they came in direct or indirect contact. The same would hold good for the group that dealt in clams or in tarle, and reciprocally there might be sage-men, hambo-men, and so forth.' It is obvious that the men who persistently collected or hunted a particular group of animals would understand the habits of those animal better than other people, and a personal regard for these animals would naturally arise. Thus from the very beginning there would be a distinct relationship between a group of individuals and a group of animals or plants, a relationship that primitively was based, not on even the most elementary of psychic concepts, but on the most deeply seated and urgent of human cravings, hunger.6

Here Haddon agrees with Lang that the name of the group usually bears its devotees with it and is adopted by the group thus named. Once accepted, the name and the regard for the animal, or whatever was the object signified by the name, would result in a mystical connexion being held to exist between the object and the human group which might issue in the object being tabued instead of used as originally, and, on the other hand, in magic being worked to secure a continuous supply of it with the object. As part of the tabu, not incident to it, exogamy, originating in a prefer-

ence for women of contiguous groups, might be developed.1

E. Durkheim, envisaging chiefly the Australian evidence, considers totemism as a religious institution. According to him, it is the religion of a sort of anonymous and impersonal force manifested in various animals, men, and emblems, none of which possesses it entirely, but all of which participate in it. It is the god adored in all totemic cults; but such a god is an invariant god without name or history, immanent in the world, diffused in an innumerable multitude of things. It is, in short, mana (q.e.) or orenda. It is not, however, represented under its abstract form, but as conceived of a species of animal or vegetable—in a word, under a sensible form—each group of men taking for ensign the animal or vegetable diffused most plentifully in the neighbourhood of the place where the group was accustomed to assemble. The totem is really only the material form under which this immanent substance, this energy diffused through all sorts of heterogeneous beings (which is the sole object of the cult), is represented to the imagination. It is the symbol not only of the impersonal totemic principle or god, but also of the definite society, the clan, of which it is the totem. It is the standard, the emblem, by which all the totemistic relations of others, the visible sign of its personality, the mark borne by every one that makes part of the clan, whether men, beasts, or anything else. All are sacred in varying degrees; but most sacred of all—are more even than the totem-animal or other object itself—is the artificial standard or emblem of the clan. Since all who communicate in the same totemic principle are related, the totem is the symbol of the morality of the clan, and all are morally bound to one another, with definite duties towards one another of help, vendetta, and so forth. The totem is thus not only a material but a moral force, which may easily transform itself into a divinity properly so called.

Totemism therefore is bound up with the organization of society. It is practically assumed as the earliest form of religion and of society everywhere.4 In the striking work of which the main thesis is here imperfectly summarized Durkheim elaborates this thesis with infinite pains and abundance of illustrations. But everything rests on the assumption of primitive universalism, which is in turn made to depend on the failure of the large spaces of the world, however, remain in which totemism has never yet been found. More or less probable traces of it may, indeed, be discerned in these areas; or they may be bereft of discovery. Moreover, the Durkheim's theory remains a brilliant conjecture, and nothing more.

In its insistence on an attitude towards nature and on a psychology different from that of civilized mankind it avoids the rock on which most of the hypotheses heretofore considered have split. This was also emphatically laid down, as the condition of success in solving the question of the origin of totemism, by Reret, a Swedish scholar, in an article which appeared almost contemporaneously with Durkheim's work. This article is an extension of part of a previous essay by the same author published in 1898. He urges that totemism is connected with an impersonal conception of life. A group of men are allied with a group of animals. There is nothing personal, nothing individual, in their union, but only an association, an association of the primitive mode of thought, which does not compare one thing with another: if it finds likeness between them, it identifies them. For primitive man the indistinguishable being; the group or the species is

3. ibid. p. 55.
everything. Man did not picture himself as lord of creation. He did not sever himself in thought from other living creatures; he was only a part of a host of living things. He felt himself uniquely united with a kind of animal living in his neighbourhood and coming in touch with him. It was no accident that he associated himself with one or other species. This association is instinctive, magical, and social. These were in the origin undistinguishable from one another. The distinction between them came later, with the development of individualism and analysis.

In this way Reutenkild would explain the origin of totemism. Without saying that he has completely solved the question, the opinion may be expressed that he has realized the conditions of primitive life and thought sufficiently to define at all events some of the conditions to be fulfilled and so lead to a solution. In endeavouring to explain the attitude towards nature of the tribes of Central Brazil Von den Steinen not only says that they draw no strict line of demarcation between man and brute; he uses the emphatic expression that, to understand it, we must think the boundary is not absolutely everywhere. There is thus no impediment to the man's sympathy with the animal. The Bororo, as we have seen, that they are red arras, not that they will become arras after death, nor that they were arras in the past. There is an opposition between the two arras here and now. From this attitude of mind we can see how it follows that in their stories human modes of life and thought are attributed to the lower animals, and, indeed, as frequently in savage tales, it is often impossible to say whether the actors are human or brute; it follows also that marriages between the former and the latter are in the tales contemplated without aversion or are even regarded as natural, and that interchanges of shape are quite ordinary incidents. It is no question of naming. Totemism is founded on something deeper than that. It assumes a community of nature between man and other creatures; and the existence of the individual is ignored, except as a small and subordinate part of a group, thought of as a whole. It was part of the organization of society which is bound up with the general concept of the world indicated above—a concept by no means confined to totemic peoples, but not always issuing in the same type of organization. How or why particular totems were chosen is a difficult question, but, however interesting, relatively unimportant.

In strict acceptation of the term totemism is not a religion. The respect of the clan for its totem arises out of the attitude of mind just explained. The relation of the clan to its totem assumes a mystical aspect and generates an intense feeling of kinship. This frequently is expressed in the belief that they are descended from the totem-species. As civilization evolves, this belief becomes modified into the shape of a story of the adventure of a human ancestor with the totem-species. Although regarded with reverence and looked to for help, the totem is never, where totemism is not decadent, prayed to as a god or a person with powers which we call supernatural. In fact, in that stage of culture totemism usually co-exists with the cult of the dead and often with the worship of other spirits and gods accurately so called. Its connexion with the social organization, on the other hand, is very intimate. Probably beginning in a type of protection of kinship, it develops the clan-feeling and the clan-organization and by means of clan-exogamy binds the whole tribe together. Whether exogamy actually precedes totemism in point of time or not, there can be no doubt that the interaction of the two strengths and develops itself, until exogamy is seen as an essential element of totemism in its full force. When, in the course of evolving civilization, totemism begins to decay, exogamy may and often does continue independently. And the cases are numerous where the clan-system and exogamy have arisen and existed for long periods without any other element of totemism, so far as we know. So various are the forms of totemism that it has been maintained with plausibility that they are due to a fortuitous concurrence of causes which has united elements originally diverse but tending to converge into a system on the whole marvellously similar wherever it obtains, just as the disintegration, and in many cases the dissolution, of the system have historically been due to a concurrence or a sequence of causes of the opposite kind.

E. SIDNEY HARTLAND.
across the Atlantic to America. It pervades the whole world of intelligent white labour, but England was its cradle.

Attempts have been made to trace its descent from chartists (q.v.) of the Middle Ages, but those institutions are to be regarded as associations of masters rather than of men, and there is little or no evidence of the existence of permanent associations between employers and workmen before the 18th century. It was then that the differentiation between employer and employed became more and more marked until a great gulf was finally set between them by the transformation of industry effected by the introduction of machinery and the institution of the modern factory system of production on a large scale. The trade union movement was a direct response to the change of conditions.

In the early part of the 19th cent. continuous associations of wage-earners generally took the form of friendly societies, with sick and funeral funds attached; but, as the century wore on, and the results of the industrial revolution, in divorcing the worker from the instruments of production and degrading his position, became more apparent, they inevitably assumed a different character. The meetings of the clubs afforded opportunities for talk of wages and conditions of labour, and we find Adam Smith writing:

'People of the same trade seldom meet together, even for merriment and conversation, but the conversation ends in a conspiracy against the public—and in some contrivance to raise prices.'

This was what the early trade unions appeared to be to the governing classes of those days—'a conspiracy against the public'—and they were only taking the same view as had been taken by the governing classes long before. Combinations of workmen were held to constitute a danger to the State, and from early times a series of statutes had been directed against them. The earliest of these appears to have been the statute 33 Edw. I. c. 1 (1365).

It stamp as conspirators1 all who do confeder or bind themselves by oath, covenant or other alliance, as relates or extends to combinations or conspiracies of workmen or other persons to obtain an advance of, or fix the rate of, wages, or to lessen or alter the hours or duration of the time of working, or to decrease the prices of goods, wares or commodities, or to prevent, or restrain the use of carrying on any manufacture, trade, or business, or the managing thereof.'

From this it may be seen that labour questions, including the limitation of output, were much the same in the first part of the 14th cent. as they are to-day. The statute goes on to declare 'combinations and confederacies of masters, or of masters and workmen, or of workmen and others' to be equally illegal; they too were regarded as constituting a danger to the State; and the principle that all combinations, whether of masters or of men, should be suppressed in the interest of the public may be said to underlie most of our earlier industrial legislation. But, as time went on, the tendency was for the laws against labour to be rigidly enforced, while those in favour were poorly administered or allowed to fall into oblivion.

The Act of Edward I. was followed by a series of others of the same nature. In the 18th cent. they became more and more frequent with the rise of the new associations. At least fifteen were enacted in the reign of George III. before the year 1800. That year marks an epoch. The whole of the existing Combination Acts were consolidated, in a new law which made all associations of workmen (and of employers) illegal, and membership of such an association a criminal offence (39 and 40 Geo. III. c. 106).

The position of the workers now was that, while no attempt was made to extend already existing State regulations as to wages, hours, and condi-

1 Wealth of Nations, bk. 1, ch. 10.

tions of employment so as to apply them to the altered circumstances of the times—and many of them had become practically inoperable—they were debarred by statute from what seemed the only chance they had of associating for their own protection. But, in spite of this, associations were formed, some of which, as the direct result of this repressive legislation, took the form of secret societies with a code of law which, in 1810, and the next twenty-five years were full of trouble and discontent. Eventually by the Acts 5 Geo. IV. c. 95 (1824) and 6 Geo. IV. c. 129 (1825) the Combination Laws were repealed and association for the purpose of regulating wages or hours of labour was expressly legalized.

The position of the trade unions was now secure. Some forty-five were discovered in 1824 to have managed to maintain a precarious existence in spite of the Combination Laws, but, when the laws were repealed, trade unions sprang into life all over the country. The next few years were a period of great fluctuation. As work of organization was taken in hand in earnest. It was also a time of great political activity, and soon after the passing of the Reform Act of 1832 we find that the unions had already accumulated members and funds sufficient to give them a distinct power in politics. They threw themselves heartily into the movement initiated by Robert Owen—the membership of his 'Grand National Consolidated Trades Union' in 1834 has been estimated at half a million—but on the whole they stood aloof from the Chartist movement which played such an important part in the history of the working classes between 1837 and 1848. Between 1850 and 1860 trade unionism made rapid strides on the old lines, and then there was a marked increase of political interest with the Reform Bill of 1867 as its centre.

The Trade Union Act of 1871 marked another stage. Though the repeal of the Combination Laws had left the workers free to combine, all combinations 'in restraint of trade' were still illegal. The funds of any such society therefore did not enjoy the protection of the law, but were at the mercy of any official who had access to them. As a matter of fact the trust had been very seldom abused, but the position was unsatisfactory, and the Act remedied it, and also strengthened the position of the unions in other respects. In 1875 a further Act recognized employers and workmen (they were no longer called master and servant) as equals and equal, with a right to a day's notice, and 'peaceful picketing' during a strike was expressly permitted. Thus 'collective bargaining, with all its necessary accompaniments, was after fifty years of legislative struggle finally recognized by the law of the land.'

Ten years later the movement entered upon a new phase. The leading spirits were no longer content to proceed steadily upon the old lines, and John Burns and Tom Mann became the apostles of a more militant and aggressive creed. A 'new unionism' came into existence which was inspired by the doctrines of socialism (q.v.). Its spirit was manifested in the labour unrest of 1889-90. This has been in its turn outpaced by the old newer unionism of the 20th cent., which is syndicalist instead of socialist and regards the general strike as its weapon. But, at all events up to the outbreak of the war in 1914, the great bulk of trade unionists seem to have been content, as Joseph Clayton has said,

1 Webb, History of Trade Unionism, p. 375.
TRADE UNIONS

409

On these two broad general grounds—that it has pointed the way to the establishment of a new industrial order, and that it has recalled us to a sense of the other side of our social nature—may be said that the trade union movement has abundantly justified itself. We shall now proceed to consider some of the special manifestations of its activity which have been at different times the subject of criticism.

(c) Strikes.—The strike (q.v.) has always been the trade unionist's most effective weapon. He can do much to protect himself by the method of mutual insurance or collective bargaining, but the strike gives him the power of bringing pressure to bear if he desires to enforce an agreement or to secure an improvement in wages or conditions of labour. The question whether it is a fair weapon is therefore fundamental. At present the right to strike has been practically acknowledged by the law, but the concession has only been gradual. At first all strikes were regarded as conspiracies and illegal; then there came a stage at which the right to strike was tacitly acknowledged, but the courts condemned them on the ground of assumed 'malicious intent'; next attempts were made to discriminate between one kind of strike and another, and now the tendency seems to be to uphold the right to strike as such.

The relation between employer and employed has been regarded in law since 1875 as a civil contract between two theoretically free and equal individuals. It is in some cases a contract of very short duration, but it does not differ in nature from longer contracts, e.g., weekly-wage-earner and employer, in this respect in the same position as a highly placed salaried official. He therefore has the right to terminate his contract when he pleases, so long as he does not contravene the law. The essence of a strike is that it is the simultaneous termination of many contracts, and it derives its power from the fact that it is inconvenient or even harmful to the employer, and generally meant to be so. Now no one would deny that any worker where wages are inadequate or conditions intolerable has the right to say to an employer, 'I will not work for you for such wages or under such conditions.' Nor will it be denied that many of the workers have a right to say this simultaneously as a joint protest. Finally, it is hard to see how they would be wrong in endeavoring to prevent any other holding similar views. If these three points are conceded, the right to strike is established in principle.

The strike then, regarded as a protest, is a lawful weapon, but the days are long past when strikes were simply protests. To-day in the majority of cases they are used as weapons of offence. Even as such they are doubtless often justifiable, but weapons of offence are used to threaten or to inflict injury; that is what they are for; and, if it is conceded that the use of such weapons is allowable in industrial warfare, there would seem to be need of some controlling power to see that they are used fairly. A strike may be simply an instrument of tyranny and oppression.

Moreover, the whole question has assumed a new aspect in recent years as the result of closer association between different classes of men and the enormous increase of power which the strike has derived from their simultaneous action. A strike on a large scale is no longer a mere matter between employers and employed: the whole nation may be affected. An wrongful strike, if recent strikes have been the frank admission by their promoters that it was their deliberate intention to cause such general inconvenience and even injury as would force a settlement in their favour, simply to put an end to them. Such
action is narrow and selfish and is condemned by public opinion. In no civilized country can any one body of men be allowed to hold the nation to ransom at their pleasure. The State is greater than any of its component parts, and is morally bound to take measures to protect the nation as a whole from exploitation by any section of it.

The question of picketing is closely connected with that of strikes. A strike really is a device to extend the principle of trade unionism beyond the scope of the shop into the home. A house is the home of the worker, and the absence of the worker from his work place has as many effects as the absence of the worker from the shop. The trade union is founded on the completeness with which his supplies of labour can be cut off. It is therefore of the first importance to the strikers to see that no one else takes their place, and that none of the workers continue their work. Hence the elaborate system of sentries and pickets. There is nothing to be urged against 'peaceful persuasion,' but it is obvious that, at a time when strong emotions are aroused, such a practice needs careful watching if the persuasion is not to be allowed to degenerate into intimidation or even violence.

The Act of 1875 rendered liable to a fine or imprisonment 'every person who, with a view to compel any person to abstain from doing or to do any act which such other person has a legal right to do or abstain from doing, wrongfully and without just excuse threatens or endeavour to prevent or endeavour to prevent any other person from doing or abstaining from doing any act where such other person resides or works'; but declared that attending at or near the house or place 'in order merely to obtain or communicate information' shall not be deemed watching or besetting.

(b) The limitation of output.—There are some things about trade unionism which will never be understood unless they are regarded as projected against a background of injustice and petty tyranny. The deliberate limitation of output is one of them. It has been, and is still, the practice of some unions not to allow their members to do more than a given amount of work in a given time. A bricklayer, e.g., may not lay more than a given number of bricks in a day. This practice is unjustifiable, because the economic point of view, because the object of industry is production, the worker who systematically produces less or worse work than he is not true to his trade. It is also morally unjustifiable because every one is bound in honour to accomplish to the best of his ability the task which he has taken in hand. And intelligent labour is ready to admit this. On what grounds then is it defended? On the ground, that it is to be only just that what can be devised for the weak against the lowering of the rate of wages by an unscrupulous employer. It was found that an employer who had already agreed to a certain piece-rate, on finding that the best of his men were earning wages which seemed to him in his short-sightedness preposterous, went back upon his word and proceeded to cut the rate, with the result that the slow or weak among the workers were no longer able to earn the weekly wage which he himself had considered as fair when he fixed the original piece-rate. Labour, in order to remove any such excuse for a lowering of wages, resolved that no member of the trade, whatever his strength or speed, should be allowed to outpace the rest. The best workers were called upon to make a sacrifice, but it was made readily and it rested upon altruistic motives. It is an anomaly, and it is injurious to industry. As the progressive organization of industry proceeds, the need of it will probably disappear. Meanwhile it remains, not without a touch of pathos, as an indication of the iron hand which invests the eyes of the employers with a sort of authority which the workers a practice which they would not really defend with the sanction of self-sacrifice.

(c) 'Ce n'est pas.'—The policy of limitation of output is universally acknowledged as indefensible, almost on all grounds. We do not refer to those cases in which a man does less than he might, or as little as he can contrive, out of personal resentment towards an employer or as a protest against a system which he believes to be unjust. Such cases are not uncommon, but it is doubtless whether any union would deliberately support them with its formal sanction. But many unionists believe that there is only a certain amount of work to be done, and that there will not be enough to go round if the standard of production per man is too high. This ' lump-of-labour ' doctrine of the worker is the old idea of the capitalist, the ' new trade unionists' of the 19th cent., who believed that there was only a certain sum available for wages, and that, if one set of workmen got more, it meant that of necessity another set would get less. Both were equally fallacious. There is neither a fixed amount of work nor a fixed sum available for wages; both are elastic. The way to increased wages lies through increased production, for it is out of the value of the product that wages, like salaries and the cost of raw materials, are paid. To limit production is to lessen the fund out of which wages are paid. There is also a belief that, if the best workmen are allowed to force the pace, the result will be a subtle reduction of the standard of earnings of the average worker—a 'bell-wether' is regarded as an abomination—and the best protection against such conditions is held to be a sort of standardization of output comparable to the standardization of hours and wages in which the workers have found protection and safety. But it seems indisputable that, if the best workers in a trade are circumscribed and shackled, the whole trade must be the worse for it, workers included.

(d) It is difficult to estimate the truth of the charges of tyranny, intimidation, and violence which have often been brought against the trade unions. There have doubtless been many cases of such things in the industrial history of the last 150 years. Violence has been used against employers; intimidation and violence have been used against other workers who failed to come into line. What we want to know, and what is very difficult to find out, is to what extent, if at all, the unions have condoned such action. We should be safe, however, in asserting that violence forms no part of the trade union programme, and we may go further and say that with the growth of trade unionism there was an improvement in the conduct of strikes. Violence and bloodshed are certainly less common now than they were.

(e) It has been said that the organization of labour on modern lines is an idea which we owe to the trade unions. Has this organization in some cases been carried too far? Employers often complain that they find themselves fettered and obstructed by trade union regulations which seem to them to be merely meticulous and vexations. There is probably some truth in this. Trade unionism, on its defensive side, has surrounded itself with an elaborate system of barriers against every conceivable possibility of an attack. These regulations are not arbitrary; the initiated know that they are applications in detail of some principle which the workers regard as important. They are born of mistrust, and they will not disappear until employers and employed learn to understand one another better and feel that they are co-partners in the same enterprise. But it should be realized that industry cannot work in chains.

Trade unions are an inevitable product of modern economic life. They are now almost universally recognized, and are defended on the ground that they are based upon the fact that the conditions of labour are now group conditions and that the worker who forms a simple unit of a large group is powerless.
to bargain successfully with an employer. The employer occupies a superior strategic position, and the worker's only hope is in association. It is only when such associations of industrial units are formed, there is a danger of tyrannical action, and the larger the association, the greater the danger; but it is equally undeniable that the circumstances of the time seem to call for such associations, and the danger should be confronted. The advantages to be gained are great, and the danger can be met with the assistance of the legislature and the law-courts.

**TRADITION.**—The word 'tradition' means, etymologically, 'handing over.' The conception of tradition, therefore, implies (a) a 'deposit' which is handed over, and (b) 'depositories,' i.e. persons who are in possession of the deposit, and are commissioned to preserve it and transmit it to successors. At all special claims to be within themselves a deposit, consisting of ceremonial, myth, dogma, or ethic, or of some of these elements, revealed by some ultimate divine or quasi-divine author. It must be handed down to posterity by a succession of duly qualified trustees. This article discusses the part which the principle of tradition has played in the history of Christianity.

1. Christ and Jewish tradition.—There is not much uncertainty regarding the attitude of the Founder of Christianity towards the Jewish tradition which He found already in existence. He was familiar with rabbinical learning, and disclaimed any idea of being a rebel against it; 'Think not that I came to destroy the law or the prophets: I came not to destroy, but to fulfil.' (Mt 5:17) It would be generally agreed that His object was, not to abolish the traditional Mosaic deposit or to annihilate the depositary society—the 'congregation of the Lord,' the 'Israel of God'—but rather to develop and expand the then existing Jewish Ecclesia into the 'Kingdom of God' and to reform and purify the deposit by blending it with the gospel, or 'good news,' of a glorious age to come. In regard to the reform of the deposit, He indicated His scheme of renewal only in the most general terms. It seems that the classical passage for this is, of course, the famous saying about Corban (Mt 15:20, Mk 7:22), with the affirmation, which follows, that it is not the things which go into a man, but those which come out of the man, that defile the man. This may appear, at first sight, to challenge in principle the whole conception of the ceremonial deposit and brusquely to deny any spiritual value to outward observances. It certainly claims an infinitely higher place for ethical values as compared with ceremonial precepts; it might be taken, further, to imply that the sole seat of religious authority for a pious Jew lay in the written Word, the Torah, and that the oral tradition of the Rabbis was comparatively worthless. An even stronger implication as to the transitory nature of the Rabbinical tradition is contained in the saying about the 'new wine' and the 'old wine-skins' (Mk 2:21, Mt 9:38), though it is to be noted that Luke (5:37) appends a saying which may seem to point in the other direction— the opposite.

It may perhaps be said also that, to a certain extent, Christ demanded the re-intellectualization of the deposit. The authority of tradition is subordinated, not merely to that of the moral law embodied in the written Word, but to that of common sense. This is illustrated by His various sayings on the subject of the Sabbath. The impression which we gain from a review of the teaching of Christ, is that His attitude towards the Rabbinical tradition was simultaneously both reverential and critical, both conservative and progressive. There are two kinds of evidence which should be considered in this connection. One points directly to the amount of historical value which should be assigned to the Fourth Gospel; but it is to be presumed that the exceedingly hostile attitude assumed by the Johannean Church towards the Jews' is at least based upon genuine reminiscences of one side of the teaching of Jesus; and the declaration that the worship of the future was to be conducted neither on Mount Gerizim nor at Jerusalem, but throughout the whole earth, 'in spirit and in truth,' represents an attitude as anti-Rabbinical as it is possible to conceive. On the other hand, sayings recorded by 'Matthew,' the specifically Jewish evangelist, seem to represent Jesus as a whole-hearted supporter of tradition, though a severe critic of the moral shortcomings of its depositaries. 'Not one iota or one verbal point shall pass away from the Law till all be fulfilled.' (Mt 5:18) is a passage in which the characteristic Jewish doctrine of the eternity of the Torah seems to be proclaimed; He adds that, unless the things of the Law are observed down to posterity by a succession of duly qualified trustees. This article discusses the part which the principle of tradition has played in the history of Christianity.
deposition, a body of dogmatic and ethical truth revealed by Himself for the first time? Did He mean to found a society as the guardian of this deposit and its authorized expounder? Did He intend to convey to His Church, as His representative, power to decide as to its true contents in cases of dispute? Or did He mean to make a complete break, in theory and principle, with the grand institutions and traditionary powers that had been historically grown up, and to propagate, not so much an organized religion as a philosophical point of view or a mode of emotional feeling? In other words—Is Christianity to be regarded as the perfect traditional religion, the crown and flower of that whole process of traditional evolution which may be traced down the centuries, possessing a deposit of immutable truth and authentic, life-giving sacraments, and preserved by a majestic, supernatual society, a Kingdom which is in this world, yet not of it? Or was Christianity, as designed by its Founder, meant to involve a complete break with the past, and an entirely fresh start upon non-dogmatic, non-sacramental, non-ecclesiastical lines?

3. The ‘Catholic’ view of tradition.—It is a well-known fact that at the present day three-quarters of the world's inhabitants of Christian faith are not members of the Church or Body of Christ. This is the meaning of the well-known fragment or depositum first formulated by Tertullian (2d cent.), and which was to be the depositaries of the Church. This fragment was taken by the Catholic Church and made the basis of the whole system of Dogma. The ‘Catholic’ view of tradition maintains that the deposit of faith (depositum fidelis) was partly taken over by Christ from the existing Jewish Church and partly revealed by Him to His apostles and other hearers during His earthly life and especially during the ‘great forty days,’ which, according to St. Luke (Acts 1), intervened between His resurrection and ascension, and during which He took from them, as He took from the apostles, the deposit of the ‘things pertaining to the Kingdom of God.’ He thus committed Himself to them—for a fullness of doctrine and inspiration to be possessed by the Church only after the descent of the Paraclete, who would guide its members into all truth (John 16). These promises are interpreted by ‘Catholics’ as guaranteeing the ‘infallibility’ of the Church in the interpretation and definition of the authentic contents of the deposit. It is, further, believed that within the Church the special task of preserving (and, when need should arise, of defining) the deposit was committed by Christ to the twelve apostles and to their successors, the bishops.

According to this view, therefore, all that Christ intended to entrust to His Church (no doubt embodied at first in a way of life, rather than in an exactly formulated creed, and expressed, so far as it was verbally expressed at all, in pictorial rather than

logical or metaphysical terms), and (2) a depositary class, consisting of the twelve men whom He had designated, in apocalyptic language, as the scribes of the future Kingdom. It would be hardly correct to speak of His Church as the actual successor of the body of the Church, inasmuch as this was conceived of as being, not a new society, but the only orthodox remnant of the old Jewish Church. But the doctrine of infallibility began the development of a magnificent development was given. The living force of the Christian tradition spontaneously generated the same complex mechanism for its own preservation and perpetuation as may be seen, endeavouring to struggle into existence, in the fields of Zoroastrianism and Buddhism. The first element in this apparatus to appear was the canon of Scripture. At first the only Scriptures which the Christian Church possessed were those of the Jewish Church, or, rather, of the Jewish Church as it existed outside Palestine. The Bible recognized in most parts of the earliest Christian Church was that of the Jews, that of the Old Testament. The books now called Apocrypha; so that, from the first, the oral tradition, vested in living depositaries (the apostles and their successors), was, to a certain extent, controlled by the existence of these writings, believed documents, some at least of the main constituents of the deposit. The Marcionite controversy of the 2d cent. compelled the Church to form a collection of apostolic writings for the purpose of demonstrating the identity of the deposit, as she maintained it, with that committed by Christ to the original depositaries, and refuting the Gnostic claim to possess a secret tradition other than Christ's. The ecclesiastical tradition. This apostolic collection became canonized as ‘the New Testament’ of equal authority and inspiration with the original Scriptures, the ‘Old Testament’ of the Jewish Church.1 In the 2d cent., too, we observe the first beginnings of the baptismal creeds, brief formulæ whose threecold structure was derived from the threefold invocation of the Father, Son, and Holy Ghost in the solemn words of baptism, and intended to summarize the essentials of the orthodox faith in a form which could be committed to memory by persons of the weakest intellectual capacity.2 The canon of Scripture and the baptismal creeds were thus the two great contributions of the 2d cent. to the organization whereby the Catholic deposit was perpetuated and safeguarded against any essential change of content. The last great development of the apparatus of the authority and authenticity of the deposit is to be found in the institution of ecumenical councils—the characteristic invention of the 4th century.3 In the 2d and 3d centuries it had been possible for Hippolytus, Ireneus, and Tertullian to appeal to the unbroken succession of the bishops and to point to their unanimous consent as a proof of the authenticity of the ecclesiastical tradition, as against the alleged secret traditions of the various Gnostic sects. But towards the end of the period of persecution, it came to be realized that the bishops themselves, the chief depositaries of the faith, might disagree as to its content; and these disagreements could only be resolved, in Christianity as in Buddhism, by the expedient of summoning a council representing, in theory or in fact, the complete body of chief depositaries, i.e. the total episcopate of the world. The object of a council was not so much to discover fresh truth as to determine what, as a matter of fact, was the doctrine which had been believed in the Church from the beginning. Hence, though each bishop

1 See art. Bible in the Church, I, i.
2 See art. Confessions, B.
3 See art. Councils (Christian): Early, to A.D. 360.
had, in theory, the right to put before the council that version of the faith which he had received from his predecessors and which had been handed down to his local church from its first founder, the grand master. This was restated and added to the testimony of the great 'apostolic sees.' Complete unanimity in the acceptance of one particular version of the faith would, of course, have stamped it in the minds of Catholic Christians as unquestionably authentic and apostolic; but, if complete unanimity had been possible of attainment, it would probably have been unnecessary to summon councils. The principle was, therefore, arrived at that an overwhelming majority of the depositaries, especially if it included the occupants of one or more of the great apostolic sees, had the same authority to express as St. Vincent of Lérins when he says, or implies, that the consensus of 'psene omnes' is as good as that of 'omnes [sacredotes].'

Hence it follows that if a small minority of the depositaries, in contrast with the remaining majority of the depositaries, had the same authority as the majority, necessarily becomes schismatic. Another famous expression of the right of a majority among the depositaries to decide what is and is not the Christian faith is to be found in St. Augustine's celebrated aphorism: 'Securus indicat orbis terrarum, bonus non esse, qui se dissidunt ab orbis terrarum in quacunque parte tertium.'

It is true that most of the so-called ecumenical councils were not actually representative of the total episcopate of the world. There were one or two of acceptance, immediate or gradual, by the majority of bishops. We are here concerned solely with theory, and need not go into the question as to how far theological controversies during the first thousand years of Christianity were merely the reflection of political, national, or racial antagonisms. It is sufficient to note that each of the great decisive doctrinal formulations of the first millennium, in general, was followed by a struggle between the majority, which accepted, and the minority, which rejected it. Thus, after Nicaea and Constantinople, a separate, 'non-juring,' Arian Church came into existence among the Goths and other barbarians; after Ephesus a 'non-juring' Nestorian Church was constituted in Syria and Persia; after Chalcedon the Monophysite Church, which still includes most of the Christians of Egypt and Armenia, split off from the rest of Christendom. But, whilst shedding, so to speak, these dissentious bodies round its periphery, the 'great Church,' the Church of the majority of the depositaries, the Church of the Greco-Roman Empire, the 'Molka' or 'Imperial' Church, as it was derisively called by the Eastern schismatics, held together round the imperial throne and the great apostolic see of Rome, maintaining its majestic unity unbroken, with the help of its authority, its jurisdiction, and the Zonarist schism, for over a thousand years. In the 'Great' or 'Molka' Church, as it stood on the eve of the Great Schism of 1054, the fourfold structure of the Church, the bishops who come after the Apostles, the Petrine supremacy, the Roman See, and the Zonarist schism had been plinyly grooming their way, had become thoroughly rooted, mature, and considerate, in the most imposing and magnificent form which has ever existed upon earth. The Church, the hierarchy, the canon of Scripture, and the ecumenical councils are all there, each fulfilling its harmonious part in the task of preserving, elucidating, and developing the apostolic deposit. This principle is expressed as well as good as that of 'omnes [sacredotes].'

1. The Reformation and tradition. The Reformation (q.v.) was, in essence and in its earlier stages, a revolt not so much against the authority of the deposit or of its founder as against the fact of the existence of a hierarchal class in Western Europe—a revolt occasioned by the corruption and reactions of the pope and the hierarchy. In the first fervor of indignation against the vices of the clergy, it seemed necessary to deny the whole principle of a body of men divinely commissioned to safeguard the Christian revelation. The mental outlook and Weltanschauung of the early Reformers was just as scholastic as that of the medieval theologians, and demanded, just as imperiously, a clear-cut body of dogmatic theology as an essential element in religion. Hence, on the one hand, the Reformation movement in the deposit was attended by the rejection of the hierarchal; and a new basis of authority had to be found for the Christian tradition. This basis was found in 'the Bible, and the Bible only.' We have noted that, for Catholic Christians, the structure of the orthodox faith was regarded as the oral tradition of the Church and the Scriptures. The logical effect of the Reformation was to knock away the first of these pillars, leaving the second standing; and so adamantane was (and is) the cohesion and solidarity of orthodox Christianity that for three hundred years it was able to remain practically intact throughout Protestant Europe, but without that supporting pillar. The last hundred years have witnessed the gradual erosion of this pillar, through the continual dropping of the rains of biblical criticism, and the consequent collapse in those regions of the super-incumbent structure. This result, however, could not then have been foreseen. The great orthodox Protestant theologians of the 16th and 17th centuries only designed to modify the Catholic theory of authority in the following sense: 'We quite agree with the Catholic in holding that there is a changeless deposit of eternal truth, and that this was imparted by God by his word to the apostles and their successors, during His earthly life and the great forty days; but we deny that the word was thus imparted to be transmitted, or transmitted, to them by any successors. Their functions as guardians of the truth were purely temporary and ended at their death. Therefore, however, divinely inspired to write the New Testament, in which, together with the prophecy of the Old Testament, it is sufficiently and sufficiently sufficiently contained. This, therefore, the sole authority for the content of revealed truth was and is to be found in the written Word of God; and we have no authority other than that which may attach to the piet and learning of mere men.'

It would, perhaps, be unfair to assert that this doctrine of the Bible, isolated and abstracted from the life of the teaching Church, as the sole fount of religious truth, necessarily presupposes the mechanical theories of 'verbal inspiration' which prevailed during the era of Protestant scholasticism, though it certainly did much to encourage them. Two difficulties, however, at once made themselves felt: (1) If the authority of the Church is practically nil, how do we know what 'the Bible' is, i.e., what books ought to be included in the canon and what not? Because, hitherto, it has only been on the authority of the Church that we have believed in the canonicity and inspiration of these particular books. (2) As some parts of the Bible are admittedly written in an obscure style, how are the unlearned to decide what the true sense is? It is possible, then, that the Catholic theologians of the counter-Reformation were not slow in pressing upon their opponents, at once raised the question of the canonicy of the Apocalypse, books which were uncanonical to the Reformers because of the passage (2 Mac 12:3-5) commending prayers for the dead. A similar difficulty was created for many Protestant Christians by the prima facie incompleteness of the Epistle of St. James with Lutheran solidarism—an fact which caused Luther to describe it as an 'epistle of straw.' The second was emphasized by the fissiparous tendencies which immediately began to manifest themselves in reformed Christendom, converting it into a chaos of sects, which ranged from the high scholastic orthodoxies of Luther and Calvin down to the Arminianism of Socinus and the various extravagances of the Anabaptists. The patent contradiction between the Protestant theory of the simplicity and obviousness of the meaning of Scripture and the infinite diversity of opinions held by those who professed to accord it an infallible authority for the outlines of the Christian deposit was satirized in the celebrated couplet of Wenerwels of Basel: *Hic liber est in quo quaeris suum dogmatica quaeque inveniet et partier dogmata quaeque solent.
To the former of these objections the Reformers replied by taking the short Palestinian canon of the OT, as now held by the Jewish Church, on the ground that (as Jerome had urged) the Jews must surely themselves know what their own Scriptures were (their abandoning the tradition of the primitive Christian tradition which had taken over the longer, Septuagintal canon from the Hellenistic Jew) and by affirming that, so far as the NT Scriptures were concerned, their authority was manifest on the face of them, in virtue of the sublimity and elevation of their style and doctrines. This reply obviously settled nothing as to the disputed case of the Epistle of St. James, inasmuch as the question at issue between Luther and his opponents on the subject of this book was precisely this—Were its doctrines to be called 'sublime' or pernicious? To the second question, also, no very satisfactory reply was ever given. In logic the orthodox Protestant divines were compelled to maintain, and did in fact maintain, that the whole system of Nicene and Chalcedonian doctrine could be deduced with unwavering certainty from the text of the NT, given a prayerful and reverent spirit on the part of its readers. But the 'subordinationistic' passages in St. Paul's Epistles (cf. 1 Co 11:18 sqq. etc.) and those in which the Logos and the Spirit are joint 'bearers of the Word' (cf. 2 Co 3:17, 18 sq.), together with the patent fact that Socinus and his followers regarded themselves as 'prayerful' and 'reverent', must have made the orthodox Protestant's doubt in their inmost hearts whether the matter really was as simple as this; and hence they sometimes show signs of being, unwillingly, driven back upon the conception of a teaching Church as the authorized interpreter of Holy Writ. The Thirty-Nine Articles characteristically take up a position which may be interpreted as consistent either with the Catholic view of tradition and Scripture as joint authorities for the truth of the deposit or with the Protestant conception of the book of the Scriptures as the sole authority, independent of any living exponent. So we are told that 'Holy Scripture containeth all things necessary to salvation,' that the three creeds are apparently only to be believed 'because they may be proved by most certain warrants of Holy Scripture,' that 'General Councils may have erred or been deceived,' that 'Scriptures and Analecta must be shown as more entitled to our belief than any derived therefrom by human reason.' On the other hand, 'the Church . . . hath authority in matters of faith' and is 'a witness and a keeper of Holy Writ.' So far as a coherent conception of the relations of tradition to Scripture can be wrought out from these statements, it has been attained by Hooker, whose Eclesiastical Polity appears to be based on the now antiquated assumption that the Chalcedonian theology can be deduced from the text of the NT as directly and irresistibly as the movement of the heavenly bodies can be deduced from a set of astronomical tables. A characteristic and explicit expression of the thoroughly-going Catholic viewpoint within the Anglican Communion is to be found in Hooker's declaration that an indispensable mark of the true Church is the teaching of that word and that ministering of the sacraments which the tradition of the whole Church confideth the sense of the Scriptures to intend. It is clear that the Protestant endeavour of the settlement would go much farther than the old in its attack upon the Catholic tradition, and that it would in fact dispute not merely the authority of the depositaries, but that of the deposit itself and the Founder Himself. Its contentions may be summed up under two headings: (1) philosophical and (2) historical. (1)

Philosophical.—Starting from Calv.'s denial of the validity of the categories of the understanding within the contemplum sphericum, Bishops (q.v.) and his followers would deny the possibility of a deposit of tradition as intrinsically so far transcendent as to avoid the creatively limitations of man's understanding, and -intercourse with God's creation. Christianity could conduct not, of strictly intellectual apprehension. (2) Historical.—It is admitted that the essence of the Catholic deposit and of the traditional understanding of Christianity was a result from the ecclesiastical councils, through the sub-apostolic writers, into the NT itself; but the Protestant divines so far in difficulty in allowing their natural sense to such passages as Acts 9:32; 'Stand forth now therefore (via metaphysic)' which were taught, whether by word, or by letter of purer; 8: 'Withdraw yourselves from every brother that walketh disorderly, and nei-ther take the tradition which he teacheth you'; and notably to the Pauline, or deutero-Pauline, injunction, τον ευθύγραμμον διάλογον (1 Th 5,9), in which 'the deposit' is expressly mentioned.

It would now be conceded that St. Paul regarded Christianity as a dogmatic deposit of a kind (as the Nicene and Chalcedonian declarations were, in a general sense, the depositaries. But it is contended that in this respect there is an absolute gap between the teaching of Jesus and that of Paul; that Jesus regarded Himself merely as a teacher of ethics, or as the prophet of a new eschatological enthusiasm; that the movement which He initiated was of a purely emotional kind, though fraught with an Interimistic validity only for the very brief period of time which, in His view, remained before the collapse of the existing world-order and the inauguration of the New Kingdom; and that, as Jesus believed in the appearance of this kingdom, He would have had no idea of promulgating a deposit or constituting a depository class. But this is in Paul it is Paul's view of the Christian Church as the real founder of Catholic Christianity. He was he who trans- formed the vague and formless apocalypse enthusiasm of the first Christian generation into a definite, firm, working sacraments; it was he who taught Christendom to deduce the Presbyterianism with which the modern day and age of Reason and Stic metaphysic, thereby laying the foundations upon which later ages were to build the elaborate structure of Trini- tarian and Christological dogmas. It is Paul who educates successors who taught primitive Christian to regard themselves as members of a more or less institutionally binding group, the new Ecclesia or Congregation of God, thereby institutionalizing Christianity as a Church and a hierarchy. It is obvious that this view, if it can be historically demonstrated, would be a sure triumph of the traditional conception of Christianity by severing the connection between the deposit itself, and its absolute authority, the history of Christianity then becomes exactly analogous to the history of Judaism and of Buddhism. It is the history of the gradual overgrowth of the teachings of the founder by dogmatic, sacramental, mystical, and hierarchical integuments derived from other religions; 'Catholicism' is thus a sort of Christian Judaism what Lamasism is to primitive Buddhism. The classical expression of this view is still, perhaps, Harnack's great History of Doxology, in which the majestic present of Church history is exhibited as a gradual working out of that 'acute secularization' of Christianity initiated by the well-meaning, though mistaken, desire of St. Paul to commend the new religious movement to persons who had grown up in the atmosphere of the Hellenistic world. It follows from this view that the whole of the 'Catholic' deposit, including the central doctrines of the Trinity and the Atonement, must be discarded, and not merely those comparatively peripheral portions of it which were dropped by the great 16th century Reformers; Doxology, in other words, is an essential part of Catholic Christianity; and Catholic Christianity will disappear entirely, and institutionalism will be reduced to the minimum consistent with the notion of the Church. Despite the many conscious or unconscious attempts that have been made to break the ice, this question, Is the Catholic deposit in toto substantially what was promul- gated by Christ, or is it a vast mass of Greco-Roman accretion which nothing whatever to do with His authentic teaching, is the primary and crucial question that lies before the religious thought of Europe at present, and will probably have to be answered decisively, in one sense or the other, before one hundred years are over.

5. Recent developments.—Within the sphere of traditional Christianity three additional developments deserve brief mention. These are all that may be observed, confined to the Western or Latin Church, as in the East the era of petrifaction, which set in with the death of St. John of Damascus and the beginning of the great epoch of the East, still holds sway. (1) The first of these is analogous to what may be noticed in the case of Lamasism, viz., the tendency to concentrate upon the functions of the deposition of the single chief depository or supreme pontiff. So, within the Roman Church, the pope was declared by the Vatican Council of 1870 to be endowed, when performing his office, with that of the teacher of Christians, with the same infallibility (q.v.) as that which Catholic traditionalism attributes to the Church; and this belief is consis-
summed up in the '1 am tradition' of Pius IX. — a remark in which an unfriendly critic might discern an echo of the old priest-king idea. (2) The second development is the theory that was analogous to what we see in Judaism, with its attempts to form 'a hedge around the Law,' to protect the real deposit by surrounding it with a kind of secondary deposit; that is, an armour. In the Pius IX, this protective armour or integument was supplied by the edicts of the Rabbis. In Latin Catholicism the opinions of theologians have, in practice, come to assume the character of dogmas. Over the nucleus of the deposit, consisting of doctrines which are strictly de fide, there is a fringe, or penumbra, of 'plures opinions' which are prosumt fidei, based, not upon the decrees of ecclesiastical councils, but upon the consensus theologorum. To deny these opinions is not indeed heretical, but may be censured as 'temerarious' or 'offensive to pious ears.' In practice the distinction between the dogmas of the primary deposit and the pluses opinions of the secondary does not appear to be very clear; and even local traditions regarding the authenticity and sanction of particular holy places and objects of devotion, however a matter of ordinary human evidence, are sometimes treated with as much respect — and criticism of them is as much resented — as though they belonged to the inner nucleus of the faith. The third development represents a reaction against the former two, and is popularly called 'Modernism.'

In its extreme French and Italian forms, Modernism (1919) is logically identical with the extreme Ritschlian Protestantism of Schleiermacher. It denies that Christ meant to promulgate a deposit, or would have had any authority to do so if He had so meant; and regards Him rather as a religious genius, not exempt from the errors and limitations of His age and country, who merely gave the first impulse to a wave of emotional feeling, which has reverberated down the centuries and is still affecting myriad sinners. This view is, of course, entirely destructive of Catholic traditionalism as described above. In England, Germany, and America, however, the Modernist movement has taken a more moderate form; and within the Anglican Church, the corresponding movement has raised a very interesting problem — that of the relation between the spiritual contents of the deposit, which the Anglican Modernist would not deny, and the Church tradition, and the forms borrowed by the early Fathers and councils from Greek metaphysic to contain it. Whilst the Anglo-Catholic would maintain that the Church was divinely inspired to choose the right conceptual forms, and that these, having received eccumenical sanction, cannot be discarded by the individual believer, the Anglo-Moderne regards the forms as having no more than a purely human authority, and as capable from time to time of variation or even of supersession. The question of the depositary class does not seem to have been directly raised in these discussions, but it is probable that the Anglo-Moderne would regard the whole Church or Christian people, and not any specialized class within it, as being the depositary.

W. Sandys and N. P. Williams, Form and Content in the Christian Tradition, 1916. The English Catholic point of view may be studied in J. B. Franzelin, De divina traditione et scripturis, Rome, 1873; L. de San, De divina traditione et scripturis, Lyons, 1897; J. V. Balmers, De traditione et scripturis, Paris, 1905.

TRAGEDY.—See DRAMA.

TRAINING (Religious).—Religion is an attitude towards God. It expresses itself in acts of appreciation of values by individuals and groups. These acts are rooted in the human psyche. They may be few and irregular; they may be gross expressions of wild passion; or they may be refined and well-disciplined reactions of the whole personality in the presence of eternal values. The differences are determined chiefly by training the inner life to react consistently to higher ideals and motives, and by training conduct to habitual and adequate expression of appreciation.

There is a broad sense in which religious training is a feature of all forms of religion, from primitive animism with favourite incantations up to the cultured forms of ritual, all transmitted by religious institutions by imitation and other educative processes. But this article deals only with the specific types of religious training now practised or proposed in the English-speaking world.

By religious training is meant a systematic effort to preserve, improve, propagate, and transmit religious life, by methods commonly used in education, such as imitation, instruction, discipline, and inspirational and moral forces, in correlation with other means of promoting religion. It goes even farther in some minds; and not without justification the claim is made that educational training, no matter how secular or technical, is not complete or adequately motivated unless in its aim and spirit it leads up to that social purpose which is the chief part of religion (Herbert, Calm).

I. Background.—The types of religious training which now prevail have arisen by connected development (1) out of a long and diversified history of maladjustment between childhood and the Christian Church, (2) out of numerous artificial theologies and individualistic theories of religion, and (3) out of an utter lack, until recently, of any psychology of religion or of childhood.

(1) The child's brief pre-conceptual religious training may be found (a) in the stereotyped forms of worship and religious expression handed down to successive generations through church and family life; (b) in the catechism and confirmation class, where formal drill and authoritative doctrine and precept have long produced educational results of some importance in religious life. (c) A nearer background exists in the modern Sunday schools, first with their memorized Bible lessons, and since 1870 with their uniform lessons taught by rather feeble hortatory methods.

(2) The theoretical background is found in an individualistic theology. The corner-stones of this theology were the natural sinfulness of every man, the impending judgment of punishment therefor, and the miraculous atonement of Jesus Christ, which made possible the repentance and pardon of the individual sinner. The supernatural factor was magnified; the human conditions and means of salvation were subordinated, and the ethical discrepancies passed unnoticed. The process was conceived as judicial on the basis of a retributive penology now discarded in the best judicial practice. The instruction given was not regarded primarily as educative, but rather as dogmatic; it was mystical, and by far the most important significance was attached to the teachings of Jesus about the growth of the spiritual
life or the conditions of the ground into which the seed shall fall.

The social gospel lately found to be so conspicu-ous in the teaching and life of Jesus was unknown. For the lack of salutary growth it is essentially self-regarding, which is doubtless the main reason why Christianity has been so long and slow in making its way in the world. When the era of modern moralism, three things had happened. (a) The individual gospel was proclaimed from social and really Christian motives, and the result was good so far as it went, but incommensurate with the effort expended. (b) Actual conditions in mission fields and the emergence of social ideals at home forced an expansion of missionary aims so as to include social service—a gospel which was not always well correlated with the other. (c) As soon as this social gospel had time to reveal its character and possibilities, results became overwhelming; and the missionary prayer is no longer for the opening of doors, as it was a half-century ago, but for teaching, doctors, nurses, farmers, and skilled workmen, by hundreds, to carry a full-orbed Christian civilization into all the lands whose Maccabean calls are coming un-sought and unbidden.

(3) Until the last quarter of the 19th cent., psychology was a thing remote from religion. It had not then as now stressed the unity of the self, as against a number of more or less independent 'faculties' bearing little relation to religion. Nor had child psychology made known the extent to which the mind is at first rudimentary, and subject to the continuous and slow changes which the long human infancy makes possible. Psychology and social and educational science have found no place in the theory of religion until the last generation, and even yet there are those in every religious body who shudder at the thought of applying scientific methods to the propagation of religion. But it is out of these diverse conditions ancient and modern that a theory and practice of religious education is now rapidly taking shape.

2. Theory and aim.—There is a type of religious education which perpetuates the theoretical back-ground of intellectualism and individualism. Its propositions are arranged in logical order, and not in the order in which they arise in human experience. They are held to be authoritative, and are taught in dogmatic form. Under this theory the service which education renders to religion is to make these formulse known, and here the service ends.

Under the other type the service rendered by education to religion is much broader. The know-ledge to be imparted is not dogmatic but inspira-tional; not an end, but a means to spiritual values; not generalized and abstract, but presented concretely and made illuminating to the pupil's present life. This type of religious training includes habits of worship, attitudes toward the natural world, ideals of life, deeds of service, the relations sustained to the smaller and larger groups of one's fellow-men, and, in fact, every form of useful expression which can be given to inner spiritual life.

(1) The theory on which any adequate plan for religious training is based includes the following fundamental ideas as to the development of religion. (a) The presence of the religious life is felt not only in worship and in the conventional forms of religi-ous expression, but especially in character and in social purpose, which subordinates all interests to those of life. (b) The religious life is a continuous growth, not a thing produced artifi-cially, or judicially instituted at the moment of a passing experience. (c) This growth involves not a special organ or faculty, but the whole person-

ality. It involves even the group of persons, and it tends to realize in them their oneness with the larger whole of society and of the world in God. (d) Finally, the growth of the religious life is against the normal, vigorous, and fundamental development. The true nature is understood, as favourable conditions for its growth are provided, and as consistent work and painstaking devotion are given to its cultiva-
tion.

(2) The following educational facts and principles are also involved in the theory of religious training. (a) The subject of an educative process is a person with all his inherited equipment of race instincts and family traits, as well as his unde-
veloped mental, moral, and religious powers. It is the business of education, not to eradicate or sup-
plant any of these, but to develop and cultivate them, and subordinate them to the highest ends. (b) Education is more than instruction. It not only builds up many and rich concepts, which shall serve as a basis for judgment and action by a mem-
er of society; but it also takes measures to estab-
lish desirable habits, and to create ideals of com-
manding dignity and emotional power. (c) Edu-
cation uses concrete materials for this purpose. It selects for the task of these human conditions best fitted in character and grade to accomplish the particular purpose in view. The treasures of the race have become very rich in such material, so that the selection and preparation of it is a task demanding the skill of educational experts.

(3) The thing that is aimed at in religious edu-
cation is (a) to put one as early and as completely as possible in possession of that rich treasure of experience which has come down from the past, and has been gathered from the ends of the earth, especially those parts of it which are richest in their meanings for a man's life in the world with other people and as a worker with God. (b) A further aim is to turn the full force of that experi-
ence, in the form of socialized ideals and purposes, as a motive power upon conduct and upon the ordering of the programme of life. This is an individual aim, but it is far more. It enlists churches, homes, and communities in this motiva-
tion of conduct for the well-being of society at large. (c) It is believed that the instruction to be derived from the parable of the soils (Mc 4:20) is a lesson of education, in which the minds mellowed by long processes of nurture are those which respond quickly and whole-heartedly to the evan-
gel. Such nurture would seem therefore to be the most direct and effective way of preparing one with the Spirit of God for the evangelization of the world.

3. Content.—Since religion and its promotion are understood to be, to some extent at least, an enterprise in education, it is necessary to choose for such instruction that material which will be most fruitful religiously. Rather vague ideas prevail on this subject, due to lack of critical analysis of the values to be sought, and to incomplete know-
ledge of how to produce and conserve those values. The educational reformers of a century ago estab-
lished the principle of gradation of material—i.e., that the ability of children to understand and master material changes as they grow older. The material must therefore be chosen with reference to this changing ability; e.g., the incident of a boy holding a bird's nest can be understood and remem-
bered by a five-year-old child, but the moral inter-
pretation of the same incident is better suited for a mind several years older.

The fallacy of catechetical instruction is partly a pedagogical one. It consists in presenting adult abstraction to children in offering strong meat instead of milk to babes. A similar

TRAINING (Religious)

has been most complete in nearly every curriculum thus far proposed for religious training.

(3) While it helps to provide a knowledge of science and general education to develop in youth a conception of the causal connectedness of the world and of its unity, consistency, and organization under natural law, it is a well-known fact that this is not generally done, for the reasons given above. But the education of youth is not more frequently connected with religion than elsewhere, and it is proper that religious education should provide in place of discarded cosmologies a better instruction which can serve the common people as a credible philosophy of nature. Nothing can do more to disintegrate religious faith and moral integrity than lack of a believable philosophy of the world. Such a philosophy is entirely within the mental compass of enlightened youths; and they have a right to it as a support for their faith and as a part of their education. Indeed they will have it. The only uncertainty is as to how good or how poor a philosophy they shall work out for themselves if wise help is withheld from them.

For the few but important lessons on this subject the creation stories and a few other portions of Scripture will serve as occasion for wise and modern instruction. A few of the great chapters in the history of science are required. These need not be correlated with the traditional creeds or systems of philosophy; they can make known a few of the landmarks of religious history, at least by their names and by some characteristic incidents associated with those names.

In selecting and grading the materials for religious education there are a number of considerations to be provided for.

(1) The language of religion must be acquired. As in any field of human experience, the language and the thought develop together. Some terms are advanced and technical, but many are elementary. The existing and practice of religion, the reading of the Bible, and the social environment offered by a religious community can make familiar to children, nurtured in such an atmosphere, all the elementary concepts of religion, and the words and expressions to which they refer. Only they can make known a few of the landmarks of religious history, at least by their names and by some characteristic incidents associated with those names.

A properly graded curriculum therefore provides for young children a selection of simple Bible incidents on subjects within their experience, or a like class of subjects taken from biography, literature, history, or the sciences which are the stories about children, animals, natural objects, and the things familiar to childhood, especially those which contain some of the language and forms of religion, but none of the generalizations and abstract principles in which religious teaching is so often couched.

(2) The child inherits certain capacities for a moral and religious life. But each individual must shape his concepts of that life from the examples of other experiences seen and heard by him. His education consists in becoming acquainted with the examples of others; in reading of other persons, meaning into them, and in shaping his own habits, judgments, and ideals, with reference to the experiences so set before him. This formation of concepts represents a later stage of religious development than the elementary social facts already mentioned above, but the later mingles with the earlier stage, and they move forward together. A class of more meaningful experiences is chosen for this purpose, such as the parables of Jesus, tales of moral heroism, events in which service and sacrifice are exemplified, the revelations of motives and of character and of loyalty to persons and to ideals, and the superiority of moral and spiritual values over those values which are chiefly carnal and commercial.

It is therefore the business of religious education to bring into the life of youth an abundance of human incidents rich in moral and religious meaning; to present these experiences with sufficient detail and pedagogical skill to assure them an atmosphere, an emotional vitality, and some permanence which the other subjects mentioned above, but the later mingles with the earlier stage, and they move forward together. A class of more meaningful experiences is chosen for this purpose, such as the parables of Jesus, tales of moral heroism, events in which service and sacrifice are exemplified, the revelations of motives and of character and of loyalty to persons and to ideals, and the superiority of moral and spiritual values over those values which are chiefly carnal and commercial.

VOL. XII.—27

New York, 1915.
their meanings interpreted. Such issues were drawn in OT times by the prophets against royal and ecclesiastical dignitaries. Jesus defined an issue between the Pharisees and the new religion of common people. Every teacher, every prophet, every reform, every moral and spiritual achievement from that day to this, can be of great service to those whose motives and ideals are forming. They have been drawn as a background to the tasks and problems of to-day, as a guide in defining and discovering present and future issues, and as an inspiration to loyalty in trying situations. Here will appear biographies of men and women who have caught visions of an improved world and have helped to realize these visions. Here also belong the rise and fall of institutions in response to the changing needs of the world. Out of such rich and varied sources are being selected the graded and sifted materials for a curriculum of religious training.

4. Method and Organization.—While the history of pedagogy has been progressive, and general educational aims have reflected that tendency, religious training has been slow to take up improved methods. Memorizer catechetical teaching is still common. Hortatory and semi-expository teaching of the Bible is quite general in church schools, but it is often being evangelistic and not primarily educative.

There is a marked tendency to reconstruct, not only the curriculum in ways already indicated, but also the method and organization. In method these changes consist in a larger use of direct narrative in connexion with concrete story material used in the lower grades; the immediate oral reproduction by pupils of the narrative so presented; the increased use of pictorial and graphic representation, and the tendency to substitute for the leaflet, pamphlet, or bare Bible specially prepared text-books of a more permanent and attractive character.

But the most important tendency is towards things to be done, as an expression in real life of the moral and religious impulses, as they awaken in childhood and youth. Daily conduct, positions taken on moral questions before associates, missionary work, community betterment, neighbourly and charitable work, and worthy social activities in general, offer a welcome field for religious training in this growing aspect. Only of such activities arise deeper and truer thinking and finer emotional responses than any didactic method can produce.

Institution of church organization provide for a department of religious training in the local church. This department is free to adopt methods in harmony with improved educational and religious ideas, and to introduce a curriculum something like that outlined above. Only in those local churches where the broad full meaning of religious education has been discussed and appreciated has the reconstruction taken place. But the nature of the process is impressing; they are profiting by experience; and their results are watched and reported.

In several American communions, notably the Protestant Episcopal, the Congregational, and the Presbyterian, important steps have been taken to reconstruct the denominational material for the use of denominational Bibles. Numerical facts are employed to propagate the principles and ideals of religious training in the local churches, and to aid in the installation of similar systems. These methods are especially successful in missionary fields, (1) because there the need is more obvious, and (2) because the methods of prayer have been turned to antiquated methods as many of the churches are.

While the prospect for the future of religious education is best in the direction of denominational organization, there is also a distinct movement on foot for community organization disregarding ecclesiastical divisions, or at least bringing them into co-operation. This plan calls for a local board and a superintendent, who shall inaugurate a school system parallel to the other system or systems in the same community. Less time would be required in the religious training of the general and vocational schools; yet the effect of the training cannot be estimated by the time spent. In addition to the direct values of such training the material of general education is re-interpreted and given a meaning and direction present and future issues, and as an inspiration to loyalty in trying situations. Here will appear biographies of men and women who have caught visions of an improved world and have helped to realize these visions. Here also belong the rise and fall of institutions in response to the changing needs of the world. Out of such rich and varied sources are being selected the graded and sifted materials for a curriculum of religious training.

In Britain and in some other European countries the schools supported at public expense are expected to furnish some instruction of a religious nature. Recognition is made of denominational preferences, and teachers are assigned to groups with this in mind. In France religious instruction is entirely excluded from all public and private schools of general education, and the members of religious orders are disqualified as teachers. This of course does not prevent the teaching of religion in the churches. In the United States of America religion is excluded by the laws of the States from the public schools; but entire freedom is given for this instruction under church or community supervision. In some States the pupils are released for one session each week from required attendance at a public school on the condition of attending religious instruction under approved religious instruction, proportionate credit being given if such work is satisfactorily done.

In general it may be said that the ideals and content of religious education have been reconstructed in accordance with modern ideas. The realization of the better ideals has been achieved in a limited degree, and every year marks distinct gains. But the program is retarded (1) by conservative traditions among earnest religious people, who have not seen the spiritual values in a religious life conceived developmentally and socially; (2) by inadequate conceptions of and facilities for training in religious activity and self-expression, and (3) by lack of united and trained leadership in the re-organization of religious education in local communities. It seems to be the task of Christian colleges to raise up a generation of men and women who have the religious and educational ideals and the ability and enthusiasm to organize them into the life of our time.

A good central organization for the study of religious education, for the comparison of results, and for the promotion of this large interest in the life and thought of the world exists in the Religious Education Association (Henry F. Cope, Secretary, 1440 East 57th Street, Chicago, Ill.). It was founded in 1903 by representatives of all religious faiths. It has held important annual conventions, mostly in American cities. These conventions have done much to shape thought, guide effort, and stimulate experiment. The volumes of the bi-monthly magazine of the Association entitled Religious Education furnish much material in the history and discussion of this subject.

TRANSCENDENCE.—See Immanence.

1 W. S. Athearn, Religious Education and American Democracy, Boston and Chicago, 1917.
TRANSCENDENTALISM. — The term 'transcendental' plays an important part in Kant's Critique of the Pure Reason—'transcendental logic,' 'transcendental metaphysics,' etc.—and through the influence of the critical philosophy the term has become familiar in modern thinking and even in popular literature. Kant did not originate the term, but he gave it new vigour and a new orientation.

1. Pre-Kantian transcendentalism. — (1) Use of the term in scholastic logic.—Before Kant's time 'transcendental' and 'transcendence' were familiar terms in the scholastic logic and were practically equivalent in meaning, although he sharply distinguished between them. To the scholastic logicians these terms were used of those most general notions that could not be subsumed under the ten Aristotelian categories. They rose beyond or transcended them. Spinoza uses 'transcendent' in this sense of the most general notions and gives his view of how psychologically they originate. 1 Strictly speaking, these 'transcendentalia' or 'transcendentia' belonged to a realm above ordinary categorical logical thinking and as such were beyond the province of logic proper. Various enumerations of these transcendent notions are given. Albertus Magnus gives ens, unum, bonum, et verum; and very generally these, along with res and aliquid, make up the list in the scholastic literature. Their interrelations are stated and various subtleties regarding them introduced by different schoolmen. Ens was as a rule regarded as super-transcendental, the root being passions or modifications of being (passiones entis). This category in scholastic philosophy was pretty much what the 'Absolute' is in modern philosophy.

(2) Use of the term in theology.—To the schoolmen, however, logic was only the handmaiden of theology, and so we find these terms more or less always moving into the area of theological speculation. These transcendental notions had their reality in the mind of God, who is transcendent per excellents. The passage in Augustine 2 where he posits the transcendental ideas in the divine mind became classical and is quoted by all the great medivalists. It is in his transanalistic interpretation of Greek thought with Christian experience. Plato speaks of the good (τὸ ἀγαθόν) as transcending being (ἐξωτερικὸν τὸ ὀνόματι), 3 and Plotinus uses the concept of transcendence in the Latin equivalent of ἐξωτερικόν, 'beyond.' At times this tendency became extreme, as in the case of Eligens and the mystics who speak of God as above all predicates—ἐν πάσῃ θλίψει, ἐν πάσῃ φόβῳ, ἐν πάσῃ ἀδικίᾳ, 'above truth,' 'above wisdom,' 'above eternity.'

Transcendentalism in theology, then, means the position that God's knowledge and character are perfect, absolute as distinct from man's knowledge, which is imperfect, and from man's virtue, which is immaterial; as such it is part of the very essence of theology and the unmovable conviction of religion. But it may become falsified through overemphasis and dangerous through over-refinement of subtlety. Ordinary living religious experience speaks of the divine in plain speech, ascribing to God's organs, powers, movement, change, purposes, and this is done without any feeling of incongruity—even when the divine spirituality is clearly recognized. Transcendentalism becomes over-subtle when it objects to this, and it is usually confronted with religious skepticism—when religion is a low ebb and beset by foes that this form of transcendentalism gains a hearing. Even in the OT, as Schultze points out, 4 we have the beginning of reflective transcendentalism. It is more evident in the Septuagint, in Philo and in the later scholastic Jewish literature, and it operates dominantly in Philo until God becomes the Great Unknown.

In the history of Christian theology we find the superimposition of this metaphysical and mystical transcendentalism on the direct religious thought of the NT. Edwin Hatch, in his famous Hibbert Lectures, 2 maintains that the great creeds of Christendom buried religion under this metaphysics; and in his zeal he has overstated the case; for transcendentalism in the sense of God's absoluteness is an integral part of religion and of theology, but, when it makes this a mode of throwing discredit on man's knowledge and of undermining man's notions of right and wrong, when it empties God of feeling, purpose, and initiation, then it becomes false and dangerous.

It is better to idealize the sense of transcendentalism in this sense, before discussing the Kantian and post-Kantian usage of the term, as these forms of thinking have their roots deep in a soil different from that of the generally and dominantly under the influence of Kant.

2. Extra-Kantian transcendentalism. — Transcendentalism in the theological and philosophical sphere means, in a general way, the recognition of God as exalted in thought and character above man and sensible objects. It is thus contrasted with phenomenalism, naturalism, and materialism, one may say, also agnosticism, for, although the agnostic may grant the existence of such a Being, the concession is of no value either for knowledge or for morality. In this sense every religious view of the world is transcendental. When, however, we ask what the relation between man's knowledge and virtue and God's is, the real problem of transcendentalism emerges, and, according to the answer given, thinkers fall into two main classes, which for purposes of clarity may be distinguished as follows.

(1) Extreme transcendentalism.—Those who hold that God is utterly incomprehensible to us, and that all knowledge of divine virtue in Him are quite different, not only in quantity but in quality, from what we mean by these terms, are extreme transcendentalists in the sphere of ontology. Modern examples are Hamilton and Mansel, who, borrowing a Kantian distinction, maintained that our predicated knowledge of God is regulative not speculative truth, that it was given, not to satisfy the reason, but to guide the practice of man, not to tell us what God is in His absolute nature, but what He wills us to think of Him in our present conditioned state. This phase of transcendentalism arose as a protest against what Hamilton calls 'the scheme of pantheistic omniscience so prevalent among the sequacious thinkers of the day.' Speculative theologians have always had leanings towards this mode of reasoning regarding the divine, and its influence can be traced in theology from the days of Origen. While the ordinary religious consciousness speaks of God as wise and good, and cannot help so doing, yet these terms in reality do not apply to Him, and are to be understood not in a metaphysical sense as designed

TRANSCENDENTALISM

From the plane of intelligence, according to Beethius, all the contradictions of the ordinary experience are reconcilable. Thus to God they harmonize, and to us as far as we look at them from this point of view from this plane. Here is a striking parallelism, viz. forgetting of the truth that man is made in the image of God, and forgetting that thinkers are apt to cut apart God and man, and thereby religion and reason alike become unreal and untrustworthy. Under this illusion religious men fall back on an authority which has no basis in our rational or moral nature, or on some occult faculty apart from reason; and others, strictly adhering to the working of the understanding, leave the transcendental sphere of Being alone. Outside the small circle illuminated by the understanding there may be Something, but to us it is unknown and unknowable. Agnosticism as regards ultimate reality is the result of this attitude.

(2) Religious transcendentalism.—Others, again, maintain also God's transcendental character, but they hold that man's knowledge is accurate as far as it goes, that in quality, though not in quantity, it is the same as God's, and that morality in man can not be different in essence from what it is in the divine, that the pathway of true knowledge and of true goodness are related. The pure heart is certainly an accommodation, but this accommodation itself is an education of man by God, progressing from less to more and conserving in its more perfect stages continuity with the earlier, and besides the process is self-correcting. J. B. Mozley gives a very fair view of this position as regards the OT. God dealt with men as they were, but in such a way as to lead them onwards and upwards. Man makes God in his own image, but it is because God first made man in His image. Augustine, who often speaks of God as incomprehensible—as indeed every religious mind must do, so that Hamilton has no difficulty in compiling a catena of such passages from various writers—yet maintains that our intellectual and moral strivings are but a returning to the Source whence intelligence and goodness spring. The human mind and heart participate in transcendental knowledge and goodness, and the aim of theology is to ascend by this road to God; only to man the grace of the Holy Spirit is necessary to initiate and guide. The method here is not so much that of negation as of eminence (via eminention), and it differs from pure philosophical or epistemological transcendentalism both in its inception on the need of grace and in its proper valuation of other aspects of experience besides the pure intellect. It is this that 'Rabbi' Duncan has in view when he defines transcendentalism as 'the denial of that which renders man's knowledge an inferior kind of knowledge,' and it is in this sense that F. D. Maurice is a transcendentalist when in somewhat exaggerated fashion he fathers on Mansel's theory such frightful consequences.

(3) Epistemological transcendentalism.—Distinct from this again is what one may call pure epistemological transcendentalism, according to which the highest knowledge in man becomes identical with, and indistinguishable from, the divine knowledge. Thus Beethius:

'Sense judges figure clothed in material substance. Imagination figures alone without matter. Thought transcends this and deals in contemplating. The pure mind considers the type itself which is contained in the individual. The eye of imagination is more exalted, for it seeks of the universe nothing but absolute form itself by the pure power of the mind's vision.'

of valid knowledge, and a transcendental inquiry, such as his own critical method, 'concerns itself, not so much with objects, but with the way in which we know objects in so far as this may be possible,' 1 which renders the aim of all analysis of the mode of our knowing the object. 2 What really matters is not be the aim of the critical philosophy to determine, but to find out that element in knowledge which makes it valid and to guard knowledge against the two extremes of empiricism and noumenism. The understanding can reach in dealing with phenomena from the side of the receptivity of mind, just as 'the transcendental unity of apperception' is the limit on the side of the mind's synthesizing activity. No other claim has any relevance for the understanding, for it knows nothing of noumena. 3 If one were to regard this only as Kantianism, the first review of the Kritik—that of Christian Garve of Breslau, 'which was also canonized in one way or another Anzeigen' of 19th Jan. 1782—might have forces:

'This work . . . is a system of the higher or transcendental idealism—an idealism which embraces both fact and matter, transforms the world and ourselves into ideas, and represents the objective world as derived from appearances which the understanding combines in the interdependent whole of experience, . . . The cause of these ideas is to us unknown and unknowable. 4

But what pure reason cannot attain to, practical reason can. Morality needs transcendental realities as postulates, and, because the sphere of morality is to Kant more real than, or as real as, the sphere of knowledge, this postulation is necessarily but valid. The transcendental of knowledge becomes the transcendental of morality. God, the world, the soul, freedom, and immortality become real here. We do not prove their existence or discuss them, by cognitive methods, but they are imperatively demanded by the facts of the moral life, of which facts he had no doubt.

4. Post-Kantian transcendentalism. — Kant's system was profound in its effects, different thinkers adopting those parts of it which served their turn, so that the complexion of their transcendentalism is determined by their point of contact with his view. His influence touched the English-speaking world at first largely through the works of Coleridge, Carlyle, and Emerson.

(1) The teaching of Coleridge, Carlyle, and Emerson.—Kant's philosophical function may be defined by saying that through him was transmitted an opportune suffusion of Kant and Schelling into England as of light softened through a stained-glass medium, and that into this suffusion he also resumed whatever of Anglo-Platonism had been floating long neglected in the works of old English Divines. 5 Thus the distinction between the 'reason' and the 'understanding' became familiar, and 'transcendental philosophy' acclimatized in English speech. The reason could overcome the impotence of the understanding and get hold of unseen realities.

1 As the elder Romberg distinguished their northern provinces into Cis-Alpine and Trans-Alpine, so we may divide all the objects of human knowledge into those which are known to us by the senses on the other side of the spontaneous consciousness: cibra et transcendentam communem. The latter is exclusivist the domain of pure philosophy, and the former, which is called the transcendental, in order to discriminate it at once, both from mere reflection and re-presentation on the one hand, and on the other from those few lights of self-speculation which, abandoned by all distinct consciousness, because transcending the bounds and purposes of our intellectual faculties, are justly condemned, as transcendental. 6

It is clear that Coleridge has no interest in accurately reproducing Kant. To him transcendentalism is just emphasis on the spiritual side of man's nature, and this is the meaning also to Carlyle:

'The grand unparalleled peculiarity of Teutofrech is, that with all this transcendentalism, he combines a Transcendentalism, no less superstitious whereby if on one hand he degrades man beneath animals, except the Cows, and the God's Cows, he, on the other, exalts him beyond the visible Heavens, almost to an equality with the Gods.'
TRANSCENDENTALISM

transcendentalism came to mean the recognition of
super sensible realities, and the spiritual nature of
man—that man was more than 'an omnivorous
biped that wears breeches.' A passage from Cole-
ridge shows the influence of this attitude in the
sphere of interpretation:

'...the intelligible forms of ancient poets,
the fair humanities of old religion,
the sublime reaches of historicity,
and the mystery
That had their haunt in dales, or piny mountain,
Or forest, by slow stream, or pebbly spring.
Or in the dark and watery depths: all these have vanished;
They live no longer in the faith of reason.
But all the better need a language.'

The faith in 'the light that never was on sea
or land,' 'the vision and the faculty divine,'
the fight against a crude interpretation of man's
spirit as ultimately matter, and the protest
against literalism in all its forms, characterize
transcendentalism at this stage; and this is still
the sense of the word in extra-philosophical
literature. In New England Emerson and others,
rebelling against an orthodoxy that tended to
make men wholly sinful and corrupt and the will
of man necessarily in bondage, and impatient
of dogmas derived from a revelation confined to one
book, initiated a movement that got the name
'transcendentalism' more in name than in
honour, but the term was accepted, and the claim
made that all the best in the world's thought
was here included. Carlyle, who, in spite of his
sympathy with Emerson, saw in this movement
an extravagant disregard of facts and an enthusi-
astic eclecticism, warned Emerson against the
dangers ahead:

'You seem to me in danger of dividing yourselves from the
Past of the Universe, in which alone ugly as it is I can find any
anchorage.'

James Martineau—himself a transcendentalist in
the Carlylean sense, whose intellectual history is
a pilgrimage from the bondage of empiricism—
does not take Emerson seriously. No doubt New
England transcendentalism became extravagant,
welcoming the raving of the Swedenborgian and
of the unregulated mystical as possible revelations,
yet it never became a system, and its airy optimism
is explicable and defensible as a protest and a
reaction; yet to its influence is largely due the
fact that to many, if not to all, in our day
transcendentalism means hopeless and unwarranted
idealism—unworkable dreaming. It was not
patient enough to be lasting, and, with all its
bombardeed insouciance, was blind to the facts
that gave the old orthodoxy its seriousness
and its power of rejuvenescence. On the other
hand, it was a refreshing and liberalizing
movement.

(2) Science and transcendentalism. Kant's
influence was felt in a very different quarter—among
those whose interests were devoted to science.
Thus Lange, the historian of materialism, inter-
preting Kant, as he thought, confines man's
knowledge of reality to the results of science,
but contends for a world above this created by
our moral and spiritual needs—an unsubstantial
world of ideas. A transcendentalism which is like
a painted cloud; and this attitude has more or
less existed since, differing according to the amount
of reality the individual thinker gives to this
beautiful but airy realm. It is found in the
historian Buckle, and has been well described
as a 'consultory private transcendentalism.'

Herbert Spencer's magnanimous handing over of
the Unknowable to religion is an example of this
'private transcendentalism.' It is due to a one-
sided exploitation of Kant without regard to
Kant's moral certainty. To Kant the moral
nature of man planted man in an intelligible real
world, although knowledge left him only in the
phenomenal, with just a glimmer of the noumenal
breaking through, but this truth, which, as in Lange's case, pretends to be its law-
ful heir finds the phenomenal the real, and the
transcendental the vague and the shadowy.

Others more alive to the reality of rationalism have sought to push transcendentalism side by side
with scientific results, while conscious all the time
of the hostility between the two. Thus W. H.
Mallock1 attempts to hold by the results of
science and yet to allow the demands of religion
validity; and this attitude was prevalent in the
past century.

In psychology the theory of psycho-physical parallelism
exhibits the same tendency—a species of cleavage between
phenomenalism and transcendentalism. The results of science
are accepted; its principles are unquestioned, and
these same facts are explained as if nothing but psychological data
were involved. It is a truce born of perplexity—a compact that
real issues will not be raised on either side. It is not difficult to see
how closely related to Kant these tendencies are, for it may not
unfairly be said that he himself adapted without question
the results of science and also the deliverances of a spiritual
philosophy due to religion and held them both without con-
sistently uniting them.

Paulsen, one of Kant's most faithful modern disciples, contents that science will never give up its
claim to explain everything mechanistically; yet
metaphysics must give to this realm of science
an idealistic interpretation. One may be the most
rigid materialist at one moment, and yet be wholly
transcendentalist as a philosopher at another.
The scientist will never admit any supernatural
agent, and the only way of preserving his claim;
yet somehow to transform all into spiritual
reality is the task of the philosopher. It is because
of this felt dualism that transcendentalism in its
pure form as absolutism claims for him the
true heir and rightful corrector and interpreter of
Kant.

(3) Absolute transcendentalism. — 'Transcen-
dentalism' in modern philosophy is used quite
world-wide known at times as absolutism, objective
idealism, neo-Hegelianism, or rationalism.
The term 'transcendentalism' traces this system
historically to Kant's theory of knowledge. As
we saw above, it is a compromise between at
least two things: (a) Those principles in know-
ledge which in the nature of the case did not
originate in sense-experience are transcendent.
In this sense the term Kantianism is not really itself,
with that degree of gravity in British thought which rec-
ognized a priori or original data both in know-
ledge and in morality—what may be generally
named intuitionism. Leibniz's famous revision
of the empirical formula may be taken as the
watchword of this school: 'Nihil est in intellectu
quod non prius fuerit in sensu nisi ipsa intellectus.'
The controversy between Hume and Reid, between
Mill and Hamilton, is one between psychological
empiricism and psychological transcendentalism,
just as the controversy between hedonism and
intuitionism is a phase in the same of the
sphere of ethics. This was the outstanding question in
British philosophy for many a day. Masson in
his Recent British Philosophy gives a readable
account of the state of matters in his time, and
'transcendentalism' is used by him of those
systems which recognize in the mind more than
sense-data. Spencer considers it one of the merits
of evolution that it supplied a means of reconcil-
ation between these opposing views. According
to him, what we now regard as two the
individual was

1 Religions as a Credible Doctrine, London, 1902.

3 Masson, p. 240.
dentism. (6) But 'transcendental' meant to Kant constitutive of knowledge—those principles which, though not due to experience, yet made experience itself coherent, above all, the unity of all the content of knowledge came from experience, but the form of it made knowledge possible. Besides, reason had as regulative principles the ideas of the self, the world, and God, and in its practical working reason got into touch with them. And Richard Price-Kant's teaching that issued in transcendentalism, as it came to be understood in English-speaking countries, in the first half of the 19th century. Hamilton welcomed the Kantian system chiefly because he found it in harmony with the limits of our knowledge as propounded by himself, but others welcomed it because in their view it taught that man by his reason was more than a mere creature of the senses. Thus Carlyle, in his paper on Novalis, 1 points out that German transcendentalism denies the absolute existence of matter, that it makes space and time forms of the understanding; therefore to God 'Time and Space are not laws of His being but only of ours,' and so He is omnipresent and eternal; and 'the black Spectre, Atheism . . . melts into nothingness.' Again the transcendentalists of all these three faculties of understanding—viz., reason. Thus the invisible world is brought near us, and we feel in every thought that in God 'we live, and move, and have our being.' It was in this way that transcendentalism also at first became known in America. 2

The transcendental unity of the self which Kant understood of the individual knower, and which by theoretical reason gave him no substantial subject or soul, was raised by his successors in Germany to the level of a universal principle and an active subject, and thus knowledge was made adequate to grasp all reality. Reality now became subject and object; transcendentology became ontology. The transcendent of Kant vanished completely; it became immanent in knowledge. Fichte laid stress on the creative activity of the self in such a way that the object, the world, was called into being by the subject. Schelling, whose views changed considerably on one stage in his history to another, regarded the Absolute as the background of subject and object alike, he himself a neutrum—form, presence, and he made intellectual intuition the eye by which intelligence grasped this whole. Hegel tried to do equal justice to both subject and object: 'the real, and the rational is the real,' and Absolute Spirit is the whole, which becomes conscious of itself through a dialectical process. For some time this mode of thinking, through its novelty and obscurity, was unintelligible and obnoxious to English thinkers, but, when it did take a hold in Britain, it was with such force that it conquered the philosophical chairs in our universities with few exceptions, and exercised an orthodox tyranny against which it was difficult to contend. To Hamilton, 4 who viewed with extreme repugnance the philosophy of the Absolute, must be attributed the revival of philosophical speculation in Britain, and his pupils were able to understand the German philosophy which then was an enigma and a puzzle to others who in Britain interested themselves in speculation.

(4) Modern developments. —Ferreir's Institutes of Metaphysics 1 was perhaps the first systematic exposition of transcendentalism in our tongue, although others had by that time acquainted themselves with that branch of its varied expositions in Germany—some especially of John Cairns, 2 others enthusiastic in their advocacy (e.g., Hutcheson Stirling, whose Secret of Hegel was an elaborate attempt to make Hegel intelligible to English readers). But was, however, through the teaching and writings of Thomas Hill Green (q.v.) that transcendentalism became a philosophical force in Britain. Evolutionism, while it spread through the universities, along with materialism and idealism, did so from below, by trying to relate man's knowledge and man's morality with animal life and animal activity in general. Transcendentalism, while acknowledging that in one sense man is a part of nature, yet explained knowledge and morality from above. Knowledge, according to this view, is explicable as the reproduction in man of the eternal self-announcements of God, and morality as the realization of the immanent Eternal. The following passage from William James describes the spread of this movement in Britain:

'For many years [this] movement had thought too much. They had deeply interested the British public by their writings. Almost more important than their writings was the fact that they have occupied philosophical chairs in almost every university in this country. . . . It follows from their position of academic authority, and the fact that this movement exercised an influence not easily measured upon the youth of the nation —upon those, that is, who from the educational opportunities they enjoy are finally expected to become the leaders of the nation's thought and practice. . . . Carlyle introduced it, bringing it, as far as Chelsea. Then Storr and William Hill Green, and William Wallace and Lewis Trelawney, and Arnold Toynbee and David Ritchie—to mention only those professors whose voices are now silent—guided the waters into those upper reaches known locally as the Isie. John and Edward Cairns, their father and son, brought them up to the Clyde. Hutcheson Stirling up the Firth of Forth. They have passed up the Mersey and up the Severn and Dee and Don. They pollute the bay of St. Andrews and swell the waters of the Dan and have somehow crept overland into Birmingham. The stream of German Idealism has been diffused over the academical world of Great Britain. The disaster is universal. 5

'Transcendentalism' came to be used of this new movement, although the term was not a favourite with the idealists themselves. It was used by Henry Sidgwick 6 especially of the teaching of Green; by A. J. Balfour, 7 who contributes a chapter of criticism, and who even could say

'In English-speaking countries it is within the narrow circle of professors, perhaps the dominant mood of thought which is restricted to this circle does not seem to be regarded by as totally ignored. 8

William James used it of all objective idealists, however these may differ among themselves, while, just as it has been used by Bosanquet's teaching in his Principles of Logic which he describes as 'the last striking output of British transcendentalism or absolutism.' 9

(5) Neo-Hegelianism and Christianity. —What gave this philosophy its vogue, to begin with at any rate, in Britain was undoubtedly the fact that to many minds it appeared as a defense fides. It seemed to supply an answer to materialism and empiricism, which were to some extent competitive with and agnostic on the other. It could be preached, and was preached often, by men who adopted the familiar phrases of sacrosanct religious thinking which were associated in the popular mind with Christian values, and thus its true value to be regarded

TRANSCENDENTALISM

as a type of Christian philosophy. Hutchinson Stirling found in Hegelianism a new version of Calvinism. Green used it to demolish the traditional English sensationalism and hedonism, and amidst the scepticism which prevailed regarding the historical element of Christianity, used it to rear a Christianity of ideas and ideals, from which dualism we are still suffering—witness the controversies concerning the historic Jesus and the divinity of Christ. Charles S. Pattison, in 1883, said of the inroads of Spencerian and Manelian scepticism and Huxley's agnosticism, found in Hegel's teaching an ark of refuge and a citadel of defence. It was thus a movement of deliverance, of reform, and of religion. Not a few of its most zealous advocates were men destined for theology who found here a more congenial home. But, as time went on and this system began to be developed, the difficulties, tendencies, and obscurities inherent in it, as well as the dangers, revealed themselves. Just as in Germany Hegel's system allied itself at first with orthodox theology and then the historic Rother, so swung back to practical atheism and materialism, so also in our own country time has made it plain that this system is no guarantee of Christian faith or morals. Green speaks with philosophic sorrow of this development in a college or university, with the satisfaction for their ideals and aspirations, though they harbour scientific views which contradict these. He is sorry because such people do not proceed to frame or adopt a coherent philosophical system; forgetting that what gave transcendentalism its interest and vitality among the educated was not its speculative scheme—that was always a puzzle more or less—but the idea that this philosophy conserved spiritual values, and that what is fast loosening its hold on this class to-day is the feeling, rightly or wrongly entertained, that these interests are being betrayed or disregarded in the interests of the coherence of the system itself. To begin with, it is widely felt that transcendentalism speaks too confidently of its own power to present a perfectly explicable view of the world—to exhibit all reality in thought categories. Its manner is apt to strike the observer as being haughty and supercilious, and its language would lead one to think that a claim to something like omniscience is arrogated—a claim so contrary to the nature of idealism and so opposed to that humility which serious thinkers have always regarded as the fitting attitude for all searchers of truth.

(6) Faith and knowledge. No one has done more among our professional philosophers to abate this soaring gnosticism than Campbell Fraser, with his insistence on the function of faith as lying at the very basis of knowledge itself, as accompanying and regulating its advance along all its operations. Reality is richer than thought, nor is it possible to factorize reality into thought terms. The limits of human knowledge are obvious even in the most liberal scheme of formalism, and philosophy has again to face the problem of the relation between faith and reason. Again, it is felt that transcendentalism does not do justice to the reality of the external world. To it the external world is only an object for a subject, and the tendency of all idealistic schemes is to lapse into solipsism. This solipsism may be of the personal, or of the social, or of the Supreme Subject, but in essence it is the same. Sidgwick suggested the term 'mentality' as a more adequate description of this tendency. Whatever term we use, the tendency itself is undeniable, and the reaction is seen in the movement known as neo-realism, but the tendency is only felt by reasonable idealists, as, e.g., by A. S. Pringle-Pattison; yet one wonders if his own view of creation is not just a residue of this old heaven of mentalism which his own purge of his system. He has no difficulty in regard to the creation of souls, which, if it means anything, means something new, but he cannot admit the creation of matter. Yet, if it existed in His fullness before any person now living or existing— if such an assumption is tolerable—why should creation as applied to matter be considered incredible? It is futile to try to explain matter as thought-elements, either in the mind of man or in the mind of God. When a philosopher arrives at such a view, it is surely the same course for him to examine his reasoning again.

(7) The problem of personality. The personality of man in this system, as we see from its modern developments, becomes insecure, or, if that danger is avoided, it is at the price of God's personality that man's is safeguarded. Thus there are those who, like Bosanquet, lay stress on In-Sentient Personality or Individuality, and tend to make men but aspects of this Being's life. Others lay stress on man and make God the totality of men—of the community or society of men ante as well as a parte post. To conceive of God as a perfect personality, above and apart from men and the world, and yet originating and sustaining both, seems an absurdity to this scheme of thinking.

1 History is the biography of the Absolute; science the natural history of the Absolute; philosophy the self-consciousness of the Absolute, recalling and arranging its past being in unconsciousness, and discovering thereby the laws of its own thought.

2 The outcome is seen in a book like Bradley's Appearance and Reality, in which the Absolute is everything—God, men, nature, spirits good and evil—and yet somehow it is all that in the bliss of an absolutely consistent whole. Personal idealism, pragmatism, and, above all, theism, will never take such a theory seriously.

5 The task of philosophy. The modern world is alive to the fact that the intellect alone is not man, and that reality is not to be construed solely by its means. Emphasis is now laid on the will and the emotions as well, with the result that the moral life—moral idealism—has a new place. When this is recognized, then it becomes clear that reality is not a perfection which the mind has to mirror, but an ideal which has to be achieved. Nothing is more deadening and more untrue than to think of reality from man's point of view as a perfect 'is'; for the moral life at any rate reality is in ideals—'the best is yet to be.' Thus only can man's freedom be saved from the cloudland of illusion, and thus only can evil and sin—the root of all our intellectual as well as of all our moral problems—be faced as our moral nature imperatively calls on us to face them. Our duty is in regard to these, unless our whole nature be itself a delusion, is not so much to explain them as to abolish them. To tell us 'this very presence of ill in the temporal order is the condition of the perfection of the eternal order' is to treat man's moral nature with insincerity. Transcendentalism has no eschatology, because to it the Absolute—i.e. all that is—is already perfect. One can no more say that philosophy or a religion without an eschatology offers nothing to man's needs, imposes a yoke on man's passion for reformation, and does away with

1 See art. REFEHE.
2 The term 'mentality' or 'immaterialism' is also used by James S. Ferrer.
3 Cairns, in Life, by MacEwen, p. 163.
his felt need of redemption. These are some of the difficulties that most modern thinking men feel in regard to modern transcendentalism, and the recognition of them has led to a very general revolt. It is possible within the philosophic world itself. Pragmatism, neo-realism, neo-Kantianism, personal idealism, are but some of the phases of this revolt. It cannot be said that these views, any or all of them, are free from difficulties; and at the present moment it is impossible to say what the future may have in store for philosophy. The best we can wish for is that it free itself from the tyranny of phrases and become intelligible and interesting; that it may have the humility to attempt to solve real problems that perplex men; that it be freed from its disdain regarding men's abiding convictions; that it abstain from any language which would throw doubt on the great ideals and values of life; and that it realize the necessity of satisfying the heart as well as the head. God, nature, man—these are the realities. Transcendentalism tends to forget the second, and to make the first and third coequal; pragmatism forgets the first, and naturalism the first and third. The task of philosophy is concerning these three, and transcendentalism is valuable when it constrains man to become exorbitant; but it must not, without becoming false, succumb either to humanism on the one hand or to pantheism on the other.

LITERATURE.—The EBD gives an idea of the variety of meaning attached to the word 'transcendental,' and R. Eisler, Wörterbuch der philosoph. Begriffe, 3 vol., Berlin, 1910, gives the philosophic usage. For the pre-Kantian logical usage and the mediaval, the letterpress phrase the History of Philosophy of the Journal of Speculative Philosophy of Theology must be consulted. For New England transcendentalism see art. Emerson. Joseph Cook, Transcendentalism, Boston, U.S.A., 1900, gives a valuable survey of the movement in the interests of orthodoxy. The literature under art. COUSINO and CARLYLE is instructive for the early influence of German transcendentalism in a popular form in Britain.

TRANSMIGRATION (Introductory and Primitive).—Reincarnation is the passage of the soul from one body to another, usually of the same species, among higher races often with ethical implications, the lot of the soul on earth being determined by its behavior in former life. Transmigration, metempsychosis, and other terms are often used in an almost identical sense, but also in a vaguer way, implying at times that the soul itself, besides its animal form, becomes permanently, sometimes only as a prelude to another reincarnation or to final destruction or absorption. Somewhat different is the creed which may be termed 'alternation of existences'; it involves the belief that man is double, a counterpart in another world corresponding to the earthly body or embodied soul in this world and taking the place of the latter when its turn comes to quit this world. Separate existence, reincarnation, annihilation, and transmigration are the possibilities that present themselves to the primitive mind when it inquires into the fate of the soul. We may say, one belief rather than another has been adopted in any specific instance; but it is clear that the resemblance of children to parents (or other relatives) has played some part, especially in W. Africa. The complex of beliefs is therefore to some extent a semi-scientific creed, taking the place of a biological account of heredity, and based on reasoning that we can follow. It seems equally certain that the widespread belief that when the animal body (or change of bodily form) during life must have had its effect on eschatological doctrine; and here the creed goes back to what must be some of the most archaic elements of human speculation. Those two factors are, however, at times to some extent combined, when a rise or fall in the scale of existence is put down to the merit or demerit of previous births. Both in reincarnation and in transmigration doctrines the life or lives that succeed the human life on earth are seen as forms in a purer life. The area of existence is sometimes as indefinitely prolonged; where some accident interferes with the due course of reincarnation, the lot of the soul may be a kind of third state, neither reincarnation nor absorption (or absorption), but separate existence (as an evil spirit). Many widely distributed customs appear to be connected with the belief in reincarnation. Thus, in Africa and America children are buried by the wayside, near the mother, under the caves, or in other situations that would in the eyes of the natives facilitate reincarnation; in parts of Central Australia and in Africa people are buried in the place of their birth. But it must be recalled that, generally speaking, the common feeling that it is well to be buried with one's own people implies no more than the view that this is necessary to ensure the solidarity of the family in the future life. The custom of killing the first-born has been explained for some areas by the belief that this child is, in special measure, an embodiment of the father or grandfather; and the abolition of a king, as in Tahiti, in favour of one who has been put down to the same cause. The belief in transmigration again in certain areas has led to the sacro-sanctity of certain species, and the totemism (q.v.) of some regions, such as S. Africa and Oceania, has been referred to this origin.

1 See art. DEATH AND DISPOSAL OF THE DEAD (Introductory and Primitive), 1 vili. 3 (6).

2 See art. FIRST-BORN (Introductory and Primitive), 3.
A well-developed scheme of reincarnation or transmigration of the soul is found in the case of the Central African tribes, as to whose real belief there is some doubt, is generally found only among peoples who either have attained a certain stage of culture, as in India, or have almost certainly been influenced by it; but it is found in the higher culture, as among W. African tribes. The W. African tribes among which a reincarnation creed has been recorded in more or less detail are the Mandingo, the Ebo, and the Ewe. This belief is also known among the Yoruba, who lie geographically between the Ewe and the Ebo; but details of their ideas on the subject are lacking.

According to Delafosse, every living being and every natural phenomenon depends for its nature on a *niama*, "dynamic spirit"; the word niama is applied to a genius, *niama* to a spirit, which may be a genius or a human being, an object, an animal, a rock, etc. The *niama* of a dead man can reside where there is a place where his name, his object, is the body of a living being whose *niama* is absent. Certain magicians attribute their powers to the possession of the *niama* of a genius or a human being. The chief task of the seer is to find out what the *niama* of a dead man is, in order to find out what the *niama* of a person is for whom the rite rite has not been performed may reincarnate itself in a solitary animal, or in a human being, who goes mad. It is therefore clear that, though the *niama* may be reincarnated, it is by no means invariably the case, and, where reincarnation takes place, it is in kind from the reincarnation in which the more easily the belief (see below). Side by side with the notion of the *niama* or the *soul*, it passes into a new death into another being; it is not the object of any cult; it is found only in living beings and passes only into another being of the same species, save on the rare occasions when it animates the body of a totem. This belief is, in form, on all fours with those of other Negro tribes; but it is hardly possible to speak of reincarnation, which implies some degree of identity, some measure of personality.

According to Montell, the Khasoneke believe that *dye* is soul, force, or shadow, while ni means breath; if this is correct, the meanings are just the reverse of what they are in the foregoing account of Mandingo beliefs, and it seems clear either that we are in the presence of a far-going disintegration of creed or that, as has probably happened further east, the belief has come from without and has been worked up by each tribe in its own fashion. If this is the case, it seems improper to generalize an account of the beliefs of a mass of tribes if such varied views have to be regarded as identical.

According to A. with the Ewe belief, every man has two souls—a *luwo agbedo*, or life-soul, and a *luwo kuto*, or death-soul; the former is visible when a man casts a short shadow, the latter when he casts a long shadow. The death-soul accompanies a man into the grave and then goes to the land of the dead; the life-soul leaves the body at death and goes sighing mournfully and seeking for a resting-place; each man has also a breath-soul. That the shadow-soul is more than a shadow is clear from the fact that sleep is attributed to the absence of the shadow-soul, waking to its return, and dreams to its activity outside the body.

The land of the dead appears to be the same as Amedzowe, the place of man's origin—a land not on earth, but in heaven, where everything corresponds more or less closely to the things of this life. Here there is a life of plants, concomitant forms, and all that surrounds a man in this life, not, however, in bodily form, but spiritually, so to speak; and the human inhabitants of Amedzowe live and think in the same form in which they lived in the world. In Amedzowe, however, is more than a duplication of this world; for, when a child dies soon after birth, a priest may declare that it was a great king in Arthe and has died in order to return to the scene of its former glories. Conversely, the fate of the world may influence the course of events in Amedzowe; a man who is too far away from the other world, he will fall ill, for the dwellers there prepare to break down his hut; and, to save him, his associates in this world must each bring a blade of grass to be placed on the roof of his house, as a symbol of the re-roofing of his spiritual house. In Amedzowe a man has a spiritual sun (*tasi*) and other relatives; from here he must obtain, if he can, a blade of grass to send to the spirits and come to the world of men. Some of those who come to this world are so dearly loved by their spiritual relatives that they have to give a promise, called *ghetsi*, to return after a short time; these are the children who die young; this promise has been personified and is regarded as in some measure an evil genius, for it invites men who break it to evil deeds and especially to suicide or to acts that will bring about a violent death.

Generally speaking, the lot of a man in this life and his abilities are determined by the fate announced to him by his *tasi*; but here, as elsewhere, there is a flexibility. The idea of the creed of the Ewe, for, as will be seen below, the *akloma*, or genius, is also held responsible for a man's lot in this life.

Side by side with this curiously untheological creed we find the belief that Mawu, the supreme god, is a dweller in Amedzowe and is the king who sits in judgment on the departing soul before it takes up its abode in this world. Not only so, but we find also the view that the lot of a man, or at least his term of life, is determined, if not by Mawu, at any rate by Mawu's interference with Death, whom he begets to spare one of his earthly children. If, as appears to be the case, the Ewe beliefs are the result of syncretism, there can be no doubt as to which are the older elements in their creed; for the god of death, Ogwu, is found also among the Edo, from whom they were separated by the Yoruba influx, and whose views as to reincarnation at the present day come much closer to those of the Ibo, their neighbours on the east.

There is, however, another side to the Ewe beliefs; this is the *akloma*, *kla*, or, in the language of the neighbouring Twi, *okra*; it is often identified with *iwu*, but an older and more correct conception seems to be that it is a genius or tutelary spirit. Another authority states that *kra* is the collective name for *inwu*, all the spiritual beings that surround a man, whether they be evil or good, human or demonic. Westernmann compares the word *akloma* with Eik *akbema*, a promise to return to the other world. If this derivation is correct, the conception of *akloma* as a tutelary spirit has arisen in the same way as that of its counterpart, *ghetsi*, by the personification of a promise, but Eik is a member of a different group of languages and topographically remote; the derivation must therefore be received with caution; it is none the less possible that both words are derived from the same root or form, especially if it should be the case that the reincarnation idea has been introduced from without or fostered in its growth by foreign influence.

Every man has a *kla*, or, perhaps, properly speaking, one or more, for the *akloma* figures worshipped by a man are often in dupliicate, male and female, in any case with only a single arm, as an indication of the identity of the same spirit being. Children sometimes carry an *akloma*.

1 It is perhaps not without significance that the *tasi* is the father's sister; for the Ewe are matrilineal, or at most in a transitional stage; the culture can hardly have been secured by a sister who has normally such influence in the family; the belief in question therefore either must be young or, more probably, has come to them from without.
TRANSMIGRATION (Introductory and Primate) 427

figure on their backs, and, in the case of twins, each carries the figure of the other; it is not without importance that these twin figurines are found in Sierra Leone, such as Sigg, where the reintegration belief is not found, at any rate at the present day. One name for these figurines is ame wuwo, ‘the soul of a man’—a phrase which makes distinctly in the present day a marked confusion between luwo and aklama. The aklama lives in Mawu, probably the same as Amedzowa, till Mawu gives it permission to enter a man, which it does before birth; the child to which it is assigned is known in advance, however; for the priest can interrogate the aklama as to the future lot of the unborn child. In some places the klo receives offerings annually, probably on the birthday of the child, for the klo is named from the day of the birth and is also known as the younger brother of Mawu. The aklama seeks only the welfare of his ward, so long as the latter fulfils his obligations; otherwise he may punish him with disease, madness, or other ills, or, more properly, may allow him to fall a victim to them. The obligations just mentioned include abstention from certain foods, generally, or for a period, or on certain days. In some cases the aklama is associated with a man by virtue of his being made by Mawu out of certain earth; or, when a thief has a thievish son, it is said that Mawu formed both of the same earth, and that the thief and the thief were alike. A man comes to the world with his character formed once for all, and it seems in reality to be that of his aklama; a man’s nature (dzoghe) is said to leave him at death, and, though it is believed to be conditioned by his aklama, it seems difficult to distinguish them.

So far as we have gone, there has been some confusion of luwo and aklama, and through of after death this confusion is increased. The images of the aklama are broken in pieces or thrown away, for their owner needs them no longer. The aklama seems now, like the luwo, to be termed sodi ‘ghost’ or ‘spirit’ and is questioned a few days after death to find out who was responsible for his death. The final destination of the sodi is Tise or Agume, the place under the earth, the road to which passes through Tsi; Kutiane is the ferryman, and his fee is twelve cowries. Another account says that the dead man meets Liahbe at the entrance of a town, and she questions him about his doings; when he has a great wound, which he must lick; and, though this is a detail on which we have no other information, it seems highly probable that Liahbe should be identified with the spiritual aunt (tosi).

Native beliefs are rarely clear and unambiguous as a written account commonly assumes them to be; but it is impossible to study the foregoing summary without feeling that syncretism must be reckoned with as a possible explanation. A knowledge of the beliefs of the peoples to the east of the Ewe can only strengthen the probability of this explanation; for here too we find diverse ideas combined, and some of them agree so closely with the Ewe creed that any possibility of separate origin must be rejected; at the same time, the general balance of the elements of the creed is so different, and the terminology so different (except where the creeds agree, as noted above), that we can hardly accept the theory of a common origin of the whole complex as the explanation of the points of agreement, which are not relatively numerous.

(c) Edo.—The Ewe language is closely akin to the Edo and forms a member of the group of languages named from the best known member, which is spoken in Benin and in the neighbourhood. It is somewhat surprising that as regards the subject of this article the terminology differs in toto from that of the Ewe, as is made clear by the following table:

Broadly speaking, ch correponds to our idea of soul, for the ego is said to disappear on the day that a man’s body is put into the grave; in the Kurukuru country there are traces of belief in a breath-soul (ofo), which does not, however, correspond to the ch, for ofo is said to take a man’s soul to Elimi, where it turns into a man with a body (i.e. ch). Two ch are usually distinguished, chiki (chinorum) and chikori being identified with choki, sometimes with choye, the ch of a childless person. Some say that chikori lives in Elimi, while chinorum is on the back of a man’s neck; others say that chinorum is the shadow in Elimi. Some say chikori is on the top of a man’s head; the latter statement was qualified by the addition that wherever the house of chinorum is associated that chinorum comes to earth when a man dies, thus reproducing the idea of alternation already found among the Ewe, others that chinorum returns, is recognized and comes to earth when a man dies. It is also said that chinorum goes at death to Elimi and returns for sacrifices and offerings, and in Elimi the ch may lay claim to a woman for whom his earthly counterpart paid bride-price without being able to secure her as a wife. Some say that chinorum is carried by oru to animate the dead, and sometimes conceived, that it brings a child to a man, others again that it ‘does things for a man,’ i.e. is his genius. Chinorum’s functions are equally a matter of opinion; it is on the back of a man’s neck, or is the servant of chinorum and takes sacrifice to Elimi in Elimi, or lives in Elimi and comes to earth when a dead dies, or is a man’s shadow in Elimi, where chinorum is also, or corresponds to Elimi in Elimi, and may be summoned (perhaps, rather, evil spirit), to whom he sacrifices on the road.

We reach a somewhat different cycle of ideas when we find chinorum regarded as a ‘bush soul,’ injury to which means sickness of the human being. It is also said to be the ‘king of the bush’ and to be richer than chinorum; when it receives a sacrifice, it is satisfied and turns its back. The prevailing view is undoubtedly that chinorum brings a child from Elimi but is not identified with the ch; for ofo is said that the dead go to Elimi, simi and in Elimi before it comes to this world. Omo (god) is said to take a man’s soul to Elimi, where it turns into a man with a body (i.e. ch). Two ch are usually distinguished, chiki (chinorum) and chikori being identified with choki, sometimes with choye, the ch of a childless person. Some say that chikori lives in Elimi, while chinorum is on the back of a man’s neck; others say that chinorum is the shadow in Elimi. Some say chikori is on the top of a man’s head; the latter statement was qualified by the addition that wherever the house of chinorum is associated that chinorum comes to earth when a man dies, thus reproducing the idea of alternation already found among the Ewe, others that chinorum returns, is recognized and comes to earth when a man dies. It is also said that chinorum goes at death to Elimi and returns for sacrifices and offerings, and in Elimi the ch may lay claim to a woman for whom his earthly counterpart paid bride-price without being able to secure her as a wife. Some say that chinorum is carried by oru to animate the dead, and sometimes conceived, that it brings a child to a man, others again that it ‘does things for a man,’ i.e. is his genius. Chinorum’s functions are equally a matter of opinion; it is on the back of a man’s neck, or is the servant of chinorum and takes sacrifice to Elimi in Elimi, or lives in Elimi and comes to earth when a dead dies, or is a man’s shadow in Elimi, where chinorum is also, or corresponds to Elimi in Elimi, and may be summoned (perhaps, rather, evil spirit), to whom he sacrifices on the road.

(d) Ibo.—Among the Ibo, who number several millions, there is much diversity of view; but only a small percentage of the tribes have been adequately investigated; the following summary relates to the Awka and Asaba districts. West of the Niger the belief is that an entity known as ch, sometimes identified with ch, sends the new being to Elimi; the reincarnated person and the reincarnation are known respectively as agwog and niwag. The ch is normally a dead person, but in some areas may be the father or mother of the child. East of the Niger the ch is in the man, Eliko akamia is the personal protective deity, with only slight traces of a connexion with the reincarnation belief; there is no explicit statement that the ch sends a child into the world. The chog may perhaps be identified with the ch or chok of the Ewe, as seems probable, it is etymologically connected with Eliko akamia, the promise to return to the other world. The Ibo are quite clear in their belief that the new child is reincarnated in his (or her) own family, at any rate if he has been buried with his fathers; children of tender years will assure the inquirer with the utmost solemnity

1 a personal protective spirit.
2 a protective spirit.
that they are their deceased grandfathers or grandparents; and the identity of the ancestor is determined by divination. A child that speaks before it opens its eyes is said to be relating what it saw in Owamwo and at once exposed in the ajofia; it is also asserted that a man who has been unlucky in one existence may decide, on opening his eyes for the first time in a new life, that it is the same world in which he was unhappy before, and resolve to give up the struggle, whereupon the new-born child dies on the spot.

The relation between či and ago, west of the Niger, may be compared with that of godchild and godparent; the relation sets up a bar to marriage, and a man may not even marry into the umunna (sept) of his či; two people who have the same či may not marry, nor yet may their children, though apparently a man may marry the fellow ọwọgọ of his sister. There is a saying that the child who is one's ago (ọwọgọ) should have been the child of a man's own loins; both must be of the same quarter; if the či has no heir of his own, the ago inherits the property. Curiously enough, the owner of the companionship, the other, who is sent into the world by the (living) či, and who ought by analogy to stand to the child in a closer relation than the či, is in point of fact regarded as a comparative stranger; he may come from another ebo (quarter) or from a different tribe altogether, and his ritual prohibitions do not concern the child, who has to observe those of his či.

There are traces of the view that či and ọwọgọ form two links in a continuous chain, and at any rate where the či is not a living person, the ọwọgọ of one generation being the či of the next; and this affords a satisfactory explanation of the views as to prohibitions. At the same time, it must be remembered that the či is properly a personal protective deity, in fact a personal alose, and that the facts are, in other directions, best accounted for on this hypothesis; it must not, however, be forgotten that east of the Niger an alose may be the či, or, according to another account, may itself be reincarnated. East of the Niger also we sometimes find the view that the ago goes to the next world with a dead man, while the ogbasa pegs that represent it are thrown away; so that here the ago is regarded as the či; it is, at any rate for a time, to some extent represented by the ndieje, or ancestral figurines. Curiously enough, the umunna of the companionship, the other, who is sent into the world by the (living) či, and who ought by analogy to stand to the child in a closer relation than the či, is in point of fact regarded as a comparative stranger; he may come from another ebo (quarter) or from a different tribe altogether, and his ritual prohibitions do not concern the child, who has to observe those of his či.

2. South Africa.—In many parts of S. Africa, and sporadically in other parts of Africa, there is a belief that the dead are transformed into certain species of animals, or at any rate that they assume this form to appear to the survivors; it has been maintained, not quite convincingly, that some Bantu tribes assume themselves to be transformed at death into their totems. This belief is, however, definitely reported from the west coast, among the Sienna and the Twi, as well as in the north-east of the Congo Free State. Among the Zulu the transformation is supposed to be into a species of serpent.

3. Madagascar.—In Madagascar the belief in transformation is also found, though here doubtless of Indonesian origin; and we see a different lot in the future state. The future state is divided into three grades; this is of course a common feature of eschatological doctrine not connected with the theory of moral retribution.

4. Central Australia.—According to Spencer and Gillen, the tribes of Central Australia believe that children are reincarnations of their ancestors (totems) and are continually reborn; but the testimony of Strehlow, a witness well acquainted with the language of the Arunta tribe, is in certain cases it is believed that a totem-ancestor is himself reborn, but after this reincarnation he does not return.

1 See art. DEATH AND DISPOSAL OF THE DEAD (Egyptian).
2 In modern Egyptian folklore the quarda, counseled by Seligman with the ka, is held to be the spiritual counterpart of a man, which has to do with his incarnate body, and which plays the part of a good or bad angel. It is of course possible that this resemblance to present-day W. African beliefs is due to coincidence; it can hardly assume that people in the same town would have had ideas of and aklama are are from the same root; for la and no may well be alternative forms of a suffix, and the transition from koda to klan is a well-established phonetic change in W. Africa. The only reason for supposing that the original idea is that of a promise, though in Ewe the term gbetsi is now used in that sense, while aklama has become a genius; but further research is needed in other areas before any definite pronouncement can be made. It is tempting to connect the root kala with the Egyptian kaf, which was a double of the man and believed to be after death, with the mummy, a denizen of the tomb; but, though there are clear traces of mumification in W. Africa, probably due to Egyptian influence, and though nothing is more probable than that Egyptian ideas in traversing the continent would have undergone fundamental changes, there is no positive evidence to connect any of the beliefs mentioned above with any article of the Egyptian creed. The possibility of an Egyptian influence is not, I think, at all important, for Egyptologists appear to accept the evidence produced by L. Frobenius as to Egyptian influence in the present Yoruba area in the 6th cent. B.C. That the terms of the Yoruba language show some connexion with those cited above is not improbable, for there can be little doubt that the Yoruba tribe has come down from the north and may not have been in occupation of the area in question, if indeed it existed, at the period in question.

It has been pointed out that the words akeba and theking are both probability connected etymologically; it is by no means certain that akeba and aklama are from the same root; for la and no may well be alternative forms of a suffix, and the transition from koda to klan is a well-established phonetic change in W. Africa. The only reason for supposing that the original idea is that of a promise, though in Ewe the term gbetsi is now used in that sense, while aklama has become a genius; but further research is needed in other areas before any definite pronouncement can be made. It is tempting to connect the root kala with the Egyptian kaf, which was a double of the man and believed to be after death, with the mummy, a denizen of the tomb; but, though there are clear traces of mumification in W. Africa, probably due to Egyptian influence, and though nothing is more probable than that Egyptian ideas in traversing the continent would have undergone fundamental changes, there is no positive evidence to connect any of the beliefs mentioned above with any article of the Egyptian creed. The possibility of an Egyptian influence is not, I think, at all important, for Egyptologists appear to accept the evidence produced by L. Frobenius as to Egyptian influence in the present Yoruba area in the 6th cent. B.C. That the terms of the Yoruba language show some connexion with those cited above is not improbable, for there can be little doubt that the Yoruba tribe has come down from the north and may not have been in occupation of the area in question, if indeed it existed, at the period in question.

1 See art. DEATH AND DISPOSAL OF THE DEAD (Egyptian).
2 In modern Egyptian folklore the quarda, counseled by Seligman with the ka, is held to be the spiritual counterpart of a man, which has to do with his incarnate body, and which plays the part of a good or bad angel. It is of course possible that this resemblance to present-day W. African beliefs is due to coincidence; it can hardly assume that people in the same town would have had ideas of
TRANSMIGRATION (Buddhist)

Strehlow's account of Aranda (Arunta) belief is as follows:

The totem-ancestors dropped some of their offspring, which were transformed into toad, rattle, rock, etc. from which proceed rats: these are completely formed boys and girls of reddish color, with body and soul equivalent to ordinary mortals. When a woman passes a spot (kunsikala) where the transformed body of the totem-ancestor is, and subsequently the same one is associated with that spot, she is consequently the child born to the totem of the ancestor associated with the spot.

There is a second method by which an ancestor impregnates a woman, but this does not seem to imply any kind of reincarnation, though the ancestor is called in both cases the inmunus of the child. The ancestor is said to come out of the earth and throw a small tiller (kunmunye) at a suitable woman, in whose body it takes human form.

Both kinds of impregnation are said to be equally frequent, and the difference is recognized in the face of the child, which is narrow in the first, broad in the second kind.

An outgroup can also, very rarely, enter a woman's body in person; and a child thus originated has light hair; in such a case the soul goes at death like other souls to the life of the Dead, and is annihilated by a flash of lightning. There is therefore no question of repeated reincarnations, and only in the third case can we really speak of an actual belief in the doctrine, so far as can be seen from Strehlow's narrative.

This account agrees with much of what is reported by Spencer and Gillen, though these authors speak of reincarnations of ancestors, they really mean an incarnation of spirit-children left behind by the totem-ancestors. And even among the Aranda we hear of the totem-ancestors living in water holes.

Perhaps it is most probable that large local variations of belief account best for the differences between Strehlow and the English authors. In this connexion the account of K. H. Mathews is of interest, though it must be remembered that he is probably relying on information derived from others. Some of the Chingali believe in repeated reincarnations of ancestors, and a change of sex occurs, as in the Aranda, but again, other tribes say they pass into other birds. The avanna is kept as a pet and murdered at death, though the wild bird may be killed for its feathers; yet the Bororo say, 'We are avanna.' According to von den Steinen, the earliest form of the belief was that the native said, 'I have a bird, not 'I am a bird,' which flies at night and which remains as the natural form of the person when a magician or other evil-disposed being binds his return to human form (i.e., death). But it is only in parts of Australia and W. Africa that these forms of eschatological creed are an element of real importance.

N. W. THOMAS.

TRANSMIGRATION (Buddhist).—Theoretically Buddhist teaching allows a wide scope for the soul or its transmigration, but insists on the revolution, or 'stream' (saivatara), of existences. In its practical influence on the popular mind, however, the doctrine amounted to much the same as any other doctrine of transmigration, being gamagam everywhere with the animistic conception of the soul, whether human or other; it inspired the people with the feeling of a certain continuity of life-relationships through various existences; it impressed the popular mind with a degree of fatalism—the belief that every event in one's life was the result of past deeds. The doctrine, when formulated, contained more or less sensuous descriptions of the better lives in the heavens, besides horrifying details of purgatorial existences; and these aspects of the teaching resulted in the growth of a respectable volume of visionary literature during the course of the history of the religion in various countries. Thus, in spite of the higher doctrine of the ideal Buddhist perfection in nirvâna, and in spite of the psychological and metaphysical formulations of the teaching of Karma, the Buddhist conception of transmigration may be treated in the same category as other doctrines of the same kind.

According to the regular teaching, the saivatara consists in an indefinite revolution of renewed existences produced and prolonged according to the qualities of the karma (q.v.), which is the matrix as well as the vehicle of the enduring existences. It is said repeatedly:

'No beginning is known of the eternal revolution (saivatara) of the beings, streaming and flowing to and fro in the ocean of births and deaths. The majority are covered by ignorance (avijñâ), and fettered in thirst (tâpas).

In this vast ocean of renewed births there are innumerable streams of existences, conditioned by their respective deeds and retractions, flowing uninterruptedly not only in the continuity of the individual being but also in the solidarity of a group of existences. Now the groups of existences are classified under five headings or 'ways of life')—the heavenly life, the human life, the animal life, the ghostly life, and the purgatorial (or hellish) life; or into six, by adding the aura (or furious) life, and the life of the bhava ('being') or lokas ('realm,' the cosmic installation of beings) into three— the formless heavens, the heavens with forms, and the material worlds with desires and greed. In this connexion it is to be noted that the Buddhist doctrine of transmigration emphasized the affinity and solidarity of the karma and all its consequences within a group of existences, whether a specific world in the cosmic system, the local division of the abode, or the class division in social life; in short, any and every link, material, physical, moral, emotional, intellectual, or social, is the cause and a manifestation of the solidarity of existences; it is the same karma. The principle of the solid
TRANSMIGRATION (Celtic)

arity is the karma, and its manifestation is the bhuta or dhātu, the latter of which means the characteristics (common to the beings within a group), the specific circle of existence, community, common destiny.

How the different dhātu are produced; what are the reciprocal actions and reactions of the psychical factors and environmental factors in the process of the development of karma, what are the conditions, etc., are evidenced by the individual karma being attracted to and incorporated into the common dhātu—these and associated ideas have arisen to varied speculation in the Buddhist schools, the whole forming a web of subtle argument and grotesque fancy, in which are mingled Buddhist cosmology, psychology, and ethics. This is a subject which awaits further investigation.

The practical effects of the Buddhist doctrine of saṃsāra were a deepening and broadening of the feeling of the continuity of life. Though often vulgarized through its amalgamation with animistic beliefs, the effect of the doctrine was to extend affection and attachment in human relationships to the former and coming lives, even to animal and plant life, which was held to be continuous and closely associated with human life, and to elaborate those sentiments through the idea of a deeper, more remote connection, and wider aspects of being than those of the present life.

This point can be illustrated from the folk-lore and literature of the ancients. The People, and one of the most ancient of all the Romantic literature—the Japanese Literature of the 11th cent.—is dominated by this sentiment of continuity. There the delicate yet strong feeling of the common European idea of continuity through lives beyond death, as well as with the idea of the death of the soul by physical separation and their changes. Unfortunately both W. G. Aston and Kari Florence, in their histories of Japanese literature, hardly touch this point.

Another point in the effect of the teaching of the doctrine of precision of his words; if the latter, it must be admitted that, according to the belief of the Celts, the passage of the soul into another body does not follow immediately upon death, but that, while the soul awaits reincarnation, it continues to live, though under conditions which are not those of the life on earth. This interpretation would make it possible to reconcile the passages in Cæsar and Dio (the evidence of the two writers who have transmitted Celtic conceptions regarding the future life in which the idea of metempsychosis does not occur.

Diodorus goes on to say:

'Therefore, during the funeral of the dead, they throw into the funeral pyre letters written to the dead relatives in the expectation that the dead will read them. It seems, therefore, that the man whose body was burned acted as a messenger between the living and the ancestors whom he was about to meet again in the other world. It is the idea of the immortality of the soul and of another world that is emphasized by the Latin writers.'

Valerius Maximus (II. vi. 10) tells that there was an ancient custom among the Gauls of sending each other sums which were repaying to the other world, so that they might personify the immortality of the soul. Pomponius Mela (ii. 2), after stating that, according to the druids, the soul is eternal and that there is a second life among the demons, adds that they bury along with the dead things which are useful to the living, and that, formerly, they postoned the settlement of business affairs and debts until the time when debtors and creditors would meet in the lower world; there were even people who voluntarily cast themselves into the funeral pyre of their kindred in the expectation that they would rejoin them in the new life. The idea of a new life after death and before reincarnation was thus one of the most cherished and deep-seated beliefs of the ancient Celts. As to where that new life was spent, Valerius Maximus and Pomponius Mela employ the ordinary terms of Roman mythology for the other world (inferors, manes); but Lucret is not content with that superficial assimilation:

'You assure us, Druids, that it is not the silent dwellings of Erebos nor the cold kingdon of Dei who inhabits the depths, at which the souls arrive; the same breadth directs their members in another world (orbe allo), and, with your song, declares what is known, death is in the heart of a long life' (Pharsalia, I. 440-456).

There has been an endeavour to fix the meaning of this word, but the result of their training in folk-lore and legends of the Celts are full of instances, and a noteworthy point in them is that many of those endowed persons are children, whose remembrance of their own former lives is mostly said to lose its vividness as they grow older.

TRANSMIGRATION (Egyptian)

The field of the so-called transmigration, or reincarnation, of the human soul, is one of those themes that has been studied by many authors and that has involved many aspects of human thought and belief. It is a subject that has been the subject of much speculation and debate, and it has been the subject of much controversy.

The concept of transmigration is a central theme in the ancient Egyptian religion, and it is believed that the soul of a person who has died will be reborn in another body. This concept is based on the belief that the soul is immortal and that it will continue to exist after the death of the physical body.

The concept of transmigration is also found in other ancient cultures, such as the Greeks, Romans, and Hindus. In the ancient Greek religion, it was believed that the soul of a person who had died would be reborn in another body, and that this process would continue until the soul had reached perfection.

In the ancient Roman religion, it was believed that the soul of a person who had died would be reborn in another body, and that this process would continue until the soul had reached perfection.

In the ancient Hindu religion, it was believed that the soul of a person who had died would be reborn in another body, and that this process would continue until the soul had reached perfection.

TRANSMIGRATION (Greek and Roman).

an earth-worm, or a crocodile; and lastly the power of being united to its own body. The following examples are parts of chs. 86, 89, and all of 88:

1. I am the Swallow; I am the Swallow. I am the Scorpion-bird (or white bird), the daughter of E3. And that which I went in order to ascertain, I am come to tell. Come, let em enwrap it with my own mission. And, I am a scrupulous ascender who consest forth through that gate of the Invisible one, I purify myself at that great stream, where my limbs are made to cease, and that which is wrong in me is pardoned, and the spots which were on my body upon earth are effaced. Here am I, and the Heart. Perchance I may overwear myself upon earth, though my dead body be buried (58). 'For I am the Ciel of the Place; this is the way that I am the Crocodile god in the form of man. I am he who carrieth off with violence. I am the smugly Fish in Sanskrit. I am the Lord to whom one bendeth down in Sechem' (60). 'Oh, thou who bringest; oh, thou runner who dwellest in thy Keep, thou great god; grant that my soul may come to me from whatsoever place wherein it abideth. Let my soul (he) be caught and the spirit (hims) which is with it, wherever it abideth. Track out among the things in heaven and upon earth that soul of mine, wherever it abideth... (69).

TRANSMIGRATION (Greek and Roman).—I. GREEK.—The notion of transmigration (περιγένεσία), i.e. the passage after death of the human or animal soul from the mortal body to a new incarnation in another body of the same or another species, necessarily rests upon a belief that the soul itself is immortal, or at any rate more lasting than the body. Theoricae, who was beloved by the Greeks R.C. and is regarded as one of the teacher of Pythagoras which does not necessarily mean more than that he was earlier in time—is said to have been the first to introduce the doctrine. On the other hand, Herodotus declared that the invention of the doctrine was derived from them by those Greeks who adopted it, and whose names, though he knew them, he declined to mention. It has been recognized that this is an allusion, at least in part, to Empedocles; for Herodotus would have had no scruple in giving the names of the Pythagoreans and Pythagoracs, who were already dead. It is, however, impossible to accept Herodotus' account, because (1) the chief authorities for the doctrine are derived from them by those Greeks who adopted it, and whose names, though he knew them, he declined to mention. It has been recognized that this is an allusion, at least in part, to Empedocles; for Herodotus would have had no scruple in giving the names of the Pythagoreans and Pythagoracs, who were already dead. It is, however, impossible to accept Herodotus' account, because (1) the chief authorities for the doctrine are derived from them by those Greeks who adopted it, and whose names, though he knew them, he declined to mention. It has been recognized that this is an allusion, at least in part, to Empedocles; for Herodotus would have had no scruple in giving the names of the Pythagoreans and Pythagoracs, who were already dead. It is, however, impossible to accept Herodotus' account, because (1) the chief authorities for the doctrine are derived from them by those Greeks who adopted it, and whose names, though he knew them, he declined to mention. It has been recognized that this is an allusion, at least in part, to Empedocles; for Herodotus would have had no scruple in giving the names of the Pythagoreans and Pythagoracs, who were already dead. It is, however, impossible to accept Herodotus' account, because (1) the chief authorities for the doctrine are derived from them by those Greeks who adopted it, and whose names, though he knew them, he declined to mention. It has been recognized that this is an allusion, at least in part, to Empedocles; for Herodotus would have had no scruple in giving the names of the Pythagoreans and Pythagoracs, who were already dead. It is, however, 2. It is true that to be a belief in the transmigration of human souls into other bodies after death was a relic inherited from the primitive or savage ancestors of the European peoples. It is expressly attributed to the Gauls, and less explicitly to the Thracians and Scythians. In fact it must have developed independently in many parts of the world, without direct transmission from place to place, especially in connexion with the idea that the limited supply of individual earthly bodies necessitates the reappearance of the same soul in various earthly bodies. Thus in popular tales the change of a man into a beast involves the assumption that, though the body is different, the soul remains the same; e.g., in the metamorphosis of Odysses' companions into swine whose intelligence remained unaffected. Not that this popular tradition ever became widely effective: except for one not very clear example, stone inscriptions show no trace of a belief in transmigration, while Euripides refers to a second incarnation as an actual impossibility, whose realization might have been welcome as a divine instrument of discrimination between the good and the bad. But, although there is nothing to show that the belief struck deep, or was cherished outside certain particular circles, it was brought into prominence by the religious upheaval which undoubtedly took place in the 8th. century, and became associated with the worship of Dionysus and the Orphic cults. Thus the notion that the soul after death passes to another body as in a dungeon is attributed by Plato and his commentators to the Orphic mystics. Two famous passages in Findor presuppose the doctrine of transmigration. In one of these Persephone sends the souls back to earth in the year when they have been purified from their ancient sorrow; and in the other those who have thrice made their abode on either side of death are destined at last to reach the islands of the blest. It seems more likely that Findor derived this doctrine from the Orphic mysteries than indirectly through the Pythagoracs. The prevalence of this mystical belief and its religious importance are illustrated with remarkable clearness in certain inscriptions on golden tablets found in S. Italy, near Rome, and in Crete, which are chiefly attributed to the 4th or 5th centuries B.C. and published as an Appendix to J. E. Harrison's Prolegomena to the Study of Greek Religion, Cambridge, 1903, p. 660 ff. One of these contains some words which form part of the appeal of the purified soul: 'I have flown out of the sorrowful weary Wheel; I have passed with eager feet to the Circle desired.' This refers to the mystical Wheel of Fortune which in its revolutions symbolizes the cycle of successive lives necessary to be traversed by the harrowed soul before its final release. This specific cycle of progress, as well as the more general conception of a khetos in human affairs, is traditionally attributed to the Orphic-Pythagorean sphere of thought. In the Orphic hymns this has so far developed as to include a statement that an exact reproduction of the movements characteristic of the present world-era may be expected when the revolving wheel shall come round to the same point again; but it is not easy to reconcile this with the opportunity which, as we have seen, is given to particular souls to obtain their release. Aristotle's reference to the Orphic poems as an authority for the opinion that the soul enters the body from outside in the process of respiration accords well enough with the doctrine now under discussion. Further, the Orphic prohibition of a diet of animal flesh, evidenced by Euripides and Aristophanes, points in the same direction.

In popular estimation transmigration is particularly associated with the name of Pythagoracs. Much of what has been established as belonging to the Orphics, the imprisonment of the soul in the body as a retribution for past ill-deeds, the undeviating recurrence of the cycle of existence, the prospect offered of ultimate salvation by the abstinence the flesh diet—limited, however, by the reservation that it did not apply to the flesh of such animals as are
sacrifice to the Olympian gods— is established for the Pythagoreans by not less convincing testimony. It would seem, therefore, that, when founding his brotherhood, Pythagoras adopted the doctrine of reincarnation for 30,000 years, and of the wretchedness of the wandering spirit which is har- assed by its weary passage through air and sea and earth: "Ere now have I been a youth and a maiden, a bush and a dumb fish in the sea. A discrimination of the peculiarities of the religious concept is involved in the assignment of the less base souls to the higher forms of animal or plant life: these inhabit the bodies of lions among beasts or appear as bay trees in the world of vegetation. The best of them become prophets, bards, physicians, and chieftains, and at last return as divine beings to the company of the gods. As a consequence of this doctrine, Empedocles, like the Pythagoreans, prohibited the eating of flesh and the slaughter of animals, which he stigmatized as the shedding of kindred blood, the murder of a son by his father or of a father by his son.

In several of his dialogues, particularly in the Phaedo, Phaedrus, Republic, and Timaeus, Plato associates the doctrines of the immortality and pre-existence of the soul with its transmigration. The variation in the treatment of this theme is not of serious nature and may not do of being discussed in detail.

According to the Phaedo, those who in this life have failed to emancipate themselves from the bounds of the corporeal element cannot rise to the purer element above, but, being dragged down to the visible world, reappear on earth as ghostly apparitions until they are again imprisoned in another body. Of these the sensual become asses or similar animals, the violent and rapacious become wolves or vipers, he who was guilty of the most revolting misdeeds are permitted to be born of the earth. The souls of the dead are punished or otherwise treated according to the measure of their human actions for 1000 years, until the period of reincarnation arrives, when they are allowed a limited area of choice, so that it often happens that the soul of a man comes into life as a beast, and that of a beast which had formerly been human again enters into the body of a man. A much more elaborate account is given in the myth of Er the son of Arion, how a great variety of choice comprising the lives of every animal and of men in every condition is offered to the allottee whose time for reincarnation has arrived. The order of choice is determined by ballot, but even the soul which drew the last lot had plenty of opportunities for selection left. The narrator of the myth was a witness of the choices made by some of the famous heroes of antiquity; how Orpheus chose to be a swan, Thamyris a nightingale, how a lion, Agamemnon an adder, how Diomed a monkey, while Odyssœus, who drew the last lot, wished of his former animal life to return as a horse. But Zeus had this choice available for him the life of an ordinary man free from all anxiety. In the Timaeus the creator fashions as many souls as there are stars, and distributes one to each star. In order that later, after a period of contemplation, they may be embodied in human form. If during the time of probation the soul lived well, he would return to his ethical habitation; but, if he failed, he would suffer a new incarnation as a beast; and, if his wickedness continued, he would sink down among the beasts until his corporeal talons had been thoroughly purged away. In the same dialogue Plato explains the evolution of birds and other animals as arising from the deterioration of human souls. Birds, with a father and mother, are beings composed of man and woman, and thus heathenized the revolution in the dead, but followed the impulses of those particular combinations that were most favorable.

Critics have not been entirely agreed as to how far Plato was a serious believer in transmigration, some holding that the entire description was purely a play of fancy, and others that, though he may have credited the successive reincarnations of Empedocles is somewhat less explicit than is sometimes represented, logical justification is still to seek for his pronouncement concerning the punishment of guilty souls in a purgatory lasting for 30,000 years, and that the doctrine of reincarnation which had been the belief that was long maintained is not one of contemporary religious asceticism. Nevertheless the reincarnation of various bodily shapes is so closely associated with the person of Pythagoras that he must be held to have inculcated it with personal authority. If so, it may be held that the Pythagorean idea of the transmigration of the souls of men is generally traceable to the authority of Heraclides Ponticus. To this source we owe the famous story that it was permitted to Pythagoras to retain the memory of his previous reincarnations, and that he established his credulity on the occasion of a visit to the Hermæ at Argos by identifying as his own, in his seeing the inscription, the shield of Euphorbus, son of Panthus, which he was bearing when slain by Menelaus before the walls of Troy. Heraclides was also responsible for the statement that Pythagoras claimed to have lived as Ethalides, the son of Heroes and herald of the Argonauts, before he became Euphorbus, that as Ethalides he obtained from his father Hermes the offer of any gift he might choose save immortality, and that he received a present of re-membering his previous fortune while on the earth and in Hades. After Euphorbus died, he became Hermes, and subsequently Pyrhus, the Delian fisherman, before his final re-birth as Pythagoras. Further, Pythagoras declared that after the lapse of 300 years his soul returned in the body of a fish. Accordingly, if the birth of Pythagoras is placed in 572, the date of the Argonauts, he would have been 1400.

There is, however, much better evidence than these fables that Pythagoras seriously taught the doctrine in the almost contemporary verses of Xenophanes; they say that once, as he was passing by, he plied a dog that was being beaten and explained: "Beat him no more; for his soul is my friend's, as I recognized when I heard his voice." It was therefore his belief that the same soul could dwell in another as in a man, and that there is a universal kinship between all living things. He did not hesitate to ascribe reasonable souls to animals, holding that the activity of their reason was an exercise of the same nature as in their exercise of their organs. Aristotle describes the possibility of any soul taken at random passing into any body as a Pythagorean fable. The punishment of souls for their misdeeds by successive incarnations in corporeal dungeons was a theme developed by the Pythagoreans in a manner hardly to be separated from the Orphic, and the results of their joint influence are to be found in the Orphic myths.

Empedocles in his poem entitled 'Purifications' (καθάρσεως) took over the doctrine of transmigration from the Orphic-Pythagorean school without making any effort to connect it with his philosophic system. Indeed it is difficult to see how it was possible for him to advocate the immortality of the soul consistently with his doctrine that the vitality of the soul is the result of an aggregation of corporeal substances. Thought and consciousness are concentrated in the blood which envelops the heart. Aristotle's assertion that, according to Empedocles, the soul is compacted from the embryo, and that the vitality of the soul is similarly misleading; but, even if the materialism of Parmenides and Pythagoras is accepted, as a rule, the possibility of making the prohibition apply only to the ram and the plough ox makes the prohibition apply only to the ram and the plough ox.

VOL. XII.—28
TRANSMIGRATION (Indian)

of human souls, he cannot have extended his belief to their pluralism. It should, therefore, be noted that all these descriptions, if not actually parts of a myth, have a mythical colouring, and must be read subject to the warn-
ing, given by the Platonic Socraites in the Phaedo; 1

1 No sensible man will affirm that these matters took place exactly in the way that I have described. But to hold that events such as those did actually happen, in spite of refer-
tion to our souls and their habits, appears to me, now that the soul has been shown to be immaterial, to be an unreasonable or unworthy view of the facts.

So long as this limitation is borne in mind, there is no valid reason for mistrusting Plato’s sincerity.

Transmigration does not cohere with the Stoic doctrine of materialism, but there are grounds for thinking that Posidonius held the pre-existence and immortality of the soul in the limited sense in which it was possible for a Stoic to accept.3 But neither Posidonius nor any of the Stoics believed in a series of successive incarnations within the limits of the current world-period is, notwithstanding the isolated stray statements of some of their doxographical sources,4 open to very grave doubt.5

According to Plotinus, the future destiny of the soul depends on the use it has made of its several functions and capacities during each particular incarnation. Hence we should constantly strive upward, not yielding to the images of sense or carnal cravings. Thus he who has exercised his human capacities again becomes a man, but those who have lived by sensation alone become animals. If, without yielding to active passion, he has remained immersed in sluggish pleasure, they may even become plants.6 There is always retribution for an ill-spent life; the bad master becomes a dog, the good master becomes a cat, a woman a poor man; the man who has murdered his mother becomes a woman and is murdered by a son.7 On the other hand, those souls which are pure and have lost their attraction to the corporeal will cease to be dependent upon body. So detached, they will pass to the region of being and the divinity, which cannot be apprehended by a human vision as if it were akin to the corporeal.8

II. ROMAN.—There is no evidence among the Romans of an indigenous belief in transmigration, but several of their poets acknowledged the influence of Greek speculation, and of Plato and Pythagoras in particular. Horace mentions the 10 Pythagorean streams of Elysia, and speaks of the same idea as if it were the poetical fancy of a later and more learned age, that their soul had once inhabited the body of Homer and earlier that of a peacock.9 Vergil, in a famous passage,10 takes more serious notice of Pythagoreanism, when he describes the purification of souls in the upper world, and their return to human bodies after the completion of the cycle of 1600 years. Ovid 11 introduces Pythagoras himself, seeming an eloquent plea against the slaughter of animal life, based upon the identity of the soul-substance which permeates our bodies and theirs.

Romans—the best sources of information are the works of E. Rohde, T. Gomperz, and E. Zeller mentioned above. For Pythagoras see art. PYTHAGORAS; also A. E. Chajnetzky, Pythagoras et in philosophiae pythagoricienae, 3 vols., Paris, 1873; and for Plato J. A. Stewart, Myths of Plato, Oxford, 1911; and Ch. S. Thompson’s ed. of Plato, Metaphren, 1907, pp. 556-557. A. C. PEARSON.

TRANSMIGRATION (Indian).—The doctrine of the transmigration of souls is in India the pre-
the Aryans of India the theory, as it meets us for the first time in the literature, appears already fully formed in the shape of belief in a permanently continued but ever-changing existence. And the different forms under which the individual lives are in their rank, and the measure of happiness or misery which they experience is regarded as dependent on moral conduct. At the basis of the Indian belief, from the root of death lies the unmerited conviction that there is no unmerited happiness and no unmerited misery, that each man shapes his own fortune down to the smallest details. This conviction has given to the Indian people a power to endure suffering which has often enough excited the wonder of foreign observers.

Since the Indian recognized that no explanation of the apportionment of happiness and misery, of joy and sorrow, by the moral state of the individual was to be found in the present life, he concluded that man's fate is determined by his good and evil deeds in a former existence. A moral qualification, therefore, according to this view, attaches to the soul; and this corresponds exactly to the sum of its good and evil deeds, and demands reward or punishment in the next existence, if not in the present.

Granted, then, that we endure in the present life the effects of our own deeds, even beyond the present, the conditions must have been precisely the same in the previous existence; the joy and sorrow that we experienced therein were again the consequences of our own actions in a preceding life, and so on without end. For that part of the individual, therefore, which was involved in the cycle of existences no beginning could be assigned. It was thus that quite early in India the theory of the endless pre-existence of the soul was developed; and the doctrine of the soul's eternal duration in the future was inferred according to the law that the kind of existence one had in the beginning is also endless and in accordance with the ancient popular view of the permanence of personal existence in heaven. The belief in the eternity of soul was followed by belief in the eternal existence of the universe.

Life for the case-loving Indian was overshadowed by the belief in transmigration. The thought of wandering perpetually through the bodies of men, animals, and plants, of being compelled in each existence to experience more joy than pain, and perpetually to renew the pangs of death, occasionally sojourning for a time in hell—this thought must have been dreadful for the Indian. Nor was it sufficiently compensated by the prospect of being able to gain heaven by his merit, and to raise himself to divine honours. For with the very ascent to divine honours no more than a transitory success has been gained. Even the gods, according to the transmigration theory, are involved in the cycle of existence, the saṁyata, and must again descend to lower forms of life when their time comes round, that is, when the power of former merit is exhausted through the enjoyment of divine position and honours. The popular gods, therefore, have ceased to be eternal and omnipotent beings, as they were in Vedic times.

According to this view, therefore, the wheel of existence rolls on without rest or intermission, and hurries living creatures perpetually to renewed suffering and renewed death. Naturally, then, the belief was born that there is no deliverance, no release, from the constantly renewed existence upon earth.

The hypothesis that once in the course of time the previous deeds of a living being may meet with the misunderstanding and punishment, or unmerited and unmerited, that, therefore, the basis for a re-birth may and will disappear, was not made in India. According to the Indian view, when a living being dies there always remains a remnant of merit and guilt still unrewarded and un punished, from which is derived the germ of a new existence. Even sacrifice and deeds of piety or asceticism cannot deliver from the necessity of renewed birth and death. In the Satapatha Brahmana it is said that the motive of death which pursues men from one existence to another may be appeased by sacrificial offerings, and that by such offerings release may be obtained from the cycle of death. This thought, however, is soon abandoned, and unmerited conviction that no sacrifices can do more than secure temporary happiness in higher forms of existence.

Since, then, in India it had become the supreme aim of spiritual endeavour to find this release, the issue could not fail to be the conviction that success had been attained; not by the way which had been previously followed and which no longer afforded inward satisfaction, but by the way of knowledge, which, in fact, might be trodden only by a few. In the knowledge of the essential nature of things, which is veiled from ordinary sight, was found the means of deliverance from the pressure of worldly existence. This saving knowledge removes 'ignorance,' i.e. the empirical view of the universe which is natural to man, but is mistaken and perversely perverted. With the possession of desire, which fetters man to existence, and is the cause of all action; as, on the other hand, successful resistance to the desires of the senses promotes the entrance of knowledge. Saving knowledge has the power—to use the technical Indian expression—of 'consuming the seed of works,' and so making impossible for all future time a continuation of migration.

The entire course of thought as hitherto developed is already contained in substance in the ancient Upaniṣads (q.v.). For them saving knowledge consists in the recognition of the sole existence of the Brahma, the soul of the universe, of the illusory nature of the phenomenal world, and especially of the identity of the individual soul, the ātman, with the Brahma. In what way the saving knowledge is conceived in Buddhism, in the religion of the Jains, and in the philosophical system of the Brahmans (Sāṅkhyā, Yoga, Mīmāṃsā, Vedānta, Vaisēṣika, Nyāya), must be ascertained from the respective articles. Cf. also art. MOKSA.

R. GARRE.

TRANSMIGRATION (Jewish).—Metempsychosis, or the migration of the soul (Heb. גַּלְוָא, 'rotation' or 'cycle'), is a doctrine which forms part of a system of esoteric mysticism tolerated rather than approved or furthered by Judaism. Its beginnings are difficult to trace. Whether they were Egyptian or Indian—probably through Gnostic or Manichean intermediaries—this doctrine, no doubt, had to accommodate itself to other Jewish conceptions before it could be assimilated and adopted; and it had to undergo such a profound modification as to give to Jewish metempsychosis a character of its own.

The belief in the migration of the soul presupposes the conception of the soul as an independent system about the creation of the soul, and the conception of sin and redemption, are the fundamental principles upon which such a doctrine must rest. The relation between spirit and matter, soul and body, man's spiritual nature and his temporal condition, the question of pre-existence as well as that of the finality of soul and body. An attempt will here be made to do justice to these problems, however succinctly. The questions of punishment and reward, of God's
justice and mercy are also involved. It must be borne in mind that, however any theory, if it was to be accepted by Jews, had to be subjected to a process of close adaptation to the fundamental principles of Judaism, and must not run counter to the Law. Now, in the light of the soul is continually being accepted as a part of philosophic speculation concerning sin and redemption, it has to formulate its theory in accordance with Judaism.

1. Creation of souls.—God is the creator of everything; but souls are His creation. But, does God continue His act of creation? Does He continually create souls as soon as any human being is on the point of being born? The answer of the believer in metempsychosis is that He does not. His creation came to an end with the close of the sixth day. At the beginning the souls were created. The power of God is thus limited to what He had done on that occasion. Before creating Adam, God had finished the creation of all the souls of man, but, His work of creation being overtaken by the end of the sixth day, He did not continue it, and produced only those evil spirits which have been arising to the divine pantheistic fluid; they are conceived as having an individual existence; they live separately and fully conscious of their individuality; they dwell in the heavenly halls or in Paradise in rapt contemplation of the divine glory; thither they are allowed to return at the end of their peregrination through the lower world. The souls of the born and the unborn, of those who have already been in the sublunar world and of those who have not yet been in that world, are dwelling together in the heavenly halls, or in the treasury of God (Dt 32:9). No clear distinction is made between these two categories of souls. It is not possible to draw a distinction between the souls of the good and the souls of the wicked. The line is not easily drawn, even if it is not so, the existence of the human soul being acknowledged, as already stated, not in a material form but as a spiritual and immaterial substance.

2. Incarnation of souls.—The souls have been created for a specific use; they must enter human bodies; but the choice is not left to them, either of the bodies to be selected or of the time and manner of entry. As soon as a woman conceives (see art. Birth [Jewish]), an angel appears before God with the sperm, and God decrees the future life of the yet unborn babe. Its whole life is thereby determined—whether it will be rich or poor, high-stationed or lowly, wise or foolish, long-lived or short-lived, good or bad, pious or wicked; even its future helpmate is proclaimed in heaven to the joy and satisfaction of the heavenly hosts. In order to obviate too glaring a contradiction in a later version of this legend of the 'Creation of the Child' (see Gastor, Jerakhim, ix. 19 f.), the moral qualifications of the future man and woman have been omitted. The soul, which is very reluctant to give up its heavenly abode and enter the human body, especially if the latter is born into a wicked family, is frequently rejected by the angel and carried through the bliss of heaven and the agony of hell, to see the reward for good actions and the punishment for evil deeds. Although the soul forgets its entry into this world, yet a dim recollection remains, a subconscious image, which is the guiding principle in elementary recognition of good and evil. Every man has within himself a standard of right and wrong given to his soul in its premundane existence. Another version (Zohár, ii. 965 ff.) describes the incarnation of the soul in the following manner:

God created all the souls from the beginning, in the very form in which they would afterwards appear in this world. He beheld them and saw that some of them would be wicked. At the time when the soul is to descend, the Lord says, 'Go to such a place.' The soul replies, 'Let me remain here and not be defiled in that other world.' The Lord answers, 'From the beginning thou hast been created for the purpose of getting into this world.' Then the soul submits, and descends according to will. The Law runs, 'Let every soul go to it.' See how the Lord had mercy on you. He has given you His precious pearl (the Law) to help you in this world, so that ye may redeem your soul. Hence, every soul must obtain purification so as not to be delivered to Gehinnom; for two rows of angels are waiting at the gate of Gehinnom to do good to lead to Eison and the evil spirits to Gehinnom; and to be saved from punishment the soul migrates from body to body.

3. Life of the soul on earth; migration; defeat of evil spirits.—Now the soul begins its course upon earth. It must endeavour to obtain the
absolute mastery over the body and not to become its slave. In the first entry the soul is absolutely pure and without blemish. It is not met by the obstacle of 'original sin.' The principle upheld throughout is that 'each man dies for his own sin' (Ezk 18:20). But the weakness inherent in matter soon makes itself felt, and, moreover, there are the temptations placed in its way through the evil spirits (messagodim), who, though they partake of some spiritual character, are imperfect compared with the pure soul, and are anxious to drag it down to their own level. For at the outset of this attempt of the evil spirits to lead the pure soul away—a desire to frustrate by the means of sin and transgression the divine plan of creation. God has created the world and man in it for His glory. Through trial and trouble man must win the crown of eternal bliss. The finite number of souls forms part of this divine plan. A term is thereby set for man’s spiritualization, for an infinite number of souls might make an end impossible of being reached. But, as there is a limited number, it is obvious that the desired consummation would set in as soon as the last soul had entered the body. It, however, is not the case, for, in this, there was, after all, a subtle way out of the difficulty, and it was not quite free from a possible reproach of selfishness. The goodness of the soul or the purity of life obtained for that individual soul alone happiness and bliss. No one else was directly benefited by it, except perhaps that such a good and pious man served as an example to others. But the world in general apparently had nothing to do with him, and his virtuous life led nowhere except to his own exaltation. Not so with the belief in the migration of the soul. Here, upon earth, in the sight of all, the sinner—whosoever he might be—had to expiate his sins. Here he had to suffer for the wrong committed, and here obtain, as it were, the pass for the heavenly regions. By this slow purification and reunion with the other purified souls, more often a cycle was completed, at the end of which the Messianic period would begin. By his actions the whole world would benefit, and the general progress and welfare of mankind would be hastened and consummated.

Thus the soul of Adam, because he had sinned, had to begin a period of migration through other bodies and thus pass through various stages of existence, and the soul which he had shared with the wife of Uriah, impeded the complete purification of Adam’s soul. But, by its final entry into the last descendant, the Messiah would be brought about the design of the divine plan when Adam, the first man, was created. The soul of Adam, passed into Moses, or, according to another theory, the soul of Adam passed into Moses, who sinned at the rock, and then into David, who sinned with Uriah’s wife, and, finally, into the Messiah, thus linking the first with the last.

There are, as it were, successive incarnations of the pre-existing soul, and for their sakes the world has been created. There cannot be any doubt that these views are extremely old. Simon Magnus raises the claim of former existences, his soul passing through many bodies before it reaches that known as Simon. The Samaritan doctrine of the taqib teaches the same doctrine of a pre-existing soul which was given to Adam, but which, through successive ‘incarnations’ in Seth, Noah, and Abraham, reached Moses, for whom it was originally formed and for whose sake the world has been created. The element which is absent here is that of migration for the purpose of purification. The latter gives to ‘migration of souls’ a peculiar character. Not only is the world perfected there-by (tiqqun), but the sinner passes through it in his world in the new existence in which his soul re-appears. It may enter the body of a pious man, and by his good deeds he will cleanse the dust still adhering to the soul and facilitate its ascent.
on high. If the pious suffer, it is only and solely for sins committed in a previous existence, and thus suffering is not a punishment for sins now committed, but a 'purgatory' for evil deeds of a former life. The explanation of the prosperous sinner is not quite so clear. Here use has been made of the other doctrine of punishment and reward after death. The sinner benefits from the good deeds that he had performed in a previous existence, the reward has been eaten up by him in this world, and nothing but punishment and tortures is reserved for him in the life after death. This presupposes that the soul of the wicked is beyond 'rejuvenation' in this world, and is sent to Gehinnom for punishment.

This seems to be the view taken by 'the Saba' in the Zohar in the passage quoted above (§2). The cycle of the soul is thus broken. It is not made quite clear how it is to be completed; but it seems that, according to some, a soul which has just sunk to this lowest level of contamination, instead of being sent to Gehinnom, becomes an evil spirit in this world, which is anxious to enter living bodies for torment or for that punishment which starts from the lowest rung of the ladder and is to lead up to the highest without recourse to punishment, even in the soul world.

To exorcize it, to free it from this temporary existence as quickly as possible, and thus hasten the next cycle of evolution, is a meritorious deed, a real tikkun, an 'improvement' and perfection.

No attempt is made to reconcile these two separate systems of punishment and reward; they are often mentioned side by side in the Zohar and other kabbalistic treatises. In the Targum to Ee 6 the suffering of the pious and the wicked have already been explained in a somewhat similar manner, inasmuch as the pious suffer for small sins in order to enter afterwards directly into heaven, and the sinner enjoys the fruit of some good deeds here, so that hereafter he is to go straight to torment and punishment.

(b) Kabbalistic theory.—The kabbalists, however, adds and superimposes the new theory of suffering and happiness, not for sins and good deeds performed in the person's lifetime, but for sins done during previous existences. The punishment was expected to fit the crime. Thus, if a man had sinned before his birth, he would be held to suffer with his eyes, and, similarly, every other part of the body would then be affected by the sin committed through that part in the previous existence. Moral sins would have to be expiated in a similar way, and, in fact, the old kabbalists and most accredited teachers, transmigration is not limited to that from one human body to another human body. The soul of the wicked passes also into animal bodies corresponding with the character of the sin.

In later schools the transmigration has been extended also to plants, stones, and metals. As an example of the former it may be stated that the soul of an adulterer passes into the body of a female stork, for it is believed that the storks punish adultery with death.1 Thus an explanation was found for the prohibition of mixing various kinds of seeds and the cross-breeding of animals, for they disturbed the normal laws of nature and caused great suffering to the souls of such mixed products. Similarly, the peculiar command of marrying the deceased brother's wife (yibbum) is explained by the legend of the joyful position in this doctrine of migration. The soul of the childless man cannot return to its source, for the soul has remained barren and is cut short in its earthly career before it has been able to pass through all the stages of purification. Hence the reason why the child born was to be called 'in the name' of the deceased, though it does not follow that it must bear the same name. In fact, the child of Ruth, which was a 'restorer of souls' to Naomi, did not bear the name of Ruth's dead husband. The new-born babe would receive the soul of the dead and continue his earthly life.

5. Number of migrations.—There is a difference of opinion among kabbalists concerning the number of souls that would migrate before it had run its entire course. The majority of kabbalists incline to the opinion that no soul migrates through more than three bodies. The real course is that in which the soul has performed the whole of the 613 commandments of the Law, by which alone perfection is attained. For the shortcomings in one existence the soul is punished in the next, and then also performs some good deeds. Others think that the soul passes through a greater number of changes. It is held that the fate of the soul of the sinner is decided after three migrations, at the end of which a thoroughly good soul becomes an evil spirit—a demon—while that of the pious may be reincarnated times without number. In this case the ascent of the soul from the lower to the higher degrees of power and parts is called a dibbuq. Similarly, the thoroughly wicked section were changed into demons. The change of the body of Nebuchadrezzar into a wild animal, as told by Daniel (Dn 439), lent further countenance to the possibility of a human soul dwelling in an animal body. The rules for slaughtering special animals and for the blessing by which the cutting is accompanied rest upon the same principle of thereby possibly saving a penitent soul from dwelling too long in the body of an animal. It is liberated by a religious act which assists it in its further migration. All this forms part of the tikkun, the tikkun of the soul. In the world, the preparation for the Messianic rule. The covenant before Mt. Sinai was made by God with all the souls which He had created: 'Neither with you only do I make this covenant and this oath; but with all the offspring of the children of Israel, who are present here this day before the Lord our God, and also with him that is not here with us this day' (Dt 2946), for He did not speak only to those who were there, but also to those who were not there on that day, in their material form, i.e. in human bodies.

By this migration of good souls to good men and contaminated souls to sinners and evil-doers a certain affinity of souls was established, which led to the identification of such souls in the various stages. As mentioned before, the soul of Abel or of Adam was that of Moses, and the souls of the ten brothers of Joseph became the souls of the ten martyrs whom the legend described as contemporaries. In fact, this tendency of recognizing the older souls in more recent bodies developed in the later schools of kabbalistic speculations established by R. Isaac Kalir, and, although it is not binding in the Jewish regular system. Lists have been drawn up and books have been compiled (Sepher hog-Gilgolim, Frankfort, 1854), in which the reincarnations of the good and the evil of previous ages are recorded. Such spiritual genealogies—if we may use such a term—have found their way even into bibliographical and historical compilations. In

1 The Heb. name for stork is blbdh, which, by a popular etymology, may be explained to mean 'the chase' or 'the pious.'
addition to the complete reincarnation, there came the notion of partial reincarnation (Neo-Tiqqumm). The soul of a good man is sometimes not strong enough to fight successfully the temptations of the world, and another soul is temporarily grafted upon that which he already possesses, so that it is made available for future tests. The following runs through the spiritual forces of man are regularly heightened on Sabbath eve by the temporary addition of a new soul, which departs with the close of the Sabbath. This is the Sin Grafted temporarily on to the pious man. The object of all this is to hasten the perfection of the world and the advent of the Messiah. By means of migration the soul has fulfilled the object of its creation—to pass through man and to lift man higher and to bring him nearer the divine. This doctrine, being a justification of God's ways with men, is, at the same time, a source of comfort to the pious, and a source of terror to the sinner. It reconciles man to suffering and trials, and at the same time explains the hidden meaning of many a law and ceremony which seem obscure. It is a vindication of the divine character of the Law, for its ultimate result is to be the rule of heaven upon earth.

7. Date and origin.—This doctrine of migration is already found systematically developed wherever it occurs, it is tacitly assumed as well known, and no explanation is given in detail. It has, therefore, been placed together and reconstructed by the present writer mostly from the Zoharistic literature, viz. the Zohar, the Zohar Hadash, and the Tiqqumim, which represents a more or less homogeneous view on migration, whenever it is referred to. While these are by far the best and most complete writings, they are by no means the oldest. This brings us to the question of the date and probable origin of this doctrine among the Jews.

All the beginnings of esoteric teachings are lost in the mist of antiquity, and, when such doctrines finally see the light of day, they have, as a rule, a long history behind them. It is, therefore, a fallacy to date the origin of metempsychosis among the Jews from the time when it becomes known publicly in the 9th or 10th century. The masters of the occult science never doubted its Jewish character. We find no parts of that heavenly mystery handed down from Adam on through all the great men of the past? With great ingenuity they endeavoured to find proofs for it in the Scriptures by means of an exegesis which was fantastic in the extreme. A few examples will suffice. They are taken at random from the Zohar, and they are found in large numbers in Manasseh ben Israel, Nishmat Hayytn, bk. iv. chs. 8-10.

'Till thou return unto the ground' (Gen 3:19) is interpreted to mean that the body alone returns to the ground; the spirit, however, is reborn. 'Nakol shall I return thither' (Job 17:12) is interpreted literally as meaning 'to the womb,' i.e. being reborn. 'The word which he commanded to a thousand generations' (Ps 105:15) is interpreted to mean that it refers to the same soul passing through innumerable generations, for God's command has been given once to all the souls, and therefore souls are reincarnated over and over again.

One generation goeth, and another generation cometh (Ec 10). The fact that the passing away of the generation is mentioned first is a proof that this must have existed before; otherwise the present generation would have to read 'one generation goeth and another generation goeth.'

'Which are already dead more than the living which are yet alive' (Ec 4:9) is interpreted to mean that the living are still uncertain as to the future fate of the migration of their souls. That regeneration, or at least the addition of a soul, is also deduced from the following verse: 'Ye shall therefore separate holy gifts, holy things (hebrew and of the uncircumcision, etc. (Le 27:30), meaning that a clean soul shall be added, not an unclean. Shall flesh and blood, therefore, the soul for them, suffer them?' etc. (Nu 11:23), is taken to mean the addition of a soul to Adam, the God of the spirits of all flesh,' etc. (Nu 16:2), means also those that are added to strengthen them 'should one man sin' whose soul proved too weak for the life of the Adama (Gn 2:17, 'Doth God set before one soul?') (Dr 115) means that a man attaches another soul to himself.

The letters of the name of Ad(ama) have been taken as the initials for Adam, David, Moses, and 'Messias' respectively. It was suggested that the spiritual value of the letters of the names of the ten tribes corresponds to the numerical value of the names of the reputed ten sages who suffered martyrdom. These examples could easily be multiplied from later kabbalistic literature, but they all follow the same line of argument. There cannot, however, be the slightest doubt that the doctrine of metempsychosis was borrowed from other religious systems, and is not Jewish at all. It will remain an open question whether the denial of the resurrection of the dead attributed by Josephus (Ant. XVIII. i. 4 [16]) to the Sadducees implies denial also of reward and punishment, or whether it extended only to the life beyond the grave, and that they believed in the reward and punishment in this world. His allegation that they believed that the soul not only died with the body but was also saved, is, as he says, a common belief among the orthodox. The vindication of God's justice would most easily be found if it means that the soul migrates from one body to another, as they did not deny the divine origin of the soul. Whatever the remotest origin of it may be, it cannot be gainsaid that the atmosphere of Palestine was saturated with mystical and esoteric teachings of every kind, one among them being that of metempsychosis. The Gnostics and Manicheans held fast to it; Neo-Platonism did not deny its possibility, and thus almost insensibly it crept into Judaism. The Palestinian Targumim show traces of it, insomuch as in some places they speak of a second death (so Dt 33), which can only mean at least a life twice repeated upon earth; this is possible only if the soul migrates from one body to another (so also Bahya, ad loc.; cf. also Targum to Is 22[4]). Saadya Gaon (+ 942) in the 10th century inveighs against such tenets, held, as he says, by a certain Karaitse sect, although it was probably rather a mystical view of the doctrine held by Jews who believed also in the migration of souls. A few centuries later Abraham ben Adereth (1280), a rationalist philosopher, in his letter to R. Solomon ben Adreth, no. 8, protested against this doctrine; but they were the only opponents, for the wave of mysticism was rising steadily with the narrowing of the political outlook and the change of social conditions. With the appearance of the Zohar the old kabbalistic literature was pushed into the background, and many an ancient mystical treatise was forgotten, unless it became embedded in the Zohar—the e.g., the treatise by 'the Saba,' the venerable (i.e. R. Haiunna), in the form of a commentary on the Biblical section 1 Mishpatim,' Ex 22, which is found now in the Zohar Ex 94[4]-114[4]. In older writings, Qana and Bahir, and in those of R. Manasseh ben Israel, Zohar, and ben Adereth (c. 1300), and Isaac of Aki (c. 1350), faint traces of this doctrine can be detected. They show that in these mystic schools echoes of the older theory of metempsychosis had been heard and received. Whenever referred to, it is always an ancient tradition. Since the 11th century, the Zohar has swayed the mind of the larger section of a Jewry despondent and broken by ruthless persecution.

The dark Middle Ages began for the Jews when they came to an end for the other nations in Europe. The writings of R. Rekanati (14th cent.)
and Babya (14th cent.) prepared the way for the development.

Palestine—in a lesser degree the adjoining Babylon—seems to have been throughout the centre of mystical speculations. Thither Nahmanides had gone, and a great school flourished in Akko for some years. From the 12th century the flow of the Spanish emigrants at the end of the 16th cent. was also towards Palestine. In Safed there arose the school of Luria (1534-72); commonly known by the initials of his name Arl-Ḥaṭam (Isaac Ashkenazi), Vital Kalabrese, Zerovero, Poppers, and others. Among other doctrines, they developed, in the writings KabbaleS, Ez Ḥoyin, etc., much further the tenets of metempsychosis as a punishment for the wicked and an exalted reincarnation for the pious. The tigguin, or improvement of the world by delivering souls from the chain of migration, became one of the prominent features, which led to that of the Hasidim. Remarkable legends of such deliverance are henceforth told. Every pious and great kabalist performed them, none, however, so effectively as the master Luria himself. The history of the rise of the Lurian doctrine in Safed is one of the most vivid autobiographies of a 'wandering soul' (first published in the Emeg ham-Melekh of Naphtali Herz, Amsterdam, 1618). The belief that certain persons are the guylfeid of other persons who had lived before them is still strongly held by those to whom the Zohar is an inspired book and the teaching of divine revelation. This belief strengthens in them the concept of God's righteousness, and the conviction that, if the time were hastened for all the created souls to pass through the human body, the advent of the Messiah and the Kingdom of God upon earth would be hastened.

LITERATURE.—The books mentioned in the course of this attempt at a synthetic exposition of the doctrine of metempsychosis—the first of which remains the only literature than can profitably be mentioned. Mannaas ben Israel, Nakhmat Ḥagam, ib. iv., treats it apologetically. A. Franck, La KabaleS, Paris, 1862; A. Jellinek, Reise zur Gesch. der Kabalah, Leipzig, 1853-62; D. H. Joel, Sokar, Leipzig, 1849, have incidentally, of course, referred briefly also to this apparently unimportant section of kaballistic Zoharistic speculation. See also literature to art. Kabala.

M. GASTLER.

TRANSFIGURATION (Teutonic).—It is clear that the doctrine of metempsychosis was held by the early Teutonic peoples, though the amount of evidence is small and dated from a time when heathen beliefs, if not forgotten, were at least misunderstood. Such evidence as exists is chiefly derived from Scandinavian records. The only reference in early poetry is to be found in Sigurdarkvida hin Skemna, 45, where Hogni refuses to hold Brynhild back from self-destruction:

'Let no man stay her from the long journey, and may she never be born again (aptr forb.)'

More striking evidence for the belief is furnished by the prose passages contained in Helgakvida Hrormarsonar and Helgakvida Hundingsbana, ii. At the end of the former it is said that Helgi and Sváva, the hero and heroine, were born again (endborin); in the latter we are told that the heroine Sigdrún was Sváva reincarnate, and later the hero himself Shiftshjóll. Helgi and Sváva were born again as Kára and Helgi Haddingjaskati. A reference is given to Káraljóð, a poem now unfortunately lost, which dealt with the adventures of these persons. Moreover, in the twenty-sixth stanza of that poem is a reference to the hero as an endborin jofunn, a 'giant' reincarnate; his grandfather Starkaður is said to have been a jofunn (c. ili.).

With the introduction of Christianity metempsychosis came at last to be regarded as an old wives' tale. For a time it still survived among the half-heathen population: to his horror St. Olaf found himself regarded as the reincarnation of a legendary king, one Olaf Geirstaðarfr (Flateyjarbók, i. 135).

It is not to be overlooked that in all these cases the men—thither not to the women—occurred in the same names in each incarnation. As among certain primitive peoples of the present day, the name is regarded as something more than a mere label; it is intimately connected with the soul of its possessor, so that a child inheriting the name of a dead person necessarily inherits the soul as well. An interesting reference to this belief may be cited from Flateyjarbók, i. 255: Thorstein Úxafót, a follower of Olaf Tryggvason, is visited in a dream by the ghost of a man called Brynjarr; it bestows a treasure on him and asks in return that one of Thorstein's children should be baptized under the name Brynjarr, since it desires a Christian reincarnation for its heathen soul.

In the Islandsinga Saga there are no actual references to metempsychosis, though the practice of naming children after lately deceased kinsmen (Nyta Saga, ii. 42), or of giving to a child names appropriated to the deceased (La Laxdæla Saga, chs. 36, 56) points to the existence of some such belief. But the passage in Sturlunga Saga, i. 42—'bote inum na Kolbeinn apr koninok at endborinum' is no true instance of this kind, since Thorgils Boßvarson, referred to here, was born in 1226, nineteen years before the death of Kolbeinn Arnorsson, of whom he seemed to be the reincarnation. To the present day, however, it is believed in Norway and Iceland that, if a ghost appears to a pregnant woman in her sleep, it is seeking a namesake (gaar etter Navnet); and accordingly the child is baptized with the name of the dead person (cf. K. Maurer, Zeitgeschicht des Vereins für Volkskunde, v. 99). Sophus Bugge, moreover, states that he had heard reis upp atte ('raise up again') used in the west part of Iceland with reference to the naming of a child after a dead person (Home of the Eidic Poems, London, 1899, p. 333).

Among the other Teutonic peoples the evidence for anything in the nature of metempsychosis is very meagre. An Anglo-Saxon charm (T. O. Cookayne, Leechdoms, Wortcunning, and Starcraft of Early England, London, 1864-66, iii. 66 ff.; C. W. M. Grein, Bibliothek der angelsächs. Poesie, Göttingen, 1847, li. 35 ff.; 116 ff.) cannot bring forth a child to step thrice over the grave of a dead man, using an incantation for the safe delivery of her offspring. It is a question much in need of investigation whether the same idea can be traced in certain usages said to be practised in connexion with burial-places of the heathen age in various parts of Northern Europe.

It may be mentioned in conclusion that Appian (Hist. Rom. iv., ' de Rebus Gallicis, 3) describes the Germans who followed Ariovistus as 'scorning death because of their hope of rebirth' (Tharouxs karapovmosb b'i Orusia dudraurou). In view of what is said of the Gauls by Diodorus, v. 23, and by Lucan, Pharsalia, i. 454 ff. (with the scholia), it is not unlikely that the reference here is to a belief in metempsychosis, though one cannot deny the possibility that Appian's statement may be due to a misunderstanding of the Valhalla doctrine.

BRUCE DICKINSON.

TRANSUBSTANTIATION.—See EUCHARIST.
TRAPPISTS—TRAVANCORE

TRAPPISTS—Trappists is the popular name for the Reformed Cistercians, or Recollets, of the Strict Observance, now the chief division of the order.

The art. MONASTICISM outlines the successive reforms of the Cistercians, from St. Bernard to St. Benedict. By 1600 the Cisterciansthere themselves had yielded to the spirit of luxury, despite the restoration in Spain promoted by Martino de Vargas. Though Richelieu and Mazarin furthered many attempts to return to the austere life of their own order, and though their centralized constitution might have facilitated this, a general reform was refused. Here and there a few abbeys did return to the ideals of St. Stephen Harding, the Jansenist reform of St. Cyr and of Port Royal being well known. Armand-Jean Le Bouthillier de Rancé (1626-1700), abbot in commendam of La Trappe from the age of ten, abandoned court life in 1662 and entered one of the reformed abbeys as a novice. Two years later, having again professed, he came to take charge of his own inaccessible Norman abbey. Finding that the few monks who had not shared his example would not share his ideals, he pensioned them off and colonized the place from other reformed abbeys. The community improved on the original austerities, taking only one vegetable meal daily, abstaining from literature and from speech except for urgent purposes.

The ideals were published by de Rancé in his Traité de la sainteté et des devoirs de la vie monastique (1683), and in his posthumous Règlemens généraux de l'abbaye de la Trappe (1701); but only a single community of nuns and two Italian monasteries adopted them. For a century they were unimportant, though other Reformed Cistercians undertook missions to Africa which had some temporary success.

The French Revolution broke up the home; the abbey was suppressed, and the premises were converted into a foundry for cannon. This was the real birth of the order. In 1791 Dom Augustin de Lestrage, master of the novices, took a score of monks to Val Sainte, Switzerland, imposing a rule stricter than ever; postulants flocked in; colonies were sent to many lands; a congregation was formed, and Dom Augustin was appointed father abbot. When the Trappists were hunted to Poland, Germany, and Italy, the ideal only increased. A new abbey was formed at Staplehill near Wimborne; a party of monks that wandered through Pennsylvania, Kentucky, Missouri, and Illinois returned to France on the fall of Napoleon, occupying La Trappe and Belle Fontaine; presently five priories were established in France, and a great college at Soligny. Before his death in 1827 Dom Augustine saw abbeys grow up in Belgium and Italy, besides two more in France. One was founded at Coalville in Leicestershore and named after the great Bernard. The soul of his friend Alberic was taken in 1848 by an expedition from La Meilleraye in Brittany, which settled in Kentuck at an abbey named Gethsemani. Mount Melleray in Ireland sent another colony to Dubuque in Iowa, and both establishments thrive, though all the fathers are aliens. A second Irish abbey arose at Roscrea in Co. Tipperary.

Outward disasters again intensified the spiritual life. La Trappe was destroyed by fire in Aug. 1871; 1450 fathers and brothers were again expelled from France in 1880; but the austere ideals were embraced by nearly all Cistercians outside Austria-Hungary. After two constitutional changes they were formally recognized in 1892 as the order of Red Cloths, with an abbot-general at Rome; and this success was crowned six years later by the purchase of the original premises of Citeaux.

1 In 1893 they were expelled from the United States, two communities went to Nova Scotia and New Brunswick, one to Oregon, one to Brazil; two tiny groups have taken refuge near Kingsbridge and Hambrook. Soligny, which had endeavoured to uphold the agricultural ideals of St. Benedict, especially by its Canadian offshoots at La Trappe, where the Ottawa joins the St. Lawrence, at Lake St. John, and in Manitoba. No establishment in the world is more unique, and though the partial observer has anything to say as to results.

Attached to each of the 71 monasteries and annexes is a body of brothers who do the rougher field work; in all there are about 2000 of these, and 1600 sisters. The only priories contain 2000 nuns and lay sisters. Three Italian monasteries still follow the rule of de Rancé as once used at La Trappe, but do not belong to the Reformed Cistercians; they have only 50 members.

TRAVANCORE.—Travancore (Malayalam Tiruvittankár, 'place where the goddess of prosperity resides'), a native state in the south-west of the Indian peninsula, takes its name from Tiruvankod, 30 miles south of the capital, Trivandrum.

'Travancore is said to have formed part of the ancient kingdom of Kerala. During the 12th cent. A.D. it was conquered by the Cholas; in the 13th cent. it was invaded by the Pandyas of Madura. A descendant of the Travancore foundation was found in the first half of the 14th cent. by Márthán Varma, and in 1795 it became a protected state under the British Government. Since then it has enjoyed prosperity under a well-regulated government, and it has been conspicuous for the maintenance of order, religious toleration, and encouragement of education.

2. Area and population.—The area of the state is 7703 sq. miles, and the total population at the census of 1911 was 3,428,975, of whom 93.8% are rural and 6.2% urban. The density of the population is high: 452 per sq. mile for the whole area, and 880 per sq. mile in the 2000 most populous towns, lakes, and

1 J. L. Allen, Century Magazine, new ser., iv. 454.

2 1691 xiv. 2l.\)
included. The people are of the usual S. Indian Dravidian type, and they preserve many characteristic usages, in particular the matrarchical forms of the system of marriage and family:

Among the Marma-Kakasayam [Malayalam maruri, 'next,' 'other,' maadhu, 'children,' tayam, 'portion'] Hindus the husband is, according to the law, the eldest male member of the family, but in the female line only the eldest male member has no place. It may happen, however, that a Karanavan ['originator'], number of the Hindu Reformed, or at least a member of the male members, will be able to continue single after the lifetime of the parent, especially if the father's son divides and go and live in separate households with the children, the mother residing with one of the sons in the original household. The married sons, if any, usually live with the mother. In regard to the Nampuleti Brahmanas, however, the eldest son alone marries, the other sons living with him in the family. 1

The chief castes are the Nayan [q.v.] honorific, and of Nyaks; Skt. madhyama, numbering 692,655, best known on account of their peculiar marriage customs. 2 The Ilhuvans or Ilavans, who take their name from Izham, the Malayalam name of Ceylon, are immigrants from that island, cultivate coco-nut and palmyra palms, make the drink known as toddy (Skr. tala, 'the palmyra tree'), and distil country spirits; they number 56,053. The Pulamans (Malayalam taravdtu, 'today') numbering 185,314, are agricultural labourers. The Channans or Shabnel (Tamil shabu, 'today') cultivate the palmyra palm and make coarse sugar. Brahman number 55,643; among them the most respectable are the Namkuri, Namkuri, or Nam- buri (Malayalam nambu, 'the Veda'; oahu, 'to teach'; tier, Skr. dhi, 'holy'), who aim at following the original Vedic rites and practise elaborate rules of purification, while they allow the younger sons of the family to enter into polyandrous relations with Nayan women.

3. Religion.—Classified by religion, the population consists of Hindus, 2,982,617, 69-57 %; Christians, 908,868, 29-36 %; Muhammadans, 226,617, 6-61 %; animists, 15,177, 46 %; Jews, Buddhists, and Jains, 100.

(a) Hindus.—Of the triad, Br diagrams, Visnu, Siva, the last is most popular; in the form of Ananda Padmanabha ('the endless, from whose naval springs the lotus') he is the patron deity of the state, with a famous temple at the capital Trivandrum, which is visited by crowds of pilgrims. Among the minor deities the following are the chief: Vrthnasvāra ('obstacle Lord'), the Ganeṣa or Ganapati of other parts of India; Subhramayya, Skanda, Kārttikeya, or Veluayya, like Ganesa a son of Siva, but this demon, who can drive the helpless and punishes the wicked—a cult special to the Tamil and Malayāḷa peoples; Śtāta ('ruler'), Aiyanapp or Aiyanār ('honourable father'), the most popular, and minor deity, chief of the household (bhata), who rides over the land mounted on a horse or elephant, sword in hand, to disperse all obnoxious spirits. Besides these the lower classes worship goliards or minor spirits, male and female, the females attendants of the goddess Bhadrakāli, the males classed as followers of Siva.

(b) Christians.—These show a notable increase, from 498,542 in 1881 to 908,868 in 1911. The Hindu compiler of the Traveancore Census Report for 1911 stated that the Christian feeling in the state has developed in the last forty years, and the census officers were under orders, in their visits, to make a special effort to secure converts. The churches were represented as having achieved great success in the evangelization of the backward classes and the increase of the Christian population is attributed in part to the increase of the number of missionary schools and in part to the rise of the educational system supported by the state. The Traveancore Census Report for 1911 states that the Christian population is distributed in the following manner: Catholic, 725,816; Brahmo, 15,550; Protestant, 107,502.

The following are the details of the Christian population: Syro-Roman, 280,407; Syrian Jacobites, 202,699; Roman Catholic, 175,724; Congregationalists, 81,573; Reformed Syrian, 74,869; Anglican, 56,251; Salvationist, 16,794. The Church Missionary Society commenced work in 1816, the London Missionary Society in 1806, the Salvation Army in 1808.

(c) Muslims.—Muhammadan missionarions are said to have visited Malabar as early as A.D. 710, and the story of the conversion of the last of the Perumals suggests that traders from Arabia arrived as early as the 9th century A.D. 3 The Muhammadans have been a determined people, a constant menace to the Perumals; they are solders, merchants, and their converts. The Perumnans (Skr. Tarashaka, 'Turk') belong to the immigrant class.

2 Th. p. 104.

TREATIES

1. Their place in international law and ethics.—The history of treaties, as formal agreements between nations, ratified by the respective governments, throws some light on the development of international ethics; and the formalities and ceremonies connected with the sanctions employed at various times, to give validity to the pact, are of interest to the historian of religion. Throughout the whole of antiquity the gods presided over all treaty-making, and the oath was a predominant factor; the transition from ancient to modern times is marked by a steady decline of this religious element. For the present purpose the juristic aspect of treaties may be ignored. But it is necessary to define their general position in regard to law. They belong to the sphere of what is known as 'international law'; but the rules known as international ethics lie on the extreme frontier of law, and it is only more convenient, not necessarily more correct, to treat them as a branch of law rather than of morals. The difficulty is greatly regressed when it is recognized that 'international law lies in the fact that there is no fixed authority (unless it be a universal League of Nations) that can lay down and enforce these rules as between nations, and the rules are liable to be broken with impunity by any nation that has the power and the will to defy them. No pact between two nations can bind a third which was not a consenting party. But treaties, which are one of the most important means by which 'international law is laid down, are valuable as a record of the development of morality, for the very reason that they express national opinion in a peculiarly deliberate and aU ahuman manner.

The history of treaties accordingly illustrates the growing sense of nations—which, by a legal fiction or a bold metaphor, are moral persons—for morality in international relations. It also illustrates the constant struggle to discover some means of enforcing the observance of pacts.

Upon a scrupulous fidelity in the observation of Treaties, not merely in their letter but in their spirit, obviously depends the universal good of the world. Pacta sunt servanda is the prevailing maxim of International, as it was of Roman Law.

In the earliest times of which we have record this fidelity was reinforced by religious ceremonials, calling of the gods to witness, with oaths and imprecations. In modern times these religious aspects, as also the giving of hostages, are thrown into the case of treaties with savages, and the observance of treaties has been left to the conscience of the parties; but, as this could no more be relied upon than when it required to be fortified by oaths, one of the chief objects of treaties in modern times has been the establishment of a balance of power in order to make the violation of them a risky undertaking. Finally, the impossibility of obtaining permanent equilibrium between groups of nations has raised the question of a universal League of Nations, which, in turn, has assumed the Treaty of Versailles of 1919, may be regarded as the highest development that the treaty has so far reached, since, by creating a determinate authority capable of enforcing the rules, it seeks to merge international law and (so far as law can make men trustworthy) international morality in one.

Previously to this treaty, little had been done in this direction beyond the general recognition that promises and signatures are futile, and that the only security lies in the establishment of just and stable order. But how to ensure that the wrongdoer who, feeling himself strong enough, wantonly violates his word and destroys the peace of the world or breaks the laws of war shall be punished, has meant an insoluble problem, since his very act implies an assurance of impunity. W. G. F. Phillipmore suggested that each state that is a party to a treaty should contract with each other, in the event of war between it and any other state that is a party to the treaty, it will observe towards the state with which it is at war all the agreed rules of the laws of war, and, if the rules are violated, then any other state party to the treaty may consider it an offence against itself that the law has been violated, such violation being considered an indirect injury, by reason of the lowering of the standard of conduct. The weak point of this arrangement is that interference on the side of law and order is merely permissive; it requires to be made imperative, and extended to cover the maintenance of the peace of nations, and not merely the observance of the laws of war.

It is generally agreed that 'international morality—if not international law—calls upon every State to use every means at its disposal, without giving offence—for example, friendly suggestion—to prevent the outbreak of war, or, when it has begun, to help the contending parties to compose their differences. A war between two nations directed or indirectly concerns all nations in a degree more or less of the international community. There is not and there cannot be any principle of law, of ethics or of religion, prohibiting peaceful States from doing their utmost to bring about a cessation of carnage and devastation.

The League of Nations converts this negative into a positive injunction to interpose, and removes the offence from the most forcible methods of doing so. For art. 16 of the Covenant of the League declares that 'any nation, not being a member of the League, will be entitled to the assistance of the League in any case of armed attack against it, in any case of war or threat of war, and in any case of conflict of interests which might lead to a breach of the peace'; the League, it is obvious, that even this machinery will not suffice to suppress the ambitions of a state that feels itself strong enough to defy the greater part of the world; but it is equally obvious that such a state will be less ready to take the plunge than it would be if no such machinery existed.

Although the experience of the Great War of 1914-18 dashed the high hopes which were entertained as a result of the Hague Conferences of 1899 and 1907, it is unreasonable to regard those proceedings as a mere 'misprint in the world's history. They were attended by the representatives of nations so numerous and so important that it was possible to say that in the result of their deliberations we have what may be regarded as the common judgment of mankind expressed in the most solemn manner in which an international engagement between nations is capable of expression on such vital questions as the desirability of substituting arbitration for war. For the first time, too, an international court was established.

2. ib. p. 69.
5. See art. OAEV.
to give effect to the principle agreed upon by the conference. Now it is true that this solemn judgment was abrogated by the wanton action of a single one among the signatories, and the whole foundation of the international relations thus formed became void. But the foundation remains, to which The Hague Conferences contributed certain elements of solidity, if only by producing unanimity among a greater number than was to be found in the treaty before being parties to a treaty. Such unanimity was secured again among an even greater number, and, when a fresh start was made in 1919, the problem of securing adequate sanction for the engagements between the nations by means of a League of Nations was attacked with the more insight and chance of success, because it was known wherein the old conferences had failed.

Among the reasons for the failure of treaties to preserve the peace the misconception of their object as the termination of war merely, and not also the establishment of permanent peace, and the lack of elasticity in their terms, are clearly drawn merely to set out the objections outstanding at the time, without care being taken not to sow the seeds of fresh conflict by imposing harsh conditions, restraining projects of liberty and ignoring claims of special peoples concerned, they do little more than temporarily suppress forces which break out with the greater violence at the first opportunity. For the same reason, they should not be rigidly drawn as to occasion consideration in the light of new conditions, and should include the necessary machinery for such reconsideration.

Antiquity. — (a) The earliest treaties of which we have any detailed record relate to the two cities of Lagash and Umma, on either side of the Shatt el-Hai in Babylonia.1 Etemenna, pater of Lagash (about 2500 n.c.), records an arbitration of earlier date in the time of Mesilim, king of Akkad. The actual patrons of Lagash and Umma are not named; the dispute is settled by the gods; the god Enlil presides over the conference and invites the parties to make the treaty; the boundary is fixed by his command by Ningirsu, god of Lagash, and by the city-god of Umma; even Mesilim acts only at the command of his goddess Kali. This is obviously an extreme instance of the religious sanction of the treaty (it is supposed to live and move and have their being entirely in their hosts' hands). A second treaty between the same two cities was made about 2400 B.C. by Ennatum, pater and king of Lagash, and Enkidu, pater of Umma. A great boundary-ditch was dug, and the plain of Gud-gul, which was in dispute, was restored to Ninisura. But the gods erected along the new frontier beside the pillars of definition, and the gods of the parties facing each other at the altars of these shrines that the gods took oaths in ratifying the treaty: 'On the men of Umma have I, Ennatum, cast the great net of Enlil. I have wrought the oath, and the men of Umma have sworn the oath to Ennatum.' He invokes the vengeance of Enlil on the men of Umma if they alter this word. He also invokes other gods, to whom he has made suitable offerings, to enforce the treaty.

In the third treaty, the terms of which were imposed on Umma by Etemenna of Lagash (about 2500 B.C.), we have a similar impression: 'If the men of Umma ever violate the boundary-ditch of Ningirsu or that of Ninisura, in order to lay violent hands on the territory of Lagash ... then may Enlil destroy them, and may Ningirsu cast over them his dice, and set his hand and foot upon them.' The imprecations recall those of the second treaty, with a sharp sting smeared the blood on seven stones, and invoked Orotal (Dionysus) and Allat (Arina).8 The locus classicus is Tac. Ann. xii. 47 (the Aramaeans cut off the blood of innocent men, and flayed the corpse of a victim, to cut a covenant being rather parallel to ἰπαρανθείναι and ταρασσεῖν ἐρριμπάρες or παραμετρίαν to refer to the cutting down of the victim, however, seems uncertain.

(b) The famous treaty between Rameses II. and Hethertumet (the Hittite king of KhaItu, about 1300 B.C.), is recorded in three copies, of which two are hieroglyphic, at Karnak and in the Ramesseum, while the third is the Hittite-Babylonian version, on the tablets excavated at Boghaz Keui.2 Two Hittite envos brought the

blood-covenant was also in use, and treaties were continued by oath and ceremony and ended by the sacrifice of an ox. In a treaty of 544 B.C. the formula is: § May the gods of the earth, the gods of the seas, the gods of the rivers, the gods of the emperors and the gods of the sun, and the ancestors of our seven tribes and twelve States watch over its fulfillment. If any one prove unfaithful he may not escape unless his gods smile him, so that his people shall forswear him, his life be lost, and his posterity cut off."1

c) Coming to the Western nations, we find that the international relations depicted in the Homeric poems were primitive, including the making of truces, with oaths, for the burning of the dead;2 oaths, invocation of the gods, imprecation on the treaty-breaker, with sacrifice and feasting, also accompanied a treaty between Greeks and Trojans.3 In the historical period in Greece we find certain primitive survivals, as when Aristides administered the oath to the Greeks and took it himself on behalf of the Athenians, throwing pieces of hot iron (μύθους) into the sea. But as a rule the oaths are the ordinary ones (νόμιμος δρόκος) in the name of the chief gods (δρόκοι); or, as in the alliance between Athens, Argos, Mantinea, and Elis (425 B.C.), the instruction is that each party should swear its most binding national oath over perfect victims (τῶν εὐτύχων δρόκον τῶν μέγατον κατὰ λείψεων). The tendency is to increase the number of gods invoked, in the hope of increasing the force of the oath.

In a treaty between Carthage and Philip v.4 in 216 B.C. the following deities are invoked: Zeus, Hera, Apollo, the Genius (Sicilian) of Carthage, the Carrthaginians, Hiero, Ithobolus, Ares, Triton, Poseidon, the gods of the army (θεοὶ τοῦ πολεμουργοῦ), the Sun, Moon, and Earth, the rivers, harbours, and waters, all the gods who rule Carthage, all the gods who rule Macedon and the rest of Greece, all the gods who preside over the camp (επορεύγοντες). The Macedonians in allying themselves with Smyrna (mid. 3rd cent. B.C.) swear by Zeus, Earth, Sun, Ares, Athena Arela, Artemis Tauropolos, the Sisyphus Mother, Apollo 6 in Φασάλης, all the other gods and goddesses, and the Good Fortune of King Seleucus. The Smyrniotics made an alliance with Anbrodotus Stratokhos for Apollo and omit the Good Fortune of the king.

The inscriptions frequently omit the instructions as to the gods in whose names the oaths are to be taken, p. presuming merely the nature of the undertaking, as:

"I will fight for the Bottians who enter into the pact, and will keep the alliance with them faithfully and without guile, showing all zeal according to the pact; and I will bear no ill will of what has happened in the past."5

Formule of imprecation frequently accompany the oath; in the simplest form (as in the alliance between Athens and Coreya in 375 B.C.) it is:

Τύδας-τυδα, εἰτι εὐ σώμενον ὁ θεός, τὸν θεόν, τὰς θεότητας, τὰς κάτω τῆς θεότητος, τὰς θεοθείας, τὰς θεοθεοθείας, τὰς θεοθεοθεοθείας, τὰς θεοθεοθεοθεοθείας, τὰς θεοθεοθεοθεοθεοθείας, τὰς θεοθεοθεοθεοθεοθεοθείας, τὰς θεοθεοθεοθεοθεοθεοθεοθείας, τὰς θεοθεοθεοθεοθεοθεοθεοθεοθείας, τὰς θεοθεοθεοθεοθεοθεοθεοθεοθεοθείας, τὰς θεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθείας, τὰς θεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθείας, τὰς θεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθείας, τὰς θεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθείας, τὰς θεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθείας, τὰς θεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθείας, τὰς θεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθεοθ
TREATIES

against Rome in 91–88 B.C. 1 When Livy 2 describes a similar ceremonial among the Carthaginians, substituting a lamb for a pig, he is perhaps only attempting to fit Roman customs to theirs. Livy is careful to distinguish, saying that the Carthaginians swear by their own gods, while the Romans perform the ceremony evidently regarded as peculiar to themselves. After the ceremony the envoys wrote out the text and brought it to Rome, and the whole college pledged itself to secure that it should be duly observed. It is hardly too much to say that the account given of the functions of the fetials reveals as highly organized a system, and as dignified a conception of the legal essence of the treaty, as has ever been realized. But it is a mistake to suppose that this organization is the expression of a high ethical standard. 3

3. Middle Ages and modern times.—(a) The Pax Romana makes records of treaties during the empire scanty. 4 The swearing of oaths fingers on into the modern period.

In the treaty between Justinian and Choezores (A.D. 561) the 12th article contains the invocation of God and the prayer that God may be compassionate to him who keeps the peace and becomes the adversary of the deceitful man who seeks to overflow the pact. The oath taken by the envoys of the clergy of Burgundy, and Childebert, king of Austrasia (A.D. 557), is 'by the name of Almighty God and the indivisible Trinity, and all the holy and godly creatures of God, the king of the Low and High, Italy, and Germany and Charles of France swear 'per Dominum sempiterne, Dei virtutem sempiterne, sanctae Dei Religionis quaam pascem,' 5— bona fide servavimus et etque fraudem Sic Deus nos auditet, et hac Sancta Dei Evangelia.' The formula 'perer en son âme,' 'furrie en animam suaum,' appears frequent in treaties between England and France or the Low Countries. Excommunication was the logical sequel to the violation of a treaty-oath (as specified, e.g., in the truce of the renewal of the Truce Domini at the Council of Noyon, 1094). Gradually the oath fades away into the promise.

In the treaty of commerce between Henry vii. and Philip, Duke of Burgundy (1453), the commissioners, in a declaratio to all faithful Christians . . . Eternal Greeting in the Lord,' 6 bona fide promise and oblige themselves, on the pledge and obligation of all their goods present and future, to give to the observance of the treaty; these obligations are to be delivered not only to the parties present, but also to the Virgin Mary at Cahors. The king's undertaking to ratify the agreements by his commissioners is given 'bona fide et de suum cordis et de suae voluntatis arcimo et en the word of a Prince.' In the treaty of 1604 between Philip ii. and James i. of England the gradual obsolescence of the oath is markedly visible in the clause: 'They shall make a like promise on the word of a King and Prince, and even swear on the Holy Gospels, if they are thereby required by the other party.'

The most modern example of an oath is said to be that taken in the cathedral of Soleuré in the alliance between France and Switzerland in 1777. Thus finally disappeared that element which was, 'in a certain sense, the underlying basis of the whole body of the ancient laws of nations.' It was not uncommon for a party to a treaty to obtain absolution from his oath.

Thus Maximilian 1., a few months before the League of Cambrai (1508), had made a treaty with Venice; one of the articles of the League summoned him by a papal brief to the

from doing so 'by the forms of the British constitution,' 1

(c) Apart from professions of this sort, the actual protection of religious freedom of peoples involved in a settlement by treaty has often formed the subject of special articles. 2

An early and remarkable instance is in the treaty between Justinian and Persia in 561, in which a special article provided that Christians in Persia should enjoy freedom of worship, and should have their own patriarch, and should attempt to make proselytes among the Magi. In modern times the Treaty of Westphalia marked an advance in religious toleration. The Treaty of Tordesillas (1529), recognizing the sovereignty of Canada, made special provision for liberty to the New Roman Catholic subjects of the king of Spain, to follow their own religious worship. The Treaty of Oliva in 1600 (between Poland and Sweden) protected the co-religionists of either power in the territory of the other. In 1667, when Russia ceded Alaska to the United States, it was provided that the civilized inhabitants should not be interfered with in their religion. And in 1901, by the Treaty of Constantiopolis, Muslims resident in Bulgarian territory were guaranteed the enjoyment of religious liberty, and the name of the sultan as khalif was to continue to be pronounced in their public prayers. 'It is incumbent on the acquiring sovereign to allow to the inhabitants of the annexed territory the free exercise of their religion when it is not incompatible with good order and the fundamental dictates of morality.' This provision is not a legal one, but its sanction is rooted more deeply than that of positive enactment. Hence the necessity of actual stipulations, such as those enumerated, is not usually felt.

(d) Of more importance, as indicating moral progress, than professions relating to religious principles is the provision for freedom of conscience. From the time that provisions for religious freedom, is the degree of solictude shown by the contracting parties for the general interests of the people. W. G. F. Phillimore 3 remarks that, except in the matter of religious toleration, the Treaty of Westphalia paid scant regard to the interests of the people. From 1648 to the recognition of American independence in 1783 the chief consideration was given to the religious teaching of the next or other days, to the rights and interests of sovereigns and reigning families. In the next period, down to 1859, there is increased recognition of the rights of states. Still, by the General Act of the Congress of Vienna, e.g., states and populations were trafficked in, with absolute disregard of the peoples concerned, who might as well have been slaves or cattle. Since 1859 4 little regard is paid to the supposed rights and interests of individual sovereigns or reigning families, and a new principle has arisen, viz. the rights of nationalities. 5

4. Conclusion.—Certain moral considerations which stand with treatymaking and treaty-breaking may be stated, though no solution is necessarily offered of the questions involved.

(a) The constraining of treaties is a matter of equity. They are made about facts, and are not therefore to be technically construe.

1 'Discrimen actuum bona fide et stricti juris, quatenus ex juro est Romano, ad jus gentium non pertinent.' The principle of the De jure, 'voluntatem potius quam verba spectari pons,' applies with especial force. 7 'There is no place for the refinements of the courts in the rough jurisprudence of nations.' 6

In antiquity a famous instance of the breach of this principle was the murder of Hippasia by Paches. 8 The classical example in modern writers, however, is the action of the French who, having disregarded the formalities of Dunkirk in accordance with the Treaty of Utrecht, proceeded to construct a still stronger place at Mardick, a few miles away. The principle by which a provision may be 'extended' so as to include a case to which the same article applies as applied to the case originally envisaged, or may be 'restricted,' so that an ally excludes the application of a provision to a case obviously improper (as when, having promised to aid an ally in all its wars, it is asked to join in an unjust war)—this principle of extensive or restrictive interpretation assists contracting parties in adhering to the spirit rather than the letter of a treaty. 9

(b) Since governments are representatives of justice, morality, and religion, it is assumed 2 that a treaty containing an engagement to do or allow that which is opposed to justice, morality, or religion is invalid. Pacta, quae turpem causam continent, non sunt observanda. 3 Since a large number of treaties are forcibly imposed on a conquered by a conquering state, it is obvious that this principle provides innumerable opportunities for dispute and repudiation, under the next heading.

(c) How far is a treaty invalidated by the employment of force on the part of one of the parties? To this it is generally agreed to answer that there is no force in the plea that one of the parties consented through fear, or in face of superior force, such as would invalidate a private contract, since such treaties are only a way of terminating war, which is entirely determined by force. 4 'No inequality of advantage, no lesion, can invalidate a Treaty. But it is equally clearly held that treachery or perfidy, inferior to that of a nation, or even of a state, does not in the nature of the case absolve the people or the government of the state, or the collective representative of a state amply justifies the repudiation of a treaty. The classical instance is Napoleon's ex- termination of terms from Ferdinand vii. at Bayonne.

(d) Fraud may also clearly hold to invalidate a treaty. And there is no real freedom of the will on the part of the deceived party. 5 The distinction is sometimes a little delicate between positive fraud and suppressio verb. In the negotiations for the Webster-Ashburton Treaty (1849) Webster suppressed a map which was favourable to the British cause. The map could have been found, as Greville admitted, if the British authorities had caused proper search to be made, and Lord Ashburton agreed that he had no legal cause for complaint. 6 Yet it is to such cases as this that the remark of Hall 7 may be applied: 'It is recognized that there is an international morality distinct from law, violation of which gives no formal ground of complaint, however odious the action of the ill-doer may be.'

(e) The question of how far a party can liberate itself from obligations has been brought into special prominence by Germany's repudiation of its pledge to Belgium in 1914. To the doctrine that 'necessity, when real and bona fide, overrules the obligation of the promise' R. J. Phillimore 8 replies:

'it is manifest that the State, like the Individual, which takes advantage of the change of affairs to disengage itself from the obligations of a solemn covenant, weakens the foundations of that good faith on which the peace of the world depends.'

So too Hall. 8

'\text{Modern writers, it would seem, are more struck by the impossibility of looking at international contracts as perpetually binding, than by the necessity of insisting upon that good faith between States without which the world has only before it the alternatives of armed suspense or open war, and they too often lay down canons of such perils looseness, that if its doctrine is to be accepted, an unscrupulous State need never be in want of a plausible excuse for repudiating an inconvenient obligation.}'

Pedants such as those on whom Frederick the Great relied to justify his acts are to be found in all ages of treaties. The Conference of London (1871) made the declaration:

'It is an essential principle of the law of nations that no Power can liberate itself from the engagements of a treaty, or modify the same, whence it results that the Party, by breach of which the contracting Powers by means of an amicable arrangement.'

This declaration, which was signed by all the

leading Powers of Europe, was provoked by Russia's attempt to evade its obligations under the Treaty of Paris of 1856, on the ground that lapse of time had changed the conditions. Although no mention of the same effect appears to be included in the covenant of the League of Nations or in the treaty with Germany, the case seems to be covered by article 16, which provides for the prevention or punishment of breaches of any of its obligations.

(f) How far does honour demand the intervention of one of the guarantors, in the case of a collective guarantee, when agreement is not reached between all parties? Bluntschli holds that each guarantor is bound to act separately in such a case. Lord Derby (in connexion with the Luxembourg Convention of 1867) held that honour (but not legal obligation) compelled each guarantor, in concert with the others, to maintain the engagements; but that, if concerted action was not obtainable, then a guarantor would have the right, but not necessarily the legal obligation, to act. It is obvious that this difficulty could be avoided by care in drafting, and that, unless Bluntschli's view be accepted, the collective guarantee is not likely to be very valuable until we have reached a higher stage of social and historic development at the present time. The covenant of the League of Nations meets the case by making joint intervention obligatory on all its members.

G. F. Hill.

TREES AND PLANTS.—I. Introductory.

All plants are sacred. This principle of the followers of Zoroaster lies at the root of all plant-life, all tree-cults. All plants possess the gifts of immortality and health. 2 The subject enters into our every thought, as the germ of the religious. And all the emotions are traceable in different aspects and degrees from the tree of life to the May-pole. It rests on the earliest conceptions of the unity of life in nature, in the sense of communion and fellowship with the divine centre of life. The oak of Manre, the ash Yggdrasil, the ashéhri, the oak of Dodona, the Ficus ruminalis, the Bodhi-tree, the pine-cones, and the seven-branched candlestick, even the modern Christmas-tree with its lights and its fruit and its fillets, are instances of the vast area in folk-lore, tradition, and social custom which has been influenced by early reverence for the sacred tree.

The sacred tree is thus deeply rooted in the primitive religious ideas of the human race. The spring, the rock, the tree are all visible manifestations of the divine spirit. They are found associated in the most ancient sanctuaries as different symbols of life; and this life, in earth or water or tree, is one with human life. The same divine spirit lives and works in all and manifests itself in each and all. The secret of religion is the recognition of this life as divine; its duty is the obligation of fellowship and worship which comes of this recognition.

In the earliest stage the sacred tree is more than a symbol. It is instinct with divine life, aglow with divine light. It is at once the tree of life and the tree of the knowledge of good and evil. This animistic stage is traceable in folk-lore and myth, in traditional survivals in later ritual, and in savage cults in more recent and even modern times. In the history of religious development it lies behind the more evolved symbolic prevalences at the present time. The covenant of the League of Nations meets the case by making joint intervention obligatory on all its members.

In the second stage the sacred tree is planted in holy ground. It is representative of the deity. It is the dwelling-place of the deity. The priest-king is its champion, and is himself the embodiment or incarnation of the god. 3 It is as priest-king at Manre that Abraham arms his trained servants and leads them against the Kings of the earth. It is an archaic survival in an archaic fragment (Gn 14:14-16). The champion of the tree-god must be consecrated by the planting of the sacred tree, though not always of the same tree. The oak-Zeus of Dodona adopted under certain conditions the white poplar and the plane. Abraham, the champion of the oak or terebinth of Manre, planted a grove, i.e. a tamarisk, at Beersheba. Agamemnon, as guardian of a sacred tree, and himself enjoying the divine title ἀξιόν ἄρδεων and worshipped as a chthonian Zeus in Laconia, planted a plane tree at Lacedaemon in the grove of Poseidon at Caphyre in Arcadia. 4 These plantations are examples of the second, or representative, stage of tree-worship.

The third is the symbolic stage. The 'grove,' or ashéhri, the common adjunct of the Canaanite shrine, is the most familiar example of this stage. It was a wooden pillar, representative like the living tree of the deity, 'the token of the deity's presence or a magnet for attracting it.' 5 There are traces of it in the sanctuaries at Samaria (2 K 13:9), at Bethel (23:14), and even in the Temple at Jerusalem (23:9). The differentiation of the one deity into the 'gods many and lords many' of local and national cults led to the iconic representation of the tree-god. The stump takes human shape. The Herme, wooden or stone pillars swelling towards the top, were crowned with the head of Hermes. The rude figure of Priapus as protector of gardens was of a similar character. The caduceus of Hermes, a wand with a triple serpent, may refer also to his own office as a tree-god. 6 Silverus is represented in a similar form, with his sacred pine and also with the caduceus as a symbol. And in this connexion the statement of Pausanias 7

and Pliny is significant, that in ancient times the images of the gods were made of wood. And with the differentiation of the deity into the gods of the nations there came the differentiation of the tree into the trees sacred to the several gods. The oak was specially sacred to Zeus. The Ficus ruminalis of the Palatine was originally the sacred tree of Roman Jupiter. Moreover, and associated with the oak on the Capitoline Hill. The cult, in early times as wide as the world, was narrowed when no sanctuary could be dedicated to Apollo which was favourable to the growth of his sacred laurel.

Primitive worship was essentially an act of fellowship and communion with the deity. The vestment of the worshippers was the sheep-skin or the goat-skin specially sacred to the deity worshipped, as the white robe of righteousness is the symbolic vestment of the Christian worshipper. This is generally traceable in theriomorphic cults, as in the Imperials. It is traceable also in tree-worship. The victor in the Olympic games was treated as the human representative of the tree-god. He was decked with olive and crowned with oak or goat-skin and carried to the centre of the sacred tree. The English Jack-in-the-Green of the old May-day sports and the Kentish Holly-boy and Ivy-girl of the Shrove-tide revels are remnants of this worship.

Sacramento and worship are closely linked together. In the arcaic tradition of Abraham (Gn 14:19) Melchizedek, king of Salem, brought forth hallowed wine and he was "priest of the most high God" (El Elyon). Sacramental communion with the deity is the essence of the mysteries, and the mysteries belong to the primitive stages of religion: "I fasted; I drank the kykeon; I took from the basket." This was the touching of the σκέρα, the sacramental core of the mysteries of Eleusis. They were rites sacred to Demeter the Earth-Mother. She is the Mountain-Mother (g.v.), the mother of the gods, represented with her pillar-shrine, the pillar of her sacred tree. She may be compared not only with Isis, but with Hathor and her sacred sycamore. Hathor nourished the wandering souls in the cemeteries of Egypt with food and drink. The Cretan Demeter in her mysteries nourished her mystics in life. The mysteries of Dionysus belong to the same cycle of ideas. Dionysus combated in human form the terrors of the beer-god, the Minotaur, god of Thanes, and of the mystery-god Zagreus of Crete. The ονομα of the Persians, the soma of the Hindus, the ambrosia of the Olympian gods, were all means of sacramental communion, a partaking of the tree of life.

The sacred tree, instinct with the divine life, is vocal with the word and the will of the deity. A prominent feature of the Zeus-cult of Dodona was its oracle. "And the giving of oracles was a chthonian prerogative." David is to consult the oracle of the mulberry-trees before he attacks the Philistines (2 S 5:5). God called unto Moses from the midst of the bush in Horeb (Ex 3:4). The sacred tree is alight with the wisdom of God. To partake of the acorns of Zeus was to acquire wisdom and knowledge. The burning bush points to the symbolic meaning of the seven-branched candlestick in the Temple. It is a budding and blossoming almond (Ex 37:19-24). The imagery of the rod out of the stem of Jesse, and the Branch growing out of his root, the setting of the sevenfold gift of wisdom, is another illustration of the same truth (Is 11:1-9; cf. LXX). And this again illustrates the meaning of the tree of the knowledge of good and evil (Gn 3:7). It is the oracle of the God of righteousness, as the seven lamps are "the eyes of the Lord... beholding the evil and the good" (Ps 19:2; cf. Zec 4:6, 2 Ch 16). The tree of knowledge is the oracle of religious and moral wisdom.

2. The animistic stage in tree-worship.—The tracing of this stage in its original simplicity is almost as difficult as its subsequent development. In pre-historic times it was already being absorbed in higher religious conceptions and revelations, in the higher physical and religious and ethical development of the human race. Jahweh 'finally triumphed over the brālūm, not by avoiding them, or by destroying them, but by absorbing them.' This is the principle in all religious development. The burning bush was not merely the oracle of Horeb; it was the dwelling-place of Jahweh (Dt 33:2). The fable of the trees and the Bramble king was spoken 'by the plain [oak or terebinth] of the pillar that was in Shechem' (Jg 9:6). It is a survival of the ancient tree-worship, an apologue or parable familiar in early tree-worship.

The story of the thistle and the cedar is another 0 K 14:9). 'Tree-worship pure and simple, where the tree is in all respects treated as a god, is attested for Arabia... in the case of the sacred oaks of Najran. It was accorded the annual feast, and it was all hung with fine clothes and women's ornaments.'

The sacred cedrus in the temple of Asis at Byblos was said to have grown round the body of Osiris. It was a stump wrapped in a linen cloth and anointed with myrrh. It represented the dead god. It is suggested that this explains the mystery of the draping of the odakriw (2 K 23:4). There are similar survivals in Greek ritual. Incense was burned and the tree was decked with fillets and honoured with burnt offerings. Mrs. Philpot gives an illustration of a fruit-tree dressed as Dionysus—another example of draping as part of this early ritual. Cook in his exhaustive monograph on the cult of the oak-Zeus has traced it through all the earliest sanctuaries of the Mediterranean area, especially in Dodona and Crete, and has given his conclusion as follows: Zeus was at each of these cult-centres conceived as a triple divinity (sky-god, earth-god, sea-god). He was an oak and served by a priestly-king, who was regarded as an incarnation of Zeus himself and whose duty it was to maintain the son's head during the season.

The Minotaur, the οπόδεν horns of consecration, and the axe are also features in this ancient ritual. This survey of the primitive cult of the sacred tree, not only in Celtic folk-lore and Gaulish sculpture, but in the survivals of pagan worship. E. Clodd gives a study of the 'primitive pagans' of S. Nigeria which sums up the animistic conception of tree-worship.

A recent traveler among the "primitive pagans" of Southern Nigeria reports this speech from a native: "Yes, we say, this is our life—the big tree. When any of us dies his spirit does not go to another country, but into the big tree; and this is why we will not have it cut. When a man is sick or a woman wants a child, we sacrifice to the big tree, and unless Osowo wants the sick man, our request is granted. Osowo lives in the big tree and is the big god. When he dies away from this place, his spirit returns to the big tree." Among the Hamitic tribes the crude animus has developed into sort of polytheism with the highest god, Neb. He is the big god of the big tree of Nigeria.
The tree-cult of the aboriginal Africans is today largely associated with ancestor-worship. Trees planted round the graves of their ancestors acquire a sacred character. The great tree on the very spot of a dead man's house became thus the shrine of his spirit. And it is held that the highly-developed tree-cult of the Hereros is a direct offshoot of ancestor-worship. One tree is hailed with the word 'a'sare'; our only word for tree, 'the', in the Semitic language; it must be accepted, but the inference may be questioned. The polytheism and the ancestor-worship are both to be traced to the more primitive forms of animism represented in the African evidence as the cult of the Great Spirit or the oak-Zeus. They are both due to the principle of differentiation in the development of religious conceptions.

Anthropomorphism is in some cases preceded by thermorphism, but theriomorphism is never generated out of anthropomorphism.1

All life in primitive ages is one, and in its movement inspires fear, not only the fear of God, but the 'fear' of Isaac (Gen 31:4). It is Jacob who 'sware by the fear of his father Isaac' (31:2). And Jacob by his wrestling attained the title of Israel (32:28). Abraham was the priest-king of Manna, Melchizedek the priest-king of Salem. At Olympia and probably at Dodona thechallenge of the priestly king gave rise to a regular athletic contest.2 Milton represents the religious king of Cnossus as an ancient limited duration. He was king for a period of nine years, when he withdrew to the Idaean cave to hold converse with Zeus.3 Theseus, by his victory over Minos under the guise of Taurus, succeeded to the sun-king's rights as champion of the oak-Zeus.4 Is it not evident that, behind and prior to the hero-worship of Theseus and the veneration for Israel, there is the ritual and there are the sacred trees in the city, whether Zeus Elyon or Jahveh, the Great Spirit of primitive animism? 3. The sacred plantation. — The planting of the sacred tree or grove is a further step in the development of tree-worship. The primitive priest-king does it as champion of the tree-spirit, under the conscious guidance of God. Eden is the most familiar example of a sacred plantation (Gen 2:9). The practice of primitive religious colours the language of poetry and prose of the Cilician Homer (22:24). Ps 104:31, Is 61:10. The riddle and parable of Ezekiel has new meaning when read in the light of early ritual:

1 A great eagle... came unto Lebanon, and took the greatest branch of the cedar: He cropped off the top of his young twigs, and carried it into a land of traffic; he set it in a city of numbers. And there the wind panted upon it, and it was not cut down... he placed it by great waters, and set it as a willow tree. And it grew, and became a spreading vine of low stature (Ezek 17:4; cf. v12-24).

4 In Egyptian art the living tree is represented sometimes singly, sometimes in groups of three, or in groves. It is at times close to an altar, or even growing from it; in one case the goddess sits under it. The palm-tree, the fig, and the cypress are most frequent; but the pine, the plane, and the fir also appear. It may even spring from the bucrania, or horns of consecration, which themselves represent the sacred bull, the theriomorphic representation of the oak-Zeus.

At Athens the original cult was that of the oak:

Nomoi Larnacou erat; longueque descensum
Tempora cingebat de quibus arbor Phoebus.5
There are in the Caryatides, or nut-maidens, traces of a nut-grove, the nuts themselves being known as the acorns of Zeus. Later, after this first stage of substitution, 'Zeus took over the olive.'6

7 Cook, CIR xviii. 56.
8 Abbai, or nurses of Zeus, gave their name to the city, and later to the goddess whose cult overflowed that of Zeus on the Aeropagus.1 In the Academy at Athens there were twelve sacred olives in the precinct of Athene.2 Demeter had her sacred oaks, and the boy who pronounced the Eleusinian formula at Athenian weddings, ἐφορὸν καθό, φῶςφορ ἀνεμον, was wreathed with oak and corn.3 There was a great oak at Delphi, dedicated to Demeter at Dodium by the Pelagians before they migrated from Thessaly to Cilicia. And Ovid, telling the story of the judgment on Erysielthon, speaks of the tree of Demeter as an oak, adorned with fillets and talbots by the people.4

These plantings are wide-spread, and traceable to the earliest sites. Hercules planted two oaks at Herakle Ponticus in Bithynia.5 Ages planted a huge oak-tree, lopped and decked as a trophy, on the tomb of Mezentius the Etruscan. The crown of golden oak-leaves from Vulci implies that the Etruscan kings were representatives or guardians of the oak-Zeus. The tree planted by Ages was itself identified with the king: 'mansi-buscus meus Mezentius hic est.'6 The identification of tree, god, and king is general. Romulus and Remus were worshipped in the Comitium under a sapling planted at the summit of the Palatine. The Bodhi-tree of Amurâdhapura, long the capital of Ceylon, is over 2000 years old. It was planted by Tissa—a brand of the original Bodhi-tree, at Gayâ in India.7 The sanctuary of 'Uzzâ at Nabla near Mecca consisted of three trees,— another link with the wide-spread cult of a triple tree-god, as sky-god, water-god, and earth-god in one.

The chain of evidence is unbroken from East to West; the triple-headed gods of Gaul, sitting cross-legged on their throne as in India, point to closer contact with the neolithic age than even Greece and Syria. The sacred flint of the temple of Jupiter Feretrius on the Capitoline Hill at Rome, the 'anticum Jovis scisma,' the home of Jupiter Lapis, has been regarded as an unhafted neolithic cell, preserved among the aborigines of Latium from an immemorial past.8

The sacred tree, the sacred plantation, was the seat of authority, the seat of judgment. The Romans meet for council in an acacêleu of the Galatia. statue met at a place called Δρωψινος, doubtless sacred to their national cult; κελτος εφορων μεν Δια, εγαλα δι διω κελτων κελπνη δρων.9 Deborah the prophetess 'dwelt under the palm tree of the ass' (Judg. x. 1). The children of Israel came up to her for judgment' (Jg 4:5; cf. I S 22:24, Jg 6:1). In 458 B.C. the Roman envoys were sent to complain that the Αξιλι had broken a treaty concluded in 459. They were bidden to make their complaint to a huge oak on Mount Aligidas under the shadow of whose branches the Ευκanian commander had his quarters.10 The πρωτοτροχος under the sacred oak is certainly a primitive trait.11 A sacred rowan-tree in Ireland derived its origin from the rowan of Dubhros, the Black Forest, in Co. Sligo.

The tree had grown from a quicken-berry dropped by the Thudth Dé Dannann, who had brought it from the Land of Promise. It was guarded by a giant named Seachrán, who could only be slain by a blow from his own club, and had a single broad fiery eye in the middle of his black forehead. He was overcome by Darmanin, the culture-hero of Irish folk-lore.12

The sacred stump.—The Lion Gate at Mycenae is one of the earliest antemonic representations of the worship of the sacred tree. The pillar of which the lions are the supporters tapers downwards like the ancient Horn. The subject has been very fully treated in art. POLIES AND POSTS; but some further links may be added.

The pillar-shrine of Cyanaus with its sacred doves is recognized by Cook as a 'conventionalized but still aniconic form of a triple tree-Zeus.' The Lydian cult of Zeus *apropaios* was connected with the oak. The Cappadocians represent him as 'a bearded god crowned with rays and standing between two oak-trees, on each of which is a bird.' In the same city there was a cult of Aphroditos *apropaion*. This cult gave its name to the city of Aphrodisias.

The coins of this city 'show the leafless trunk of a tree with three branches. The two of these branches rise separately from an entwined trilobate work. Sometimes they spring from a single trunk, on either side of which is a naked man wearing a Phrygian cap; the one on the left wears a double-axe; the one on the right kneels or runs away, turning his back upon the tree [a frequent motif preserved in folk-lore]. Sometimes . . . the branches are flanked by two lighted altars.'

The priest of the Cappadocian cult of Bellona at Rome is represented with a branch in one hand and the two-headed axe in the other—a further link with the oak-cult of Crete.

Amid the early rites of Etruria and the *sacra* of Rome there are further associations with this cult. Hermes is represented in a fragment of Aristophanes as *rhopalos*; so also is Janus on a coin of Hadrian. Janus is also represented with a spear; and his title Quirinus is understood in reference to the oak-god. The Sabine *turris*, the oak-spear, the Quirites, the men of the oak-spear, are thus related to Janus Quirinus or Jupiter Quirinus. The spear is a variation of the sacred stump. The tree-god is often represented by a post, sceptre, or spear.

The *trigylia* associated with Juno Sororia and Janus Carialis is a symbol of this triple Janus. It consisted of two vertical beams and a cross-bar, the rude form of a cross. The 'yoke' under which the conquered were forced to march was of three staves or spears, and is also traced to the cult of Janus Quirinus. The door-posts (*pinnæ*) were sacred to him, as the threshold was to the Earth-Mother.

The sprinkling of the blood on the door-posts in Hebrew ritual (Ex 12, Ex 40) and the shaking of the threshold in the vision of Isaiah (Is 6 RV) are examples of the same cycle of ideas—the sacredness of the posts and the threshold as tokens of the Deity.

The *caucacus* is another variation of the sacred rod. It consisted of a triple shoot, the central shoot forming the handle, the two side shoots being folded back into a double knot. The chief lends its name to its opposite shoots, and the tree is tabu in the folk-lore of the West. It is not likely to burn it. Judas hanged himself from an elder bush. The *litus* of the augur is another variation of the sacred rod. So also the mysterious twisted rods used in what is probably a funeral procession in the decoration of Etruscan tombs at Norchia and Tarquinii. In the fresco at Tarquinii, while most of the figures have the *litus* of the Etruscan Hades, 'one of the leading figures has the *litus*, and prominent among these is the hammer borne aloft,' 'a frequent emblem of supernatural aid.' The figure of the god with the hammer is frequently met with on Celtic monuments.

The Y cross with its mystic Pythagorean meaning has also some ancient link with these Etruscan rods. A hazel twig of this stump is in use as the divining-rod for tracing water. The Etruscan *lucumones*, or kings, were representatives of Jupiter. Their crown was of golden oak-leaves, with thorns, gams, and fillets. They acted as vice-gerents of the oak-god. Their golden *bullas* was the symbol of the sun-god—another link with the oak-Zeus. They used a sceptre with an eagle, and were preceded by the lictor bearing the axe with the handle of rods. Cook suggests that these may be a conventional substitute for the trees of the tree-god.

These were all part of the royal insignia of the ancient king. Is it not possible to trace the origin of the English regalia to the same source?

In the inventory of 1640 are enumerated the 'large staff with a dove on the top wherein it is thought to be an ancient trial. . . . found to be lower part wood within and silver-gilt without; the "small staff with a file of bees on the top . . . found to be tree within and silver-gilt without; a staff of black and white ivory with a dove on the top; and the two sceptres with a hammer on each end.' These are all symbols of authority, such as are found in the *sacra* of the ancient races of Europe. The sceptre with the cross, the wooden rod with the dove, the rod with the 'fluree de leece' may be compared with the 'dean-corne,' the 'lancee,' the *lanceolae,* and the dove-pillars of the Etruscan and *Aegae* cults. The rods laid up before the Lord in the tent, 'one for each father's house' (Nu 17 RV), may point to similar associations on Semitic soil. And the cross with its *spolia opima* was the most honoured sign of Jupiter Perseus at Rome. The *furuta* form, which he took his name, was the lopped trunk of the ancient oak, venerated by the shepherds of old, forming a wooden cross to which votive armour was attached. The cross in the folk-lore of Rome was a sign of the oak-cult—the presence of the oak-king, a shrine for the offering of the trophy of right to the oak-god. Was Plato altogether unconscious of this when he said: 'What I have written I have written' (jn 17)? And was St. Paul too in his 'foolishness of preaching,' and in his witness to the power of the Cross and of Christ crucified, unconscious of the other tradition of the power of the cross, when he wrote:

1 Unto the Jews a stumbling-block, and unto the Greeks foolishness; but unto them which are called, both Jews and Greeks, Christ the power of God, and the wisdom of God (1 Co 1:23).

5. Trees many and gods many.—The sacred tree signified universally in primitive ages the presence of the deity. The one tree with its nursery-grove was the shrine of the one God. But east and west, in hill or in valley, in north aspect or in south, the tree varied. And, as the tree varied in species, the god varied in name. Then the tree and the god of the clan grew to be the tree and the god of
The district, and in turn the tree and god of the nation. The, pre-eminence of the bramble-bug (dr. 90°)* is true to the fact. The olive, the fig, the vine had established their fame and their rule; they would not submit to another; the bramble had ambition to rival even them. Treas many led on to gods many. 1 The oak-zeus at Athens took over the olive. Apollo remained true to his sacred laurel. This development is most marked in Greek art and Roman verse:

1. Populus, Althea graminea, varia heraclea 2 .
2. Ficus, myrtus Veneri, sua laures Phoebo. 3

The Semitic nations stand apart from this tendency to assign a particular tree to a particular god, 4 whether from reason to monotheim or from adherence to the primitive conception of the oneness of the divine spirit. They had sacred trees in great number, but they were all sacred to one god localized in village, clan, or nation. In India each Buddha had his own tree, and Gautama himself, after having passed through 43 incarnations as a tree-spirit, eventually found wisdom under the sacred tree of Brahma, the pipal-tree, or Ficus religiosa. 5

This triad of the gods over the nations and the consequent interlacing of the tree-cults, sometimes by expansion, sometimes by absorption, remained in many cases in the domain of the tree-gods and tree-demons. As the jinn or genii of the Arabs were gods out of touch with men, outlaws, dehumanized, "abominations of Moab and Ammon," the wood-demons of the German forest or the Polynesian islanders were the foes and the dread of their conquerors—or their neighbours. And in the controversy between the Supporters of ancestor-worship and the supporters of animism -Ancestor-worship was not in nature the divine spirit, this wide-spread belief in wood-demons and unlycky trees is in favour of the latter. In an age when "every valley had its king," 6 and every hill its shrine and its sacred tree, as in these islands in Celtic times, and when fews were frequent between clan and clan, the jealousy of the clan would separate between god and god, and between tree and tree, and people the forest-clad hills with every form of terror and danger. The only bond of safety was in the nation's god and in the king as the champion of his rights. All around was danger and death: "for I the Lord thy God am a jealous God,' [Deut. 5:29] cf. 2 Cor. 11:3. The language of religion, not the language of ancestor-worship; and it may be traced in tree-worship and demon-lore from earliest times.

A blasted or stricken oak might be the messenger of misfortune:

1. De coelo tactas semini praediciere quaeve. 6

The Abors in Assam regarded the rubber-tree as the abode of two malignant spirits; another haunted the plantain and sting-nettle. 7 The satyrs and devils of the OT, the jinn of the Arabian stories, the centaurs and cyclopes, fauns and dryads of Greek and Latin mythology, the wood-maids, wild men, and elves, the wild women of the Pyrol, and the green-ladies of Neufchâtel, in their different degrees of mischief or malignicious, were haunting terrors of the old world. 8 The Neraides of Macedonian folk-lore are tree-spirits. It is not well to be blown down in the shade of a tree, for it is there that the tree-demons appear. At this day the country-folk avoid especially the plane, the poplar, and the fig—tree-lore for these are favourite haunts of fairies. 9

In Ireland ghosts and apparitions haunt isolated thorn-bushes. 10 To call up the Tolcarne toll near Newlyn, an incantation was necessary, and three dried leaves must be held in the hand, 'one of the ash, one of the oak, and one of the thorn.' 2

Tresi Sing Oak, and Ash of Lemba, and Thorn, good Sirs, (All of a Midsummer morn)! England shall ride till Judgment Day, by Oke, and Ash, and Thorn. 3

The creation myth of the Tanganorr natives in Australia holds that Punjab fashionable man out of the bark of a tree. Another tree was tabu, and haunted by a bat; the tabu was broken; the tree was violated; the bat flew away, and death came into the world. 4 Daphne is the name both of the laurel and of the spirit within it. The name of a palm-tree is not called Tamar, but Ba'al Tamar. The former conception is Indo-European, the latter Semitic.

"The Indo-European could never free himself from the identification of his gods with nature ... The Semite, on the other hand, was accustomed from the earliest times to distinguish between the object and its food."

Among the peoples were Philryla, the linden, Rhums, the pomegranate, Helike, the willow, and Daphne, the laurel. Mrs. Philpot notes:

"In later times an attempt was made in some cases (e.g., Daphne in Laurier, Letum, Dryas, Cercis) to explain the connection by metamorphosis ... but it is extremely probable that this was an inversion of the primitive nexus."

The classic passages for the oak of Dodona are Hom. Od. xiv. 327 f., xix. 296 f. In Hom. II. xvi. 223 f. the oracle is mentioned; Vergil refers to it in Georg. ii. 15 f. The oak was also sacred to Ceres; before harvest worship must be rendered to her, and the worshipper must be crowned with a wreath of oak. 9 The willow is associated with Hera at Samos, and with Artemis in nature the divine spirit, the willow was the goddess of the nut-tree and the cedar in Arcadia, of the laurel and the myrtle in Laconia. 10 The laurel is sacred to Apollo; the priest-king Anius is guardian of the tree and the shrine. 11 The olive is specially connected with the cult of Athene at Athens. The pine is associated with Pan and Silvanus, the cedar with the Accadian deity Ea, the sycamore with the Egyptian goddess Nuit ( Hathor). The cypress was sacred among the Persians, and in the West, together with the poplar, it belongs to the cthonian deities. The vine and the ivy were closely connected with the rites of Dionysus. 22 The ash and the elm appear in Scandinavian mythology as the first man (Yggdrasil) and the first woman (Umbila), and the ash Yggdrasil is connected with the court of the gods. 23

Celtic folk-lore in must parts of contact with the ancient oak-cult of the Mediterranean area, with variations due to local developments under northern conditions. The drumgonos of Dodona, the acyrpauiuos, or poplar-fellers, at Athens, the xerorougos at Phlius, 14 have their representative in the tree-felling god Eaus on the Paris monument. 15 The ancient axe-rite of Dodona, Crete, and Etruria appears in the sculptures of Siculoelos and other deities in Celtic lands. 16 On the Trier monument the deity is felling an oak-tree on which are three cranes. The Tarvos triganus, the bull, before the oak-tree, with two cranes on the back and one between the horns, is another variation of the Paris altar. 17

The cult of Cernunnos supplies another link. He is represented in the Cluny Museum with stag's horns, on the ring each horn referring to the sun. In the silver bowl from Gundestrup in Denmark he is shown with griffin's head, with stag's horns, and on his right a stag and a bull. In a wax tablet at Pesth he is called Jupiter Cernenus; on a Rheims monument he is with a stag and an ox, and the Salamonicus tablet of Jupiter Cernenus has also an echo in a modern dance—a horned figure among the mummers of Mohoas on the Danube.

The oak also entered into the ritual of invoking Zeus as a rain-god. On the Lycean mountain of Arcadia was a shrine sacred to Zeus, in which was a spring to which the priest went in time of drought. He touched the water with a sprig of oak; this would rise into a fruitful shower over the land. In Brittany the fountain of Barantin in the Forest of Brezilien served the same purpose. Water was thrown on a slab near the spring, and rain would then fall in abundance, accompanied by thunder and lightning.

The well was near the fabled shrine of Merlin, one of the Celtic types of the sun-hero, and it was overshadowed by a mighty tree. Bhys suggests that the spring, the tomb, the slab, and the tree 'all belonged to the Celtic Zeus.' There is a similar story connected with the Snowdenian tarn Duly, the Bleew Lake, where the slab was called the Altar. The stag-horn of Jupiter Cernenus has also an echo in a modern dance—a horned figure among the mummers of Mohoas on the Danube.

In the parish of Borrisokane, Co. Tipperary, there was in 1833 a huge ash called the Big Bell tree. The name is derived from the word 'Billa,' which occurs in Maghie, 'the plain of the old tree,' the present Moville. This name has been connected with Windisch with bile or 'Bell,' king of Hades, the consort of Dan. This Bell represents Crones in his darker character as Death, and suggests the idea that the big ash-trees of Irish folk-lore were ash-trees sacred to the Celtic Cronos. The ash was also sacred to the Celtic Silvanus: 'Silvan sacra semicilium fraxino.' He presided over woodlands, clearings, arborescent copses.

The white-thorn has also its sacred associations. It is unlucky to cut it down. A 'lone thorn' is regarded with special veneration. Christianity took over its sanctity. The Crown of Thorns was placed on his head. Buddah-worship skillfully adapted the sacred thorn near Tainaholy, Co. Wicklow, is still called 'Sheagh Padrig,' or 'Patrick's book.' In Britain the 'holy thorn' of Glastonbury has similar venerable associations. The thorn appears in Thomas 'a la romance as the tree of knowledge. The yew among the Druids was a symbol of immortality. Celtic folk-lore has many traditions of tree-worship. The first man sprang from an elder, the first woman from a mountain-ash. The berries of the rowan are a charm against all disease. There are also trees which were inauguration trees. One, an old yew tree in Coolemonen in the parish of Killadown, is called the 'honey-tree.' A tree in the parish of Kilmasteigh is called the 'fern-tree,' i.e. the elder.

5. conventional hornings and tree-rites.—The cult of the sacred tree had its offerings and its rites. There are even survivals of the offering of the highest sacrifices. The natives of the Vindhyam uplands of India until lately offered human sacrifices to trees. In pre-Christian Arabia the incense and the worship is vocal. At the close of the bar festival the head of the bear is set up on a pole, called 'the pole for sending away,' and the skulls of the other animals which are hung up with it are called 'divine preservers' and are at times worshipped. This is a link with the buccania which form so integral a part in the sacrificial tokens of the Arvyan world. Plutarch states that Theseus, on his return from Crete put in at Delos, and instituted a dance in imitation of the mazes of the labyrinth.

'The danced round the altar Keraton which was built entirely of these animals which are hung up with it as a dance in imitation of the mazes of the labyrinth.' It is a circle, which together with the swastika, or conventionally the Swastika, is symbolic of the sun-cult. The dance around the May-pole and the Jack-in-the-Green festivities within our own memory in May Fair, London, are survivals of the same rites. The grilling in Assyria and Asia, in their attitude of devotion, has a counterpart in the vision of the Temple in Ezekiel.

'And it was made with cherubims and palm trees, so that a palm tree was set round about the cherub, and a cherub was set to the one side of the cherub.' In a Mexican MS the tree breaks into two branches in the shape of a tau-cross, each branch with three blossoms; the tree is surmounted by a parrot, and is supported by two men, standing, each with his right hand raised in the attitude of devotion.

Trees were hung with votive offerings. In India the sacred banyan-tree is represented with six elephants in the act of worship. In Egypt it is the same animal with jaws and fruit, and the worshipper before it has the right hand raised. Elsewhere it is a tree sacred to Artemis, hung with the weapons of the chase. Wreaths were worn and garlands were carried in various Greek rites; and this use of wreaths points to some analogy with tree-worship in the two pillars before the Temple at Jerusalem. Robertson Smith gives a coin from Paphos with similar detached pillars before a temple, each is surmounted above the other by a dove as in the rude pillar-shrine of Crete. Whether

Trees and Plants

They were called oaks or not, they were worshipped in Japan.

On the eastern gateway of the Buddhist temple at Sanchi the sacred tree is represented with worshippers. It divides into two main branches, like that in Mexico, and there are two trees on either side of the road. Central tree is being worshipped in garlands. The Bodhi-tree of Kanakamuni breaks into three branches and is hung with festoons. This custom still survives in the present. Rhyas has collected recent evidence from Glenarmshire of holy wells overshadowed by thorn or other trees, on which rags were fastened. And the present writer some thirty years ago saw a bush hung with red rags in one of the islands of Aran off Galway. It is one of the last relics of the cult of the sacred tree, like the practice of 'touching wood' to avert a change of 'luck', still in use in this country.

The tree is also a trophy of victory. As late as the 4th cent. of the Christian era a pear-tree at Auxerre was hung with trophies of the chase and venerated as a god. The 'Stock-im-Eisen' in the centre of Vienna is the stump of a larch, now studded with bits of iron, in the last remains of a trophy with which it was originally hung. The Irmensul had a similar origin. Romulus celebrated his victory over the Cenennenses by his institution of the spolia opima in honour of Jupiter Feretrius:—

'He cut down a great oak that grew in the camp, and hewed it into pieces. He put on either side of a trophy: to this he fastened Acron's whole suit of armour, disposed in its proper form. Then he put on his own robes, and wearing a crown of laurel on his head, his hair gracefully flowing, he took the trophy erect upon his right shoulder, and so marched on, singing of victory before his troops. This procession was the origin and mould of future triumphs.'

The 6th cent. Gallican poet Venantius Fortunatus, author of the Virginia regia, who lived when the honour of the sacred tree was still valued by the Gauls than the shame of the Cross, lifts up the old faith in his great hymn of the Passion:

'Pange lingua gloriosum proelium certaminis
Re super crusta troppo dis tribuum nobilium,
Quiliter redemptor orbis Immutabilis victor.'

Coxe fidèlis inter omnes auro una nobilis
Nulla tamen alia protens frons, idonea saepe
animo ducis, dulci dulce pendens sustinet.

The tree of life.—The sacred tree was the source and the sustenance of life. Worship, sacrifice, and mystic charm are closely linked together. The sacred oaks, balsams, and birches are the sacred food of the gods in Asia, and corresponds to the ambrosia of the Greek world. The Vedic amicē or soma had in it the principle of life and was withheld from ordinary men: it was, however, to be taken by the initiated.

In Sparta, in early times, the dead were laid upon palm branches and leaves of the olive. In the forest land of northern Europe hollowed oaks were used in the burial of the dead. The practice among the Oddfellows of each member dropping a sprig of sweet herbs on the coffin in the grave is a survival of the same early rites. In Abyssinia the branches and twigs of the grape-tree are used by the pagan Kunamas as a protection against sorcery and as charms and amulets at child-birth and death. In Babylonia the idea is more strictly developed. The god-gifted ziz is 'master of the tree of life.' In time of drought the priest of the Lycean Zeus lets down an oak-branch to the suppliants of the water. Codrus, when he devoted his life to his country, dressed as a woodman. Cook notes:

'If the last of the Athenian kings on so solemn an occasion appeared as an oak-tree armed with an ax, it is clear that this was no more disgraceful but the ancient ritual costume of the king.'

The cult of the sacred tree embraces the highest rites in life and in death. The rite of tree-worship in India in its surviving forms is mainly conventional. The idea of reincarnation may in some cases explain it, but the rites are purely a point to other and more primitive ideas. The Agarî, a Dravidian tribe of Châtâ Nagarî, have a special regard for the sil-tree, which is used at their marriages. The bâli, or tree, system prohibited marriage between those who have the same totem. Among the Marathas the deôak, or marriage-guardians, though they no longer form a bar to the union of two worshippers of one deôak, still have some share in the marriage-rite.

The deôak is usually some common tree such as the bâli, banyan, or the sami. In its commonest form it is the leaves of five trees, of which one, as the original deôak of the sacrifice, is held specially sacred. It is worshipped chiefly at the time of marriage.

It has already been suggested that in primitive ages every valley, as Elton says, had its own king. Each king would be the champion and priest of the sacred tree, and this tree worship as indicated by the above spirit would be sacramentally united in all rites of initiation or other social sacra with the tribe or clan. The five leaves represent a pentapolis, or group of five states, one or other, as in ancient Rome, choosing the common priest-king of the five, preference therefore being given to the leaf which represented his sacred tree. Similar customs banning all marriage within a totem-clan have been observed among the Bantu tribes of S. Africa. The mushroom totem of the Awemba is an example of a vegetable totem.

Again, it would appear that the root-idea in the animistic cult of the sacred tree is religion rather than totemism or ancestor-worship; these are perhaps only relics of the primitive age—results of anthropomorphic development and differentiation, degenerate conceptions of the earlier animistic principle of the unity of the divine spirit or life.

The mistletoe-bough in the Christmas feast and 'kissing under the mistletoe' are relics not only of the oak-cult of the Druids, but of its connexion with primitive marriage rites. They are based on the authority of Pliny, and the special virtues ascribed to mistletoe are also referred to by him. Cook has some valuable notes on the mistletoe, which give support to Frazer's conjecture that the sun's fire was regarded as an emanation of the mistletoe. Cook bases his argument on the cult of 1Σετoκ Ανάκλαω at Ixnus in Rhodes, a town named after the mistletoe. The cult is not definitely referred to in connexion with the oak, but 'it is probable, because the Rhodians regarded the oak as the sun-god's tree.' In the story of the punishment of Ixnus there is, he suggests, another link between the mistletoe and the sun-cult. Ixnus was the father of Parithos, whose constant associate was Dryas.

'The relation thus established between 1Σετoκ the mistletoe and 1Σετoκ kai ὁ οἶκος is sorely fortuitous.'

A scholion on Euripides, Phæn. 1185, reads:

'Zeus in his anger bound Ixnus to a winged wheel and cast it spinning through the air... others say that Zeus hurled him into Tartarus. Others again that the wheel was made of fire. This flaming spin-wheel has been commonly understood as the sun-god.' Cook concludes:

TREES AND PLANTS

455

'it has not, however, been hitherto observed that iuxtea is found in a derived tree-life and that the mistletoe was on Greeks soil thus intimately associated with the sun-god.'

An old Staffordshire custom of keeping the mistletoe-bough throughout the year and then burning it in the fire under the Christmas pudding probably rests on some tradition of the perpetuation of the fertility of the mistletoe represented during the winter the sap of the oak,2 and this formal burning of it, like the feeding of the sacred fire of Vesta from the oak-grove of the Palatine slopes, expresses the principle of life. It has not been customary to use mistletoe in the decoration of churches at Christmas; but W. Stukeley reports a curious custom from York:

On the 14th of Christmas Day they carry mistletoe to the high altar of the Cathedral and proclaim a public and universal liberty, pardon, and freedom to all sorts of inferior and even wicked people at the gates of the city, towards the four quarters of Heaven.'

There was in Flintshire's a shrine of Fortuna Viscata at the Capitol on Rome. This may be the Fortuna Viscata of Agrippa near the temple of Jupiter, where stood the oak of Jupiter Pererius.

The rota Fortunata survived till lately at Douai, when about the garden in which the mistletoe was carried in procession a wicker-work giant known as the grand Guyant, and other figures called les enfants de Guyant. There were the wicker boughs over the shrines, whose colosal images of wicker-work are described by Caesar.3: *All images of the same simulacrum; Personae divinity, arbos nubibus membra vivos hominibus compit; quibus succussis, circumvinti funeri examinantur homines.4*

The mistletoe-bough and the various customs connected with it are all survivals of the solar cult, and, with the wreaths, axes, spears, cranes, and doves, point to the true meaning of the worship of the sacred tree. The mistletoe-bough is mentioned in the type of the Golden Bough:

Quale solis spinul fratres vacui
Frondus virrei nova, quod non sua semen arbore,
Et croceo fetes terrae circundate
Talis creat species aut frondentes opaca.

The yew was also regarded as a symbol of immortality.5 The name eburus, mid-Irish iheor (Taza),6 enters into place-names and clan-names—e.g., Ebrarun (York), Ebarunun (Yverdon), Ebunones. The last-named is an instance of a tribe or clan taking its name from a tree-deity.

There was a yew in Belach Mughna in the west of Leinster—"a great sacred tree, and its top was as broad as the whole plain. Twice a year it did bear fruit: it remained hidden from the time of the Deluge until the night on which Con of the housing of Mughna was born, and then was made manifest. Thirty cubits was the girth of that tree, and He height was three hundred cubics. However, Ninthe the poet felled that tree.'

Cell-oe in the Martyrology of Gorman is the 'church of yews.' And there is an ancient hollow site in Staffordshire, with only the memory left of its All Saint's dedication, the New Year festival of the Celts, which is now marked by the Hanchurch Yews. The churchyard yew is an ancient symbol of the tree of life.

In the story of Eden the command went forth: *Of every tree of the garden thou mayest freely eat: but of the tree of the knowledge of good and evil, thou shalt not eat of it: for in the day that thou eatest thereof thou shalt surely die' (Gen 2:9).

No ban is put on the tree of life till the command is broken. It was the broken hickey like the yew of Mugha which was the only initiation and instructed, as in the quest of the Golden Bough? It stood in the midst of the garden:

2. FRR III. 2958.
5. De top. Gall. vill. 16.
7. De ritu Gall. vill. 16.

'That arbor opus
Aureus et foliis et lento videmus virendam
Junoni inferiore dictus sacer: haec tegit omnis
Locum, et obscurae claudunt convivibus umbrae.'

Was it so thin and so shadowed that it could not be found? Is there anything parallel in the imagery to that of the Cretan labyrinth?

It has been suggested that in an earlier version of the Eden story there was but one tree, the tree of life, and it is to be noted that in Gen 3 the tree with its forbidden fruit is described as being 'in the midst of the garden,' as the tree of life in 27. And in most of the myths of paradise there is the conception of the central tree as of immortality.

The Norse Yggdrasil in its complexity is the central tree of the universe: 'The chief and most holy seat of the gods is by the ash Yggdrasil. There are in it the most ornate and in it the most splendid. It is the greatest and best of all trees, its branches spread over all the world and reach above heaven.'

The garden reached by the Chinese king in quest of the stones of paradise had 'a wondrous tree in its midst, and a fountain of immortality, from which four rivers, flowing to the four corners of the earth, took their rise.' The central tree with its fruit in the old willow pattern dish is a familiar illustration:

'The Chinese temple, there it stands
And there's the tree of many lands'
In other words, the universe-tree of China.

Heracles, in his search for the golden apples, 'conquered the protecting dragon and secured the golden non-fruits from the central tree.'

A tree of India combined the wondrous powers of five wondrous trees, the chief of which was the paradajja, 'the flower of which preserved its freshness throughout the year, contained in itself every fruit and vegetable, and which is eaten on demand. It was, moreover, a test of virtue, losing its splendour in the hour of the sinful, and preserving it for him who followed duty.'

It was but a step in the development of myth to differentiate between the tree of life and the tree of knowledge; and it was a step in the revelation of truth. The tree of life has the promise of immortality and bliss.

The sacred books of the Parthian state that 'the original human pair, Maschima and Areta, sprang from a tree in Heden, a delightful spot where grew homes or hamas, the marvellous tree of life whose fruit imparted vigour and immortality. The sacred book of man at the temple of Ahirvan, the spirit of every guise of a serpent, gave her husband fruit to eat and so led to their ruin.'

The story of Eden ends in ruin, but it is ruin which has the promise of regeneration (Gen 3:11). There is the way of the tree of life, and Christian mysticism found it in the way of the holy Cross.

The drama of religion closes with the vision of the holy city, New Jerusalem, and the throne of God and of the Lamb:

'the tree of the life of the nations: and the leaves of the tree were for the healing of the nations' (Gen 3:12).

Ethics and religion have each their part in keeping 'the way of the tree of life' (Gen 3:11): they are the supporters of the wheeling sword, the whirligig flinging circle of the solar disk, the most sacred symbol of the Sun of Righteousness.

9. The tree of knowledge.—The oracle is an integral part of tree-worship.

Joshua at Shechem 'took a great stone, and set it up there under an oak, that was by the sanctuary of the Lord. And Joshua said unto all the people, Behold, this stone shall be a witness unto us; for it hath heard all the words of the Lord which he spake unto us' (Josh 24:26).

It was a witness in the hand of Shechem. The 'plain of Esromim' is the 'trench of the diviners (Jg 9:3). In Africa the trees planted round the ancestral graves were tended by women whose oracles were listened to in times of crisis. Tree-divination was practised by the Ainu. The oracle of the sacred tree of Doilona was assigned to the depths of its root.'

The oracle was

1. Verg., Ec. vi. 136-139.
5. Philpot, p. 129.
6. Philpot, p. 129.
7. Philpot, p. 443.
on his secret and sacred quest.1 As the care-tree it has been taken over by the Church in the rhyme:

"Care Sunday, care away, 
Care Sunday is Passion Sunday, the Sunday before Palm Sunday.2"

Care Sunday is Passion Sunday, the Sunday before Palm Sunday.3

The holly is the Irish entlenn, the Welsh cadwyn, the O.E. holken; it is not a variant of 'holy.' The persistence of its red berries in winter and its Christmas associations give it a high place among the trees of the north. It enters into the ritual names of Ireland, as in Druinn Cullim, now Drumulin, barony of English, King's County. More noticeable is its occurrence as a personal name, Mace Cullin, bishop of Lusk.4 The effigy of the Holly-boy in the Kentish Shrove-tide revels may be regarded as a substitute for the oak with its ancient religious association. At the close of the revels it was burned.5 The Christmas burning of the Yule-log is another link in the same chain, as the burning of the mulberry-bough is the evidence of the continuity of the sacred fire. The Christmas blossoming of the Glastonbury thorn and the Christmas-tree (of late introduction in England), with its lights and flowers and fruits, have been associated with the "strange blossoming power of nature connected with St. Andrew's Day" (30th Nov.). These were transferred in the Middle Ages to the Christmas festival.6

The ritual names of Ireland were given to the memory of Adam and Eve, and this led to the paradise-plays which formed a prelude to the Nativity-plays. The Cross of Christ was held in ancient legend to have been made of this wood, and this was the "blessing of the Tree of Knowledge."7 In the Paradise-play this tree was brought in laden with apples and decked with ribbons.8 The lights form an integral part of the earlier ideas of this tree-ritual.

In old Icelandic legend there is the story of a mountain-ash at Mauthrull which on Christmas Eve was covered with lights that the strongest gale could not extinguish. These lights were its blossoms. In French legend, Perceval comes across a tree illuminated with a thousand candles; and in another story Durmals le Galois twice saw a magnificent tree covered with lights from top to bottom.9

In Icelandic folk-lore lights are seen in the rowan-tree, and in Celtic folk-lore the scarlet berries of the rowan-tree are the source of wisdom. Is there not here a link between the light of wisdom and the bright fruit belonging to the tree of knowledge? The flammes were the scarlet tufts in their caps.8

"Simonides tells us that it was not a white wall which aegus gave, but a scarlet one, dyed with the juice of a fruit of a very flourishing holly-tree, and that this was to be the signal that all was well.9"

The story of aegus and Theseus has its parallel in the sign of the 'scarlet thread' at Jericho (Jos 2:9).

The rod of Aaron was the rod of the priesthood, and the priest's lips were to keep knowledge (Mal 2:7).

At the return from Captivity 'the Thanthas said unto them, that they should not eat of the most holy things, till there stood up a priest in Exodus and Ezra Thanninim' (Eze 29).

The breath of judgment contained these sacred loll (Ex 29).

The sacred berries are in the charge of the priest: 'for he is the messenger of the Lord of hosts' (Mal 2).

The rod was the token of this authority; and the rod of Aaron was a rod of almon. The Hebrew word for 'almon' is shoshphed, connected with the root 'to watch.' It is the tree of watchfulness, the tree of light. Jeremiah of the priests of Anathoth, in the opening of his prophecies, sees the vision of an almon-rod. It is the token of the watchfulness of God.10

1 Verg. Georg. ii. 290—292. 2 Philpot, p. 92. 3 Philpot, p. 311. 4 Philpot, p. 311. 5 Philpot, p. 311. 6 Philpot, p. 311. 7 Philpot, p. 311. 8 Philpot, p. 311. 9 Philpot, p. 311. 10 Philpot, p. 311.
TRIMÜRTI

‘Then said the Lord unto me, Thou hast well seen; for I will hasten my word to perform it’ (Job 19:16).

And the vision of death it would seem that the blossoming of the almond-tree symbolizes the light of the presence of God (Ec 12:3), the light of wisdom and knowledge: ‘Because the preaching thereof is wise, he still taught the people knowledge’ (12:1). The early cult of the sacred tree among the Jews left its mark in the Temple of Jerusalem. R. G. Collingwood notes that, as the two pillars, Jachin and Boaz, so also the golden candlestick had associations with this ancient cult. The pillars were wreathed with pomegranates; the candlestick was a budding and blossoming almond.

If the former witness to the tree of life, the latter witnesses to the tree of knowledge.

Light was the first of the gifts of life; and it is in the light alone that religion can fulfill the duties of life. A Babylonian seal figured by Mrs. Philpot shows the sacred tree with seven branches, three on the right and four on the left, with a fruiting branch drooping on either side. On the right is a figure sitting with outstretched hand, the head crowned with the horns of a bull; on the left is another figure sitting, without the bull-mask, but with a snake behind it. It recalls in some points the story of Eden; but it is also a link in the development of the seven-branched candlestick of the Temple.

The sacred twig, the sacred fire, the priest-king who is guardian and champion of both, and who is also the representative of the majesty of the sun, each and all witness ‘at sundry times and in divers manners’ to the religious fellowship and communion which man enjoys with the divine spirit. Silent adoration is called for in the presence of the tree of life. The tree of the knowledge of good and evil is vocal in the light of divine wisdom:

1. And I turned to see the voice that spake with me. And being turned, I saw seven golden candlesticks; and in the midst of the seven candlesticks one like unto the Son of man, and his voice as the sound of many waters (Rev 1:15).

This voice is the voice of divine wisdom, vocal at Dodona and Cnossus and Delphi, vocal in the burning bush, and vocal to-day in the spirit of wisdom and understanding, the spirit of counsel and ghostly strength, the spirit of knowledge and true godliness, and the spirit of God’s holy fear. This fruit of the Holy Spirit is the fruit of the thumbed tree:

2. And there shall come forth a rod out of the stem of Jesse, and a Branch shall grow out of his roots: And the spirit of the Lord shall rest upon him (Is 11:1).

It is true to-day, as in the earliest ages of animistic religion, that ‘the fear of the Lord is the beginning of wisdom’ (Ps 111:10).

THOMAS BARNES.

TREE OF KNOWLEDGE, TREE OF LIFE.—See Trees and Plants.

TRIADS.—See TRIMÜRTI, TRINITY.

TRIMÜRTI.—Though the Rigveda does not contain the conception of a separate spirit mani- fested in three forms (trimürti), which is the Hindu doctrine of the Trinity, it contains elements which have contributed to form that belief. In the first place, Agni as the god of fire has three forms: he is the sun in the sky, lightning in the aerial waters, and fire on earth. On this idea is based much of the mysticism of the Vedic period, and it is reflected in the ritual by the threefold character of the sacrifice. Thus Agni, whom R. H. Thompson calls ‘May’, Surya protect us from the sky, Vata from the air, Agni from the earthly regions,1 appears a tendency to reduce all the gods to manifestations of three chief deities, each representative of one of the three divisions, sky, air, and earth. Yásaka 2 tells us that his predecessors in Vedic interpretation held that all the gods could be reduced to three, Agni, Vāyu or Indra, and Sūrya, though he himself does not adopt this view. A further step towards the amalgamation of the gods is seen in the Mātriyāṇi Samhitā,3 which holds that Agni, Vāyu, and Sūrya are all sons of Prajāpati, the creator god.

The further development of the doctrine occurs only in the later Upanisads as the outcome of the adoption of the principle of the absolute (brahman or sthūla). In the Tattvarūpa Arācī prakṛti, the self, Mahānāryāṇa Upaniṣad the highest self (paramātmā) is identified with Brahman (by which Brahām is probably meant), Sīva, Hari, and Indra; the identification with Hari is probably a later interpolation, as it spoils the metre, but it is doubtless an old change in the text. In the Mātriyāṇi Upaniṣad4 Brahām, Rudra, and Vīṣṇu appear as forms (tānaṇāti) of the absolute, which itself is incorporeal, and again6 are declared to correspond respectively with the rojas, tamas, and sattva aspects of the absolute. The same triad is found in other texts such as the Prāyāg- niśkotra,5 the Mimāṃsākāṇi,6 the Rāmōttarapārniya Upaniṣad,7 and the Hindu System, which holds that three are the three states of Prajāpati.

This is the classical form of the doctrine which is repeated in the Harīvānaṇa, in Kālidāsa’s Kumāranātha, and not purely in the later literature. The personality of the trinity is varied slightly according to sectarian preferences; thus in the Saiva view8 the absolute, which is Śiva, is manifested as Brahma, Viṣṇu, and Bhava, the last a personal form of Śiva; the Nimbarka and other sects9 identify Kṛṣṇa with the absolute, distinguishing him from Viṣṇu as one of the trinity. There is some uncertainty whether the conception of the definite trinity was preceded by the conception of Viṣṇu and Śiva as merged in a unity, as appears in the term Harīvānaṇa, this view, however, is rendered probable by the fact that the epic appears to have identified Viṣṇu and Śiva as equals before it combined Brahma with them as their peer. A characteristically late idea recognizes a trinity of the Saktis, or personifications of the power of the three gods: Vāch or Sarasvatī as that of Brahma; Śrī, Lakṣmī, or Rādā as that of Viṣṇu; and Umā, Durgā, or Kāli as that of Śiva. For this there is no Vedic parallel, though in the ērgī hymns of the Rigveda a triad of sacrificial goddesses is found in Sarasvatī, Idā, and Bhārātī.

Serving as it does to reconcile rival monotheisms with one another and with the philosophic doctrine of the absolute, the theory of the three forms presents no such close similarity to the Christian doctrine of the Trinity as to render derivation from Christian influences either necessary or probable, though chronologically the existence of such influence is probable.

TRINITY

quite possible. It is, however, conceivable that the idea developed under the influence of Mahāyāna Buddhism, which possesses the notable trinity of Buddha, Dhyani-buddha, and Dhyani-bodhisattva on the one hand, and Dharma, Dharmakaya, and Sambhoga-kāyas of a Buddha on the other. The Buddhist art of Gandhāra, followed by that of Tibet, China, and Japan, is prone to depict groups of Buddhas with three elements, with which the idea of the Trinity is, and it is to this influence that we may assign the existence of such sculptures as that from the cave of Elephanta, Bombay, which presents the three gods in one statue, and affords the inspiration for the old triostrata trinity deity of the Matya Purānas, if a passage often wrongly interpreted to mean 'One God and three persons.'

A. BERKELEY KEITH.

TRINITARIANISM — See TRINITY, RELIGIOUS ORDERS (Christian).

TRINITY. — I. The term and concept. — (a) The term 'Trinity' (from Lat. trinitas) appears to have first been used by Tertullian, while the corresponding Greek term 'Triad' (τριάδα) appears to have been first used by Theophilus the Christian apologist, an older contemporary of Tertullian. In Tertullian, as in the subsequent usage, the term designates the Christian doctrine of God as Father, Son, and Holy Ghost.

(b) Although the notion of a divine Triad or Trinity is characteristic of the Christian religion, it is by no means peculiar to it. In Indian religion, e.g., we meet with the trinitarian group of Dvala, Siva, and Puru, and in Egyptian religion with the trinitarian group of Osiris, Isis, and Horus, constituting a divine family, like the Father, Mother, and Son in medieval Christian pictures. Nor is it only in historical religions that we find God viewed as a Trinity. One recalls in particular the Neo-Platonic view of the Supreme or Ultimate Reality, which was suggested by Plato in the Timaeus, e.g., in the philosophy of Plotinus the principal of the Ancient Neoplatonists (apex caloris et geni), which are triadically regarded as the Good or (in numerical symbol) the One, the Intelligence or the One-Many, and the World-Soul or the One and Many. The religious Trinity of the ancient religions of Christianity, if somewhat loosely, with Comte's philosophy might also be cited here: the cultus of humanity as the Great Being, of space as the Great Medium, and of the earth as the Great Father.

(c) What lends a special character to the Christian doctrine of the Trinity is its close association with the distinctive Christian view of divine incarnation. In other religions and religious philosophies we meet with the idea of divine incarnation, but it may be claimed that nowhere is the union of God and man so concrete and definite, and so universal in its import, as in the Christian religion. As Augustine said, if in the book of the Trinitarians it was to be found that 'in the beginning was the Word,' it was not found there that 'the Word became flesh and dwelt among us.' It is the very central truth of Christianity that God was historically manifest in Christ, and that He is the union of the Supreme Being and of the Church or community of Christ's founding. This Christian faith in the incarnation of the divine Word (Logos, Logos,ῥηθαν) in the man Christ Jesus, and of the latter being united through the fellowship of the Holy Spirit, constitutes the distinctive basis of the Christian doctrine of the Trinity.

2. The development of the doctrine. — The limits of this article preclude any attempt to trace in detail the development of the Trinitarian idea from its beginnings in the Bible to its final formulation in the orthodox creeds. In various articles of this Encyclopedia this ground is traversed, such as the comprehensive art. God; the art. on particular developments of ancient Christian thought like the Alexandrian, Antiochen, and Cappadocian Theology; the art. on individual Christian theologies like Athanasian and Augustinian; the art. on heretical phases of Christological and Trinitarian belief like Adoptionism, Arianism, Monophysitism, Nestorianism. It will be convenient, however, to take here a general conception of the development in question.

(a) The Old Testament could hardly be expected to furnish the doctrine of the Trinity, if belief in the Trinity is grounded (as stated above) upon belief in the incarnation of God in Christ and upon the experience of spiritual redemption and renewal through Christ. It is exegesis of a mischievous, if pious, sort that would discover the doctrine in the natural form, 'Fathers,' of the Deity's name, in the recorded appearance of three angels to Abraham, or, even in the tor sanctus of the prophecies of Isaiah. It may be allowed, however, that the OT ideas of the Word of God and the Wisdom of God are adumbrations of the doctrine, as recognizing the truth of a various selfrevealing activity in the one God.

(b) In the New Testament we do not find the doctrine of the Trinity in anything like its developed form, not even in the Pauline and Johannine theology, although ample witness is borne to the religious experience from which the doctrine springs. None the less Christian is it seen, for instance, in the eternal Son of God and the supreme revelation of the Father, and the quickening Spirit of life is acknowledged to be derived from on high. And so, when the early Christians would describe their conception of God, all the three elements — God, Christ, and the Spirit — enter into the description, and the one God is found to be revealed in a threefold way. This is seen in the baptismal formula, in the name of the Father, and of the Son, and of the Holy Ghost, which at least reflects the usage of the apostolic Church, and in which the members of the Trinity are already all three associated together, as 'Trinity,' or the Deity's name, in the familiar words of St. Paul, the grace of the Lord Jesus Christ, and the love of God, and the communion of the Holy Ghost. This last has been called, and justly so, the great Trinitarian text of the NT, as being one of the few NT passages, and the earliest of them, in which the three elements of the Trinity are set alongside of each other in a single sentence. If the passage contains no formulation of the conception of the Trinity, it is yet of great significance as showing that, less than thirty years after the death of Christ, His name and the name of the Holy Spirit could be employed in conjunction with the name of God Himself. Truly, if the doctrine of the Trinity appeared so.

1 Jn 11;
2 Jn 14;
somewhat late in theology, it must have lived very early in devotion. (c) The story of the Trinity in ecclesiastical history is the story of the transition from the Trinity of concepts, which God revealed to the Father as the Creator and Legislator, the Son or Redeemer, and the Spirit or Sanctifier, to the Trinity of dogma, in which the threefold self-disclosure of God is built within the realm of the human mind, there to form a threefold distinction within the divine Nature itself. With the transition from the Trinity of experience to the Trinity of dogma the theological statement tends to lose touch with the gracious figure of the historical Christ. In the Nicene-Constantinopolitan Creed, in which the Eastern development of the doctrine of the Trinity culminated, the dogma still retains its connexion with its positive ground and basis in the incarnate life of Christ; but in the Athanasian Creed, which represents the form which the dogma finally assumed in the West, it appears to have lost the connexion altogether, and to move entirely in the transcendent realm.

Five stages in the dogmatic development may be distinguished.1 (1) The formal identification of the Logos or Son (hitherto regarded primarily as the cosmic principle of revelation and not therefore co-eternal with God). This doctrine, due to Origen, which may be expressed in other words as the classical subordinationism within the Athanasian theology. Formulated in the interests of the divinity of Christ, it conserved also—as against Sabellian views—the distinction between the Father and the Son. (2) The doctrine of the eternal generation of the Logos or Son (hitherto regarded primarily as the cosmological principle of revelation and not therefore co-eternal with God). This doctrine, due to Origen, which may be expressed in other words as the classical subordinationism within the Athanasian theology. Formulated in the interests of the divinity of Christ, it conserved also—as against Sabellian views—the distinction between the Father and the Son. (3) The doctrine of the conceptuality of the Son as a creature, especially after the Origenist theory of eternal creation (which enabled Origen himself to regard the Son as still primarily a cosmological principle) had been abandoned. (4) The doctrine of the hypostatic union of the Son within the divine Nature, according to the formula of 'three Hypostases in one Ousia or Substance' (τρεις ὑπόστασις, μία οὐσία) of their Persons.2 (4) The doctrine of eternal distinctions within the divine Nature, according to the formula of 'three Hypostases in one Ousia or Substance' (τρεις ὑπόστασις, μία οὐσία). To the Cappadocians, Gregory of Nazianzus, Gregory of Nyssa we owe the final settlement, for which this formula stands, of the dogmatic terminology. In distinguishing between hypostasis and ousia, the former denoting a real principle of distinction within the divine Nature and the latter the divine Substance or Nature (σύνεσις) itself, they sought to lift the orthodox doctrine out of the Sabellian modalism which recognized no distinction in reality between the Father and the Son, so impairing the significance of the historical Christ, and at the same time to vindicate it against the opposite error of heathen polytheism (tritheism), of which it was so often accused. Moreover, the Cappadocians gave to the third member of the Trinity, the Holy Spirit, the definite place and character which He now possesses in the Eastern orthodox, as being also a hypostasis (from the Greek *ὑπόστασις*), distinct from the Father, and proceeding from the Father through the Son. (5) The doctrine of the double procession from the Father and the Son (the filioque clause, added to the Niceno-Constantinopolitan Creed on canonically indefensible grounds)3—a doctrine which represents the difference between Western orthodoxy and Eastern (with its view of procession as from the Father alone, the unitary source of deity)4; which was conceived, in the interests of the divine unity, as counteractive of the subordinationism contained in the Eastern formulas; and which under Augustinian influence found its way into the Athanasian Creed. Curiously enough, the Athanasian Creed (so called) thus differs theologically from the Niceno-Constantinopolitan Creed in its original Eastern form on a point on which all ancient Western and Eastern churches would have lain with the Eastern symbol. The Greek (Athanasian) theology found the divine unity in the Father, the one fountain-head of deity, so that, as some say, the Father is the first of Father and Son and the Spirit as subordinate to the Father. The Roman (Augustinian) theology found the divine unity in the divine Nature or Substance, with the result that, as the distinction between the three Hypostases has become weakened under the doctrine of the co-inherence, so attractive to the non-metaphysical Westerns,5 there remained no proper foothold—so to speak—for the doctrine of subordination.

3. The statement of the doctrine. (a) The ecclesiastical doctrine whose stages of development have been indicated may be briefly stated as follows, and the form of statement would commend itself as a whole alike to the Western or Roman Catholic and the Protestant Church. For, although the doctrine of the Trinity was the subject of much discussion, dogmatic speculation, in the Middle Ages and at the Protestant Reformation, and has been since, it has been formulated all along on the lines of the Niceno-Constantinopolitan and Athanasian Creeds. Both Roman Catholics and Protestants have so far the three Persons (Hypostases) or real distinctions in the unity of the divine Nature or Substance, which is Love. The Persons are co-equal, inasmuch as in each of them the divine Nature is one and undivided, and by each the collective divine attributes are shared. As a 'person' in Trinitarian usage is more than a mere aspect of being, being a real ground of experience and function, each divine Person, while less than a separate complete self, is in a sense a hypostatic character or characteristic property (διάταξις). The hypostatic characters of the Persons may be viewed from an internal and an external standpoint, i.e. with reference to the inner constitution of the Godhead or to the Godhead as related to the cosmos or world of manifestation. Viewed ab intra, the hypostatic character of the Father is the personal (Θεότης, the Son and the Spirit procession: wherefore, 'the Father is of none, neither begotten nor proceeding'; the Son is

2 C. F. J. 1733.
3 See further, art. Trinitarian, 3.
4 Strong, p. 170.
5 Strong, p. 164 ff.
eternally begetten of the Father; the Holy Ghost eternally proceeding from the Father and the Son.1 Viewed ab extra (for Love functions externally as well as internally, is centrifugal as well as centripetal2), the hypostatic character of the Father is made manifest in creation, whereby the world is provided for beings who should be capable of experiencing fellowship with the holy Love; the hypostatic character of the Son in redemption, whereby the alluring power of sin is overcome; and the hypostatic character of the Spirit in sanctification, whereby human nature is quickened and renewed and shaped to the divine likeness. Yet, while this is said, as there is no separation in the unity of the Godhead, so the one God is manifested in the threefold work of creation, redemption, and sanctification; moreover, each of the Persons as sharing the divine attributes is active in the threefold work, if with varying stress of function. Verily the doctrine of the Trinity exit in mysterium.

(c) It should, perhaps, be emphasized that the Trinitarian statement is never tritheistic, in the sense of affirming three persons, self-existent and self-determining individualities in the Godhead. When it is affirmed that there are three Persons in one God, the word 'person' is used archaically, and not in the modern sense of a self-determining personality. It was a word employed by Tertullian3 as on the whole the best word by which to convey the idea of an inner principle of distinction or individuality; and it was a good enough word when it bore a vaguer and more flexible meaning than it bears nowadays in Western Europe. To say that there are three separate personalities in the Godhead would be polytheism. To say that there are three eternal principles of distinction or modes of subsistence in the Godhead is not polytheism—although in the speculative construction of the Trinity it might lead, and has sometimes led, to a theoretical pluralism or polytheism.

4. The speculative construction of the doctrine.

(a) Although the Christian Church soon came to look upon the Trinity as an incomprehensible mystery of revelation, which reason might not probe, her theologians have not refrained whether in ancient or in modern times from speculation upon the doctrine. In medieval times, indeed, the doctrine was often on the high school of logic and dialectic.4 Then, as before and since, recourse was often made to the principle of analogy, in order to throw light upon the mysterious notion of tri-personality in the Godhead. It is a principle that has received classical treatment at the hands of Augustine, who employed in particular the analogies of the human self-consciousness and of the relationship of love. It is not pretended, however, that by such analogies the doctrine of the Trinity may be rationalized. And, clearly, such analogies fail on one side or the other to satisfy the conception of 'three Persons in one Nature.' On the one hand, the psychological analogy of the self-consciousness does justice to the unity of the Nature, but not to the distinction of the Persons. This is as true, it has been remarked,5 of Dornern's construction founded upon Hegel's 'being in itself, being for itself, being in and for itself,'6 as of Augustine's 'memory, understanding, and will'7 (in each of which he found the whole rational nature expressed), or, as we might add, of his

'mind, self-knowledge, and self-love.'8 On the other hand, the social analogy of love does justice more or less, to the distinction of the Persons, but not to the unity of the Nature. In this case the three elements of the analogy are the loving subject, the loved object, and the love which unites them. The subject and the object possess, to be sure, more than sufficient independence for the purpose in view, but it is difficult to see how the love which unites may be accepted as a distinct person, even in the vaguest sense of that term. The application of the psychological analogy may be regarded as an attempt to satisfy the theological interest attaching to the traditional dogma for which the Logos-conception stands, namely, the explanation of the relations of God and the world. On the assumption that the human individual is a microcosm, bearing traces of the divine Personality upon him, it would seek to make more intelligible the unity in diversity, or more precisely the unity in trinity, affirmed in the orthodox view of the Godhead. Again, the construction of the Trinity which is founded upon the social analogy of love appears to satisfy the practical interest attaching to the traditional dogma, namely, the vindication of the truly divine character of the Person and Work of Jesus Christ, and the existence of the created social unit is the real microcosm, it would make more intelligible the trinity in unity which is also affirmed in the orthodox view of the Godhead. Perhaps the social analogy has been the more influential of the two. It certainly offers a picture of the inner constitution of the Godhead that corresponds to the Christian Gospel: 'The love of the Eternal Father is for ever satisfied in the Eternal Son; and the Father and the Son are for ever bound together in the Holy Spirit, who is the bond of the Divine Love.'9

(b) In modern constructions of the doctrine of the Trinity there is a tendency to make much of the microcosm of human personality as carrying traces of macrocosmic Reality. God is to be interpreted, it is said, according to the teleological principle of the highest, and human personality is the highest thing we know. The result is that, as C. C. J. Webb10 has indicated, we hear a good deal nowadays, even in non-Unitarian Christianity, of 'the Personality of God,' whereas the historical doctrine is that of 'the Personality in God.'11 This raises the question whether the future of Christianity lies in its associating itself with the modern philosophical movement of personalism or in the renewal of its old alliance with Platonism. Into such a question we may not enter, but we would cite a recent instance of a discussion of the Trinity in which human personality figures as the key to the mystery of the Godhead. It is S. A. McDowall's12 contention that there is more than analogy between human and divine personality, there is also identity in their nature. The Trinity within us is more than suggestive of the truth that in God personality is also triune. If we might borrow the language of Julian of Norwich, the 'made Trinity' actually points to 'the unmade blessed Trinity. If the Godhead be a Personality, it must indeed be a unity, but the unity—like the unity of human personality—is composed of three persons, which, although not self-existent but completely interpenetrating, are differentiated from each other by the stress of their individual functioning.13 Personality, whether in God or in

man, could not really exist if it did not thus involve an internal manifold.\(^1\) For the elaboration of these positions reference must be made to the backgrounds and implications of Trinitarian doctrine.\(^2\) To illustrate a recent tendency in the application, in Trinitarian speculations, of the principle of analogy.

5. Economic and essential trinity.—(a) The transition from the Trinity of experience to the Trinity of the Word of God is evident here only as illustrating a recent tendency in the application, in Trinitarian speculations, of the principle of analogy.

(b) It should be observed that there is no real cleavage or antithesis between the doctrines of the economic and the essential Trinity, and naturally so. The Trinity represents the effort to think out the Trinity, and so to afford it a reasonable basis.\(^3\) The first Christians had St. Paul's saving experience of the grace of the Lord Jesus Christ, and of the love of God, and of the communion of the Holy Ghost; and the theologians of the ancient Church, who sought to think out the Christos-Trinity, found the Christos-Trinity in logical terms of effort. In the effort they were led, inevitably, to effect an alliance between the gospel of their salvation and the speculative philosophy, and more especially the Platonism, in which they had been trained, while, in making room for the Christian gospel within the world—not altogether hospitable—of the Greek philosophy, they found themselves translating their empirical knowledge of God—the God and Father of the Lord Jesus Christ—into a doctrine of diversity or multiplicity, as distinguished from merely abstract unity, within the divine Nature itself. Other tendencies, in thinking out the Trinity, they arrived at the Trinity. None the less the greatest and most influential of the Christian Fathers, Origen, Athanasius, Basil and the Gregory, Augustine, all acknowledged that, for all the light thrown upon it in the Biblical revelation, the divine Nature remained for them a mystery transcending reason.\(^4\)

(c) It is claimed, however, especially by Catholic thinkers, that, logical mystery as the Trinity undoubtedly is, it not only conserves the spiritual values of the dogma, but more to the sublime and exalted the Athanasian Creed, \(e.g.,\) is declared to be in effect a sublime and magnificent hyan of the Christian faith, having a power all its own to stir and uplift the souls of believers with the greatest of the divine recompensation in Jesus Christ. That being so, it may be allowed that there is justice in the contention that acceptance of the Trinity does not commit one to the adoption of all the obsolete modes of thought, but only to acceptance of the authoritative Christian tradition which the terms of the Greek philosophy served to symbolize, and with which continued vitality they have become invested.\(^5\)

(b) In consequence of a wide-spread failure, especially within the Protestant Church, to appreciate the symbolism in which the traditional Christian convolutions are embodied, and to recognize in the doctrine of the Trinity of Three in One many more than a sacred mysterious formula, modern Christian theology is thrown back more and more upon the historical revelation in Jesus Christ and the inward experience of God. It is not at this modern level of practical ground and basis of Trinitarian doctrine, being less concerned with what God is in Himself than with what He has shown Himself to be—less concerned with the Substance or nature of God, than with the Trinity of manifestation. It is part of the modern empirical movement in theology, chiefly associated with the names of Schleiermacher and Ritschl. When thus employed, the Trinity is largely interpreted as NT. [Note: The text is cut off at this point, making it difficult to continue the analysis.]

---

TRITHEISM

TRITHEISM.—1. Definition.—Tritheism (Gr. τρικλήσις, 'three,' and ἄτεχος, 'God') is the belief in three Gods. As such, it is a form of polytheism, defined as the belief in many Gods or in more Gods than one.

2. Christianity and tritheism.—So far as the present writer is aware, no historical religion may properly be called tritheistic. Where divine triads or trinities are found, they are not distinguished from other divinities or from human beings. (1) On the other hand, the charge of being tritheistic has often been preferred against the Christian religion, as presented in the doctrine of the Trinity. (2) The Christian Church has, however, expressly dissociated itself from trinitarian views tending to tritheism. (3) Moreover, liability to the charge of tritheism is regarded as sufficiently damaging also to speculative constructions of the Trinity. In what follows the writer would expound these three statements one by one.

3. The charge of tritheism.—(a) The accusation of being tritheistic, which has often been made against Christianity, is, in a sense justified. For undoubtedly the doctrine of the Trinity has been, and is still, conceived among simple uneducated Christians in a naively tritheistic way. Sometimes also a naïve tritheism is found even in theological statement, as when in so-called transactional theories the Atonement is represented as the result of a bargain between the first and second Persons of the Trinity. (b) But the Christian religion, like other historical religions, must be judged by the affirmations of its best and most representative minds, and not by the crudities of the uninstructed or the aridities of theological pedantry. It is affirmed by the representative minds of Christianity that the accusation of tritheism is unjustified, being largely founded upon misunderstanding of the theological terms in which the Trinity is formulated. They would insist that there is a world of difference between the formula, 'There are three Gods,' or even the formula, 'There are three distinct or separate individuals in the class known as God,' and the formula in which the orthodox doctrine may be summarized, 'There are three Persons in one God.' In fact the Trinity is declared to be at bottom an assertion of the divine unity. If in the light of the Christian revelation we are led to affirm three eternal distinctions in the Godhead, we must still hold fast to the old faith of Israel's prophets and say, 'These three are one.' Admittedly, however, the English and American tritheistic constructions tend to mislead in the Trinitarian terminology. In particular, the ambiguity of the word 'person' is allowed to be a source of much misunderstanding. To set forth the doctrine of the tritheist, however, enough, it would be added, to vindicate the doctrine of the Trinity against a charge so obnoxious as that of tritheism. We are

reminded in this connexion of how the early Christian thinkers abhored the suggestion even that in affirming the Trinity they were reinstating human formulae on the Trinity.

It should be remembered that there was no word 'person' in the vocabulary of the Greek-speaking theologians, who always expressed the essence of the Trinity in the declarative form it assumed in the Niceno-Constantinopolitan Creed. ‘Person’ (Latin persona) as a term, however, in the Affirmative Creed, did represent the Greek Λογος. New 'hypothesis' ('soulment' or 'soulship', lit. 'standing under or from the things used about the beginning of the Christian era to signify a real concrete existence or actuality in contradistinction to a mere appearance having nothing solid or permanent underlying it, such as a count in comparison with a rainbow. Through Origen's influence it came to be employed in the theological terminology as the designation of a member of the Trinity, as in the Capadonian formula, 'Three Hypostases of the Father', 'hypothesis', and still is, though the term 'hypostasis' as applied to the members of the divine Trinity supported an independence or individuality of too complete a sort, as though the Father, Son, and Spirit were as separate in the class God as Peter, John, and Paul in the class men.2 but this suggestion was corrected, at least for speculative minds, by the Lege-Christology deriving from St. John and St. Paul, in which the idea of immanent distinctions in the unity of the Godhead received recognition. On the other hand, the tritheistic tendency was accounted for the Latin-speaking theologians by the selection, due probably to Tertullian, of a term (A. 'person' as the designation of an 'essence'. Though persona, as its original meaning might show, implied only a temporary and superficial kind of individuality, it was employed by the Latin writers under the lit. 'face', by which person was often rendered in the later Greek theological literature, and thereby the dignity and a rational nature. A 'person' in the early centuries of the Latin Church was an individual viewed in a legal aspect (the word often meant a litigant or a party to a contract as well as a player) as the subject of rights and duties, if not as yet in the philosophical sense of an independent and self-determining Ego—a sense which has attached itself to the word in modern times. Yet even the ancient legal and real associations of 'person' would impart ambiguity to its theological usage, especially in popular thought, and the ambiguity would tend to increase in鸡蛋, the more so as the distinction between the modern philosophical sense of personality. So it is not surprising that there has been a 'strong tendency to tritheism in Western theology, especially among the people; and that non-Christian thinkers, notably Jewish and Muhammadan, have taken the doctrine of tri-personality in God as virtual or veiled tritheism.

4. Tritheism as a heresy of dogmas.—(a) Although aberrations from the orthodox dogmas were in the East towards a modalistic Monarchianism (Sabellianism) rather than tritheism, it was in the East—among the Greek-speaking theologians—the birthplace of tritheism, and it was a doctrine that found a home and a soul within the tritheistic tendency. The movement in question illustrates the reaction of Christological discussion and controversy upon the doctrine of the Trinity. Christology in the heart of the Monarchian (tritheistic) school, the development of Christology naturally led to a revision of the dogmatic terms.

(b) As a definite phase in the history of Christology, tritheism appeared c. A.D. 530 in Monophysite circles, being associated chiefly with the names of John Askusnages and John Phillopus. The latter, an Alexandrian philosopher and a distinguished philologist, was a considerable work entitled Μαγιας important fragments have been preserved in the writings of John of Damascus, appears to have been the most influential of the school. As a Monophysite John Phillopus was opposed to the Chalcedonian declaration of the Person of Christ as consisting of 'one person in two natures' (διὰ τὸ ψυχων ου μία ψυχων τε δύο φωνες), and contended that Christ's was a single nature composed of the two divine. This is to say, in Christology φως or ωλια and κτορτυκας were to be viewed as synonymous terms.

(c) When this Christological position is applied to the doctrine of the Trinity, it is once raised to as whether the orthodox fomula of three Hypostases in one Substance can be maintained. If one ωλια, is there not but one ωλια also? If three ωλια are, there are not three ωλια? Thus, if the five to the literary form leads to a form of Unitarianism, the affirmative to the second to a form of tritheism.

(d) John Phillopus started from the consideration of the three Personages and reached a tritheistic conclusion as to the divine ωλια as φως: τρεις φωςις λεγες ἤμας ἐπὶ τίς ἀγίας ἐμαραθέομεν. So he and his followers were named by their opponents 'tritheists' (τριδειης), although we are told 2 that they would not actually have confessed themselves as believers in three Gods. If theirs was a theoretical, it was not also a practical, tritheism, like the Trinitarian notions of the Socinian theorists mentioned above (which amusingly justified the protest of the earlier Unitarians). It appears, however, that John Phillopus admitted the notion of a common Nature (ωλια κας), if holding in their belief; the tritheist had maintained a nominal sense; but Damian 3 (578-605), the Monophysite patriarch of Constantinople, held in pronouncenly realistic a view of the one Substance, but not the separate persons. He was the first in the East to regard the three Persons as true reals or separate individualities, that, like Peter the Lombard in a later day, he was accused of teaching a Quaternity rather than a Trinity, and his followers were labelled 'trideterminists' (τριοπτικας). The tritheists were definitely opposed in the name of the orthodox dogmas by John of Damascus, who in seeking to emphasize as against them the unity of the Godhead gave— as Augustine did—a modistic flavour to his theological exposition. 4

5. Tritheism as an error of speculation.—It has been remarked 5 that in the tritheistic movement (so called) and the counter-movements it evoked we may find the roots of the medieval controversy between nominalism and realism. The remark is illustrated by the case of Roscellin, the best-known representative of the older nominalism. According to Roscellin, universals were not reals, but merely subjective conceptions (Ratus vocis). And, if this principle holds of the nature or Sub- stance of the Person of the Trinity, the Person formula must be regarded as distinct self-consciousnesses, and the unity of the Godhead as but a nominal and generic unity. Thus on philo- sophical principles Roscellin reached a theoretical tritheism, which, however, at Anselm's instance, was condemned at Soissons in 1092.7 And over and over again, from the beginnings of Christian theology down to the present, speculative con- structions of the doctrine of the Trinity have led to encounter—sometimes in the irony of things—the damaging charge of being tritheistic. In the ancient Church, as Culliustus accused Hippolytus of dythorism, so Dionysius—maintaining the Roman tradition of unspeculative adherence to the

TRUST.

unity of the Godhead—preferred the accusation of tritheism against Origen's teaching. Yet Origen's doctrine of the eternal generation of the Logos or Son entered into the orthodox formulas, and a follower of Origen, Gregory Thaumaturgos, mildly championed the unity of the Godhead against the polytheists (tritheists). Again, in the medieval Church even Abelard was suspected of tritheism, and yet it was Abelard's aim and endeavor, in his dissertation against tritheism like Roscellin's and pure modalism, and his sympathies lay with modalism rather than tritheism. Once again, if it is not invidious to select so modern an instance, W. Adams Brown comments as follows on the theological part of tritheism:

"It is hard to see how these "centres of conciseness life and activity" can be distinguished from separate personalities." And yet W. N. Clarke 5 so emphasizes the Trinity of manifestation, as distinguished from the Trinity of essence, as to be far away indeed from tritheism. It all illustrates the fact that, while the doctrine of tritheism, as the Nicene-Constantinopolitan and Athanasian Creeds, will have no traffic with tritheism, it is difficult in the theological exposition of the dogma to steer a safe course between tritheism and modalism (in which the Father, Son, and Spirit are merely three modes or aspects of the one God)—which serves to give point to Augustine's famous remark that tritheism is an alternative to the affirmation of the three Persons is silence: 'dictum est tres personae, nunc ut illdum diceretur, sed ne taceretur.' 6

TRUST.—In the wide sense of confidence in a supernatural Power on which man feels himself dependent, trust enters as an element into practically all religions from the lowest up to the highest. Man, as the children of God, rely on their faith to bring them success in the chase, and other peoples on their national god to give them victory in war. But such trust possesses no ethical quality and need not further detain us. Only when the superior and supernatural Power is conceived in more or less ethical fashion can a trust emerge that has ethical and religious value. Religious trust, in the only sense worth considering, is confidence in and reliance upon the eternal Power or force which we hang, as one that is working towards a worldly end and guiding the course of events in wisdom and goodness. It is the trust that comes to expression in Ps. cxlii, 1:

'Thy lovingkindness, O Lord, is in the heavens; thy faithfulness reacheth unto the skies. Thy righteousness is like the mountains of God; And the children of men take refuge under the shadow of thy wings.'

Were the facts of life uniformly of a kind to render the moral purpose and control of God obvious and unmistakable, the exercise of trust would make no particular demand on our energies. Since, however, they are far from being so, the world not seldom seeming to ride roughshod over man and his valiant trust, it is easy to see why the idea of a triumph over difficulties. In the Epistle to the Hebrews it is presented in the light of an act of heroism: 'He endured, as seeing him who is invisible.' Trust of this kind is not of course to be looked for in the religion of primitive races or in religions that are merely national. Nor does it emerge with any distinctness in the pantheistic religions of India. The Indian conception of the world-order as governed by the principles of karma and anātīdrāta 7

1 Cf. Harrack, ii. 90, 93. 2 I b. iii. 101 f. 3 Acts xi. 19. 4 Christian Theology in Outline, Edinburgh, 1897, p. 192. 5 In his Outline of Christian Theology, Edinburgh, 1898, and more especially in his Christian Doctrine of God, 1906. 6 De Trinit. v. 9. 7 (transmigration) is not at bottom ethereal, and the corresponding piety consists not in submission to that order as something good, but in the desire to escape from it, and in the exercises through which the goal of absorption in Brahman is attained. Bhagavatism, it is tritheistic, acknowledges a single God who is personal and gracious; and in its conception of bhakti, or devotional faith, as the way of deliverance from the wheel of birth and rebirth, a respect of tritheism appears, if not as a transference of at least as a fruit. But bhakti is far less ethical trust than a mystical 'abiding' in the 'Adorable,' and the piety of Bhagavatism as mirrored in the Bhāgavad-Gīta, intense though it is, for the most part of the usual Indian type.

In the religion of the Greek dramatists, of Plato, and of the later Stoics, trust holds an assured though not a prominent place. Sophocles expresses the conviction that, however things may seem to us in our short-sightedness, if we could only see the purposes of the gods in their totality, we should know them to be good, and that 'nothing to which the Canadian man is base.' Of the just man Plato declares: 8

1 Even when he is in poverty or sickness, or any other seeming misfortune, all things will in the end work together for good to him in life and in death. Of the gods, one whose desire is to become just and to be like God, as far as man can attain the divine likeness, by the very essence of his nature.

Even more striking are the words of Epictetus: 'So do with me what thou wilt: my will is thy will: I appeal not against thy judgments.' 9 In the Epinomis, a dialogue wrongly ascribed to Plato, it is said: 'Pray to the gods with trust.' 10 And of Socrates Xenophon says that he must have believed in the gods, since he trusted them: 'πνεύμα μόνον τα θεῖα εἰς τὸν άνθρώπον ἵππον ἀνακούνειν.'

But, though the higher Greek religion trust had a firm basis provided for it and secured a certain amount of recognition, its full significance was far from being realized. Nowhere do we find it put forward as a central element in piety or a spring of strength and goodness. It was in the Hebrew prophets and their spiritual successors that it first really came into its own. Everywhere in the Bible we are met by utterances of fervent and steadfast trust in God. And its religious importance is clearly recognized. Isaiah sees in it the only source of safety: 'If ye will not trust, ye shall not be established' (7). Jeremiah speaks to the same effect: 'Cursed is the man that trusteth in his own heart, and maketh his flesh his arm, and whose heart turns aside from Jehovah. . . . Blessed is the man who trusts in Jehovah and whose confidence Jehovah is' (17). To trust in Jehovah and do good is presented in Ps 37 as the sum of religion. In the NT the idea of trust, deepened by a new feeling for God's care for the individual, occupies a position of still greater prominence. Outside the Synoptic Gospels, however, it is to a large extent merging in the idea of faith (q.v.). It is faith in the sense of belief that is established as the condition of salvation. This change of emphasis—as we shall see, it amounts to nothing more—is intelligible when we remember that the gospel was preached as, in the first place at least, a message to be received. None the less it created for the Church a serious problem and one that had to wait long for a satisfactory solution. The problem has to do with the mutual relations of trust and faith. By St. Paul, 1 and also in the Epistle to the Hebrews, faith

8 See art. Brutwood.
9 I Cor. x. 13 (Gr. ἑξέτασις, Dialogues of Plato, Oxford, 1897, iii. 290).
12 Memorabilia, i. 5.
13 E.g., Rom. 4.
is conceived in a way that makes the two practically identical. But what if its object is thought of as a doctrine which must first be assented to before trust can enter? In that case faith, while including the will in addition a purely intellectual element, either intellectual submission, if the doctrine is authoritatively given, or intellectual insight, if it is the product of a rational process. Adopting the first alternative, the Protestant anthropologists in their analysis of faith established *notitia* and *ascensus* as the necessary preliminaries to *fiducia*. The vice of this solution is that it destroys the independence of faith—in other words, of religion—by binding it to an act external to it and without moral quality. The faith described by Paul as trust in God is presented as at bottom subjection to the Church or the Bible as the guarantor of religious truth. And its independence is equally subverted if, adopting the second alternative, we regard it as receiving its object from philosophical reflection. The true solution of the problem lies in the recognition that in faith itself there is a cognitive element, and that its object is given not in the form of a doctrine, but in the form of an ideal value. Face to face with the great values that are supremely embodied in the little life and in the earth, if we are summed up in the conception of a kingdom of the god, we affirm them on the ground of their worth as the manifestation of the eternal Power that works at the heart of things, the eternal Reality on which the universe no less than our human life is founded. Faith is nothing else than just this feeling for the ideal and, above all, the moral values and this affirmation of their cosmic significance. So interpreted, it is one and the same thing with trust in God, for what is trust in God but trust in the good as the central might on which we and the whole universe hang? If there is a difference, it is that in the idea of faith the emphasis falls on the cognitive aspect, and in the idea of trust on the volitional.

TSHI-SPEAKING TRIBES.—See Negroes and W. Africa.

Tsimshian.—The Tsimshian belong to the northern group of coast Indians, but differ markedly from the Haida and Tlingit (qq.v.) in language. Their social organization is also somewhat divergent, since instead of two phratries they have four—Eagle, Wolf, Canhada, and Gypisawaduwa—each embracing many small local groups or clans. There are three chief Tsimshian divisions: the Tsimshian proper, living on the lower Skeena River and the coast to the south, the Niska of Nass River, and the Kitskan of the upper Skeena. The last does not border on the coast and is intermediate between the coast tribes proper and the true inland tribes of Athapascan lineage. Most of the information that we possess regarding Tsimshian religion is from the Niska, but there seems to have been little difference between their beliefs and those of the other divisions.

1. Cosmological beliefs.—The earth was believed to be flat and circular. It was supported by a man named Amala ('smoke hole'), who lay on his back in the water up to his shoulders on the slope of the horn of the mountain-goat. This was filled with grease, and in it stood a pole, on which the earth rested. When he became tired, he lifted the pole, and the earth shook. The pole, with the earth on it, was turning round in the bowl of the spoon, the grease in which served to make it revolve easily. Sun, moon, and stars belonged to the sky and did not turn with the earth. This reference to the turning of the earth with seeming constancy is an example of how the universe revolving, but the association of grease with the being under the earth is paralleled by something related of the Haida Atlas, Sacred—one-standing-and-moving, and probably genuine aboriginal.

2. Supernatural beings.—The supernatural beings, so far as we are acquainted with them, were much the same as those among the Haida (q.v.). They had a supreme heaven-god called Lalin ("the air"), a perfect counterpart of the Haida Power-of-the-shining-heavens. From the information regarding him gathered by Boas, however, it seems that he approached much nearer to the monotheistic idea of a supreme being.

'Heaven is the great deity who has a number of mediators called Negoq. . . . Heaven rules the destinies of mankind; heaven taught man to distinguish between good and evil and gave the religious laws and institutions. Heaven is glorified by the mere existence of man. He is worshipped by offerings and prayer, the smoke rising from face being especially acceptable to him. Murderers, adulterers, and those who behave foolishly, take a spell by force, and making him angry, are especially hateful to him. He loves those who take pity upon the poor, who do not try to become rich by selling at high prices what is just and fair prices and are sumptuous. He, like the moon, must be treated with respect. Men make themselves agreeable to him and maintain their cleanliness. They also bathe and wash their whole bodies before praying. For the same reason they take a vowitive when they wish to please the deity well. They fast and abstain from touching their wives if they desire their prayers to be successful. They offer everything that is considered valuable—eagle-down, log, cedar bark, good elk-skin lines, etc. The offering is burnt.'

The ethics of this, especially in the matter of acquiring wealth, seems so different from the aboriginal code found elsewhere that it is probable that the native informant's statements were tinged with missionary teaching, and that Heaven, or Laha, was elevated to a position above that which he occupied in earlier days. There can be no doubt, however, as to the existence of a sky-god 'first among equals.'

The Tsimshian prayed less often to their heaven-god than to the minor deities, or 'mediators,' whom they generally asked for food and fair weather. Sometimes they prayed to the supernatural beings collectively. The most important 'mediators' are stated to have been the sun and moon, spirits having in the shape of lightning, thunder, and animals. The Raven, also called Kismem, was believed in and had the same functions and general character as among the Tlingit and Haida. They also believed in the sea grizzly bear, or Hagulak, which may have been originally a Haida conception, since his home was called Helahadek ('near the Haida country'). In his house he had four kittens called Lukwaxam, Warm, Hot, and Boiling. The killer-whales seem to have been his servants, since they were known as ' Hagulak's men.' There was also a one-legged man similar to the Master-hopper of the Haida. Besides praying to the deities, a person could force them to grant his desires by rigid fasting. He had to abstain from food and from seeing his wife for seven days, lying in bed motionless all that time. Then he might rise, wash himself, comb the right side of his head, and paint the right side of his face, after which he might look at his wife. A less rigid form of fasting extended over four days only. To make the wife conceive a man's wife must join him, but, if the wife should be untruly to her husband, the effect of the fasting would be destroyed. What ever twins wished was believed to be fulfilled, and they were especially asked to especially to controul the
weather and bring eulachon and salmon. Numbers of tabas governed hunting and fishing, particularly in the fishing. That which required great numbers and were, or were, a principal source of wealth to the people. The first of these fish to be caught were roasted on a peculiarly-shaped frame made of elder brushwood and the spiritual ceremonies, the man who handled it prayed

4. Shamanism.—Nothing is known of Tsisbsbians shamanistic beliefs, though any distinction is made

5. Witchcraft.—The wizard cast his spell by speaking some article taken from the victim into a box containing portions of a human body. Strings were fastened inside this box, and, if the wizard wished his victim to die, he said the spell, and then threw the object some distance above the body, but, if he
desired him to perish at once, he cut the string, thereby precipitating the object upon the body. Afterwards he had to go round the house in which he had killed a witchcraft was laying, and later he had to walk round his grave and rub himself, pretending to cry all the time.

Unless he observed these rules, he would himself perish as well. If it happened that a person had been killed by witchcraft, the Tsisbians would take out his heart and lay a red-hot stone against it, wishing at the same time that the wizard might die. If the heart burst, it was expected that their wish would be fulfilled; if not, it was a sign that their suspicions were unfounded.

LITERATURE.—Nearly all the available Tsisbian material is contained in K. Boe, report v. on the Western Tribes of Australia, in Report of the British Association for the Advance-

TUKARAM.—In Tukaram there culminates an important section of the bhakti school 1 and his verses have all the authority of a 'Veda' for most of the twenty million Marathi-speaking people of one of India’s noblest races, among whom are to be found some of the greatest Indian reformers of all time. Both for his poetical genius and for his unique place in the people’s heart he is happily described as ‘the Robert Burns of India’ who marks the era of the efflorescence of Maharashtra’s people. 2

1. Sources. (a) Biographical. Two serious difficulties confront the modern biographer of Tukaram. (1) All the Marathi Lives of Tukaram are drawn almost exclusively from a single authority, the poet-saint Mahatpl (1712–90), whose accounts in the Bhakti Vipasa (chs. xiv–ix.) and the Bhakti Lalita (chs. xiv–xv.) are quoted as early as 1774 respectively, more than a century after Tukaram’s end in 1660, ‘long enough for legends to grow.’ (2) We have ‘no authentic and properly sealed account of his life,’ but only a mass of legends and traditions that have gathered round Tukaram 3 and show a distinct ‘tendency towards idealisation.’ Moreover, ‘at least some facts of historical accuracy to start with, and Mahatpl’s “detailed legends ... seen in every way as deserving of belief.”’

A few sources earlier than Mahatpl have been indicated recently by V. L. Bhawe. Besides (1) Tukaram’s autobiographical poems (see below) and (3) the abhatkas of Ramchandra Bhagat, the leading disciple of Tukaram, there are two other poems by Tukaram by his grandson, Gopil Buwa, (4) the autobiography of Rama, another disciple of Tukaram, which gives the names of some of Tukaram’s contemporaries who figure prominently both in Mahatpl and in Tukaram’s own poetry, and (5) a biography of Tukaram by Banwarilal, a contemporary of Mahatpl, a work written by one named Krishnadass Itragi on Krishna Chaitanya Ramnayya, which gives the important ‘summary’ of Tukaram’s success and helps us to settle important dates in his life, this work being quoted by name and its facts given by one Niranjana A.N. Patwardhan has added a sixth authority, a biography of Tukaram, in Marathi Mulin, author of Bhaktakshara, but it cannot be pronounced utterly trustworthy, though he was followed by a few Marathi authors. 4

The investigation concerning biographical material has gone enough to clear away some confused unimportant tradition, ‘miracle and wonder-working,’ Mahatpl’s account has a solid substratum of historical accuracy. Moreover, he uses his sources with discrimination, rejecting what he discovers to be unreliable. 5

(b) Autobiographical. The true text of Tukaram’s writings has not yet been critically ascertained, and between the several collections there is a wide difference as to the number of poems included, ranging from 422 in the edition generally accepted 6 to 854 in one 7 described by E. G. Bhandarkar as ‘ethnically

12 His wife Rama, being ‘constitutionally asthmatic,’ he married another, Dhibai or Anu, daughter of a well-to-do Poona merchant.

A great famine in 1629, during which his elder wife 11 died crying for bread, was the last in a succession of sorrows which led him to give up all business and worldly attachment. Siting on the river bank with his younger brother Kanhoba, he threw into the stream his half of the business papers and handed over the remainder to Kanhoba, while he dedicated himself wholly to Viphoba. The spirit of poverty, of a life of poverty, commanding him to complete the unfinished task

TUKARAM

467

of his great predecessor Nanud, bhakta and poet. In another dream he received his all-important gurú-mentra — Rama-Krishna-Hari, the secret mystic formula which finally initiated him as a Hindu bhakta. In this way he arrived at the sanctuaries of one of the Babaji Chaitanya of the land of Ragha Chaitanya and Keshav Chaitanya—a possible indication that Tukaram had some connexion with the Chaitanya sect. The V��ies of events setting forth his dealings with Brahmans point out the most important part of his life-narrative.

One such story provides an interesting Hindu parallel to the Quaker saying, "Every soul is of equal significance to every meal.

A Chinchowl Brahman, Chitthinam Dev, had invited Tukaram to dine with him, and, the Brahman's plate having been laid the usual distance from the Brahman, Tukaram made the strange request that two more be laid, one for his own god and another for Nabat, shiped by his host, in explanation of an autobiographical poem being: 'If you enjoy a meal in faith, God sits down to dine with you.' Another event, one of the most critical in his life, demonstrates Tukaram's reverence for Brahmans, even at the height of his renown. Ramshwar Bhai, a Brahman scholar jealous of the Brahman's fame, has not only moved the pujas authorities against him but had personally enjoined silence upon him. But 'what of the poems already written,' asked their decile authority 'when your heart is in the river,' was the cruel reply, and into the river the whole bundle was cast. Tukaram thus is, at its darkest hour, but, to the astonishment of all, several days later the sheets were seen floating on the river and were taken unharmed. Ramshwar's expediency followed. He was not replying in gentle verse: 'If your mind is pure your enemies will be your friends. And it was true enough in this case, for Ramshwar became his lifelong disciple.

Of the many incidents illustrating Tukaram's religious views one is of his own Brahman who persistently, heading this Vairgavite bhakta a pantheistic treatise to which Tukaram agreed, was given his life on condition that he be covered with a blanket. When the blanket was lifted after an hour's reading, Tukaram was found seated with his fingers in his ears, his defence being that he could not listen to the Advaite doctrine that God and His worshippers were the same.

The miraculous is found interwoven throughout Tukaram's life even in his birth. His birth was born as an incarnation. He performs many miracles to help the poor. Vithoba miraculously intervenes at every point to vindicate and deliver his faithful devotee. In this, Tukaram's youth is to be included, unquestionably, the account of Tukaram's 'ascension' on which Mahpati has expended all his powers, giving rise to the popular Hindu belief that Tukaram was carried away to Vaikuntha (the Hindu heaven) in the car of Vishnu. The probability is, as suggested by P. B. Bhandarkar, that he met his death by drowning, in the holy river of his own village, in 1550, whether by what is called jala-sood, drowning by the case of some other Indian solhna, or whether the constant expectation of God's coming to fetch him away produced an illusion, and in obeying a fancéed call from the opposite bank he ran him into the river and was drowned, it is very difficult to say. The various traditions concerning Tukaram's influence after death must also be regarded as legendary.

5. Autobiography.—Though there is as yet no critical edition of Tukaram's abhakta in existence, his autobiographical poems are generally accepted, and his self-revelations give the impression of being sincere and genuine. Of his kindness and unselfishness for others, on which Mahpati dwells so often, he himself tells us nothing, his autobiographical verses being wholly concerned with the personal and spiritual side of things. It is his own religious life that occupies his song. The abhakta classified as 'autobiographical' in the English translations of the poems by J. N. Fraser and K. B. Marathe² number over 500, and there are many hundreds more given up to confession, invocation, and asyria. He tells us but little of his life in the world, though he often dwells on his guilt and misery. The poems of self-acquiescence, at about 350, are, more than anything else, the theme of which depth is rare in Hindu literature, though his relation to God is personal and pantheistic by turns.

Fallen of fallen, three fallen am I' (314). 'I am a fallen soul, my friends, it is witness to my sin. I am redeemed' (310). This conviction of sin is often closely associated with extreme mental or physical falseness: 'False is my mind, false is my life, false is my faith. He speaks falsehood to the false' (318). Sorrow, resulting from the death of parents or from other causes, is a theme of some depth in these poems, from business failures, clearly led him to his self-dedication: 'It is well, O God, that I became a bankrupt, and was crushed by the wind.' Thenceforward he is a banker, and his dedication was complete: 'Bank, race, colour, creed and caste—all are gone' (279).

Patwardhan has made a tentative effort to depict Tukaram's long inward struggle. That this earnest pilgrim reached some worthy goal would appear from the poems, about 80 in number, under the heading Triumphant Happiness in Fraser and Marathá.

I have found a sea of love, an inexhaustible flood. I have opened a treasure of spiritual knowledge. I have the bustre of a million sons arisen in thy worshippers' souls' (613).

This, however, is by no means his habitual mood, which is rather one of despising his own self-complacency. He has a passionate desire to help and serve those around, and in the end of his days is far too kind for the open society, sometimes to the point of coarseness, yet he has something to say of constructive worth to his age and people. And it is chiefly as a preacher that he views himself. Though he lays no emphasis on Vedic lore, he has nevertheless a message invested with authority.

'These are no my words: I am a hired servant of Vithoba' (1919). Excesses of enthusiastic pantheism sometimes to the point of coarseness, yet he has something to say of constructive worth to his age and people. And it is chiefly as a preacher that he views himself. Though he lays no emphasis on Vedic lore, he has nevertheless a message invested with authority.

'These are no my words: I am a hired servant of Vithoba.' (1919). Excesses of enthusiastic pantheism sometimes to the point of coarseness, yet he has something to say of constructive worth to his age and people. And it is chiefly as a preacher that he views himself. Though he lays no emphasis on Vedic lore, he has nevertheless a message invested with authority.

'For the sake of bhakti.—To fathom Tukaram's deepest secret we need to explore his experience of bhakti, the clinging affection of the heart for a personal God, though the god in Tukaram's case was a village-idol, surrounded by Puranic gross mythology and superstitions. The idol he worshiped was even one 'stained with blood of Krsna and Siva,' but whether Tukaram recognized this plurality of gods at Pandharpur we cannot say. In this unpromising soil Tukaram's bhakti grows, with pantheism and idolatry as twin-stems on the same tree. And, though his bhakti is too often a mere emotion, fugitive and fleeting, with more of longing than of satisfaction, it is yet free from those sensual extravagances that have degraded some forms of Indian bhakti. In Tukaram we probably see Indian bhakti at its best.

If it be asked in what Tukaram's bhakti experience consisted, the answer might be given in the words of the Nārada-bhakti-sitra: 'surrendering all actions to God and feeling the greatest misery in forgetting God.'

'Tuk has his house in the Inconceivable' (176). 'Wherever I go, there is the company of compassion; then take me by the hand and guidest me. As I walk along, I lean on thee' (310).

'So particular time is necessary,' says Tukaram, 'for the contemplation of God, it should be done always.' 4 And again: 'God is ours, certainly ours, and is the soul of all souls. God is near, certainly near, above, and inside.'

His deep sense of sin offered a serious obstacle to the quest of his soul.

⁴ The Poems of Tukārām, 3 vols., Madras, 1900-15; the references by simple figures below are to this useful work.
The Endless is beyond, and between him and me there are the lofty mountains of desire and anger. I am not able to ascend them, nor do I find any pass. (994)

*I know not how to cleanse me of sin, so I have relented thy feels. . . If thou dost take a thing in hand, what is impossible? (3055) The meeting of the young girl and the maiden, many a sorrowful, many a sinfull, Tukar dwaile at thy feet; preserve him, O God! (1964) There is no prayer I can put to thee! But now, I feel sure that some of my service had been accepted. Now nothing but the service is left; I see no sign of assurance in him who stands hand on hip! \textit{Vipoh\textipa{2}} (5010). (Though I made myself ceremonially pure, some imperity would still cling to me)? (2965).

Inward purity thus becomes the prime necessity. (925)

What I delight in is purity of heart? (2023) What you need is a clean heart and a spirit at peace? (2969) Blessed are the poor, for their heart is pure. . . . Their hearts are filled with devoted love? (854).

The urgent question therefore comes to be: How shall this purity be realized? Ceremonies are unavailing, as are also pilgrimages. Tukar\textipa{1} has full confidence that God can fulfill His child's desire, and to the crucial question how the divine blessing is obtained the answer comes repetitively: 'It is bhakta' (312).

My single-minded bhakta has put an end to pilgrimage and to tre? (2773). 'God comes quickly and stands where he finds me' (2876). This is called the meaning of salvation (2925?). Without bhakta and bhakti, there is no salvation in this modern trend? 2 Lay reasoning or learning aside in a bundle, for here bhakta is the one great criterion.

What is bhakta? His modern interpreters are not always clear. Bhandarkar says that it is 'faith, love, or the pure heart'; and also that it has different meanings in different contexts. Sometimes bhakta is that heart-religion which is guaranteed the vision of God withal we are to effort, a parallel being found in the \textit{Svadist\textipa{n}\textipa{r}ta Upanisad} reference to 'those who by the heart know the Supreme Spirit who dwells within.'

Bhakta, therefore, as experienced by Tukar\textipa{1}, seems to have concerned itself chiefly with realizing a change of heart. The great precept of religion is to hear God in the heart?' (812). And, with a change of heart, he longs for some assurance of the change: 'Whether I am indeed God's child, truly accepted by him, how am I to know? How shall I know of a certainty that my heart is purer, my mind less tainted with anger? For if love be not in my heart how has my heart been changed?' 'Fortunate, indeed, is he who has a secret weapon.' (1479)

Three lines of solution appeared to Tukar\textipa{1}: concentrated personal meditation on God and His saints, persistent self-examination that shall root out self-esteem, and such utter self-abandonment to God that no voice shall be desired but His. Deep humility, simple faith in the divine protection, and complete abandonment of self to God comprise another triple secret of bhakta. Tukar\textipa{1} had travelled a long rough road in quest of peace. Yoga he had found unavailing, as well as mantras, austerities, and the five fires. On the summit of bhakta he found three graces whose fragrance reaches us in his pages: pity, pardon, peace.

He who gives to God simple-hearted devotion. . . . within his heart are these three: pity, pardon, peace. (1432) There is no Saviour of the needy save God alone: In Him are pity, pardon, peace. (1432) Where pity, pardon, peace abide there God dwells. (1432) Thither He runs and makes His home . . . . and where these graces have free play He tarries. (1432)

5. Teaching.—Tukar\textipa{1} never systematized in his psychology, his theology, or his ethics. He oscillates between a Dvaitist and an Advaitist view of God and the world, leaning now to a pantheistic scheme of things, now to a distinctly providential one. He does not formulate a system. He says little or nothing of cosmogony, and, according to him, God realizes Himself in the devotion of His worshippers. Likewise, faith is essential to their realization of Him: 'It is our faith that makes these offerings.' (1479) He said, 'I am His Vihoba?.' On the other hand, God makes Himself accessible to man's feeble apprehension by means of visibility, the idol thus becoming a proof of divine cosmopolitanism: 'He has embodied himself in forms to suit our pleasure?' (1753). Man is a child of God. Indeed, the figure of childhood is pressed sometimes so far as to sacrifice reverence and dignity, the same applying to Tukar\textipa{1}'s view of God as Mother, though in the latter he finds a solution of many perplexities. All this deals with man's 'natural' state, but separation has entered, sin being viewed variously. It is sometimes a mere breaking of caste rules, and sometimes a breach of morality, and again, and very often, it is \textit{mipana}, a word often on his lips and perhaps best rendered by 'self-centredness,' though this is inadequate, to have separate ends, the sacred and the profane, of sin and what means of salvation were disclosed to him. Brahmanical or mystic intuition and verbal theology were deprecated as much as austerities. Men should waste no time in argument, but throw themselves at God's feet. Specific hindrances to salvation are found in the above \textit{mipana}, in indulgence of desire, fear of ridicule, learning, and disputation. What the religions life means to him has already been seen. More re-nunciation leads to nothing, and indeed everything is worthless save a personal experience of religion. Tukar\textipa{1}'s 'good man' must possess humility, peaceableness, kindness, truthfulness, contentment, and simplicity.

He is mostly despondent of his fellow-men: 'I am sick of mankind?' (994); and for relief he turns to 'the saints,' about whom he has hundreds of verses, setting forth their calling and their service to mankind. At the other end of the scale of creation animals call forth his real sympathy. Whether he held to \textit{ahimsa} is not quite clear. A very feeble hint is given here and there, but there is no real indication of a belief in the sacredness of life. Reincarnation he seems to allow, he is not opposed to the idea of rebirth, as to whether to prefer mortal rebirth, for the power of God's name could break his \textit{karma}. Conscious communion on earth was far preferable to being merged in the unconsciousness of Brahman.

Pata\textit{n\textipa{r}\textipa{r}\textipa{n}\textipa{a}} has shown that Tukar\textipa{1}'s \textit{doctrine of bhakta} comprised a conception of the Divine Motherhood which gave Tukar\textipa{1} a God of love and tenderness, a sense of human inadequacy which led to conflict between faith and the flesh, devotion thus being frustrated by human frailties, and a defeative view of life 'that was at best one-sided. His end was individual, the peace and solace and beatific rest of his own restless soul. . . . Tukar\textipa{1} was a painfilled in regard to this world. . . . The \textit{bhakta} of the future ought to be broader based, fuller veined, and larger sonied.\textit{A defect sometimes pointed out is that the claim of human need is a rare mood and very seldom expressed in his poems}' and that 'there are but few traces of the passion of winning others. It is a defect, however, very largely repaired by his self-forgetting service as set forth in the pages of \textit{Mahapal}.'

6. Relation to Hinduism.—Tukar\textipa{1} acquiesced in the greater part of the conventional Hinduism of his day while himself living on a loftier plane. Often therefore he speaks with two voices. Temple ceremonies he does not condemn, but his heart aspire to something higher. Among Vihoba?; however, there is no kind of ambiguity, for, as an incarnation of \textit{Kr\textipa{n}\textipa{a}} or \textit{Vish\textipa{n}}, Vihoba? was the bigger half of Tukar\textipa{1}'s spiritual life,
though again faith was always the channel. Inwardly he experienced the living God, though outwardly it was an idol he worshipped.

In some verses he indeed holds that the stone idol was a mere stone, neither embodying nor symbolizing the divine. The inconsistency of such a position, on the one hand, to have realized, but on the other not to solve it. Hence the millions in the Deccan who follow him in idolatrous practices and the thousands who share his theistic aspirations have both much to support them. Hence too a theistic society like the Prarthana Samaj \(^2\) so recently as 20th June 1920 failed to pass a resolution that "any member who performs a domestic or any other ceremony with idolatrous rites or worships any idols while performing such rites will ipso facto cease to be a member of the Bombay Prarthana Samaj." \(^3\)

A similar anomaly exists in his references to caste and holy places. Caste was accepted by Tukaram as an institution of the Hindu world, and he did not carry to its logical conclusion his conviction that God does not consider a man's caste, all Hindus, his equals spiritually. He pointed to Him (1977). In personal inward religion Tukaram was democratic enough, but he was too much of the 'mild Hindu' to fight the battle of religious rights and privileges.

Tukaram was in no sense a 'reformer,' as the word is commonly understood: he was a sage with lofty principles in a degenerate time, a sage who for lack of courage, conviction, or inspiration allowed his protest to lapse after he had uttered them.

7. Influence.—Tukaram has quite a unique place in the inner life of his own people. Besides the Varkarls, a pilgrim sect devoted to him, every member of which visits Pandharipur not only at the two annual festivities but on other ekadasis, or 'monthly-elevens,' named varis, and whose preachings of equality and disregard of caste have been a valuable counterpoise to Brahman domina-
cering, \(^4\) there are some fifteen million Deccan peasants of all castes and creeds who sing his verses in the fields by day and in companies around flickering lamps at night. These renderings form a section of the hymn-book of the Prarthana Samaj (q.v.) of Western India, now in its eleventh edition and containing 900 of his abhangs. His terms 'Vithoba, Paudurang,' etc., being un-
acceptable to ekadarsi (non-theists), the simple term 'God' has been substituted. \(^5\) That Tukaram has exercised a great nationalizing and democratizing influence among the people of the only Indian nation that has ever ruled over any consider-
able portion of India can hardly be doubted. His moralizing force cannot be said to have been so great, in view of idolatrous conditions in the Deccan to-day. But the Vithobli of Tukaram still inspires a phenotypical type of devotion in his devotees. From as far distant as Madras, women have been known to make at Vithoba's shrine the hair-offering called venukund ('vini = braid; kund = gift') by having their heads shaved as by Brahman women at Gaya, and all Pandharipur pilgrims have such an affection for their god that no darshan is complete without the pilgrim's head touching

Vithoba's feet. No fewer than 140,000 people take this darshan at a single festival, at the rate of 12,000 daily. Some of them accomplish the 100 miles journey by protrasting their form at every step in honour of Vithoba, some thus rolling along for more than 40 miles; \(^6\) one case is known of a man rolling like a log from Nagpur, hundreds of miles away, at the rate of two miles a day, the journey lasted two years. \(^7\) Tukaram's moving verse has done not a little to inspire this tragic devotion in men and women alike.

All attempts to classify Tukaram have failed. He was neither an orthodox Hindu nor a Hindu Protestant. He lived according to the rules of a gigantic religious system with much of which he disagreed while enjoying an inward experience transcending the system, for spiritual intercourse with God and His 'saints' was the sum and substance of Tukaram's religion. He belongs therefore to none of the stereotyped forms, and, to be understood and appreciated at his proper worth, he must be approached without the dogmatic prejudice, whether Hindu or Christian. Those who have no definite creed and who follow no organized system find in him a kindred spirit. He cannot be classed as a mystic, for he had no extraordinary visions, and he followed Hindu rules of living. We may regard him as a devoted theist living his own inward life amid idolatrous surroundings.

'You can find much in Tukaram's poetry that runs parallel with the teachings of Christ, save its principles and spirit. These latter, obviously easily read into his words, and when they cannot do so they put them there. Tukaram was one of the greatest Protestant's, and, as such he did not hesitate to take such a religion as is still influencing the devotional trend of his own people. In the case of us Christians he is one of the most powerful of sidelights, a few weeks ago he threw me into the very arms of my Lord.' \(^8\)

At the close of an examination into 'The Alleged Indeliberatedness of Indian Theism to Christianity' the conclusion is reached:

'Certainly either Tukaram was actually in contact with Christian teaching, which is by no means improbable, or he was a remarkable instance of a man naturaller Christian.' \(^9\)

Of these two alternatives we incline to the second, as there has been no evidence adduced as yet pointing to Tukaram ever having been 'in contact with Christian teaching,' and, while he has much kinship with the NT writers, none of the fundamental doctrines of the Christian Church, with the possible exception of faith, can be traced in his poems. His chief influence is indeed so close that a knowledge of his poems, at least in their English translation, should be regarded as an indispensable preparation for missionary work among his people. That nearly three centuries ago Tukaram should have proclaimed so clearly the inefficacy of all merely external rites and should have insisted so constantly on inward experience as the one essential of true religion offers to the Christian evangelist a most useful point of contact with the people of India.

LITRERATURE.—This has been indicated in the footnotes. For a fuller treatment of the subject see J. N. Farquhar, Tukaram, Madras, the press. J. F. Edwards, Life and Teaching of Tukaram, Madras, the press.

TULASI-DASA.—1. Life.—Little is certainly known about the life of Tulasi-Dasa (commonly pronounced Tulasi Dasa), the greatest Vaishnav in Northern India, beyond two or three dates and a few accidental particulars mentioned in his writings.

A life of the poet is said to have been written by his friend and companion, Vrindavan Dasa. It is referred to by Siva

TULASI-DASA

Situna, who wrote in the latter half of the 16th cent., but no copy of it is now known to exist. We have two personal documents relating to the poet— a deed of 1596, and an entire book of the Rāmacarita-mānasā, both in his own handwriting.

There are numerous traditions concerning him, some of which may be accepted with considerable confidence. He is said to have been born at Rājāpur, in the present United Provinces of Bāndā, about A.D. 1552, and to have been a Sarvarā ḍitā, known by the name of Tūlasi-Dāsa. His father's name was Atmārāma, and his mother's Hulasā, his own name being Rāma Bālā. In one of his verses he tells us that he was abandoned by his parents immediately after his birth, and with great probability it is assumed from this that he was one of those unfortunate children known as abhukta-vanā, born under the beginning of the currency of the asterism Mula. Such a child is said to be destined to destroy his father, and the only remedy is to abandon it on its birth, or, at best, so to arrange that its parents shall not look upon its face during the first eight years of its existence. He lived for some time in the service of the Sādhu, who, in token of the sacred leaf used in the ceremony of purification of the infant, re-named him Tulasī-Dāsa (Servant of the tulasi-plant), and gave him this name he was henceforth known. To this Sādhu, who was probably also his guru, or spiritual preceptor, Narahāli-Dāsa, he wandered all over Northern India. From his guru he learnt the story of Rāma, but owing to his ignorance (of Sanskrit) he could not at first grasp its importance. At length, after frequent hearings, he learnt it so far as his intelligence would allow, and then determined to write it in the vernacular for his own benefit and for that of others similarly situated. When he grew up, he lived as a householder, and married a girl named Ratnāvalī, the daughter of one Dīnāndānī Pā-thaka, by whom he had a son named Tāraka, who died at an early age. He was devoted to his wife and could not bear to be separated from her. She was a firm Vaishnava, and on one occasion, when she had gone out in a visit to a person of her own level, he reproached him for following her and not showing equal affection to Rāma. Struck with remorse, Tulasī at once left her and took to an ascetic life. He is said to have seen her only once again in after-years, and then not to have recognized her. With his new life he went to the region of the Āranyakas, and subsequently in Benares, he made long journeys over Northern India preaching the gospel of Rāma. At first he met with considerable opposition, but his life and attractive personality conquered all obstacles, and, even in Benares, the head-quarters of Siva-worship, he won universal respect. His fame as a poet spread far and wide, and gathered him many friends and followers, the most famous of whom were Rājā Māna-sūhā (Māha Singh of Amber († 1614) and the celebréted 'Abdu 'r-Rājīm Ḫānāna (1560-1627). A wealthy landowner of Benares named Tōdar Māl (which is to be distinguished from the more attractive personally named Tōdar Māl which was one of his closest friends, and a touching poem which Tulasī-Dāsa wrote on his death has survived among his most cherished verses. After Tōdar Māl's death his heirs quarrelled as to the disposal of the property, and referred the matter to Tulasī-Dāsa as arbitrator. The deed of arbitration in his handwriting is still in existence and gives a strikingly attractive personally characterized, of the disposal of the property, and referred the matter to Tulasī-Dāsa as arbitrator. The deed of arbitration in his handwriting is still in existence and gives a strikingly attractive personally characterized account of the arbitration.

Bubonic plague appeared in India in 1616, and lasted for eight years. The poet seems to have been attacked by it, for one of his minor works, the Hamsanām Bāthaka, describes his sufferings from such a disease. After temporary relief he had a relapse and died in Benares in A.D. 1623.

2. Works.—More than twenty formal works, besides numerous short poems, have been attributed to Tulasī-Dāsa, but some of these are certainly apocryphal, and others are of doubtful authenticity. The most generally accepted list mentions twelve, viz. six minor and six major. The minor works are the following:— (1) Rāma-lōli-Nahachakha, (2) Vairāgya-sandipīni, (3) Barowai-Rāmāyaṇa, (4) Jānakī-mangala, (5) Pārvati-mangala, (6) Rāmāyaṇa. The six major works are:— (7) Kṛṣṇa-sandhyā (8) Vina-sandhiprākāsa, (9) Gītāvān, (10) Kevatlata, (11) Dōdhdhā, and (12) Rāmacarita-mānasā.

Tulasī-Dāsa was a Smārta Vaishnava; i.e., while a worshipper of Rāma-chandra, he also adhered to the tradition (concerning the dvaita (or the organised sect) Kāśika, who was a dedicated worshipper of Śiva, but who also followed the general religious customs of his caste. This involved, among other things, the worship of the god Śiva and the practice of eating his meals at a distance. But in this respect he differed from the more thorough Vaiśānaka Śivas, who had abandoned tradition, and who worshipped only Viṣṇu in one or other of his incarnations and ate in company. During his stay in Ayodhya he associated with these Vaishnavaśvetas and there composed the first three cantos of the Rāmacarita-mānasā. Subsequently, being unable to agree with them on points of discipline, he migrated to Benares and there compiled the rest of this work.

His devotion to Rāma-chandra as an incarnation of the Supreme is illustrated by the above list of works. With two exceptions (nos. 5 and 7) they all deal directly or indirectly with that deity. No. 7 is a collection of hymns in praise of Kṛṣṇa, another incarnation of Viṣṇu. No. 5 is a short poem describing Śiva's marriage with Pārvati, a subject also treated at some length as an episode in the Rāmacarita-mānasā. As already stated, Tulasī-Dāsa paid special reverence to Śiva as a great and kindly god, although by no means on a level with Rāma-chandra. It was Śiva who, out of love for the world, communicated Rāma's history to Pārvati and thereby saved humanity from the mudra of death. A brief notice of each of the works named above will suffice.

(1) Rāma-lōli-Nahachakha.—The genuineness of this is disputed. It is a short poem describing the 'nailed' ceremony at the investiture of Rāma-chandra with the sacred caste-thread. This ceremony is a village rite still kept up on such occasions and at weddings in Oudh and Bahar, and the whole poem is in rural style and in rural metre.

(2) Vairāgya-sandipīni ('Kindling of Quietism') describes the true nature of holiness. It advocates vairāgya (absence of passion), and the description of the perfect man, and the surrender to the Deity is not without poetic beauty.

(3) The Barowai Rāmāyaṇa is a summary of the history of Rāma-chandra in the Barawai metre. It is very short and, as we have it, probably incomplete. It is rejected by some authorities.

(4) Jānakī-mangala and (5) Pārvati-mangala.—These are two poems, probably composed in celebration of the marriages of Siṭā to Rāma-chandra and of Pārvatī to Śiva respectively. The authenticity of both is doubtful. In no. 4 the order of events differs from that given by the poet in his more important works. The

1 No fewer than four places claim the honour of being his birthplace. The claim of Rājāpur is that best established. His caste has been a subject of dispute. According to some authorities, he was a Kāśika Brahma.
2 Vinay-prakāsa, 227, 2.
3 Asta, 1, 50.
4 He was never a good Sanskrit scholar, and some of his few verses in that language contain grammatical blunders.

2 The whole has been translated by G. A. Grierson in J. ASI, 1896.

The most brothers. poet, have not, again is the present writer's opinion, and, if it is correct, the final recension must have been sufficiently long after the composition of the Räma Satrai for the latter to have become recognized as the last of the fifth chapter gives in great detail what purports to be the poet's doctrine regarding works as opposed to faith.3 The difficulty in the way of accepting the work now called the Dihāsī is that it is largely composed of verses already occurring in the Rāma-charita-mānas, the Rāmājī, and the Rāma Satrai itself. Out of a total of 572 verses no fewer than 258 have been so identified, and there are quite possibly more. If genuine, there must have been a nucleus of original verses to which subsequent admirers have added others, so as to compile a kind of anthology of the poet's best delhi. This is the present writer's opinion, and, if it is correct, the final recension must have been sufficiently long after the composition of the Räma Satrai for the latter to have become recognized as that of the fifth chapter.

(10) The Rāma-charita-mānas ('Lake of the Gestes of Rāma') is commonly called the Tulsāi-kyta Rāmāyaṇa. This epic, the poet's greatest achievement, and also, in point of time, probably his first, was begun in A.D. 1574, when its author was about 43 years of age, and upon its fame chiefly rests. It has been described as the Bible of ninety millions of people, and is certainly more familiar to every Hindu of Northern India than our Bible is to the average English peasant. There is not a Hindu of Hindostan proper, whether prince or cottar, who does not know its most famous verses and whose conversation is not coloured by it. Its similes have entered even into the language of Indian Muslims, some of whose most ordinary idioms, though they know it not, made their first appearance. The life of Ramachandra, considered as an incarnation of the Supreme, is here dealt with in a formal epic. The subject is the same as that of the celebrated Sanskrit Rāmāyaṇa of Valmiki, but the epic of Tulasī-Dāsa is in no way a sinpli-
tion of that work. We have an independent story, but in both, the treatment, the world for itself.

The author himself states that he has taken his account from many different sources, and it has been shown that the part of Vālimikī's work, the Adhyāgītā Rāmaśāna (a section of the Brahmāṇḍa Purāṇa), the Bhūṣaṇa Rāmaśāna, the Vasūṭa Saṁhitā, and the Prāṣasanṇa-Rāgaṇī attributed to Jayādeva, have been included.

But what is interesting in the estimation in which the work is held in India, the following very popular legend may be quoted. Rāmaśāna denoted his approval of Vālimikī's epic by appending his signature to a copy of it. Thereupon the monkey-god Hanumāna, with his nails, wrote another Rāmaśāna upon a rock, and tossed it to Rāma. The latter approved of it also, but said that, as he had already signed Vālimikī's copy, he could not sign another; he had better show it to that poet. He did so, and, as Vālimikī saw that it would eclipse his own work, by a stratagem he induced Hanumāna to sling it into the sea. Hanumānas is, in fact, expressing a prophet-like sentiment. The poet would himself inspire a Brāhmaṇa named Tulasi, who would recite his (Hanumāna's) poem in the tongue of the common people and destroy the fame of Vālimikī's epic.

There can be no doubt that its reputation is well deserved. The Rāmaśāra-śāna is one of the great epics. It has its proximities and its episodes that are not so closely related that one can read it without being impressed by its high poetic merit. The various characters are vividly and consistently described, and live and move with all the dignity of a heroic age. The style is less inflated than that of the Bhāratīya Ramāyaṇa, but it follows the infinite pathos of the passage describing Rāma's farewell to his mother; the rugged, harsh language telling of the horrors of the battlefield; whenever occasion demands. It is a thoroughly poetic and didactic method of dealing with narrative, teeming with similes drawn not from the traditions of the schools, but from nature herself; and, suffusing all, a life-giving atmosphere of divinity pervades. Tulasi is able to cast them and plead that the end justifies the means. Or, again, the foulest treachery, such as that of Vibhīṣaṇa towards his brothers, is extolled because the traitor is suspected and rewarded by the hero. But this is one of the obligations of the story and of the author's view of the divinity of Rāma. The human characters are to our ideas far more sympathetic. There are those whom the poet has tried to make attractive: Lakṣmaṇa, the ideal of an Indian wife and mother; Bharata, constant and tender, the model of the true bhakt; and Rāvaṇa—the Satan of the epic—destined to failure, and fighting with all his demon forces against his fate.

One of the most striking features of the poem is the writer's capacity for conveying the message. Even of other literature, Indian poetry has its stock similes—the lotus, the water-lily, the bee, the moon, and so on. Even the best Sanskrit poets often give the impression of being largely the work of the closet, not of the open air. Tulasi-Dasa employed the same old similes—he would not have been Indian if he had avoided them—but thousands of others are his own. Little expressions—the turn of a sentence or an apt epithet—show how he had seen and studied the world for himself.

It would be a great mistake to look upon him merely as an ascetic. He was a man that had lived. He had been a householder—a word that means to an Indian that he was enjoying the pleasures of a wedded life, the joy of clasping an infant son to his bosom, and that he had all the duties and responsibilities that such a step had attained his prime. He appealed not to scholars, but to his countrymen as a whole, the people whom he knew. He had mixed with them, begged from them, prayed with them, shared their pleasures and their yearnings, and, on the other hand, had contracted intimate friendships with the emperor's court. All this we find reflected in the pages of his writings.

His works have suffered the fate which has befallen other famous Indian authors. Imitators have written poems which they have passed off as his, and numerous kēpitas or apocryphal additions, have been inserted in his epic. He has suffered too from the attention of commentators without end, most of whom have wasted energy in discovering hidden meanings in the simplest passages, while they discreetly avoid the real difficulties. Finally, his epic has actually been translated into Sanskrit, and there are critics who have maintained that the translation is the original, and that the Rāmaśāra-śāna is an empty shell of nothing but a prefixed fragment.

3. Religious ideas. The religious ideas of the poet are of great importance in the history of India. Seventh in descent of teacher and pupil from the great Rāmaśāna (q.v.), he was a thorough Vaishnava and follower of the Bhakti-Márta (q.v.). He taught that there is but one Supreme Being; and that man is by nature sinful and unworthy of salvation. Nevertheless the Supreme, in His infinite mercy, became incarnate in the person of Rāmaśāna to relieve the world from sin. Rāma has returned to heaven, where, besides being the ineffable Supreme, he is still Rāma, and whose miracles, in consequence, we have now a God who is not only infinitely merciful, but who knows by actual experience how great are man's infirmities and temptations, and who, through Himself incapable of sin, is ever ready to extend His help to the sinful being who calls upon Him. On all this follows, as a corollary, the doctrine of the universal brotherhood of man, and the duty which man owes to his neighbour. His definition of sin is that which is contrary to the will of Rāma, and it is only by acknowledging this, and by abandoning himself to utter loving faith in Rāma's power to save him from its thraldom, that a man can escape from the weary and tedious process of the fatherhood of God and of the necessity of bhakti, or devotional faith, had long been known. In Northern India Rāmaśāna had been its great exponent, and Tulasi-Dasa put forward no novelty. His claim for consideration is that his teaching was successful. His own pure life and the magic of his poetry have done for the Bhakti-Márta what the eloquence of hundreds of other teachers failed to do. The fact that he was a Śārīta Vaishnava must not be forgotten. He belonged to no sect, and founded no sect, but was an ordinary Hindu, accepting all the Hindu mythological machine. He was the Supreme, he paid adoration to Śiva and the other gods. His attitude to them was much the same as that of the official teaching of one branch of the Christian Church: to Rāma he offered hārpeya, to the others ājñyā, to Śiva uṣṇa-vaśya. A few words must be devoted to the poet's use of the word māṇya. Occasionally he refers to it in terms that can only be interpreted as meaning that which hides Brāhma from the soul—the māṇya of the Śiva-worshiping Vedāntins, to whose doctrines he was strongly opposed. But all his
TUNGUS.—I. Area, distribution, number, and history.—The name Tungus is usually derived from the word Tung-hung ('Eastern barbarians'), by which these people were known to the ancient Chinese. They call themselves Aranilk (sing. Aravanki) or Tanguts. The Tungus are one of the most widely distributed of all the native tribes of Siberia; they live in small groups all over Siberia as far west as the river Yez, as far east as the island of Sakhalin, as far north as the Arctic shore, and as far south as the middle of Manchuria. In spite of this distribution, the language and social anthropology of these tribes are the least known of all the Siberian peoples, the Samojed, Turkic and Mongolic tribes, and Koryak and Chukchi, even the Gilyak and the Ainu, having had more space given to them in anthropological literature than the Tungus. As a reason for this may be cited the fact that the Tungus usually live in the interior of the continent, in places difficult of access and, with the exception of the Lamut, far away from the coast. The total number of Tungus belonging to the various tribes was 76,504 in 1897, while in 1911 there were only 75,204.

The Tungusic tribes are usually divided into Northern Tungusic and Southern Tungusic. Of these the former is the Tungusic of (1) Samogir, (2) Nigidal, (3) Olehi, (4) Oroki, (5) Maganu, (6) Tungus proper (including Lamut and Orochen). The Southern Tungusic group comprises: (1) Manchu, (2) Daur, (3) Solon, (4) Gold, (5) Oroche.

The Northern Tungus are at the stage of reindeer culture like the Magadelenian man in Europe, though at the same time they know the use of iron, which they brought from their more southern home. They belong to the Neo-Siberian group. The Southern Tungus are horse nomads, cattle-breeders, and fishermen, and in some places also agriculturists, and in the ten tribes of the Seka cul-ture the Upper India has been saved from this by Tulasi-Dasa.

LITERATURE.—G. A. Grierson, ‘Notes on Tulasi Das,’ I A 23, 1913, xxv. (This is the only complete account in English of the poet’s life and works; a few errors in it have been corrected in the preceding pages). Tulasi-Dasa, Poems and Folk-tales, ed. and tr. by G. A. Grierson, 1897, pp. 1-417. (A general history of Tungusic literature in the same language).

Numerous ed’s of all the poet’s works have been published in India, but few of them possess critical value. Two excellent ed’s of the Rama-charita-mahabharata have been published, viz. that issued in 1893 by the Kaj-Falvi-vidhan Press in Ranipur and that issued in 1907 by the Kani Nagari-pracharak Sahib of Benares. Both are critically edited and have elaborate intro-ductory matter on the poet’s life and works. For those not familiar with the language the writer can recommend a good ed., with a line-for-line Hindi commentary and much general information concerning the poet, by Rama-ionday Bhagab, Nirguna-sarga Press, Bombay, 1904. The same editor has issued a good ed. of the Alhamab-dish, which in the similar ed. of the Vishnu-patricha, this can be recommended to students. It is believed that it is intended to issue all the poet’s works in this series.

A good, if somewhat literal, Eng. tr. of the Rama-charita-mahabharata is that by C. Grant, with an Introd. by F. S. Thunberg, ed. by A. B. Ghosh, Alhamab, 1890-93. It has been several times reprinted in India.

G. A. GRIERSON

TUNGUS

There are several peoples mentioned by the Chinese who can with probability be considered to be Tungus. These are (1) the Usschen, who lived north of the Lia-Tung peninsula and paid tribute in arrows and arrowheads to the emperors of the Tang dynasty; (2) the Manchu; (3) the Keta and Mixi, who occupied an important strategic position in the Korea and north of China before the Manchu; (4) the Yenisei and Gitzhelen, who were the peoples who helped to cause the movement of the Hsiung-nung westward, who in their turn pushed the Yueh-chi (Turks) to the west; (5) the Mian or Buyrj (Turks) who emigrated from the Usschen, the Jen-Deen (Zhu Zhu) rose to power, but they are named not in the 6th., but the 7th. cent., when the Yenisei and Buyrj (Turks) emigrated from the Jen-Deen yoke; (6) the Tung, who in the 5th cent. entered the Usschen; (7) the Khitans, who in the 7th cent. inhabited the valley of Sungari and who were the ancestors of the state of Pohul; (8) the Ilkhan, who in 925 overthrew this dynasty and founded the Liao (iron) dynasty; (9) the Niu-chi (Yueh-chi), who in their turn overthrew the Liao dynasty in 1032; (10) the Mokho (Ukhi); (11) the Altai, who in the 10th cent. inhabited the valley, and who in 1294, the Chinghiz (Golden) Khan subdued them in 1294, but in the 14th. cent. the Altai reasserted themselves and founded the Manchu dynasty, which in 1644 occupied the throne of China after the Ming dynasty and reigned till 1912.

There are certain characteristics and customs common to many of these Tungus, and so we can use the term Tungus for such an extensive use of the bow and arrows with iron or stone blades. The Tungus are divided into four groups: (1) the Usschen-Tungus mix-ture, (2) the best-known and most famous of the Tungus, (3) the Buyrj or Chinghiz (Golden) Khan, and (4) the Altai. (1) Linguistic and ethnological. The Tungus tongue has been considered to be related to Mongolian and Chinese, as also to the Korean. The Tungus tongue is perhaps a most probable, and can be used as the surest means of tracing the existence of Tungus peoples in any given region. In many places the Tungus use another language as well as their own.

As in language, so also in social anthropology and shamanistic religion. We can see a certain connexion between them all the Tungus peoples. But the preservation of their own language is not necessarily an indication of the preservation of their physical characteristics.

3. Physical type.—As has been said, there has been contact between the Chinese, the Mongols, and the Tungus-Manchus since the 11th cent. B.C. and probably earlier, but it was based chiefly on conquest and on intermarriage among members of the royal families. Migrations en masse did not begin, as far as is known, till the 7th cent. and during the time of Chinghiz Khan. It is probable that the Manchus have had some contacts with the Tungus, and that the Tungus have played a greater rôle than is known in the formation of the modern Japanese nation.

The Tungus peoples are often described as being of medium to tall stature, round and low-headed, while the Northern type approaches the type of the Eastern Palaeo-Siberians (low stature, intermediate or long-headed, and horse-riding). This mixture of the Southern Tungus with other neighboring tribes has been going on so long that it is very difficult to make any record of it, and the Manchus and the Chinese are probably the result of the mixture of the population of north-east China, the Northern Tungus, specifically those isolated in the Arctic region, are comparatively unmixed, or in any case it is easy to tell them apart. This is especially true in the case of the Tungus between the Lena and the Yenisei, who live in thoroughly Tungus or Tungus-Yakut land, while the Tungus between the Lena and the Obkhoek Sea live scattered among the Palaeo-Siberians (Koryak, Chukchi, and Yakaghir). The latter were the secondary object of study of the Jesup Expedition of the U.S.A. some ten years ago, while the Tungus between the Yenisei and the Lena were studied by the Oxford-Philadelphian Expedition in 1914—15. The only racial admixture that has to be considered in the case of the Arctic Tungus between the Yenisei and the Lena is with the Yakut.

With the help of the genealogical method in dealing with the social anthropology of the North-Western Tungus (in North Central Siberia) it is possible to distinguish the following grades of Tungus metisiation.

(A) The Tungus, whose genealogical table, as far back as can be traced, shows no admixture of Mongolic or Palaeo-Siberian, is the Tungus-Yakut, who call themselves Tungush, and are such linguistically and socially, but who have begun in the last two generations to intermarry with the Yakuts, who, who were Tungus, but who for a long time have intermarried with the Yakut, and have consequently, physically and linguistically a new type; they consider themselves to be a separate nation, their language approaches more nearly to the Yakut, and in physique they look more like the Tungus; (9) the Tungusi-Siberian Yakut, who live in the western part of the Yakutsk territory, and the eastern part of the Turukhan country, all on the Tungus land; the other Yakut call them Tungus (Tungus); they are a minority among the Tungus.

The Tungus-Yakut approach in their stature, and head and facial forms, to the Yakut (q.v.), who, on the whole, are of a more Mongolic type than the Northern Tungus, while the Dolgan, though they stand further from the pure Tungus than the Tungus-Yakut do, are yet in all these three aspects more like the Tungus than like the Yakut, or we might say, they return to the physical type of the Tungus.

1. Technique.—Most of the Siberian Tungus are at the stage of reindeer-culture, though they differ from such as these reindeer-breede as the Lapps or the Eskimo in that their technique is not so highly specialized and their curvings and draings on reindeer-bone or mammoth-ivory are not so perfect; very few of them have any knowledge of making half-ground huts, most of them still having fur tents similar in structure to those in their original southern home. In spite of centuries spent in a land where there are no horses, or only small Siberian ponies which are used for driving but not for riding, they still preserve their old habits of horse-riding, exchanging the horse for the reindeer. In mythology and religion also their southern origin is apparent from time to time. Thus on the grave of a deceased shaman must be placed drift-wood figures of a goat, a horse, or a dromedary—animals which have not been known to them for many generations.

The Tungus who do not live in the tundra as reindeer-breeders, hunt the forest, are mostly hunters and occasionally horse-cattle-breeder. Only in the Amur and Baikal region do we find stationary groups.

Among the Northern Tungus iron is much more used than among the Samoyeds. Until quite
recently tainting was common among the Tungus of the Yenisei, charcoal alone being used as colouring matter, and no bright colours.

One of the most characteristical features of the original Tungus costume is the beautifully decorated apron, which has in some places degenerated into a small covering for the sexual organs. Birch-bark is not used in the same way as among the Ostyak, but the typical Tungus canoes are made of birch-bark sewn into shape. The Tungus ornaments are typical of a migratory people. They have been borrowed from the people among whom they lived, and have been grouped into one form or another, either the conventionalized zoological-anatomical figures of the Samoyed or the rich ornamental designs of plant form so often met with among the neighbouring tribe of Yakut. Yet in their mode of life the Tungus exhibit more neatness, more cleanliness, and more reserve than any other tribe of Northern Asia, and probably this was the reason for the classic name that Cæsæn gave them, however few he saw. He called them 'the gentry of the Siberian aborigines.'

5. Sociology.—The original Tungus social division was into clans, named after the clan-ancestor by whose river they dwelt. At the present time the remnants of the clans are grouped together into local groups, with local river and other names. This arrangement was followed by the Russian government, and is the basis of their internal organization and government, as far as it goes, rests with their council of elders and a prince, elected for three years and re-elected as many times as they wish. Langa, a Hukachar prince, and a great shaman of the Limipsk Tungus of the Yenisei tundra, has been prince for twenty-five years.

Married people are always known as the 'father of So-and-so' or 'the mother of So-and-so,' even if the Russian Christian name is used—e.g., Ivan's father.

(a) Marriage.—Marriage restrictions are very numerous. Not only are blood-relations and clan-relations debarred from marrying, but two brothers of one family may not marry two sisters of another family. The exchange of children in marriage is not allowed, except among the Panka-gir Tungus. The terminology connected with relationship by marriage is regulated by the age-classes. Thus kynnie would be the name used by the husband for the father, elder brother, and on of a less intimate character, and kynnie for her elder female relatives, while for his wife's younger male relatives he would use the term kuttie, and for her younger female relatives katnie. In marriage there is a special relationship, called bally, between two men who have married sisters. The reindeer which plays a part in the marriage ceremony, i.e. on which the bride rides to the bridegroom's home, is called Havakin (from the god Havaki) among the Yenisei Tungus and Savakin among the Tungus of the Okhotsk region. This reindeer is never used for any work, and is never searched for if he gets lost. When he grows ill or old, he is killed, but not eaten. He might be called the reindeer of the bride's individual spirit. The most important feature of the match-making is the settlement of the kodyu (wicfe).

(b) Birth.—At childbirth the woman is considered unclean, and is obliged to go away from the tent for confinement. After three or four days she returns from her seclusion and is purified by juniper berries. The child is not born until three times (through the kanaiia, Hiekche) says that the placenta is eaten. Among the Tungus of the Yenisei-Lena region the placenta is usually hung on a tree or a pole in a skin bag. On the whole, the Yenisei Tungus gives birth to her child very easily. If, however, there are any complications, the Tungus and also the Yakut woman is placed in a kneeling posture, with her hand fixed to the tent poles, followed by a forcible massage with a log of wood by the woman who attends her. To help his wife, the Tungus husband cuts down a tree and drives a wooden wedge into it. If this has no effect, a shaman is summoned.

(c) Burial.—All the belongings of the dead man are placed near his body. The classical way of burying a man was to dig a grave under the body and put it in a coffin standing on four high poles or on a high platform, while a woman was buried on the ground and covered over with stones. Among the sea and river tribes the dead were often buried in a tent like that of the Russian mode of burial in the ground prevails, except where the ground is frozen. The shaman (tent) where the death occurred is promptly removed, and left. On leaving the place where a dead person had been buried, his relatives used, in olden times, to let fly two or three arrows towards him.

(d) Invocation of a shaman.—A young shaman (haoemsh), who has shown signs of devotion, wisdom, and nervous sensibility, is prepared for his office by an old shaman, who teaches him the secrets of the shaman's art, and who by magic, totemism, or more of frequent intercourse with the young shaman, the old shaman gives him the shaman's coat and drum. The shaman's chief spirits are: kiteg, in the form of a long-serpent, who has power over epidemics and makes the shaman's tent stay put; sissaam, in human form, with eagle's wings, on which he carries the shaman from place to place, who also protects animals from diseases; onkung, a prophet-spirit; and lesser spirits such as khaminy, miryada, torungu.

The shaman's coat (homahok) must be made of wild reindeer hide. His cap (karden) is an iron circle with representations of wild reindeer antlers. His boots are called kanye tuta kypuri, and his belt angapaphun. Hanged from the lower edge of his coat he has a fringe of reindeer or fox-skin, called kiarukta. A fringe at the back, longer than the others, and with a bell at the end, is called virgina. Projecting from his shoulder is the tuut talk eaul of the shaman (karnina). On the gilde (iron circles attached near the ankles at the back) hang pieces of iron (bustler), which are the shaman's arrows against koryi (malevolent spirits). In the middle of the back of the shaman's coat are hung representations of the sun and moon. The shaman is considered the most important feature of his costume, and the sun is often sewn on a piece of skin taken from the skin of a bear's head. His coat (kDONE) at the back, and ukang, the diver, on the front of the coat. Gieh, a fish (sturgeon) frequently met with, is also represented there, and so too, the long eaul, 'the shaman's duck.' On his apron (bamun kahou) there are also representations of the sun and moon, and the shaman's staff (kamun kynnie) has a human face (of an ancestor) and bear's feet. Sometimes a human face is found on the sun which is hung on the skin from the bear's head. All these accessories suggest ancestor-mand-bear-worship, as also do the traditions. All the objects used by the shaman have their special names; the shaman's cap, e.g., is designated by a different word from that used for an ordinary cap, and, if a common term is used, the word kahou is prefixed. The shaman's drum is oval in shape, and the drumstick, gicho, is long and narrow, with jingles.

6. Gods and spirits.—Animism is highly developed in the Tungus religion. The spirits living everywhere in nature have to be propitiated. They are more or less independent of the highest god, Havaki. The mischievous spirits in folklore are called kushady, and these creatures use a special 'bad language,' which occurs in the tales and is understood by the shaman. The malevolent spirits are called korvi. The Tungus of the Lena live in the village of Tsiga (tsigah) of the north. He has enormous eyes placed outside his face and a flat nose, and the black hair on his head and face is like the tsiga after a storm. He can assume the form of an enormous bear, a wolf, or 1 the wind. The Tungus...
and Yakutsk districts call the kurji spirits buni; to the buni of the water they give the name garan, and to the buni of the earth that of dorokhi. The stronger the influence of Christianity, the worse become the shaman's techniques. Even there are other spirits, the spirit-owners of flies, of various animals, and even of thieves, shuro.

The chief god, Havaki, is anthropomorphic, but is connected with the sun. Sometimes the sun with the face of a man in E is supposed to represent him. Among the Tungus of the present generation the conception of the highest god is very vague, though the conception of spirits living everywhere in nature still has a strong hold on them all, Christian and non-Christian.

7. Sacrifices.—Private sacrifices of food are offered without any special preparations, but the sacrifices to the spirits connected with fertility are more important and must therefore be performed in the presence of a shaman, who knows the method of procedure. Thus the spirit-owner of wild reindeer is propitiated by an offering of the head of a mountain-shoulder. The head of this spirit, according to the Yenisei Tungus, is on the rock Hulgardzakiit, between the Upper Kurkeika and Lake Chirinda. The spirit-owner of lake-fishes is the Hulardzakiit of the east of Lake Chirinda, and at the beginning of the fishing season ceremonies are held to propitiate him. To ensure success in trapping, the Tungus will use in the construction of the traps at least one piece of wood which has been used by a shaman during his shamanistic performances. But the tura, or stick, which is the tree on which the shaman climbs to the sky, is never used for this purpose, being too sacred. It is too koyara—a word used to express an idea similar to that of Melanesian mana.

8. Animal worship.—The veneration of the bear is especially highly developed. When a bear is killed and brought home, a ceremony called buk is held. The heart and liver of the bear are cut into pieces, cooked, and divided among those present (exclusively males). Each person, before eating his piece, bows before the bear and assures him that it was the Russians who killed him, and not the Avankil (Tungus). Another remnant of a ceremonial bear-dance is tkotnedzegyem ('we are simply robbers'). The bear is then hung just as they are in a bag, and hung on a tree. If one bone is lost, the spirit of the bear will hold the hunter responsible for it.

The eagle is also treated with great veneration, and is always carried on horseback in order to kill him. For beyond these animals the Tungus use that adjective which they also use in speaking of heroes, i.e. hoona.

To all other animals which are not especially venerated the Tungus always behave, as they say, 'carefully,' lest the animal should become extinct. When a silt is made in the ear of the reindeer for purposes of identification, the hair that is cut off must not be thrown away, but must be hung on a tree or put in some safe place. The heads and feet of the wild reindeer must not be thrown away; a special platform is sometimes erected for their reception, while the teeth of the wild reindeer are kept as amulets. Moreover, a fox custom which drives the procurers of fox-skins to despair. After the fox has been trapped, his muzzle is cut off and carefully preserved. The skin may then be sold, but the must be placed safely on a platform.

TURKS.—I. ETHNOLOGY.—1. Origin of the name.—The terms 'Turk,' 'Turkish,' and 'Turke' are used in two different senses: to designate either those peoples belonging to the Turke linguistic family or those peoples from Asia who appear from the 9th century to the present time. The first name 'Tur' is much wider than the term 'Turk' and in any case is not synonymous with it. It must be noted that, while we hear of the Turks under that name in S. Russia even in the 1st cent. A.D., they only established themselves in Turkestan ('Land of the Turks'), the country named after them, in the 4th cent. A.D. Before that the country was known as Iran or Iranistan ('Land of the Iranians') and stretched farther west into the present Iran. Thus one must be careful not to confuse the archeology of Turkestan relating to the Iranian period with that which can be ascribed to the Turks.

The earliest information about the Turks, to be found in the Chinese annals from 2356 B.C. onwards, alludes to them under the name of Hsiung-nung, or slaves of the Hsiung, while the name Tu-Kiu, or Tu-Kiu, or Turks, becomes prominent in the 6th cent. A.D. only when a prince of the Assaya dynasty, Tinmen, rose to power. But we hear of the name Tark in connexion with the Turkish invaders of Europe in the pre-Christian era. Pompomius Mela in the 1st cent. A.D. calls them 'Turkes' and Pliny the Elder in the same century uses the name Tyrcae of a people in the neighbourhood of the Don. Though the various Turkic invaders of Eastern and Western Europe were chiefly known by the names of their leaders (Kipchak, Nogai, Seljuk, Osmanli), the name Turk as a generic term for the whole race is that most frequently used up to the present day. The Turks themselves with the exception of some Anatolian Turks call themselves by a dynastic or clan name.

2. Origin of the race.—The Chinese annals refer to the Hsiung-nung as their north-western barbarian neighbours, and make a distinction between them and their north-eastern neighbours, the Tung-hung, afterwards the Tungus. The third Central Asiatic race, the Mongols, do not seem to have been a pedigree, and it is possible that they form a branch of the Tungus or the Turks, or are a combination of both left behind and isolated on the steppes. This may be said of Qassim that the Turks and Tungus are two independent races which entered into the composition of the sub-races of Japan, China, and Tibet. The analysis of the funda-
mental types of both these races shows striking differences, but in comparison with the North and South Asiatic type they may both be called Mongoloid. Even assuming that the Tungus and Turks, and the Mongols, are the ethnological descendants of the original homo Asiaticus, yet, when they first appear in history, the two races differ widely in language, physical type, and culture. If the remains of the type in the upper Yenisei valley with burial masks, some of which are prominently Aryan in character, can be definitely ascribed to the early Turks, who knows whether their Mongoloid type was not after all an acquired character due to their mixture with the Mongoloids? So much for the anthropological evidence as to the origin of the Turks. Not less important from the point of view of the folklorist is the origin of the race as explained by tradition. Perhaps the most wide-spread is the legend (found also among the Mongols) of a she-wolf, or white she-wolf, who found and reared an abandoned boy, subsequently the founder of the Turkish race. This she-wolf, Ak-biuri, saved the little boy from the bad god Erik and brought him to Altun-dagh (‘Golden Mountains’) to an Altun-kii (‘Golden Cave’). The boy began to work for his mother and six days later he began to call her father. De Guignes suggests that this is merely a version of the Roman tradition brought back by the Huns after they returned from their invasion of Europe. But as a matter of fact the story might have travelled in the opposite direction, or the origin might have been independent, for the Chinese describe the shields of the Turks as having representations of a wolf before the approximate date of the Roman story. Then almost as widely spread is the legend of their first ancestor being the eldest son of Japheth, son of Noah. It is hard to determine whether the legend relating to still another ancestor, the son of the virgin-widow, Alanqua, has also a Biblical background.

3. Cradle of the race.—There are several hypotheses as to the geographical position of the original home of the Turks. H. H. Howorth seeks it in the southern parts of the Altai (Altun-dagh). Richthofen considers the region of the Amur, Lena, and Selenga their problematical original home. Parker suggests not the Altai Golden Mountains but some other mountains of the same name in the present Chinese province of Kin-Shan. Recent archaeological discoveries in the Altai-Sayan region as well as of aborigines at the present of these mountains support Howorth’s theory. While it is still difficult to know with certainty to whom to attribute the bronze remains of the Minusinsk, called by the Russians by the vague name of ‘Chud’ remains (Chajoi, ‘stranger’), there is no reason not to suppose that the country was inhabited always by the Turks, who were influenced in their bronze culture by some Iranian people from Central Asia, though also by the Chinese. The investigation of the bronze culture in the region of Kaban (N. Caucasus) will probably throw light on this question. This Kaban culture is found to be more similar to the Minusinsk than to the other bronze

This is important as throwing light on the puzzle of the origin of the Scythians, though no one can doubt now the kinship, if not identity, of the Eastern Scythians and the Turks. If the cradle of the Turks is to be sought in the forest of the Altai, it is clear that the Turks are a sedentary and agricultural mode of life—and the steppes and valleys between the Altai and Baikal are full of evidence of the sedentary culture of this people—it is still true that in comparison with the old Chinese, the Turks, especially their eastern branches, must be considered barbarians. Besides, there never has been a uniform culture spread over the various Turkic nations, nor did they ever live in a mass undisguised by foreign races. This is why it is difficult to be certain whether some of the clans mentioned first by the Chinese and then by the Arab writers can be considered Turks. It is much easier to make this distinction among the contemporary Turks, even though they appear also under various names of Tatar, Tula, or Osmanli.

A few words must be said about the term 'Tatar.' R. G. Latham 1 points out that the term we use the term Tatar or Tartar, the sounder will be our etymology. He also calls attention to the mistake of coupling the Manchus and their dynasty to the Tartars. With the Tatars as the name of the empire, the word 'Tatars' is found in the old Turkish inscriptions of the Orkhon ascribed to Rilge-Khan.2 About this time (8th cent.) the 'Otuz-Tatar' ('Thirty Tatars') lived to the east and south-east of Baikal and were dependent on the Turkish confederacy. Chinese history does not mention them till the 9th century. According to N. A. Aristoff, 3 the Otuz-Tatars were originally Turks, while the Mongolian settlers from Siberia, Bichurin is inclined to call them Mongols. In the same inscription on the Orkhon is a mention of the 'Tokuz-Tatars' ('Nine Tatars').

The term 'Tatar' is closely connected with the term 'Tatan.' 4 The people living in the present Khalka from the 9th cent. were called Tatan. They were divided into many aiinad, or unions of clans. The strongest of these were the Mongol, Taigut, Kere, and Tatar. 5 These were divided into clans, but all of them used the tribal name of Tatan. The Mongols successfully fought the Nunci (Tungus) in the middle of the 12th cent., and towards 1206 the old name in S. Siberia of the Tatan, as used by the Chinese and Arab historical mentions, ties the Turks to the Black Forest of the Altai mountains, from which they spread at an early date over the Yenisei and Ob, no archæological remains can be ascribed to the Samoyed, and no ethnological evidence supports the theory of Cœраст.

The relationship between the Samoyed and Finnic races is still an open question, but in any case historical and archæological evidence of early Finnish culture does not go further east than the Urat (term). By dismissing, therefore, the Samoyed-Altaic theory, one dismisses also the claim of the Finns to an Altai-Sayan cradle. Possibly further archeological discoveries may reveal still earlier Turkic inscriptions in the Bosporus of the Yenisei, but they can only be found more to the south, since the inscriptions to the east of the Yenisei, i.e. the Orkhon, are one or more hundred years later. The relation between the Mongols and the early Finnic and archæological remains of the steppes of the Black Sea attributed to the Scythians has been recently studied carefully, and a close resemblance was found. 6

The relation between the Mansi and the early Finnic and archæological remains of the steppes of the Black Sea attributed to the Scythians has been recently studied carefully, and a close resemblance was found. 6

5 Ib. i. 239, 231-237.
von Klaproth,1 confuse the two names Tatan and Tatar.

The first people to call all Mongols Tatars were probably the Russians, and they gave this name among the tribes which had settled along the Volga, and who see not even to have been Tatan but various Turks brought within the Mongol-Tatar army, who after the death of Jenghiz Khan were called the ‘hus’s, (2) their own name, (3) the Turks, (4) part of the Turkmans, (5) part of the Uzbegs. The village- and town-dwellers are; (6) Sarts, (7) Taranehli, (8) most of the Uzbegs (with the Kipekzak Turks), (9) the Turks, and (10) the Kirgis, and Karagass. The most genuine Turks are those ‘Tatars’ who inhabit the region of the Altai forests—the ‘Chern Tatara’.

II. CENTRAL ASIATIC TURKS.—The Central Asiatic Turks, all of whom are Mahommedans, can be divided according to their mode of life into (a) steppe nomads, and (b) village- or town-dwellers. The steppe nomads are; (1) the Kirgis or Kazak, (2) the Kirgiz, (3) the Tukshu, (4) part of the Turkmans, (5) part of the Uzbegs. The village- and town-dwellers are; (6) Sarts, (7) Taranehli, (8) most of the Uzbegs (with the Kipekzak Turks), and (9) the Kirgis. The Kirgis live in the northern and eastern part of the Aral-Caspien basin, and in the Orenburg steppos, so they are lowlanders. The Tatar-Kirgis live on the slopes of Pamir, Altai, and Tien Shan. They are mountain-take. There are, however, other Kirgis, to whom this name may be applied historically and ethnologically, who lived from the 6th century A.D. in the Yenisei valley and migrated to Semirechie, forced forward by the advances of the Russians in the 18th century. They are often identified with the ‘Khaks’ (Castrens, Klaproth, K. Radowoff), and the inscriptions found in the valley of S. Yenisei are attributed to them. The Kirgis-Kazak call themselves Kazak, kaz meaning ‘goose,’ zog meaning ‘crow,’ i.e. the steppe birds, and the steppe. The Russians call them Kirgis-Kazak to distinguish them from their own Cossacks (Kazak). The Kirgis-Kazak derive themselves from the Uzbeg, and they derive the Kara-Kirgis from dogs. But the Kara-Kirgis call themselves brothers of the Kirgis-Kazak, and in fact are probably one of their branches. Out of 47 millions of these Kazak only about 400,000 are Kara-Kirgis.

The Kirgis-Kazak were divided into three groups, called orda—the southern, or great orda, ‘Ulus-dschus,’ the little orda, ‘Klihi-dschus,’ to the west, towards European Russia, and the middle orda, ‘Orta-dschus,’ in the typical steppe country. But, when they began to mix with one another and to increase in numbers, they divided into clans, and each clan had its own tanga, or clan symbol, with which the horses and dromedaries were marked. The heads of the clans were called Sultans, while the nobility was called Tiuri or Ak-sneu, ‘White Bones.’ They trace their ancestry from Jenghiz Khan, notwithstanding their standing of the Kirgis-Kazak, in the district, and the other people were called Kara-Sneu, ‘Black Bones.’ Lately, however, marriage prohibitions between these castes have been withdrawn, and the social division is based on material considerations.

The felt hut of the Kirgis is called yurta, and a group of yurta is called aul. Herds of sheep, horses, and dromedaries are their chief form of property. In sharp contrast to their lightly-bred houses their graves, especially among the Turkestan and Semirechie Kirgis. They look like small towers and are made of bricks and clay. The subjugation of the Kirgis by the Russians began in 1734 and took more years than during the Great War some groups of Kirgis considered themselves independent.

2. KARA-KALPAK.—The Kara-Kalpak, or ‘Black Caps,’ and akin to the Kirgis-Kazak, live in Turkestan, especially in the Syr-Daria district, where they form half of the population. They number about 134,000 (1911). They seem to be taller than the other Kirgis, and lead half-sedenarian, living part of their days being agriculturists. Some 20,000 of them live in Khiva.

3. SARTS.—The Sarts (1,847,000 in 1911) were originally a mixture of the original Iranian inhabitants, the Tajik, with their Tatarian conquerors,
TURKS

The Usbeg. They busy themselves with commerce, but occasionally take to agriculture and cotton-growing, in which they are not as successful as the Tajiks, though they know the use of the arida, irrigation channels. All the Sarts speak Turkish, and are Muhammadans (Sunnite); they have made some Persian terms and a few words of this language, and a physical type they approach nearer to the Iranians.

4. Taranchi.—The Taranchi are very like the Sarts. They also live in winter in villages, biskak, and their summer homes are called akalk. They migrated to Russian Turkistan from Kuldja at the same time as the Dungan after Kuldja passed to China. They number about 83,000 (1911) and live in the Semirechie country, in the II basin, and partly in the Transcaspian country. They are agriculturists, especially busying themselves with vegetable gardens, but prefer commerce. They are Muhammadans, but their women do not cover their faces as the Sart women do.

Besides the Taranchi there are various Turkish tribes on the Eastern slopes of the Tian-Shan, in Kashgar, Yarkand, and Khotan, who are the supposed descendants of the Uigur. Their language is called Tush and it is possible that one of the oldest types of Turkish. They form the most easterly branch of the Central Asiatic Turks, and probably remained behind when the other races moved westwards. They ruled it in Kashgaria from the 10th to the 12th century. Though in time they became Muhammadans, early Nestorian teaching has left its traces; they still use the Syriac alphabet and possess a book of the 11th cent. in this writing, called Kudatun Bilkik. They are a 'free self-governing people.' Some of them have been to Mecca (800 miles to the Siberian Railway), then through Odessa to Astrakhan and the Transcaspian Railway, and have been to Samarkand and the Sinkiang districts.

The Kirei of N.W. Mongolia are supposed to have come from the source of the Amur. In the 11th and 12th centuries the Kirei were an important power, and were probably of Nestorian creeds. Whether the mystical Prosor John (a Christian priest who reigned in some Christian Asiatic kingdom) was their king it is difficult to say. They are not heard of for a long period after the flight of the Khan to the Dungan from the Buddhist Mongols in being Muhammadans.

They live on the banks of the Upper or Black Irkut and the greater part of the Western Altai pastures and the Jungaria plains as far as Lake Zaisan. They train hawks, falcons, and golden eagles for hunting such game as gazelles, foxes, and even wolves. Like the Kazak, they claim Jenghiz Khan (a Mongol) as their ancestor.

5. Usbeg.—The Usbeg (about 800,000 in 1911; including Kipekchak, about 660,000) form the majority of the inhabitants of the Samarkand district and parts of Fergana and Syr-Daria districts. In Bokhara and Khiva, they are the ruling people, like the Osmanli in Turkey. Their name is probably derived from Usbeg Khan of the Golden Horde (1312-40); in the 16th cent. they founded in Turkestan the Khanates of Khiva and Bokhara. Their language is divided into three varieties: Turks, Iranians, and Mongols. The Turkish element is probably predominant, though in the case of the Usbeg of Khiva it is the Iranian type that prevails; the Usbeg have been considered nomad life for a sedentary one, their customary law, adat, has lost ground, and is being replaced by written law, shari-iat. Father-right is very strong, but the position of women is on the whole better than among the Sarts and Tajiks. Though the Usbeg now imitate the Sarts in making huts covered with clay, and live in small villages encircled by walls of fortresses, here and there the old felt yurt is still found.

6. Turkomans of Transcaspia.—The Turkomans live to the number of about 600,000 in the Transcaspian territories of Persia, Khiva, and Bukhara. Until the Russian occupation of Merv they were nomad horse-breeders. Although some of them were subjected to Persia, their boast has been that 'not one Persian could cross their frontier with as strong a force as to turn his face.' In the event, the Russians destroyed their power by capturing their principal fortress, Gok-Teppe, and their slave trade has been suppressed. They now live in clay or raw brick houses, and, in some places, in Russian wooden houses. They are Muhammadans, but follow the unwritten customary law. The clan division is still strong, and all migrations are made in clan groups. Endogamy is enforced. As the male population is abundant, the kolybas for the wife is very high, and in some places the unmarried men form 27 per cent of the population. On the whole they seem to be a democratic people.

The chief tribes are the Usbeg (Chaushak), the Irtish (Chaushur), in the north-west part of Us-Turi and the Karakorgol Gulf; (b) the Yomouts and Yomouts, extending from Khiva across the Oxus and along the south bank of the Oxus to Persia; (c) the Golden or Goliks, settled in the Persian province of Ispahan; (d) the Turks, friendly and like the Usbeg of the Turcoman; (e) the Tekkes (Taka), who were the most important tribe when the Russians conquered Transcaspia, and whom the Russians have been the most likely to imitate in their nomadic life, but were driven out by the Kasimkho in 1718 and subsequently occupied the Akko and Merv oases; the Russians inflicted a crushing defeat on them at Gok-Teppe in 1811; (f) the Sarts (Sarjaks) were found in the neighborhood of Panis and Yulistan; (g) the Salar (Salors), an old and important tribe, suffered much in the course of fights with the Tekkes, and in 1857 migrated to Zarabad in Persian territory near the Hari- rud; (h) the Ersats (Ersaks) are now found chiefly near Khogja Shuk; they were once a very important tribe on the upper Oxus.

The Central Asiatic territories, which belong to Persia, have a total population of from five to six millions, of which at least from four to five millions are Turks. Eastern or Chinese Turkistan has a population of about two millions, excluding Kulja and Jungaria. Jungaria has about 600,000 and Kulja 120,000, the overwhelming majority in all these three provinces being Turks. Besides the Turks of the north we find some Mongols, and in the east and south Tibetans.

I. TURKISH TURKS.

1. Kazan Tatars.—The Kazan Tatars number more than a million, and their centre is in the government of Kazan, though they extend on both banks of the Volga as far as the government of Saratov.

2. Astrakhan Tatars.—The Astrakhan Tatars, to the number of some 50,000, live at the mouth of the Volga. Some of the Volga Tatars, such as the Cheremiss, Chuvash, and other middle Volga tribes, and the Buriats, who emigrated in large numbers from the Urals, have Ugrian origin, but they are now Turks in speech and Muhammadans in creed and social life. Numerism was introduced among the Volga Turks in the 15th century.

3. The Bashkir. The government of Orenburg
is a great district for the Mordvis and the Bashkir. The latter are also found in Ufa, Perm, Samara, and Kazan. The former, says that the Bashkir are as entirely Turks in language and features as are the Kirgis. They are shepherds, herdsmen, but above all bee-masters. After the battle of 1532, when the power of the Tartars of the Caspian and the Crimea was subdued, they submitted themselves to Russia, against whom they have not ceased to rebel. Their number is about 392,000.

4. Teptya.—A typical mixture of races, something like that of peoples of Siberia, where it is difficult to define which racial element predominates, are the Teptya. When the Khanate of Kazan fell, a mixed population of Turks, Tchernomis, Tovatch, Chuvashes, and Mordvis fled to the east of Ural; out of these has arisen a population which the other Turkish tribes call Teptya; they are partly shamanistic, partly Muhammadan.

iv. The Fontus or Crimean and Nogai Tartars.—The Khanate of the Crimea, originally Nogai (a political division of Tartars similar to the Kipchak who came there in the 13th cent.), was by the middle of the 16th cent. more or less Osmanli politically. In 1778 they became independent, but in 1874 became subject to Russia. They are known as excellent agriculturists and growers of grapes and tobacco.

The Nogais became the Crimean Tartars who migrated there before the Nogai in the 11th or 12th cent. from Asia Minor, and are probably a branch of the Seljuk, are shepherds. The culture of the Crimean Tartars is more like that of Kazan and Astrakhan Tartars, though a part of the Dagestanes. Their total number is about 300,000. The same Nogai Tartars are to be found in Lithuania and Rumania to the number of 5000. They are now mostly Christian, and mixed with the local population.

Another branch of the Nogai occupied the country between the Tobol and the Yakai rivers at the beginning of the 17th cent. They were transplanted by Peter the Great to the banks of the Kuma and Kuban, but a small group remained behind at the mouth of the Volga and are called Kandar Tartars.

The Nogais are very Mongol in physiognomy. Some pay tribute to them the tamul of the Orenburg government.

v. Western Turks.—1. Turks of the Caucasus.

The Turks of the Caucasus—properly speaking, the majority of the aboriginals of the province of which Tabriz is the capital. They number about two millions. They seem to be Turks speaking a Yagatai dialect, which invaded Persia during the Seljuk period (11th cent.). They are also called iliketi, i.e., tribes or clans. Each clan has its own ilkhani, appointed by the Shah.

Some of these clans are: (a) the Kajars, near Astarabad; the present dynasty of Persian Shahs comes from this tribe; (b) the Aybars of Azarbaijan province (a group of these immigrants to Anatolia and live now in anti-Turks); (c) the Shokaks; (d) the Karakynnyu; (e) the Karagamili; (f) the Babila; (g) the Imunlu; (h) the Kishakhal, who probably arrived at Herat before the Persians.

Azarbaijan Tartars are mixed with the Persians; other Turks of the Caucasus, living in the mountains along the upper parts of the rivers Chechek, Hakina, and Aklan, are mixed with the natives of the Caucasus and are physically of local type.

2. Turks of Anatolia.—(a) Osmanli and Seljuk.

The term Osmani or Ottoman, used in a strict sense, is a descendant of Osman, the chief who gathered round him a nation at the end of the 13th and beginning of the 14th cent. Recent researches have proved that the Osmani Turks (Anatolians) were the native race of the plains of Eastern Europe never called themselves Turks, but always

Osmani (a tribe of Turks who lived in Persia for a considerable time before they moved to Asia Minor. It was probably as refugees before the advance of the army of Jenghiz Khan that they appeared in the 13th cent. and with the permission of the Seljuks of Konia settled on the Asiatic remnants of the Byzantine empire. As the Osmanli had written their name in the capture of Constantinople, all that we know about their early history is founded on tradition. Their clan is supposed to be descended from Khorsan, and they are known to have been a branch of the Tartars. They soon took to the war, and by the end of the 15th cent., stopped but for a very short time the success of the Osmanli in Europe. If we consider that the Osmanli were originally only a small clan, and that the Seljuk and other Turks came to them, and that they were dealt with them, we must conclude that the bulk of the Osmanli nation was recruited from some race other than the Turkis. Recently the name Osmani became also the fighting name of the modern Ottomans. It was the political unrest in Europe that helped the descendants of Osman to conquer all the Balkan Peninsula and Byzantium. The invasion of Asia Minor by Timur at the beginning of the 15th cent. stopped but for a very short time the success of the Osmanli in Europe. If we consider that the Osmanli were originally only a small clan, and that the Seljuk and other Turks came to them, and that they were dealt with them, we must conclude that the bulk of the Osmanli nation was recruited from some race other than the Turkis. Recently the name Osmani became also the fighting name of the modern Ottomans.

Many of the Turks of the old Byzantium who belonged to the Osmanli empire were not Osmanli in the strict sense. Thus the supposed remnants of the Seljuk of the 11th cent. are called Konots. It is interesting to note that Byzantine authors mention a Turkish colony which settled in Macedonia on the river Vardar in the 9th cent. and mixed with the local population.

(b) Turkormans.—The Turkormans of Anatolia are spread all over Anatolia, but are specially numerous in the central part and in E. Taurs. They are more Mongolian in type than the Osmanli or Seljuk. They are nomads, but not to the same extent as the Yuruk. Their summer residences (yalı) are close to their winter houses (kışhâ). Some of them are Shārans, others Sunnites. They seem to have been first heard of in Anatolia in the 12th cent. and are mentioned by the historians Nicetas and Anna Comnenus as "Turcomans." They were opposing both Seljuk and Ottoman rule and probably migrated from C. Asia under their own political régime.

(c) Yuruka.—The Yuraks live chiefly in the mountains, but also in the plains from Smyrna to Mo E. Taurs. They are typical nomads.

Old ethnologists sometimes mistook the religious communities of the Muslimated sects for Turkish nationhood. In Turkey, the Kızıl-Bash (q.v.), or Red Heads, living in the Angora region of Asia Minor, Persia, Afghanistan, and the Caucasus.

III. Religion.—We shall deal only with the religion of the Turks before they accepted Muslimahmânism; it has persisted up till now among some Turks of Central Asia and Siberia. There is evidence (the Buddhist writings in Uigur character that some of the Central Asiatic Turks were followers of Buddha about the 8th cent. Still more has been heard about Christian Nestorian influences. In fact, there is a permanent sign of these in the form of Uigur written characters modelled probably on the Sogdian. The Arals captured the Samanid and the Turkmundan in Central Asia was introduced later, and to some extent it is still spreading. The original religion of the Turks is a shamanism of
assist at the ceremony, which is held on the top of a mountain of sacred birch spiny. The old
fire (suyu' ol) is made, and after many incantations
a new fire is lighted from the old one. It is pro-
tected by the shamans lest it should go out, which
would mean a catastrophe for the tribe. A be-
gost or a ram is sacrificed, but no blood must be
shed and no cry heard from the sacrificial animal.
During the sacrifice to Yulgen among the
Altaians similar precautions are taken, and the
whole fire-keepers of the kitchen fire boiled on
the 'old fire,' while the hind-quarters are boiled
on the new fire. During both ceremonies each head of
a family attaches a thread of flax to the sacred
birches—that is the path for their wishes to go to
the high being—and eagle feathers attached to the
threads carry them farther up. The meat boiled
on the old fire is then taken round in the direction
of the sun and burnt on the same fire. If the
smoke goes up in a straight line, the sacrifice is
accepted. Then only a feast is held, and

the choicest meat is offered to the kori shaman, or
medicine-man. Among the Kirgiz he is called
baka, if belonging to the same clan, or dama, if
belonging to another clan. The meat prepared
on the new fire is consumed, while remnants of
the feast together with the implements used are burnt
again on the old fire.

The birch is held in a very important role in all
Turkic ceremonies, and, whether the Turks live in
steps or tundras, birches are either brought from
the forest regions or are symbolized by driftwood
decorations. This as well as veneration of forest animals
and birds (and not steppe or tundra animals) seems
to point again to the forest origin of the race.

The summer sacrifice to Yulgen (called also Bai-
Yulgen) lasts for two or three days, and it is usually
on the second day that the shamanistic perfor-
mations are held. The kori is preparing for a
journey to the various spirits and gods living in
the skies above. He ceremonially feels various
spirits represented on his drum. While the
company eats the offered meat, the kori sings:

Accept this, O Kaira Khan!
Master of the drum with six horns
Draw near with the sound of the bell!
When I cry 'Chokh!' make obeisance,
When I cry 'Me!' accept this gift.

Then he offers a garment to Yulgen with a song:

Gifts that no horse can carry—
Ah! Ah! Ah! Ah!
Gifts that no man can lift—
Ah! Ah! Ah! Ah!
Garments with triple coils,
Turn them three before thine eyes,
Let them be a cover for the steeds,
Ah! Ah! Ah! Ah!
Prince Yulgen, full of gladness,
Ah! Ah! Ah! Ah!

Then only the shaman summons all the spirit
assistants represented on the drum to enter it.
He sings and then is silent for a while, and a
noise of various birds and animals, whom he is
initiating, is heard. Then he begins to beat his
drum and to dance round the people, touching
them occasionally with his drum or drumstick.
The fire is extinct, the shaman's voice becomes
weaker, and the sound of the cracking of the
birch in the corner of the room indicates that the
shaman has fled to the skies. Sometimes the kori
gives an account of what he sees while he travels,
sometimes only after coming back. In the sixth
sky he encounters the moon, in the seventh the
sun, and from the highest sky he can reach—only
a few koris reach the ninth sky—he prays to

Yulgen:

1 Lord, to whom three stars are low;
2 Father, begetter of three; bearer of three.
3 The Blue vault that has appeared,
4 The sky that shows itself,
5 The blue cloud that whirls, among

75-76.
TUSHESES AND OTHER PAGAN TRIBES OF THE CAUCASUS

The Tushes, or Tushos, are a people of the Caucasus, who inhabit the region between the Black Sea and the Caspian Sea. They are a semi-pagan people, who have preserved many of their ancient traditions and customs. They are known for their hospitality and their love of music and dance. They are also known for their use of herbs and natural remedies in their daily lives. They have a rich oral tradition, which is passed down from generation to generation. They are a peaceful people, who have lived in harmony with their environment for centuries.

The Tushes have a strong connection to the natural world, and this is reflected in their art and literature. They are known for their beautiful textiles, which are often decorated with patterns that depict their myths and legends. They also have a rich tradition of storytelling, which is passed down from generation to generation.

The Tushes are a proud people, who have a deep respect for their ancestors and their history. They are a people of great spiritual strength, and this is reflected in their devotion to their sacred animal, the Tushes. They believe that the Tushes are a symbol of their connection to the divine, and they honor them in their daily lives.

The Tushes are a people of great beauty, both in their natural surroundings and in their people. They are a people who are proud of their heritage, and they are always ready to share their culture with others. They are a people who are deeply connected to their land, and they are always ready to defend it against those who would seek to take it away from them.
tushes and other pegan tribes of the caucasus

chosen by the khvaz from the community, either for a definite period or for an individual feast. Their name is the same as that of the dasturi, but in the Iranian priesthood the dasturs occupy the highest rank. The duties of the Khevsur dasturs are to receive the barley from the shultas, prepare the fermentation, obtain the wild hops (cultivated hops may not be used), and brew the sacred beer. During this process they must be barefooted, bareheaded, and ungiroted, may not leave the sanctuary, and are forbidden to speak.

While the shultas are all equal in rank, there are various degrees among the dasturs according to the periods for which they are chosen; and, together with the shultas, they administer the finances of the khati.

The real priest of the khati is the khvaz, who is chosen, not by the community, but by the soothsayer (kadogi) or seeress (vakitkhav). A future khvaz is usually a man of standing, the most popular, the best beloved; the only proper servants of the khati may prepare; and darbazi-dwellings and assembly-places are provided for the ministers of the shrine. The sacred vessels (mostly of silver and often bearing Christian symbols) are jealously guarded against profanation or theft; and at high festivals the worshippers drink from them the sacred beer.

As the throne of the celestial khati, the khati, in its aspect of place of prayer and sacrifice, serves as means of communication between heaven and earth, so that in each crisis of life it is visited for prayer to the divinity dwelling there. While almost every village has its own khati, three, all dedicated to St. George (see below [d]), possess special sanctity—those in the villages of Gudani and Khakhmachi, and the khati of Karatsiv. The former is the holiest in Khevsuria, and all three enjoy large estates.

The khati of Gudani is called 'leader of God's hosts' and contains the chief drosha of the Khevsurs. It possesses great power against all evil spirits (hence it is intrinsically) and against disease, insanity, and sterility. The khati of Khakhmachi is the special patron of hunters and thieves, and has peculiar power over the clouds. The khati of Karatsiv is particularly potent against all evil spirits, which appear in the form of hedgehogs, swine, etc.; and his sacrifice, in case of misfortune, is a goat, which, it should be noted, is offered only to evil spirits. In the village of Atake is a khati dedicated to St. Kvirik, lord of the mainland, whom all angels obey, and who has his throne next to God.

Priests.—Some uncertainty prevails concerning the various orders of the priesthood. The lowest rank is that of the shultas, of whom each khati has an annual chosen annual contingent from the community by the khvaz and the dekansosi. The shultas's duties are to guard the property of the sanctuary, to supervise and assist the agricultural work on the land belonging to the khati, and to see that the beaches are guarded. Like the other ministers of the khati, they must lead a blameless life, and for several weeks before each feast intercourse with women is forbidden. They may not enter the dasturi, this privilege being reserved for the higher functionaries.

The next in ascending rank are the dasturs, 1

1 Cf. art. BANNOUS. 2 The emphasis laid on the sacred beer may be a reminiscence of the Indo-Iranian soma-homa rite (see art. HAMA, SOMA), despite the widespread custom of drinking intoxicants in connection with sacred ceremonies (see REL. V. 70).

1 art. PARIS, PERSIAN (Iranian), 2 the Fredericksen speech (ed. also below, p. 457) looks very like a survival of Zoroastrianism (see SBE v. [1850] 169, 226-227, xvill. [1850] 125, xxv. [1850] 283); but, on the other hand, to go barefoot and ungirted are heinous sins in Mandala (SBE v. 461, 257).

2 art. INCANTATION, in which this dreaming is really a form.

3 The khvaz, dekansosi, dasturs, and shultas roughly correspond respectively to the fourfold hierarchy of bishop, priest,
A somewhat fantastic figure in the hierarchy is the khevis-beri (‘valley-elder’). It seems, on the whole, that he was originally the political or spirit leader of the khati, the latter being the bearer of the droska and the leader of the army. In this manner he naturally became protector of the khati, and so developed by degrees into the god of the countryside, as his older political importance steadily diminished. Traces of this, however, yet remain. He is still the one who uplifts the droska at certain feasts; and, unlike the khevi, dekanosri, dasturi, and khalas, he inherits his dignity; and it is only in the case of extinction of a family in which the office of khevis-beri is hereditary that he is chosen by the khusi. He is the faithful transmitter of ancient ritual; but his precise relation to the khusi is uncertain.

(c) Sorcerers.—Among the Khevsur sorcerers and priests co-operate. The kadogi is chosen at New Year by khusi and dekanosri. Usually he is neuter, and he delivers his messages in the characteristic manner of shamans. He is the mouth-piece of the khati and is consulted in all important events of life, especially in cases of illness, when he designates the particular offering necessary to propitiate the deity whose anger caused the affliction. In certain khatis, as in Khakhabo, the kadogi even has the right to carry the droska.

The female counterpart of the kadogi is the khabalo; but it is often a hybride. In Derbent, however, the restrictions imposed on all other Khevsur women, the mkikhvouri holds rank equal to that of the kadogi. The mkikhvouri divine by means of water, grains of corn, etc.; and, if they declare that the cause of an illness is a deity’s desire to obtain the person afflicted, the latter is clad in white, and a vow is taken that his hair shall be uncot for three years, etc.

There is another class of sorceresses, the mesulri—women and girls who sustain a peculiar close relation to the supernatural world. To approach the spirits of the departed, the mesulri lies upon the ground, grows pale, and falls into deep slumber, often broken by a gentle murmuring, which is regarded as converse with the dead. Since, however, too much speech regarding the other world is dangerous for the mesultr, and her speech is in a language which is intentionally obscure. If a child falls ill before reaching the age of two years, the mesulri is consulted. She tells from what departed spirit the illness comes; and the child is cleansed with that of the deceased in the same worded question (in similar illness of an older child the aid of the kadogi, not the mesulri, is sought).

(d) Deities.—Reminiscences of Christianity are so numerous that it is not always easy to say exactly what is essentially the religion of the Khevsurs and kindred tribes. The supreme deity is Morigi, creator and omnipotent, who dwells in the seventh heaven and is the god of the living, whereas Christ is the divinity of the dead. The Trinity, occasionally invoked in prayers, is regarded as three angels; the Blessed Virgin receives honour as one of the chief angels; and SS. Peter and Paul are the angels of wealth and abundance. Morigi leaves the actual administration of the world to his delegates, the khatis, each of whom has his special function and is aided by two deacons and a subdeacon of the Orthodox, Roman, and Anglican Churches. Be, however, the last is less likely. It is known, they are reminiscences of the sarathoripterand, andarapvet, representing the Saorastitution (for whom see Ar. Pnintat, Parsamrosi [Iranian]).

1 Cf. the divergent opinions cited by Merzbacher, ii. SS.
2 A single example is that of the Karabakh Kashek in Ossetia (Merzbacher, i. 545–553) and Elburz, the latter being called On. The pilgrimage bn the Feast of the Lady 200 to 3000 sheep and 20 to 40 cattle being offered at Khakhabi alone, and the quota of each family being at least five sheep. The priests receive the skin and half of the flesh. This is commein keep the meat being cooked by the dasturi and eaten by the assembly, together with bread and abundant beer. This beer is solemnly blessed by khusi and dekanosri, after which the dasturi presents it first in the sacred silver vessels to these priests and then to the laity; but it is consumed so generously that the festival frequently degenerates into a drunken revel. Women are not admitted to the feasts and may not pass beyond a certain line in the khati, where they receive their share of beer and viands. Near a khati on a hill in the village of Arkhoti is a special nishi (place where a saint has performed a miracle) for children, and this to are brought leaves baked expressly for them.

2 This explains the function of the mesulri in healing infants.
3 Steiner, in Wettar and Welte, Kirchenbezirke, Friebur, 1892–1901, and also A. S., April, iii. 392 ff. However, Georgia is probably derived from Pers. Gurgutjan, the name of the land in question (Adeney, p. 344, note).
4 Cf. the remarks on the Khevsurs, the last is less likely. It is known, that such are reminiscences of the sarathoripterand, andarapvet, representing the Saorastitution (for whom see Ar. Pnintat, Parsamrosi [Iranian]).
5 The seven heavens represent Jewish Talmudic tradition (seeḲeṭaṭ, 106:4, 5); and, for Georgi as such, see 229; and the concept of Christ as god of the dead is probably borrowed from the doctrine of His descent into Hades (I P 199).
(f) Status of women.—Until a daughter-in-law has entered the household, a Khvessar woman’s life is not considered normal; she is only one of the tribe working in the fields and tending the cattle, but must also mow and thresh, bring wood and water, cook food, make clothing, etc. When her son brings her into his household, however, a woman enters whose status law becomes the administrative head of the house, and nothing may be done without her approval.

(g) Marriage and divorce.—Betrothal frequently takes place in advance of the marriage, while the girl is still a child; and in such a case the boy’s father is obliged, until the girl reaches maturity, to send annual presents to the bride’s father, while at New Year a brother or sister of the groom takes the girl to the house. Of course, a girl’s personal property, remotely akin to the skin, is strictly forbidden, with the result that, since all the inhabitants of a village belong to a single family, men and women of the same community very seldom wed.

On the first day of the wedding, all those present send to the bride’s father, by two men of standing, two sheep, one of which is killed at the khati, the other in the bride’s house. The girl’s marriage is solemnized by the large festival held among all the maidens of the village escort the bride, with her parents and kinsfolk, to the end of the village, where one of the khatis is eaten. The bride’s escort now return home, while the bride, with some of her more distant relatives, follows the two men sent to the bride’s father, all but the last of whom is mounted on horseback. During this journey the second khati is eaten, and when she reaches the village which is to be her future home, the bride is met by all its inhabitants, the distance which they come to greet her being proportionate to the respect shown her. Arrived at the groom’s house, the bride is entertained in a separate room by the women of the family, while her escort are conducted to the stable; meanwhile the groom hides till summoned by the feasters; and he then receives the place of honor, but may share in neither banquet, song, nor dance, being permitted to drink only a single glass of brandy. The women likewise are delirious from the men’s feast and dance, this being probably a Muhammadan survival, since no such restriction exists among the Christian Karthvelians. This revol usually lasts three days, during which the groom may not come near his bride; and she is solemnly carried off to her new home where a similar feast is given. The groom now goes back to his own village, and remains an entire year. If he visits even the village of the bride, the only exception being when the groom has no parents, in which case his bride remains with her own family; or if he returns too soon, after one year has expired, the groom sends his nearest kinsman to fetch the lad, and has himself excused by some of his relatives. The dekhaml and khetsi-berti are now summoned, and the former sews together the garments of the bridal pair in taken of their union, while the girl’s mother prepares the nuptial bed, to which she leads the wedded pair. After the first three nights, the groom no longer shares this bed, but seeks his bride only by stealth; and it is not until the birth of their first child that the pair live together openly. The conjugal act involves ritual defilement for three days.

Despite the absence of outward manifestations of affection, and notwithstanding the life of toil imposed upon the married woman, she occupies a position of great respect. Except for very rare instances, she guards her fidelity to her husband with extreme care; and if convicted of adultery, she takes her life. Her symbol of wifehood is her kerchief (mannditi); and if she throws this between two men, or any of her relations, she must at once desist from their quarrel.

The older form of wedding among these tribes was marriage by capture, which is still frequent, usually only with users of the same tribe. This is regarded as an insult to the kinsmen of the man to whom she was betrothed, and the robber’s relatives must pay them a fine of 16–30 cows and make rich presents to the girl’s father. In addition to this, the elders and consorts of the girl insult the robber by ‘jumping on the roof’ (lozna shekhtoma) of his house until he slaughters a sheep and gives them a young ox and copper plate. If, however, the girl is carried off against her will, a deadly feud arises between the kinsmen of the robber and those of the intended bride and groom, often resulting in destruction of property and life, which the former seeks an opportunity to escape to her chosen husband.

Polygamy is permitted, but is rare unless the wife is sickly, aged prematurely, or bears only boy children; but if the second wife is taken, the husband must give five cows to the family of the first.

The bride brings a dowry with her, but the groom has no claim upon it, whereas the wife has the right to make herself a new dress annually at her husband’s expense. The property of husband and wife is kept separate, and neither may be the other’s heir. Sons alone may inherit; if the marriage is childless, or only girls are born, the village is the heir.

Divorce is rare, for, even if a wife is thus dismission for laziness, barrenness, or sickness, her husband must pay her 16 cows for the marriage and one cow for her maintenance. An unmarried and wedded life except the first and the last. A divorced wife may marry again, and is still entitled to a new dress each year at her first husband’s expense. On the other hand, any children of the the first marriage belonging to their father and, although a temporary exception is made in the case of an unwed infant, this child also goes to its father as soon as it is grown. A man is deeply disgraced if his wife leaves him; and in such a case she must promise never to marry another man, a violation of this pledge formerly involving the death both of the woman and of her second husband.

Under no circumstances may a man ill-treat his wife—a rule which is enforced by the entire community. Since the family (vqjkhli) is strictly subordinated to the community (tamoba), so that ostracism involves entire forfeiture of communal protection, rights to communal pastureage, etc., the ruling of the tamoba is one of much effect in all departments of life in the individual household.

Death and disposal of the dead.—Death being believed to defile the house, the mourners are carried into the open air, and there breathe their last, surrounded by the members of their household. Since the corpse is deemed a source of uncleanness, its place of rest is in the open air, and the resting-place of the duty of young, unmarried persons (lads for males, and girls for females) called nareveli (‘defiled’), who shear the head of the corpse (if it be male), clothe it in a shroud of white and red, and dig for it a long, narrow, shallow, stone-lined grave, in which it is laid uncoffined. Contact with nareveli entails defilement; and they may not enter their own houses until (after five or six days) they have taken repeated cleansing baths. For a year the kinmen of the deceased let their beards grow, wear old clothes turned inside out (thus hiding the usual adornments of dress), and carry no weapons or less a child, who is unwept) is formally bewailed, the men lamenting silently, the women aloud; and one of the order to the incantations of the deceased, the others joining in the refrain. A funeral feast is prepared and blessed by the khami, who also recites an ancient prayer containing reminiscences of the Old and New Testaments.

The corpse is buried at daybreak. This is considered as an insult to the kinsmen of the kinmen and other male residents of the community stand weeping softly at the boundary of the village. Of the family only the widower and the body to the grave, and she leads the dead man’s completely caparisoned horse,

1 CL the (see Merzlachet, ii 97, note 5);
2 For minor variations see Merzlachet, ii 97, note 5;
3 In certain regions wooden coffins are coming into use.
which bears his clothes and weapons, as well as food and drink for his journey to the other world. Arrived at the grave, the stringed instrument is played, and the deceased is instructed to see that his shadow is properly engaged in the life after death.

Within several days of the death, the corpse is removed from the house and is exposed on the field. This exposure is intended to harden the body, so that it will be easier to identify in the next world. During this period, the relatives and neighbors gather around the corpse, and the house is respected as a sacred space for the deceased.

During the four days that the corpse remains on the field, various rituals are performed. These include offerings of food and drink, prayers, and the laying of flowers and incense. The relatives and neighbors also gather to perform the final rites, and the body is finally laid to rest in a cemetery or a nearby place.

The burial is performed in a simple manner. The corpse is placed in a shallow grave, and the grave is covered with a few stones or a small mound. The family and friends then gather around the grave and perform the final prayers and rituals. The grave is then left undisturbed, and the family returns to their daily lives.

The burial of the dead is an important ritual in the Caucasian tribes, and it is performed with great respect and care. The burial process is intended to ensure the deceased a proper place in the next world, and to provide a means for the family to honor and remember their loved ones.
TUTELARY GODS AND SPIRITS

eism of the sun, which can avert it only by paying the amount demanded, killing a sheep, and sharing it with his opponent and with invited witnesses, after which 'the souls are set free.'

2. Samtani. The Samtanis, numbering about 10,000 in 1912, are the modern representatives of the Sanois or Sunni of Strabo and Pliny. Their religion is by no means so interesting as that of the Khersusis, etc., and primitive elements are far from prominent. From Iranism they retained a sort of prayer to the sun and moon; from Christianity a form of anointing a child by its mother in lieu of baptism, and a veneration for Natrun, the Virgin, and St. George; from Judaism a reverence for Elijah; and they still abstain from work on the three Sabbaths—Friday of the Mammansaders, Saturday of the Jews, and Sunday of the Christians. They practise the strictest endogamy, only residents of the same village being permitted to wed—possibly (though by no means certainly) an Iranian survival. Superluous female children were formerly sacrificed as soon as born. Bara might take place only in clear weather, rain (in view of the great precipitation) being regarded as ill-omened; and food was laid on the grave for the soul's journey to the Other World.

3. Empire of Caucasus religion. —The rather scanty fragments of paganism found in the Caucasus are of more interest than appears on the surface. The Kartvelian stock seems to have had its original home much farther to the south in Asia Minor and to have been driven steadily northward by the invaders who established their empires in Mesopotamia. Thus they found an abode in eastern Cappadocia, Pontus, Armenia, the Caucasus; but under pressure of Armenians from the west, and of Iranians from the south, they had reached, by the time of Strabo, a territory extending from the lower course of the Kekkil Irakam to that of the Kura, and thence to Lenkoran on the Caspian, the northern boundary being the Caucasus range. The Kartvelian group thus represents the descendants of the ancient Colchidians, Samanes, Hetri, and Althani, the latter corresponding to the Kheureus, Palavas, Tushes, and kindred tribes.

If this theory is correct, from the modern paganism of these three Kartvelian tribes we may infer that the national character of the religion of a once considerable part of eastern Asia Minor. But perhaps we may go a step farther. We then have a knowledge that in Asia Minor there were at the Christian era certain characteristic religious phenomena represented by an orgiastic nature-cult, shown by the worship of Cybele and Attis (q.v.) in the west and north; the second exemplified by the developed polytheism of the Hittites (q.e.) in the centre and south; and the third characterized by a primitive type of the religion, mixed with shamanism, in the east. The enthusiasm of the orgy appealed to the decaying faiths of Greece and Rome; the polytheism, with a high degree of civilization, yielded only slowly to its foes; but the primitive savagery, with a low grade of civilization, was driven by the barbarians of higher type to the recesses of the Caucasus, where it still lingers, commingled with reminiscences and influences of the nobler religions of Zoroastrianism, Christianity, and Muhammadanism.

LITERATURE.—The principal literature on the paganism of the Caucasian tribes (chiefly in Russian) has been summarized by G. Merzbacher, Die Hethiter (Die Hethiter des eossen) und Hethiterlands des eossen, 2 vols., Leipzig, 1901 (esp. ch. xiii. for the Samtanis, and ch. xiv. for the Althani, Hetra, and Tushes). Nothing of importance on this subject has appeared since; or earlier literature not specified by Merzbacher, mention may be made of M. Kozlovich, 'Om dyrkan af fordradis hos de kavassiska folkem,' in Ymer, 1889, pp. 111-122. For the scanty classical accounts of the Caucasus and its inhabitants see: B. Latzey, Sogdica et Caucasus a veteribus scriptoribus Graecis et Latinis, 2 vols., Petrograd, 1896-1906. For ethnology and ancient history see esp. E. Chastour, Recherches anthropologiques dans le Caucas, 4 vols., Paris, 1885-87; J. de Morgan, Mission scientifique au Caucase, 2 vols., du 1000 au 1800, Zaborowski, 'Le Caucas et les Caucasiens,' in Revues anthropologiques, xiv. (1914) 121-133.

LOUIS H. GRAY.

TUTELARY GODS AND SPIRITS.—The conception of a tutelary guardian genius or guiding spirit believed to protect and watch over certain persons and objects appears to have been derived from the powers of observation and generalization are sufficiently developed to bring about a systematized scheme by which natural phenomena come to be divided into classes and assigned to particular departments of knowledge and application. Of these the high gods are associated with special functions—e.g., in Mexico, where Tlaloc is regarded as the god of rain and water, and therefore has the special care of the office of fertility, it is the numerous spirits by which primitive man supposes himself to be surrounded that become the patrons or guardians of individual men. Any extraordinary event that demands the help of an intervening agent produces the idea of a tutelary spirit, more deeply into the nature of the supernatural powers and to establish a more intimate alliance with them. Thus, to the primitive mind, the constant motion of water is controlled not by natural law but by some supernatural agency resident within the stream. At first it appears simply as a mystical impersonal force, but, as the mind becomes capable of more definite ideas, the conception of a spiritual being having personality is evolved.

The Trojans, e.g., originally regarded a sacred river as containing mana (q.e.), and, in consequence, sacrificed a bull to the stream by laying it on the bank of the river to be consumed. In later times, when they had reached the animistic stage, an altar was set up on the side of the river, and when a sacrifice of a bull was offered, the belief being that the spirit in the water came out and consumed the essence of the sacrifice.

As soon as the notion of a local spirit allied to a natural object is developed, the desire to seek the aid of the supernatural being speedily follows. The Iroquois at their festivals thank the good spirits and every object that ministers to their wants for the assistance rendered by them. In process of time a tutelary guardian genius is assigned to every individual, whose special function it is to guide, protect, and warn the man under his care. This guardian spirit may be acquired in various ways and take different forms. It may reveal itself at birth, or may await the 'crisis' reached at puberty. It may be the spirit of some ancestor or great chief or mighty magician; or it may belong to a deity whose dwelling is not with men. From these spirits the personal name and even the nature of an individual are frequently received, and to them men naturally looks for guidance and protection.

1 I. H. Bancelot, NF XII 334.
3 E. B. Tyler, P.C.S. ii. 335.
1. Forms of guardian spirits.—(a) Placenta.—

Among the Koobos, a primitive tribe of Sumatra, the navel- string is frequently cut off after birth and given to the child for good luck. The Esquisse is a sort of guardian angel of the man who came into the world with them and who lives in the house. They are said to guard the child from all evil. Hence it is that the Koobos always think of his navel-string and afterbirth before he goes to sleep or to work, or undertakes a joung[1]ney. The belief is that one would deprive himself of their care. The Butts, another tribe of Sumatra, believe that the soul of their deceased relations, in addition to an internal weight, had two invisible guardian spirits (his ends and end) who help him to keep out of great danger; one is the seed by which he was begotten, the other is the signal he calls to himself his elder and his younger brother.1

Among tribes of Central Australia the navel-string is frequently cut off with a stone knife and, after the afterbirth has been removed, they leave it around the child's neck until the blood is dried. It might not be thrown away over the open sky, lest demons should get hold of it and work the child harm thereby.2 If it were buried under the threshold where the mother stepped over it when she rose from bed, the child in after life had a guardian spirit in the shape of a bear, eagle, wolf, ox, or boat.3

(b) Association.—The one or few guardian spirits of an individual—son or daughter—are thought to manifest itself under the form of an animal.

Among the Ibans or Sea Dayaks of Borneo the spurong, or spirit-helper, is a form in which a dream appears, and makes himself known in the likeness of an animal. On the day after such a dream the Iban wanders through the jungle looking for signs which may recognize his spurong, and if an animal behoves in a manner at all unusual, if a startled deer does not run off in a hurry, if a bird of rapine, or a fish, or a chipmunk shows itself, or if a gibbon gambols about persistently in the trees near him, if he comes upon a bright quartz-crystal or a strangely contorted root or creeper, that animal or object is held to be full of a mysterious significance and is the abode of his "Nyong."5 It does not follow however, that every spurong takes on an animal form, all individuals of that species be objects of special regard to the Iban, and he will not, of course, kill or eat any such animal. Even if the spurong changes its form, he will continue to respect the species in which it first appeared. The cult may spread through the whole family, the children and grandchildren being under an obligation to respect the animal represented by their guardian spirit.

Among the Omaha Indians an animal as a guardian spirit is assigned to every man at puberty, and so close is the bond under which this supposed man is subjected to, that the qualities of the creature is that of his guardian. If, in the vision which defines the animal, he has one foot, he will be lame; if two, he will be a ke. The belief is that if, on the other hand, there is a bear that appears to him, he will be slow and clumsy and therefore likely to be killed. This belief is held that the man acquires the nature of the animal that is his guardian, has the Thompson Indians of British Columbia have a similar tradition in this connection. In his battle form a mimic battle before setting out on the warpath, in which every man portrays his body and imitates the sounds of his guardian animal.6 Similarly in W. Africa, when a man is initiated into a secret society, the animal that he sees in his dream forms his guardian spirit or patron.7

In Central America nagualism8 is one of the ancient forms of worship which still flourish. It consists in choosing an animal as the tutelary divinity of a child. The choice is said to be so closely connected with it, that the life of one depends on that of the other. The animal is selected in one of three ways—(1) by priestly divination; (2) by the father and friends drawing animal figures on the floor of a hut at the mother's confinement, the spirits of the animals appearing at the threshold near the being the guardian; (3) by noticing the bird or beast first seen by the watchers after the confinement.9 Sometimes a child's nagual is discovered by means of a calendar, in which all the names, places, and important facts of the child's birth, and the things that are recorded. Some of these horoscopes have a wheel painted on them; others are surrounded by the naguals in the form of various animals.10 The good luck of the animal is calculated from formulas and calculations based on a written document—is obviously a later development in the same lines.

Among the Algonquins of N. America the tutelary genius is known as the guardian totem or spirit-helper, associated usually with streams, cataracts, rocks, mountains, and forests. In nearly every case it manifests itself under the form of a beast, bird, or reptile of unusual size or appearance, although the animals have human proportions. At the age of puberty youths are made to retire to a cure where they will undergo a period of fasting. The first thing that appears in a dream to the novice is regarded as his guardian spirit, to whom he looks in after life for guidance and protection. The man destined to be a warrior will have a vision of an eagle or a bear, a serpent will appear to the future medicine-man, a wolf to the hunter. To complete the bond, a porportion of the guardian is worn about the person, which is regarded as rather an embodiment than as a representative of a supernatural power. It therefore seems that the guardian spirit is only one of a large class of spirits to which the common name of nagual or guardian is given.3 The same belief is found among the Iroquois and Hurons, the genii being called okias or okoms instead of naguals.

2. Functions of guardian spirits. — (a) The relation of guardian spirits to totems.—Among some of the Algonquin tribes a man's guardian is identical with his clan totem, but, since the former belongs solely to an individual, while the latter is the inheritor of the clan, a distinction is observed between the clan, the tutelary genius cannot be explained in terms of totemism.2 The similarity between the clan totem and the guardian spirit has led several anthropologists to believe that the human form, with which the species' comprehension under the name of Nycroty. Similarly when all the members of a man's family and all his descendants, and, if he be a chief, all the members of the community over which he rules, come to share in the benefits conferred by his Nyong, and in the feeling of respect and for it and in the performance of rites in honour of the species of animal in one individual of which it is supposed to reside. In such cases the species approaches very closely the clan-totem in some of its varieties. Un fortunately, however, for this theory, the authors' own evidence that there are no signs of clan totemism in Borneo.4

For support of this view of the origin of totemism (p.v.) their advocates are driven to various American theories such as those of F. Boas, who thinks that the totem is the symbol of the family, or that the Columbia have been developed from the personal manitou; and of Alice C. Fisher, who is led to a similar conclusion by a study of the totem of the Onaha tribe.6 It should be remembered that, while it is perfectly true that guardian spirits are occasionally inherited among certain N. American tribes, and not acquired for each individual separately, and therefore in process of time may become the totems of the clans, yet, since inherited guardian spirits are usually regarded as less powerful than those acquired by individuals,3 they are hardly likely to be taken over as the providers of the clan. Moreover, there is no evidence forthcoming that a totemic

clan has actually grown up in this way either in America or elsewhere. Where the original condition is that of a common totemic or clan spirit, it is not then a matter of fact that the totem spirit is preserved in America and the Pacific, as compared with Australasia, we are dealing with a relatively advanced, not to say degenerate, form of totemism. The fact is that in the majority of cases, the origin of the institution rests entirely upon a few cases derived from the N. American Indians. In Australia, where the custom is seen in a much more primitive form, there is no evidence of guardian spirits becoming clan totems, while in Africa examples are also wanting. We therefore conclude that the theory which seeks the origin of totemism in the personal guardian spirits of individuals is devoid of proof, at any rate in the present state of our knowledge.

(5) Guardian spirits of houses and villages.—In most of the W. African tribes there is a class of ancestral spirits known as the 'house-spirits,' which are supposed to protect and benefit their particular village or family, acting in conjunction with the 'family-spirits' or ancestral totems. It is often supposed that the spirit of a man lingers about a house some time after his death, and, although it is able to injure the children and often causes them illness, it is thought that it is in the best possible way of keeping off evil spirits.1

The Bundu recognizes a minor deity called Baal Atoy, which protects the house against sickness and attack, and is called upon in cases of madness to expel the evil spirit possessing the patient. The 'seven children of Him the Great' are supposed to lead the same way leading to the house from the river's brink; it holds a spear in the right hand, a shield in the left, and carries about its neck a fringed collar made of knotted strips of ratten; the head of each room is tied on such one strip, making it a knob, the symbol of the housekeeper of his household. Another god, Basa Uone, brings prosperity to the house.4

Even an evergreen tree may choose its guardian spirits, often in the form of an animal, as a dog, tiger, cat, or serpent, 'although occasionally a human being is selected.5 The Rhonds have titular deity es of house, village, groves, etc., which survive in the later Hindustan. The Rigveda recognizes Vashataptra, the lord of the house, to whom the lord's orders obligations to be made. This Vedic divinity is associated by W. Windle with Vesta and Heifer, and compared to the Celtic cernus, satelies, originally 'house-man,' and thus associated with the 'king of the house-men.' In Hindustan, however, a female deity, Jata, is assigned to the guardianship of the house. Although she is represented as a demonic power, she is friendly to her vassals, as she is not worshiped with incense, food, flowers, and so forth.

The Ainus have a fetish called Inao, invested with life, which is supposed to look after the household and general welfare of the family. Its special dwelling-place is in the northernmost corner of the house, and it is supposed to be invisible. Occasionally, in times of trouble, he is brought out from his corner, stuck in the hearth, and there prayed to by the head of the family. It is supposed to have been brought down from heaven to be the husband of the goddess of fire, and to help her to sit down to the table, and therefore he is called 'the ancestral governor of the house.'

3. Offerings to guardian spirits.—Since guardian spirits exercise such a powerful influence over the lives and destinies of men, it is not surprising that they are frequently the recipients of offerings to appease their wrath or secure their favour and beneficence.

The Thal of Indo-China, e.g., offer firstfruits of rice at harvest to the guardian spirit of the family before the household partake of the new crop. Besides the firstfruits at harvest, 'the guardian spirit is consulted on the parched grain in spirit,' at the time when the first thunder of the season is heard. 'When all is ready, the rice is served up together with fish, which have been caught, for the purpose, on a table set in a corner, which is sacred to the guardian spirit. A priest dounouts a long distaff-like to the generosity of the gift with children, then the family sit down to the table and consumes the offering. At the close of the banquet the daughter-in-law of the deceased ancestor, the guardian spirit (the guardian) fashioning and linking rice and fish for his use in the corner, after which she closes the shrines in the house in the name of the deceased.1

There is another instance of a spirit called Totoro who, it is thought, is the guardian spirit of the house. It is said that this spirit often brings in the invisible guardians so that they may not harm him when he eats the flesh of the animals killed in the chase. Spirits are also supposed to guard the clearings to which the deer come by night to drink, and the hunter must sacrifice a foul to the combination from time to time to secure the benefits of the custom prevails among the Indian tribes about Green Bay, Lake Michigan. While hunting, if a person has a particular guardian spirit, and therefore, when a young girl seized a house to eat it, her father first fondled it tenderly to appease the spirit who has charge of mice, in order that his daughter might not suffer from her meal.2

Among the Ewes of Togoland (W. Africa), before the new yams are eaten, every house-holder takes a raw piece of yam and goes with it to his loom (yslight) and prays: 'May the Artificer take this yam and eat! When they practice their art, may it prosper!'3

Again he takes a raw yam and goes with it under the house-door and prays: 'O my guardian spirit (adzina) and all ye gods who pay heed to this house, come and eat yam! When I also eat of them, may I remain healthy and nowhere feel pain. May my housemates all remain healthy!' After he has invoked their protection on his family, he takes a cooked yam, crumbles it on the hearth and adds it with red oil. With this mixture he goes again to his loom and prays, 'May the Artificer take this yam and pray about the end of the homestead, then under the house door: 'He of my guardian gods and he of the watchers of the house who lives in my house, and is mixed with the rice, may you take the white yam from my hand and eat!'4

Among the Ewe-speaking tribes of the African tribe it is customary at sowing a rice-field to reserve a certain portion at the entrance for the guardian spirits, who at harvest are invited to come and share with their servants. They will then content themselves with eating the grain in their private stores and not touch on the crops destined for the use of man.5

In the Teninber and Timor-laut Islands, East Indies, the first-fruits of the harvest are brought to the shrine, offered to the guardian spirit (omatere), or spirits of ancestors, 'which are thrown up as gods or spirits or household gods.' The Yoruba of the Slave Coast sacrifice fouls to their guardian spirit (ejeri), which is supposed to dwell in the head, by mixing some of the blood of the victim with palm wine. The head is cut off, and the forehead? The tinode in Florida, one of the Solomon Islands, are also approached by sacrifice on certain occasions—e.g., before a planing, a voyage, or a fight. The N. American Indians offer dogs and horses to the medicine bag, to which they look for safety and protection throughout life.

Among some of the Algokin tribes, when a man's guardian spirit is identical with his clan totem, should he be compelled to kill the sacred animal, due apology was made to it before destroying it, certain portions of the flesh being preserved as an offering to the manido (guardian).9

Herein again lies an important distinction from the Aborigines, and many even when the two are inseparable. The former is regarded as so intimately associated with an individual that prayers and sacrifices may with impunity be offered to it, but the latter is more closely concerned with the food group or clan and therefore is seldom the recipient of offerings from individuals. Apart from the evidence of Carl Strehlov, that the hymn which is sung at the initiation of the kanganaro describes the offering of a morsel of kangaroo fat to make the fat of the kangaroos increase,10 the act of oblation can hardly be said to form a part of the totemic rites in Australia—the home of the Aborigines, and the custom to which it is linked. Therefore conclude that totemic gods and spirits have arisen out of animistic and theistic conceptions rather than from ideas connected with totemism, although it is undoubtedly

1 L. A. F., p. 167. 2 Ibid., p. 172. 3 Ibid., p. 175. 4 Ibid., p. 175. 5 Ibid., p. 175. 6 J. F. H., p. 175. 7 Ibid., p. 175. 8 Ibid., p. 175. 9 Ibid., p. 175. 10 Ibid., p. 175. 11 Ibid., p. 175.
true that in America the doctrine of the clan totem has developed side by side with that of the guardian spirit conceived as an animal. Elsewhere, however, the patron spirit is much more closely allied to animism and theism. Wherever animistic conceptions prevail, there the notion of a tutelary genius will be found in some form or other. As spirits give place to gods, the spiritual guide is a protector of individuals, and has his place in the pantheon, till in the Christian Church the doctrine of a guardian angel watching over, succouring, and defending the faithful on earth is raised to the sphere of a higher spiritual level. Are they not all ministering spirits, sent forth to do service for the sake of them that shall inherit salvation? (He 1).

This is the function of the guardian angels in the NT; they are to lead men safely to the kingdom of heaven by helping them to attain salvation. It is not the Biblical conception that angels are the personification of natural powers, or merely the means of securing the favour and help of supernatural beings. They are consistently represented as a body of created spiritual beings intermediate between God and man (I’s 8), whose function is to act as mediators between the inhabitants upon God’s throne (Dn 7th), Ps 91:1 103:8, Is 6, Gn 16, Jg 13, Lk 11-th). Jerome thinks that every individual, whether baptized or not, has from birth an angel chosen by God to guard him, while Chrysostom2 and Basil hold that only the baptized enjoy the privileges of having a tutelary angel. Thomas Aquinas teaches that out of the least orders of angels are sent to men, and therefore alone are guardians.3

No doubt the Biblical account of the ministry of angels was inherited from the world-wide doctrine of tutelary gods and spirits, and to an extent influenced by it, but at the same time it is evident that the line of development has been on a higher and more spiritual level.

**TWINS.—The birth of twins in the human species is an event so unusual that it has almost everywhere drawn popular attention and evoked expressions of emotion, varying from extreme terror through the whole gamut of fear, repugnance, suspicion, anxiety, perplexity, hope, and joy. The theory of twins is regarded as un-natural and monstrous, and therefore as pertaining evil. The unfortunate babies and their mother have been looked upon as guilty of a serious crime—a crime calculated to call down the vengeance of the higher powers. Accordingly they must be at once put to death, and the offence repudiated and cleared from the land. Or their birth has been taken to a message from the divinity conveying a warning of impending evil, only to be thrust aside by their immediate slaughter or by so variety of superstitions observed, intended by abstinence and humiliation to avert the threatened calamity.

1. Tabu of twins: its mitigation, ceremonies, and superstitions.—Among the peoples by whom this view of the birth of twins has been taken as those of Australia, the East Indian Archipelago, nearly as well as among the priest-ridden part of the aboriginal population of America, the population of the north-east of Asia, the non-Aryan tribes of India, and the backward classes and populations of Europe. Among the Brahmins, as the priests are called, there are many beliefs as reported of the Assyroians and Babylonians, the

Aryan population of India, and the Egyptians. Where the superstition has the fullest power both mother and children are at once put to death. A typical illustration of this is found among the Negro population of the Niger Delta. Even when the mother is allowed to live she becomes an outcast and must pass the rest of her days in the forest. If she ventures into the town or village, any paths that she may use will be defiled and unfit for the inhabitants. She may not drink from any well or river water-supply as her own people; she must not touch anything belonging to them. The consequence is that the mothers of twins simply die from hunger and exposure, or they take their own lives. A slave-woman is the professional killer of twins. She takes each child by one foot and the other and breaks its back across her knees. ‘The bodies are then placed in an earthen pot and taken into a dense part of the bush and there left to be devoured by wild animals and insects. In some parts of this district the children are not killed, but simply thrown into the forest to die of hunger and exposure. At Arobo in Africa, if her husband is not of a man of wealth, he may redeem her with another victim. More generally there are provided ‘twin-towns’ of cities of refuge, to which these unfortunate women may escape and where they can at least be saved from their own homes. There they must reside for a time to undergo purification. The period is stated by Mrs. D. Amaury Talbot, speaking of the Hibsos, as the mouth of the month of the lunar cycle; that is to be twelve moons. This, we may be sure, is the least penalty that can be imposed on them.

Leopard writes that ‘the women, looked on as unclean for the rest of their lives, are obliged to reside in villages, which are known as Twin-towns, or the habitations of defiled women, appointed for that particular purpose. From this time forth the husband, whether he be head of the house or not, is obliged to maintain a wife who has been so defiled; although at the same time he is strictly forbidden to cohabit or to have any dealings with her, being, as he is in every religious and personal sense, human and spiritual, divorced from her. But in spite of the fact that to him, as well as to all the members of his or her community, the woman is unclean and therefore taboo, the penalty of death being inflicted on both in the event of their breaking the law in this direction, she is allowed to form connections outside the village, and account to me, with men belonging to outside communities, and the offspring resulting from such intercourse becomes, at a matter of course, the property of the husband. The same proviso holds at New Guinea. But in the event of the defiled woman herself bearing twins again, these must be left to another woman. If it is known, the probabilities are that the death of the mother would be demanded by the household and the community as well. Or if not killed, she would be driven into the bush and left to die, although, if discovered by a stranger, he is at liberty to claim her as his own property.—that is at least if he feels inclined to run the risk of a venture so truly provocative of offense.’

2 In Bali, westward of the Hibsos country, the woman was, and perhaps is still, quarantined in an out-of-the-way hut for six days, after which she went through a ceremony of purification by the priests. The father, head of the house, was required to offer certain sacrifices. The threatened evil was thus averted, and the purified mother was then received back into the family circle. Among the Hibsos, however, if the mother dies during the birth of twins, she may be carried to burial by the ordinary door of the hut or along the ordinary path of the village, as she is born through a hole broken for the purpose in the wall of the hut and along a path specially cut through the bush.

7 P. 401.
TWINs

The lot of the children in Nigeria and adjacent countries has also been mitigated, to the extent that one only of them is now in most places put to death.

The Basari of Togonbad, e.g., preserve the boy if the twins are of different sexes, or the stronger of the two if the same sex. Yet it is possible that a big price is offered and cut in two. Half of it is buried with the condenmed twin as a sort of protection to the survivor, to help with the surviving twin, so that the spirit of the buried child may not avenge itself on the survivor. Survivors-twins are burdened all their lives. The women who have such twins, though apparently not driven away, are not allowed to take part in the agricultural activities (oiling and harvesting), until a certain number of years, or the harvest, until the dead twin has reappeared as a subsequent child.

A similar modification of the children's fate is found among the Ibasu tribes. On the lower Congo one of the twins is often neglected and starved to death. The reason given for this is that the mother does not like the extra trouble involved in caring for the two; but it is doubtful whether this is a sufficient explanation. In some cases where the twin that dies is also found among the Negro Yorubas and other west African tribes, both Negroes and Bantus. It is said to keep the survivor from pining for the deceased, and to give the spirit of the deceased a habitation. This arises from the special sympathetic relationships that exist between twins. We shall find illustrations elsewhere.

In Australia the usual reason assigned for killing one or both twins is the economic reason that the mother has not enough milk for them, and moreover cannot rear them and also get her food. This is a piece with the prevalent custom of infanticide, even of a single child, when the mother already has one dependent upon her. But among some tribes at least it does not appear to be the only reason.

Among the Eenhây the husband suspects his wife of infidelity. Among the Arunta, where twins are reported as of extremely rare occurrence, they are put to death, a woman with a soul is believed to have two bodies, and the twin is a sign of illness. Among the Yurips and the Nias twins are universally disliked and dreaded.

In the province of West Nias it is believed that they will grow up evil doers: if a boy and girl, they are specially evil, the one will become a murderer and the other a poisoner. Formerly the former used to be hung on a tree in a sack, and the latter miserably to perish. The Dutch government and missionary, it seems, have almost succeeded in suppressing the practice. In many cases the natives are still alive even of the parents. The father gets a priest to make a magical image of a board roughly cut in human shape, as a charm against these twins, and put up in the house to prevent a second such misfortune. Until it is ready, the parents dare not go out or speak to be given to a family of a different clan, becoming thus the child of that family, all relationships with its natural parents being severed. Among the Basutos the same custom prevails. The Nilotic Negro Dinkas, prescribes the substitution of goats for the sacrifice of the calves.  8

The neighbouring Nandi, a Nilotic Negro tribe, look upon the birth of twins as an insidious event, and the mother is useless for the rest of her life. Doubtless in earlier days she was put to death or expelled from the community. Even now her life must be a burden to her. 6 She is given her own cow, and may not touch the milk or blood of any other animal. She may enter nobody's house until she has sprinkled a calabashful of water on the ground; and she may never cross the threshold of a cattle kraal again. Special names, as is often the case, are given to children born in twin. Among the Nandi, in the Elen district, have rendered her lot a little less intolerable. But even there she is shut up for a while in the hut, and elaborate and protracted ceremonies must be performed with a medicine-man's assistance before she is released. Even if a woman produce twins, circumstances are unfavourable, and they are redeemed with the slaughter of a sheep.

In both N. and S. America the custom of putting two twins, or at least one of them, to death seems to have been universal. 9

The aborigines of the northern part of the upper basin of the River Amazonas allege a curious reason for their dislike of twins. To give birth to twin is considered by many a thing to be avoided at all costs. The unfortunate mother therefore will either try to separate the second child (or, if the girl is the last in the lot in the bush whither she has, in accordance with custom, retired alone to be delivered), or the Saliva on the other hand, saying she is a rodent. Their objections, however, seem to go deeper than this; for the Saliva husband believes that the second twin is the offspring of adultery. A chief has in fact been known to give one of his wives a whipping in public for having dared to bring two twins, and to threaten the others with similar consequences if they did the same. 10

From a pastoral letter by the archbishop of Lima in the year 1846, quoted by von Temski. It appears that the Peruvians of that date offered twins and children born first time from Amazon, or supernatural being, and preserved their bodies or buried them in their houses. 11 Other records show that the birth of twins was regarded as unnatural and unlucky and demanding sacrifices and ceremonies lasting many days. 12 The North-Eastern Madu of California who inhabited the foothills and western slopes of the Sierra reared the birth of twins as an exceptionally bad omen. The mother, it is said, was often killed and the newborn children were sometimes buried alive with her body or without. 13 Among the Seri of the Californian Gulf 'triplets are deemed evil monsters and their production a capital crime. 14

1 K. R. Dunand, JRAI Hist. 67.
8 A. C. Hollis, The Nandi, their Language and Folklore, Oxford, 1899, p. 68.
Among the Kavan of Borneo, the motive alleged for malevolent destruction in the jungle is to preserve the life of the other; and it is believed that a sympathetic bond exists between twins which renders each of them liable to all the ills and misfortunes that befall the other.

In the Ambatombakha the excuse for this treatment was that they would in any case die, if not in the womb, during the little time they might remain in the province of Imberia it was apparently the custom formerly to sacrifice the twins. More recently, though this custom had been abandoned, the parents were required to sacrifice one of them over to a relative; and, if a woman belonging to the royal family had twins, both they and the mother were sent away and lost their lives.1

Exposure or murder by violence is in fact a fate of one or both twins—a fate they share with their twin. They are still regarded as unlucky or even dangerous, but ceremonies are performed to ward off the evil.

The Ewe of Togoland, W. African Negroes, hold them to be forbidden to eat; for they must either be killed or sold, but they will not live long; they will die and go back to the father, or to the sister, as a mark of distinction they wear special beads; and their parents set up a house on the day of the funeral, but that of a feather of a pair of buffalo-horns and in some districts a curved wooden staff with the precaution that, if any of the twin's belongings are brought into the house, the father and mother are to be brought in and the twin's belongings are to be given over to them. In the same district the twins-fetish is also invoked at a funeral feast on setting up the horns, and a dog is bled to them, together with some of the meat which is provided for all who give it. In a feast for all who come together from the outlying villages. The parents of the twins are required to offer for the twins and dance, and the twins are carried on the back that every Egyptian is said to have the twin figures. In some these twins are very expensive. Twins must be kept as if they are children. They must eat a year earlier than other children, and smoke a month earlier than others.

Notwithstanding the practices and beliefs just mentioned, the Ewe are said to look upon twins with favour.

For the Ho the birth of twins is a very great joy; it is regarded as better than riches. Among the Fe, another tribe of Ewe, such births are very frequent. The children are regarded as children of Oohob, a supernaturally being. If twins were to be born, it would be regarded as a misfortune. Even twins if born are not allowed to look upon the other children or to touch the same animate object. It is the belief that they are to be kept away from the world and any other thing that is contrary to them. Both twins are kept away from the world and any other thing that is contrary to them. Both twins are kept away from the world and any other thing that is contrary to them.

For the Ho these twin figures are used for decoration. The Ho is a tribe of the coast of Togoland, and it is the belief that they are to be kept away from the world and any other thing that is contrary to them.

The Ho, a tribe of Ewe, when twins, a boy and girl, are born, neither of the parents may eat or sleep until an elaborate series of purificatory ceremonies, accompanied by feasting and the drinking of palm-wine, has been performed over them by others who are also parents of twins and who are paid for the rites. If the twins are to be kept alive, it is thought that they would become cripples. To the twins and their parents the flesh of hussar-apes and rats is forbidden. If any one shoot a hussar-ape, the parents of twins are expected to beat him with a stick. The exact relation between the hussar-ape and twins is difficult to determine. The hussar-ape is said to be the long-tailed monkey (Mercketta, a species of cercopithecus) are 'individual twins' of twins, and that twins may never

TWINS

Turning from the Negroes to the Bantu, we find that the ambiguous position of twins is well ex-emplified by the Thonga.

Among the customs vary, as among the Fue, in different districts. The Bantu of Nyasaland, for example, were not put to death. Novelties made in the village, in some cases, lead to the death of twins, and if the children are allowed to live, it is usually by the mother or the father of the twins. In the village with the Thonga, the mother of twins is always treated as though she were a member of the priestly order of the village. She is allowed to keep her children, but not to marry. If she marries, her children are not allowed to participate in any of the ceremonies in the village. In the village with the Thonga, the mother of twins is always treated as though she were a member of the priestly order of the village. She is allowed to keep her children, but not to marry. If she marries, her children are not allowed to participate in any of the ceremonies in the village.

TWINS

195

scionally with disfavor, held that they threatened misfortune to their parents, and that the storing buffaloes were sacred and the kid should be wounded; and, if he wounded an antelope, it would escape him. In the Ganges valley, it is thought that the twins cannot die until the spell is broken by another woman bearing twins, or his wife another child.1

In India and adjacent countries twins are generally considered as monstrous, though there are differences in this respect. All the peoples, however, seem to agree that the birth of twins of different sexes is serious. It is held that their commencement is caused by the union of the spermatozoa of different fathers; for it has been sinful, amounting to prenatal incest.2

Among the inhabitants of the Siamese Malay States, when twins are rare occurrence there is considered to be something unlucky, it is otherwise with triplets: they are considered fortunate.3 In some other districts in Java, it is considered by the people that when a woman bears two children at the same time, it is proof that she has been amorous; in consequence, the women are careful to keep on good terms. This child ought to be returned to his formidable parent as soon as possible; but, since there is no means of identifying him with certainty, both twins must be treated alike. In consequence of this origin, twins after death are never buried in the same grave as their respective parents, but are buried in the same grave as their common parents.

The birth of twins in the island of Shikhalain in the Bazar archipelago is regarded as ominous, for the same reason: it is to avert the evil omens of their birth.2 The custom is also observed in some parts of the Philippine Islands.4

To the Gikryk of the island of Shikhalain twins are a source of displeasure, if not of fear. Such births are said to be relatively common, and that both boys or both girls are twins. The reason for the pair is believed to be offspring of the Mountain-man, a supernatural being, and the custom is believed to be maintained by the people who are careful to keep on good terms. This child ought to be returned to his formidable parent as soon as possible; but, since there is no means of identifying him with certainty, both twins must be treated alike. the belief that the twins are due to two fathers.

Hence also the second-born child is commonly held to be the elder or higher in rank, as among the Negroes.

But there is another, and perhaps older, view, more widely held, that they are the result of divine impropriation.

In W. Africa we have seen that they are called 'fetish-children'. To the Fof Tongola they are the children of the Omo. The Aima of Calabar, the Kwakwati of the Ennedi, the hunter of the River, and the Hidjo pronounce one of them to be the offspring of an evil spirit (the other being born to the woman for an "incubus"), and regard their birth as a favour, which the jealous spirit is likely to recall, or to take the mother or her husband in payment for it. To prove this, the important event is celebrated by a variety of ceremonies, including songs, dances, and gifts to the parents (omniales offerings for the spirit), which have a way of disappearing by enchantment.

Two entirely black sheep are bought for the twins; they must have the care and observe their prayers and symbol of their spirits, their fetishes. In Indonesia likewise the birth of twins is ascribed to a demon. One of them, according to belief in the island of Lias, is due to superimposition caused by such a being, as is also the birth of an albino. Other causes are recognized in the eastern province of the island, as roughness or anger on the mother's part towards her parents or sister, continued cohabitation during pregnancy, or the eating of a double fruit. To the last we shall recur. Like the Warmund, the North Samoans believe some other cause will kill the twins if they are allowed to live; and they are therefore put to death. And in northern Patagonia, the offspring of the twins is the offspring of an "ante" (ghost of the dead).

The quieter ones are, of course, the larger, is put in a pot and buried alive. The Back of Demeurano also regard twins as the offspring of an evil spirit named Pernowarai. In Essaquepe a British commission, in 1871, reported that a native woman, who was not many years ago ascribed an outbreak of sickness to one of twins whom she had just brought to the coast. He became a wizard, a person of supernatural powers, "because a woman could not naturally produce two children at a birth"; and the unfortunate child had, indeed, been Investigated was born as the result of the mother's infidelity to her husband, but it is generally accepted that she has trespassed on the sacred space of a ghost whose power lies that way.4 In the Moluccas twins are attributed to the sky-god, Upulero, probably as father.5 This belief may be compared with a custom of the Tungva Tribes of S.E. Africa, who call twins 'children of heaven' and in this capacity ascribe to them special powers; and the mother is called Tilo, "heaven".6 The ancient Persians held that one of twins was the son of the lightning, to which they prayed the lord and creator of rain, and that the parents were asked to be excused if the lightning diverges and ceremonies. There is some evidence that they offered the twins, probably to the lightning; at any rate, if they died young, the children were endowed with supernatural powers in the dwelling-house as sacred things.

As among the Tungvas, twins taken to be the offspring of the Mountain-man, so their neighbours the Alains of Shakhal believe one of them to be of a supernatural being, on the ground that one cannot get out of the child at a time. This is a perpetual shame to the mother; and there is reason for believing that this was disguised at birth, as the twin's account expressly affirms. At all events the Alains state that only one survives, and that of one human paternity. It is also said that, like the Japanese, they hold that, when twins are born, the older is bold, strong, and lucky, while nothing distinguishes the elder from ordinary men. They, however, seek by means of sacrifice, prayer, and talismans to prevent such births. They avoid women who have given birth to twins; but, contrary to the Gilyaks, they hold that nothing is so likely to convey the infection as objects belonging to the

The belief in reincarnation is very widespread, and it has been discussed by the present writer in his Primary Paternity.\(^1\) The Semang, a Negrito tribe of Perak, hold that certain birds and animals eat only the souls of the dead; both birds and animals are considered to have the power to foretell the future; and a bird of this kind is looked upon as the offspring of a pregnant woman, but only while children.

The somewhat indefinite ascription by the various tribes of the north-western coasts of N. America to the power of the dead of eating animals is available to the husband of the young women, and renewing it year by year.

Arunta, which take the wolf in the forest.\(^2\) The birth of twins is connected with a misfortune, human life being intensified if both are girls; every one promptly runs out of the house, leaving the mother and children alone. To prevent this event, the Fihmen (one of the tribes) set up a figure of a wolf, made of wood, to act as a substitute for the husband of the young women, and renewing it year by year.

A pair of twins have the privilege of learning things by means of dreams. They are thought to be to spiritual and physical phenomena. They lose the privilege, however, if they eat animals which they have so much of, and do not grow any such animal. If this power appears to extend into adult life, twins among the Igorrians of S. America are believed to be born of the twins' parents; and among the twins are regarded as the elder; but both must be treated exactly alike: the Twin Houses,\(^3\) or set, each consisting of a small rude framework covered with a thatch of grass, form a sort of shrine. Upon a wooden girdle beneath the thatch is spread a white cloth, on which is cast a small cup of corn from an ear of corn, and a white streamer floats from a rough pole in front of the structure. The shrines of twin-shrine is ascribed to twin-bearers and twins, and to the two by persons who are born of twin, but not necessarily of the same mother. Under their direction and to their profit, the twin-bearers and twins, and their shrines, are arranged. A fowl is then sacrificed and the patient is washed over all these shrines in the water of the river; and the powers of twins are sometimes extended to their parents.

To cure a sprain, the mother of twins in Ceylon made to trample the hemp every evening for a couple of days.\(^7\) Among the Brahuis of Baluchistan, to cure the tertian fever, a twin is called on to stand opposite to the patient. This is hung round the patient's neck and is believed to drive the fever away.\(^8\) In Maryland it is asserted that the breasts of twins has power to drive away the whooping-cough from a child by giving it a piece of bread and butter.\(^9\) Among the Baganda a ceremony also intended to ensure male fertility to the plantains is performed by the father and mother, and an effigy of each of the twins, partly composed of ground oat-flower.\(^10\) Among the Basoga, on the north-east of Lake Victoria Nyanza, the birth of twins is a joyous event, though both the twins and their parents are subjected to taboos and ceremonies to render them innocuous. In the north-western district the persons of both father and mother are sacred; the former goes on a round of visits, and is believed to carry blessing wherever he goes. In the central district the children are held to be of divine origin. Their mother must sow her seed before any woman of her clan. The twins must be brought to the field of any classwoman who is about to sow; and the sowing is performed in their presence.\(^11\) The Buto, a Nilotic tribe bordering on Lake Kyoga, were held to be the birth of twins, though they and their mother are secluded, as among the

In fact, it is chiefly in the control of the weather and the promotion of fertility that twins closely connect with another—that the powers possessed by twins are generally held to lie. Power over the elements, especially over rain and snow, is always attributed to them by the Indians of British Columbia. The Shuswap hold that, if a twin bathe in a lake or stream, it will rain. The Tsimshian think that whatever twins white birds on a thing, and that the weather. There fore they pray to wind and rain, 'Calm down, breath of the twins.'

A study of the Etuksaw by ethnologists tells us that they can cause disease and procure favourable winds and weather. Nuxa twins produce rain by painting their face black, according to the Bushmen. The Bushmen hold that this course for the abatement of a gale. In S. Africa twins are said to be able to foretell the weather by their feelings: this seems to be a relic of a belief in control of the weather, control having faded into prediction. A little farther north, the Bushmen employ the twin to procure rain. The women, stripped or covered at most with a grass petticoat, go in procession led by a mother of twins to the grave of a twin, or of an abortion, buried in a dry place, and pour water on it, or dig up the remains and bury them again in the mud near the water. Among the Wanyamwoi of the German East Africa a twin about to cross a river, stream, or lake, or in a stormy weather, fills his mouth with water and sports it out, saying, 'I am a twin.' The object of this ceremony is to prevent harm befalling him or his companions. It is only in the Upper Congo that twins are usually abundant, a twin is called to make excessive rain cease. He puts some rain-eradicating earth on the hands and feet, dips them into the rain to cease and the earth to dry up. Here twins also are credited with occult powers to affect the weather, or to cure or to cause the success or failure of a hunting or fishing expedition.20 In Gabun, French Congo, the images of twins, presented to the twin sanctuaries, are said to be used in rain-making.21 It is apparently held to ensure the continued fertility of their mother.22 From a consideration of the traditional disappearance of Romulus, the first of the twin-sanctuaries of Romulus, who, it will be remembered, was one of twins, J. G. Frazer has made the ingenious conjecture that the ancient Romans must have had a widespread superstition that twins have power over the weather in general and over rain and wind in particular. The superhuman powers of Gwyvelwyk and the mundane cult of such as die have already been referred to.

4. Cult of divine twins.—So far, abundant reason has been given for the conclusion that twins, being out of the ordinary course of nature, are held by many peoples to be children of extraordinary powers, or of portentous and even dangerous birth, and consequently that they, or at least one of them, must be laid under an especial protection, put to death, and, where this practice is abandoned or has not arisen, they and their mother (frequently their father also) must be surrounded with taboos. They are involved for various purposes, chiefly for rain and fertility. Rendel Harris, who has investigated the subject, has in a series of works established the existence, from a remote antiquity, in Mediterranean countries of a cult of divine twins, some indications of which are also found elsewhere. The twins of Greek legend, Castor and Polydeuces (called by the Romans Pollux), have of course long been known, and other twins of less renown have also been recognized. But the wide range of the cult, and the number of cases in which twins have been worshipped, had not previously been understood. Castor and Polydeuces, the twin sister with their sister with their twin, the tradition ally the children of Leda, born in some versions, out of an egg.

Twins, king of Sparta, the husband of Elara, though regarded in their life as their father, was credited in some accounts with the paternity of Castor only, the other two being the children of Zeus. It has been mentioned above that this belief in a divided paternity of a multiple birth is not unusual among the lower races; it is therefore one of the marks of the archaic origin of the cult of Castor and Pollux. The former, being the son of a mortal father, was himself mortal. Pollux, however, by some accounts, was credited with sharing his immortality with his brother and living with him alternately a day under the earth and a day with the gods. Their legend attributed to them a number of adventures; and they were worshipped as deo stari, protectors of travellers by water, and thence of travellers in general, the guardians of hospitality and of oaths, and were represented as riding on magnificent white steeds. As twins they were connected with the sky, with thunder and storms; hence probably not only their patronage of travellers by sea, but also their character as Dioscuri, sons of Zeus, and their reputation as saviours, which has been ascribed to their descent from the Tyndareans, they were special patrons of the kings of Sparta. Other twins were also known in Greece—Herakles and Iphikles, Amphion and Zethus, etc. Rendel Harris has also made out a good case for the existence of twin-sanctuaries in the peninsula and adjacent islands, leading to the inference that the twin superstition in Greece was not different from that found in other quarters of the globe.

The worship of the Dioscuri early passed to Italy, where it is attested on the coins of Magna Grecia and the mirrors of the Etruscan. It became firmly rooted in Italy by the well-known dilymphomy at the battle of Lake Regillus. But from the very beginnings of the city the twin superstition seems to have been accepted. The tale of Romulus and Remus is conclusive on the point. They built Rome, as Amphion and Zethus built Thebes, one brother slew the other—neither of these incidents is by any means strange in legends of twins—and the surviving twin disappeared in a thunderstorm, without a doubtless another way of expressing his relation to the sky and the storm-cloud.

The Siwins, perhaps originally divine horses before they became elaborated into human-shaped figures in the Etruscan, are rain-makers, probably connected with the lightning—certainly with the sky; they grant fertility to men as well as to the earth, and they aid the sailor and the traveller. In Asia Minor and Palestine the cult of the twins appears from a very ancient date. Esau and Jacob and other twins found in the Hebrew Scriptures are personages whose primitive form and attributes it is no longer possible to recover from the attrition of time and the corrosive energies successfully wielded by generations of pious editors. Traces, however, of the twin cult linger in the names of various places, like Ibn Airaq, near Bagdad, which has been identified with a place called in the book of Joshua Bne Baraq, 'sons of lightning'; and the account in the second book of Macoebes of the defeat by Judas Maccabeus of Timotheus almost certainly contains a Dionysiac tradition. Barca in N. Africa, a colony of Cyrene, seems to be connected with lightning; and the saliphum plant, which was sacred to the twins, was in the cabbalistic worship of its coins. The Pharaohs at Alexandria was dedicated to the saviour-gods. There is reason for suspecting legends, and perhaps the cult, of divine twins among both the Phoenicians and the Arabs.23 24 25 26 27 28
Farther north it is quite clear that Elesness was from ancient times a seat of the Twain-cult. The Twins were there known as Monnia and Atiz. When Christianity superseded the old paganism, Jews, Christians, and Copts took their place. The Syract Acts of Thomas shows that Thomas, or Judas Thomas, as he is called, was regarded as the twin of Christ. With his Lord's assistance he performs in the legend a number of deeds which are beyond doubt Dioscuric. Among the apostles James and John seem also to have been regarded as twins: whence probably their sobriquet Eliaziros, "sons of thunder." In various countries of Europe there are vestiges of Dioscuric cult in historical writers like Tacitus and in popular tales. A pagan altar has been found at Notre Dame, Paris, with a dedication by the boasters of the Seine to certain Celtic divinities and among them the Heavenly Twins. The ancient gods all over Europe and the Christian East have been succeeded by saints who perform similar functions and are often called by similar names. Many of these are in pairs or triads, and some of them are explicitly reputed to be twins or triplets, not merely in Christian profession and martyrdom, but by name. They have some of the sonorous names, or names which are variants of one another, according to a wide-spread custom of calling twins by names specifically given to twins, or names which are echoes of each other. A few of these may be found recorded in Rendel Harris's List.

Such are Speussippus, Elecosippus and Melicosippus, martyrs, of Langres, whose cult spread westwards from Cappadocia; Florus and Ampholius, martyrs of the two cities of Carthage, and martyrs; Protasius and Vervastius, martyrs, whose relics Ambrose opportuneely found at Milan for the conversion of the Arians; Cossus and Damian, physicians and martyrs, whose cult seems to have been known from the Euphrates to Kent. Other might easily be added from the ancient lists of Harris.

The electrical phenomenon sometimes appearing on the masts and yards of vessels during a storm in the Mediterranean was anciently held to be a manifestation of Castor and Pollux; and it was a good sign when the light was due west.1 This same phenomenon is now credited to St. Elmo, a patron saint of sailors, whose name occurs in a variety of forms, and of whom nothing whatever is known.2 Rendel Harris has reproved Professor For believing that in some of its forms the name is connected with Remus, who with Romulus was commemorated at San Remo on the coast of Italy. Rendel Harris also finds Remus preceded Castor and Pollux in the veneration of the Romans. They were exposed, according to the legend, in a rude boat on the Tiber; and from floating on the river they probably made their way, like other figures of the Twins, to sea as the patrons and protectors of seamen and voyagers.

Several pairs of mythical twins are found on the western continent. Of these the best known are the twins of Iroquoian tradition, Iosheka and Tawiscoa.

According to their legend, a woman named Atanese fell down through a rift in the sky upon the primordial waters, for there was no land as yet. By the advice of the turtle the animals dived, brought up soil, put it on the turtle's back, and so formed a land on which they could receive the falling birds, who were pregnant and promptly gave birth to a daughter. The daughter because in her turn pregnant of two boys, Iosheka and Tawiscoa. When these were born, birds were to be born in the natural manner, and by breaking his way out through his mother's side or armpit, ended her life with his own birth. The brothers grew up, Iosheka went about providing the earth. Cast out time armed with water. But the evil twin attempted to foul him by creating a gigantic frog to swallow all the water. A quarrel ensued, as in the case of Romulus and Remus, between Iosheka and Tawiscoa, using the horns of a deer, vanquished Tawiscoa, whose weapon was only a branch of the wild rose, and drove him away to the extremity of the west, his blood gushing from him at every step and turning into fire as it fell. The victor then established his lodge in the far east, opened a cave in the earth and brought forth all kinds of land animals, formed men, instructed them in the art of making fire and in the growing of maize; and it is he who imparts fertility to the soil. Iosheka is therefore the beneficent and divine helper of the Iroquois-Iroquoe; and the deeds and combat of the Heavenly Twins are the foundation of their mythology.

Without pausing to consider any other N. American twins, we may turn to Peru.

From before the times of the Incas the Peruvians seem to have worshipped in the form of the Heavenly Twins, as the Atacama, to us as Atairu, conjectured by Brionton to be properly Atchschuca, 'brother the twins.' From him and from his wife, the ancient Guanasiri, who seduced the sister of certain Guichannae, "raysless ones" or "darklings," she proved pregnant and produced two eggs, but died putting them into the world. From these eggs emerged two brothers, Apocatequil and Piguera, names which have also suffered some deformation. Apocatequil was the more powerful. By touching his mother's corpse, he brought her back to life; she slew the Guichanneus, who had destroyed his father; he released the race of Indians from the soil by turning it up with a golden spade. The thunder and lightning were due to him; thunderbolts were infants of lightning, gave fertility to the fields, and were esteemed as love-charms. 'In memory of these brothers, twins in Peru were deemed always sacred to the lightning; and when a woman or even a man was killed and sacrifices offered to the two primitive brothers, with a chant commencing A chawsa cañacuyot, 'O Thou who cannot twain,' words mentioned by the Spanishiards for the name of a deity.'

The Bakairi, a Carib tribe in the northern part of the Amazon basin, have a legend of twins who were cultural heroes.

The Bakairi were then few and oppressed by the jaguars, who are indiscriminately imagined with traits of both the lower animals and human beings. Their mother, called Twaawia, was pregnant, because pregnant by sucking two finger-bones of Bakairi killed by the jaguars. She died before giving birth to her children; and they were cut out from a body by the Countess O. Mueiter. The boys, who are called Keri and Kamo, were fostered by the jaguar, their natural captor. But the jaguar, seeing that the boys were weak and small, but manipulated another one to complete it. They then avenged their mother's death on their foster-father. With the help of the vultures they captured two birds; they stole fire from the fire (ania eutelus). From the Ocholol water-snake they obtained a root and made the birds, which animals they gave hawmanns, sleep, stones to build houses, arrows, tobacco, manioc, and cotton. They invented flutes and dancing. They made various tribes of men; and Keri is honoured as the ancestor of the Bakairi. They quarreled, but made the dispute up again. Finally they disappeared, nobody knows whether.

There are other mythical twins in S. America, but the subject need not be pursued.4 In New Zealand, Melanesia, and Micronesia there are moreover legends of two brothers, or a band of brethren, who appear to be culture-heroes, though the opposition of beneficent and malicious or of wise and stupid brethren is undeveloped; but they are not specifically described as twins.

If we inquire into the origin of the cult, it seems clear that the Dioscuri, as the sons of Zeus, were regarded as divinities of light. It is likely, therefore, that their appearances are represented as taking place in the middle of the summer about the first full moon after the solstice.5 So also there can be little doubt that the Atavins in India were divinities of the dawn and possibly the evening twilight. From divinities of light they would naturally pass to wild, or personify, the lightning (Zeus's weapon) and the storm. They came to be looked upon as protectors from the violence of the elements, and hence of voyagers on river or sea, and, by extension of the idea, of travellers generally. Their powers would gradually grow until they covered a sea region. The same connexion with light and lightning to be traced on the American

TYPOLOGY

which may be intended for such a reliquary. Though there are not many texts in which the afterbirth or the infant is spoken of as a

historical person, it is possible to discern in its life and death a

mystical, or sometimes 'mystical,' as opposed to the literal or grammatical interpretation. Origen, as is well known, spoke of the

divisions of this 'spiritual' method, and highly favoured it. It was not his invention. Already both pagan and Jewish writers had found in it an admirable expedient for extracting salutary lessons from passages in their sacred books which seemed to be trivial, perplexing, or even of doubtful moral worth, if taken at their face value. It flourished particularly at Alexandria, and was much used by Philo. The practice of allegorizing the OT Scriptures became so popular, and the defining line between allegorizing and typology in the strict sense is so uncertain, that it is necessary at the outset to refer to the former; both branches of this mystical interpretation, as used by Christian writers, aimed at elucidating the latent principles of Christianity in the OT, but, if a definition between them is demanded, it is supplied by Herbert Manning, Bishop of Peterborough, 1819-29) in these terms:

"According to one mode [i.e. typology] facts and circumstances . . . have been applied to circumstances of the NT, or the symbols of which they have been described as mere emblems"; or, again, "An allegory is a fictitious narrative, a type is something real."2 This last sentence requires some modification; allegorizing may accept the historical truth of the narrative treated, but does not depend upon it; typology, the bishop holds, demands its historical truth. Van Mildert brings us nearer to the true test when he says:

"It is, indeed, essential to a Type, in the Scriptural acceptation of the term, that there should be competent evidence of the Divine intention in the correspondence between it and the Antitype."3

Again, Westcott says:

"A type presupposes a purpose in history wrought out from age to age. An allegory rests finally in the imagination, though the thoughts which it expresses may be justified by the harmonics which connect the many elements of life."4

"Any account of the ancient method of typology must take into consideration the fact that this

1 See art. DOUBLET.

3 "A Type is the Scriptural Acceptation of the term, that there should be competent evidence of the Divine intention in the correspondence between the type and the Antitype."3

continent, where they further tended to become culture-heroes. But this does not account for their duality, excess in so far as they may have been, nor the third, the morning and evening, the dawn and the disappearance of light. It is perhaps due to an innate tendency in the human mind to repeat, to echo, to balance, or to contrast. This persists in psychology, in the belief that every action itself is performed in every department—in philosophy, theology, mytho-

logy, literature, art, ethics. It is responsible for the dualism of the great religions, for the frequent redistribution of the world, if not of the universe, for the symmetrical grouping of figures in a work of art, and for dramatic nemesis. In the domain of mythology and religion, whether pagan or Christian, it has doubtless been emphasized by the mystery attaching to the comparatively infrequent phenomenon of human twins. The beneficent and maleficent sides of their tabu are expressed in the opposition of characters and frequently in the double predicate.1

5. Afterbirth as twin.—The Baganda hold a curious belief that the afterbirth, or the navel-string (there is a variation as to this between the two accounts given by Roscoe; whom we are indebted for the information), is the twin or double of the child to whom it belongs.

The afterbirth was enclosed in a broken cooking-pot, covered with the leaves of the plantain, and placed at the root of the pumpkin—i.e. if a boy at the root of a plantain from which beer was made; if a girl, at the root of a plantain used as a vegetable. We are told that the child rubbed the second, and was believed to have a spirit, which became at once a ghost.1 On account of this ghost the plantain was guarded against any one not belonging to the clan from partaking of the beer made from it, or of the food cooked from it; else the beer or the food, by becoming possessed of the child, would be lost to the clan, and the child would then die in order to follow the ghost of its twin. To obviate this, no one of the clan, neither the grandfathers nor the great-drink the beer, so retaining the ghost of the afterbirth in the clan. More elaborate was the care taken of the king's umbilical cord, to which the ghost of the afterbirth attached, and which was always spoken of as if it were the afterbirth itself: hence probably the confusion between afterbirth and cord. A special officer, called the kikयegenye, who was second only to the kitiuki, or prime minister, was appointed to the charge of it. He occupied an enclosure next to the king's, in which was a temple built for the 'twin.' Once a month at new moon he carried the 'twin,' wrapped as it always was in bark-cloth, into the presence of the king, who took it out of its wrappings, inspected it, and returned it to the kikanyenge. He then exposed it in the doorway of the temple for the moon to shine upon it, anointet it with butter, wrapped it up again, and restored it to its place in the temple. When the king died, the kikanyenge made way for a new kikanyenge to take charge of the new king's twin;1 but it still remained his duty to care for the body 'till the end,' and to provide for the upkeep of the temple and enclosure. In due time the dead king's jaw-bone, to which the child was attached, was enclosed in a box, which would be added to his 'twin' and kept at the temple, where he would continue to be venerated.2 Even the jaw-bone and umbilical cord of the god Kibuka were preserved in his temple on an island of Lake Victoria Nyanza; and they are now in the Ethnological Museum at Cambridge.3

To the south of Uganda and west of the great lake, in Kiziba, formerly in German territory, similar customs and beliefs prevail.

The afterbirth, we are told, is considered as a kind of human being, and on the birth of twins the children are spoken of as four, instead of two, each afterbirth being looked upon as a child.4

In ancient Egypt also there seem to be traces of the same idea.

Monuments of the earlier dynasties show an object which has been called the Egyptian child's afterbirth, and applied upon standard in procession, together with the usual symbolic standards of animals. Its use was continued to the end of the Egyptian empire, though its shape was gradually conventionalized. The goddess represented as presiding at the birth of Quanum, Vesta, and so forth, was believed to bear or have been born a child like the reliquary containing the navel-string of Kibuka; and in other representations the same goddess wears a vase-like object

distinction between type and allegory was not at all times recognized, and there must always be room for difference of opinion as to how far the inter- pretation offered of any passage rests finally in the imagination. One characteristic feature of the history of typology is the divergence of opinion as to the limits of justifiable exposition of types. The fundamental principle at the heart of this method of interpretation is that there is a continuity of revelation in the unity of Scripture. In days when the historical sense and the recogni- tion of progressive revelation were still inchoate it was the natural way of evidencing this unity of revelation. It is the product of the ages when history was regarded as a series of catastrophic events rather than as the unfolding of an age-long process, and it was therefore of immense value as a means of showing that history is not a mere series of accidental events, but the accomplishment of a divine purpose. Thus, though typology, as a branch of serious theological study, is now generally accredited and practically the only method of interpreting Scripture, it is not of recent date that it has taken on the form that the NT itself deserves careful study. It is proposed in this article to discuss (1) the extent and character of typological references in the NT, (2) the general history of typology in later times, and (3) its strengths and weaknesses as a method of interpretation.

2. In the New Testament.—From the first it was an integral and essential feature of the gospel of Jesus to establish and maintain an unbroken connexion with the old covenant. Jesus was aware that His teaching was such as to precipitate a cleavage with the traditions of the Jews. He therefore emphasized the essential unity: 'I am not come to destroy but to fulfil.' In the synagogue at Nazareth He expounded Is 61 as a scripture that day fulfilled in the ears of His hearers. He saw in John Baptist the fulfilment of the 'Elijah' prophecy. After His resurrection He expounded to His disciples 'in all the scriptures the things concerning Himself.' He taught that they 'testified' to His Lordship. He illustrated His message from OT parallels, as when He referred to Elijah at Zarephath, and Elisha and Naaman (Lk 4:22-25). On two occasions He is re- corded to have referred in particular terms to events of the old covenant, viz. the sign of the prophet Jonah, and the lifting up of the brazen serpent. At these we must look more closely.

Concerning the sign of the prophet Jonah, Matthew (12:38) interprets the sign as Jonah's confinement in the belly of the whale foreshadowing Christ's burial and rising. Luke (11:29) omits this application (though Plummer contends that it is implied in Sophocles). Matthew and Luke agree in giving the application that the contrast between the patience of the Saviour and the impenitence of the Jews at the preaching of a greater than Jonah is the warning sign. We have to inquire therefore whether Mt 12:38 is an interpolation by the evangelist, or else that Jonah can be justly regarded as a type. The story is now generally accepted as an allegory of the experi- ences of the gospel, though such is typical of Christ, in so far as the whole history of Israel is prophetic, but, regarded as a personal story, the story of Jonah corresponds so little with the mine in the belly of the whale, in principle, and offers so many difficulties in detail, that the suggestion worked out by Sanday, that Mt 12:38 is a distortion of the story of Jonah, is very questionable.

With regard to the reference to the brazen serpent, apart from the difficulty of treating the discourses in the Fourth Gospel as the actual words of Jesus, the case is clearer. But the treatment is markedly broad lines of principle and suggested analogies rather than detailed similarities. The in- cident referred to was already regarded as mysteriously en- abled. 'He is lifted up, of whom the scripture speaks: he is actually as apparently contravened a divine law.' Jesus intimates that that principle will be revealed in His own ministry, and the terms in which He speaks of it are such as to express that principle in the broadest possible way, for nothing is the Son of Man a conception not exhausted by reference to the manner of Christian suffering. In a very similar fashion Jesus spoke of His Body in terms of the Temple, because the Temple 'as the seat of God's presence among His people' exhibited a principle to be perfectly fulfilled by the Body of Christ.

Our Lord's example in this matter of reference to the OT Scriptures may be summed up as a full recognition that the principles of truth enshrined in the OT were to receive in Himself a fuller and clearer explication, and that therefore the OT Scriptures are full of teaching concerning Him; His practice therefore encourages us to search the Scriptures for the revelation of such principles, but it may be questioned if we can derive from His teaching any justification for the exploitation of formal resemblances or for indulgence in the fancy of elaborate working out of details. Throughout the NT the same reverence for the dignity and true spiritual value of the OT is marked. Even in those books which show the clearest leanings towards mystical interpretation, in instances where the correspondence seems most far-fetched (e.g., Mt 22:29), or the argument most alien to our modern ways of thought (e.g., Gal 3:23 or 1 Co 14), the respect for the old covenant as a medium of revelation, and the lofty nature of the NT itself, is always clearly discerned. Nothing in the NT can be compared with the puerilities of such a work as the Epistle to Barithand, which degrades the old covenant to a mere riddle of which Christianity is the answer, and which so keenly sees in Abraham's 318 men a foreshadowing of the Cross of Jesus, because the Greek number 318 is clearly made up of the Greek numbers 3 and 8, which were the numbers of St. John, the Apostle, and Jesus, the Hebrews—a work clearly influenced by Alexandrian methods of thought—the OT is never merely allegorized, and the restrained treatment of the figure of Melchizedek and of the Tabernacle ritual in that book afford a marked contrast to the fanciful elaboration with which both have been treated by later writers. A recognition of typological methods of thought is essential for a true understanding of the NT.

The extent of possible typological references is remarkably small.

Patrick Fairbairn gives the following list. But he has to confess that even this would be regarded as a long list.

 tipos: Adam, Melchizedek, Sarah and Hagar, Ismahel and Isaac, and Joseph, and the Hi-avenabim Abraham, Moses, David, Solomon, Jonah, Zorubabel, and Joshua.

Even in the Epistle to the Hebrews a work clearly influenced by Alexandrian methods of thought—the OT is never merely allegorized, and the restrained treatment of the figure of Melchizedek and of the Tabernacle ritual in that book afford a marked contrast to the fanciful elaboration with which both have been treated by later writers. A recognition of typological methods of thought is essential for a true understanding of the NT.

At any rate it is important to note that all these references occur quite naturally and that nowhere is there any sign of a studied exploration of the OT for possible types.

3. History of typology. This may for convenience be divided into three groups rather than periods, though each group corresponds roughly to a period in the history of the Church.

(a) The first is that of the apologetic use of types to prove against Jewish unbelief the antiquity of the Christian faith or to refute heresies. The very purpose of the apologists exposed them to fancifulness. Whereas the author of the Epistle to the Hebrews would show his readers that what they valued as the old covenant was but a shadow preparing the world for better and enduring things to come, Justin had to show that what the Jew

TYPOLOGY

objected to in the Christian gospel lay hidden in the Jewish Scriptures. We can understand how he was able to rediscover Moses at Rephidim, prefigured the cross of Christ, or even how the bells on the high priest's garment were a mystical foreshadowing of the apostolate.1

Another interesting fact is to note how entertaining and very fanciful interpretations of those false teachers who, as Hippolytus puts it, 'by seducing those ignorant of the holy Scriptures into such like fancies make fools of them.'2 The Catholics met such fanciful allegorical interpretations by application of a canon of truth or tradition, which limited typological exploration to the treatment of narratives in the canonical books and to the illumination of truths revealed in Scripture—a limitation not always observed in later times. When we come to Origen, we find him using and extolling the allegorical method because so few could reply to Celsus's objection to some passages in the OT. Herein he simply took over the already long-established method of dealing with difficulties in Homer. His intellectual greatness saved him from the extreme rationalism of his predecessor Clement, even though he adopted his recognition of 'a manifold sense of Scripture (viz., on the one hand, the literal or grammatical; and, on the other, the allegorical, universal, and mystical). It must be remembered that, though Jerome accuses Origen of allegorizing to such an extent that 'historiatae auserat veritatem,'3 Origen recommended the retention of the literal sense where it was profitable, but the literal often failed to yield the meaning of the words.4

(b) The school of Alexandria, inheriting this tradition from so great a master, carried the discovery of mystical significance in the Scriptures to excess, finding in the method a last field of opportunity for the edifying use of the Bible. The school of Antioch resisted this use; Theodore of Mopsuestia entirely rejects allegorical interpretations, questions how attractive and how dangerous the practice was.5 Tyconius points out how well the method meets the need of pagan writers, but calls attention to the fact that in the lack of any sound rule of interpretation anything can be proved from the Scriptures.6 Tyconius, after endeavoured to establish rules for the proper surveying of the 'forest of Scripture, and to systematize what he calls the 'reduplications' of the Bible. Being a Donatist, he fell under the condemnation of Augustine, who speaks slightly of his work.7 Augustine's own rule is thus summarized:

To divide a, modus est, ut quisque in sermone divinoque nec ad muros homunculum nec ad filia veritatis properent reperiri, figuratum esse cognoscat.8

On the whole the Latin writers were more restrained than the Greek, more tenacious of historicity, and therefore more inclined to typical interpretation proper than to what is merely allegorical; yet Jerome, for all his criticism of Origen's methods, is himself in danger of being free in dealing with Scripture. As time went on, the last link of the chain that fell upon the Church removed one of the surest restraints against unprofitable fancifulness.9

(c) The third group or period is that in which typology took its place in constructive theology, and begins with the Scholastics. It was the object of some of the Fathers in admitting a threefold sense of Scripture that was generally followed. Erigena indeed speaks of an 'infinite sense,' and was led by his mysticism to use the allegorizing method freely; the Scriptures to him were rich in secrets, glittering with divers colours. Rabanus Maurus admits a fourfold sense. Others went farther, acknowledging a sevenfold or even an eightfold sense. In the later stages of Scholasticism, particularly after the rise of the theory of the twofold nature of truth, and the spread of mysticism, some schools practically scorned the literal interpretation of Scripture on the ground that 'litera occultis, spiritus vivificant,' and 'carried this often to such an extreme, as to leave scarcely a trace of the simple meaning.'10 It must be acknowledged that some, like Hugo of St. Victor and St. Thomas Aquinas, tried to restrict such excesses.

The combined influences of the Revival of Learning and the establishment of the Bible as the sole regulas fides brought about in the writings of the Reformers an even more pronounced tendency to typology. Luther and Calvin are remarkable for the sanity and critical acumen of their commentators. Reaction from Scholastic fancies and a new reverence for the plain teaching of Scripture produced this result; but soon the demand for popular expositions of Scripture (and perhaps the dearth of really scholarly teachers) brought typology into great favour, and it became a definite branch of hermeneutics. In this connexion the name of Cocceius of Leyden in the 17th cent. is prominent, although he adopted no definite system, and seems to have been content with a formal resemblance to justify typological interpretations. Others, however, did endeavour to systematize the method.

Solomon Glassius published as Jena in 1623-36 a work in five books called Philosophia Sacra, of which one part is devoted to the study and classification of Scripture narratives. A work published in Leyden in 1611, and referred to as a principal authority by T. J. Horst, is the Introduction to the Critical Study and Knowledge of the Holy Scriptures, the first ed. of which (in 1605) appeared in 1619. A second ed. was being issued in 8 vols. in 1656. Glassius divides types into two main classes—'insects,' or those specifically asserted to be in Scripture, and 'impressions.' These are sub-divided, the first into those which Scripture 'expressly ostendit' or 'tacitly insinuat,' the second into those which are 'judicious' or 'context.' The last are to be rejected. He adds nine canons for classifying or recognizing types. The canons are not particularly helpful, but they afford the author the (to him) valuable opportunity of refuting Bullarmine's recognition of a type of the class in the story of Zacharias—a recognition, of course, far older than Bullarmine. The fact reveals one reason why the Protestant theologians were anxious to find clear rules to govern typology. Other popular works on the subject were Thomas Taylor, Moses and Aaron, or the Types of the OT opened, London, 1655; Samuel Mothers, OT Types Explicated and Improved, do. 1673, rewritten by Catherine Fry and published in 2 vols. in 1734 under the title Gospel of the Old Testament (regarded by some as the fullest exposition of the subject); and E. Vignettes, Observationum Sacrarum, 3 vols., Franeker, 1699-1708.

The last named displays the rise of rationalism, and certainly the rationalistic and unimaginative temper of the 18th cent. was unimpressed by the practice of typology. Something of the 18th cent. methods of thought affects Marsh's Lectures on the Criticism and Interpretation of the Bible, and here we find a quite definite rule as to the type of typology laid down. We will admit no types except those which Glassius had called innate. He defends this

TYPOLOGY

503

position with much good sense and learning, though it is really a confession of weakness and inability to discover the principles which govern the characteristic features of the Baptist and the

At the beginning of the 19th cent. the subject attracted attention. It was much affected in circles influenced by the Evangelical Revival. Typology was long regarded as the main learning of the Hampton lecturers in 1814 (Van Mildert) and 1824 (J. J. Conybeare), and of the Hulsean in 1826 (Temple Chevalier), besides giving rise to a good deal of the spread of scientific criticism and the study of ancient religions, and before long of comparative religion, were destined to strike a death-blow to typology as a recognized branch of hermeneutics. The religion of the Jews was for a time regarded as beneath the notice of the student of religion, and, when it came into its own again, a much broader view of the relation between the old and new covenants held the field. Thus De Wette wrote that the entire OT is a great type of Him who was to come, and that Christianity lay in Judaism as leaves and fruit lie in the seed. Again, F. C. Bampton, in his examination of the notions between the 'deeper apprehension and the immediate sense' in the law of general harmony by which all individuals, in the natural as well as in the spiritual world, form one great organic system. The impress of the modes of natural science upon this utterance did not recommend it to those whose conception of the supernatural and providential alienated them from the rising naturalism, but the effects of modern methods of scientific study are already apparent in Fairbairn's Typology, since the publication of which no standard work on typology has appeared. It survives now principally in the expositions of those to whom the results of Biblical criticism are still unwelcome. Sometimes it is pursued with dignity and real spiritual value (as in the works of Andrew Jukes), but sometimes with a distressing purblindness or even offensiveness. It must be acknowledged that, on the other hand, modern writers of the critical school have unduly ignored the importance of typology—an attitude to which that of Edwin A. Abbott offers a brilliant exception. In his view the NT, and particularly the Fourth Gospel, is full of typical suggestions. In this way, believing the author to record what he took to be facts, it has spiritual import, but reconciles the rejection of the historicity of the narrative with the retention of its spiritual import. In a word, he allegorizes the records, while acknowledging that the author believed that he was recording facts, but facts with a typical significance.

This view is of importance in two respects. First, it reminds us of the fact that the symbolic significance of things and words held a far greater place in the thought of ancient times than it does with us, who have learned to form abstract conceptions and to search for exact definitions. E.g., the NT writers can speak of the 'blood of Christ' without explanation, in a manner that perplexes us. In the second place, it is based on a fundamental principle of sound interpretation, viz. the endeavour to discover what the original author of any document meant to convey. When we read of Melchizedek, or the ritual of the Tabernacle, or of David, it is not enough to ask what those passages may suggest to us; we must first ask what they suggested to the original readers. If the principles of truth which they then suggested be one with the principles more clearly seen in the fuller revelation in Christ, then the imperfect revelation may be regarded as typical of the fuller yet to come, because so mankind was being prepared. Thus the elder lights of the typology of the Baptist and the

1 Quoted from an article in J. C. H. Bähr, Symbolik des Material der Christlichen Kultur, Heidelberg, 1887, l. 16.
2 Hermeneutik des OT, Leipzig, 1841, p. 335.

...UDASIS

UDASIS.—The Udásis are the principal religious order of the Sikhs (q.v.). Also known as Nának-purá, 'sons of Nának,' the founder of Sikhism, they are probably the oldest of the Sikh orders, but Náráí, their founder, Sik to bhair, in Nának's elder son. The term ñadas is derived from Sanskrit udās, 'sad,' and means 'sorrow' or 'sadness.' The Udásis were separated from the active or militant Sikhs by the third guru of that sect, Amand Dá, who did not wish to encourage them, as is sometimes stated. This separation is also ascribed to Arjan, the fifth of the Sikh gurus. Whoever effected it, the severance marks the cleavage in the Sikh sect which definitely ranged it against the Muslim Mughal power, leaving the Udás order still in touch with orthodox Hinduism. Nevertheless the tenets of the order, deeply coloured as they are with Hindu asceticism, did not prevent its finding many followers among the descendents and disciples of the Sikh gurus. Thus the sixth guru, Hargovind, is said to have allowed Sri Chand to adopt Gurūdītā, his eldest son, into the order by making him his direct disciple—a statement not free from chronological difficulties.

The Udás order was at an early period divided into four chapters (dhūan, lit. 'fires'). Their founders were Bāhā Ḥasūr or Ḥasūn, Phāl, Gondā, and Al-mast—four said to be disciples of Gurūdītā. Of these founders the first bears a Muhammadan name (Ḥasan) and the last a purely Arabic title, al-mast denoting one drunk with love or devotion. The holy ecstatic, now is represented at Nainī Tal and Jagannāth, places far from the Panjab and Sikhdom alike. Gondā is revered at Shikārpur in Sind, as well as at a shrine near Amritsar in the Panjab, while the other two possess shrines in the Panjab hills only. This distribution points to efforts made by the earlier gurus to spread Sikhism, or at least a quieter type of it, over India generally. The followers of these four chapters constitute the senior assembly (bārā akhārā) of the order, its junior, or chhōrī akhārā, having been founded later by Phērū, a disciple of Har-Rāi, and now under Guriā. In theory all Udásis are celibate, but those who are so in practice are styled Nānā (or 'naked') Udásis. Sir Edward MacLauren, however, gives a different explanation of the term Nānā.

He describes their usual dress as red in colour, but 'a large section of them go entirely naked, except for the waistcloth, and two rolls of bandages to cover their bodies. These, like the naked sections of other orders, are known as Nānā, i.e., the special reverence to the ashes with which they smear their bodies, and which are said to protect them equally from either extreme of temperature. Their most binding oath is on a ball of ashes.'

As smearing the body with ashes symbolizes also death to mundane things, the Nānā Udásis are probably strict celibates, and hence the Nango...
ULTRAMONTANISM

505

the foundation of the chapter to a follower of the famous Sultan Sahib Sarwar, who was converted by Guru Nanak's father, Jeth Singh, and who eventually comprised many who used to affect the cult of that saint and perhaps still combine with it their acceptance of Sikh doctrine. The chapter, however, possesses the Brahminic akharā of Amritsar and is distinctly affiliated to orthodox Sikhism, and in the great Sikh State of Patīlā, where it is called the Bakhshī Sahib, it pays special reverence to the Gurus of Sikhism, or original "Book" of Bābā Nānak, and has an akharā of its own, distinct from those of the four dāflān. Lastly, but mentioned must be the Rāmdān Udaisā, a sub-division attached to another Gurdwārā, who was a grandson of one of Bābā Nānak's converts and established by one of the later gurūs in a monastery at Rāmdān, where the sub-order possesses a fine temple, at some distance from Amritsar. Each subdivision of the Udaisā has an organization for collecting and administering funds. Each is presided over by a head abbot (sri mahant), to whom the ordinary mahants, or monks, are subordinate.

The castes are generally are divided into two classes, one, from all Hindu castes and will take food from any Hindu. Sometimes, but not invariably, or even occasionally, congregated in monasteries, they are generally found formed into temporary Sikh places as Amritsar, Dera Nānak, and Kartarpur in the Panjāb, but they are also said to be numerous in the Malva to the south of it, and at Benares. The principal seats, however, lie in the central and in the District of Rohtāk, where Sikhism is by no means dominant. Their usages are not uniform. Some wear long hair like Sikhs, others matted hair like Sannyāsīs, and others again cut the hair. Some affix the tilak, or caste-mark, others avoid it. The dead are often cremated in the Hindu way, but apparently are sometimes buried. When a body is burnt, a samāṭh, or mausoleum, is erected to some Udaisā, but this privilege must be confined to those of special sanctity or mahants. While the majority are ascetics, some frankly engage in secular callings. Machagan gives the following picture of their relations with the Panjāb villagers.

In Lodhāiana the Udaisā are described as mostly Jāts by origin, the chādi or disciple and successor being usually chosen from these free traders, and are therefore the incarnation of the dravakās in Hindu villages, where they distribute food to such as wish for it. They are held by the Granth to be Bābā Nānak and of Guru Gobind Singh, although they do not attach much importance to the latter. The head of the college is called a mahant, who is also a mahant of the temple chādī. They are owned as well as in Hindu villages, and it is probably on this account they do not quite neglect Guru Gobind Singh. They rarely marry; and if they do so, generally lose all influence, for the dravakās soon becomes a private residence closed to strangers. But in some few families, such as that of Jaspīl Bāṅgar, which keeps a large langīr or almshouse going, it has always been the custom to marry the endowments being large enough to support the family and mantain the institution; but the eldest son does not in this case succeed as a matter of course. A chādi is chosen by the mahant, or by the family. If a mahant whose predecessors have not married should do so, he would lose all his weight with the people. The great shrine at Dera Bābā Nānak, in the Gurdaspur District, is in the custody of a community of Udaisā, whose mahant is to be appointed with the consent of the Bedi. Another shrine at the same place known as Tāhī Sahib, from a large tāhī or shisham tree* which grew close by, and was founded by Sri Chand, and is also after mahants of the Udaisā order. 2

Thus the Udaisā display all the normal features of an Indian religious order—a long-lived, real, abandoned in practice, professed adherence to a reformed faith, tempered by judicial compromise with the established system, and the inevitable evolution from an ascetic celibate order into a hereditary caste. In the last phase of the Sikh regime the Nānakputras had to employ as escorts to caravans, their sacred character as sons of Nānak ensuring them against attack.

ULTRAMONTANISM.—Ultramontanism is the term applied, often in a hostile or critical spirit, to the tendency to centralize in the papacy the doctrinal teaching and government of the Catholic Church. More vaguely still it is applied in general to extreme Roman Catholicism, to the tendency to emphasize all that separates Catholics from other Christians or from other men. Often enough it is used, quite inappropriately, as a mere nickname for ordinary Catholics who are conscious of their obligations as members of a universal Church. Thus the Catholic parties in the German and Belgian Parliaments have been called Ultramontane, though they would certainly not admit that they take their politics from Rome.

Historically, ultramontane was in occasional use in Central Europe from the 11th cent. onwards in a merely geographical sense, just as citra-montanus was used in Italy, to describe a man who lived south of the Alps. It does not seem to have been commonly used with any theological significance till the 17th cent., when it was applied to those who opposed the prevailing Gallican tendencies in France. The counter-reformation in general, and especially the pontificate of Sixtus V. at the close of the previous century, had done much to organize the central administration of the Church, while, on the other hand, the growing power and self-consciousness of the French monarchy tended to insist upon, and to express more definitely as principles, Gallican practices which might be traced back to the 13th century. It is in opposition to Gallicanism (p. e.) that Ultramontanism has its most definite meaning, and Fénelon, the Jesuits, and others who opposed the ecclesiastical policy of Louis XIV. and the Four Articles of the Gallican Church of France composed the ultramontane party. In the 18th cent., when the influence of religion was at its lowest, Gallican principles kept a strong hold on the French Church, but they found their most complete expression in the writings of the German Pelromius and in the policy of Joseph II. The Ultramontanism which opposed Gallicanism and Josephism was little more than the assertion of the universal character of the Church, which both those systems tended to obscure, and an effort, far from successful till the 19th cent., to assert the right of the Church to live her own religious life without the constant interference of the State.

Fornal Gallicanism, with its Four Articles, may be said to have been destroyed in France by the Revolution. The fall of the ancien régime liberated the Church; numbers of the more Gallican clergy were dispossessed by joining the Constitutional Church; and Catholicism was purified and revived by suffering and persecution. No more striking manifestation of papal power had yet been seen than this religious war, in which, according to the Concordat, practically deprived thirty-seven bishops of their sees. The Concordat was thus an Ultramontane act, and, though Napoleon added to it the Gallican articles of liberty and equality, and, when quarreled with the pope, tried to make the Four Articles the law of the State, nothing could restore the old pre-
Revolution Gallican system. The spirit, however, survived and inspired both the statesmen of the restored monarchy and many of the more old-fashioned clergy, yet the Restoration was also the period of the rise of Ultramontanism. This movement of the 19th cent. received its most powerful expression in the writings of Joseph de Maistre, de Bonald, and Lamennais. These men realized that the Revolution had destroyed the old foundations on which men had rested their habits of thought and action, and that a fresh start had to be made. De Maistre knew that the revolutionary spirit was still abroad, stronger perhaps than ever, and his Du Pape (1819) is an appeal as much to practical utility as to principle. It is only the Christian Church which has in it the strength to overcome "the Revolution"; and without an infallible papacy the Church is, like the States-General, reducing the monarchy to a shadow and therefore slipping back into revolution. He was disappointed with the immediate effect of his book, but his rigid, austere, and precise ideas proved a great influence on the Ultramontanes of the middle of the century. A man of far greater intellectual power than de Maistre, the Vicomte de Bonald emphasized the weakness of the individual man in finding out for himself the truths of history and conduct. What a contrast between the disagreement of philosophers and the agreement of practical men about practical matters! The individual reason rightly, therefore, falls back for support on the convictions of society and on tradition. This "traditionalism" Lamennais combined with the Ultramontanism of Joseph de Maistre. Lamennais's passionate temper always made him push a thing to its extreme limit, and he turned de Bonald's trust in tradition into a universal test of truth. The voice of the pope was for him the expression of this "universal consent." In his first stage he combined legitimacy with Ultramontanism; in his second he appealed to the people and tried to make democracy the exclusive ally of the Church. The Avenir, which Lamennais and his friends edited in 1831, was probably the most brilliant expression of the earlier stage of 19th cent. Ultramontanism. The enemy which the Avenir fought was the Gallican tradition of State control over the Church which had been reinforced by the revolutionary doctrines of St. Simon. The aim was liberty—liberty of conscience, of association, of education, of the press. Devotion to Rome was the great instrument of liberty, for the Gallican Church was the universal Church and was independent of the different governments. It provided also an element of fervour and historic sentiment at a time when Europe, under the influence of the Romantic movement, was casting off the 18th cent. and all its works and recapturing the power of religious enthusiasm. The exclusive form in which Lamennais's ideas were expressed ultimately set Rome itself against him, but the movement continued under wiser men, Lacordaire, Montalembert, de Ravanign, and others. They succeeded in all but destroying the old Gallican spirit and in putting a new life into the French Church. In the Revolution of 1848 the Church, which had been so unpopular in 1830, exercised a powerful influence. The defeat of Gallicanism, however, brought out a division in the Ultramontane ranks which the struggle in which the Ultramontane movement was passed under the Second Republic and which broke down the old State monopoly of education, led to the first open breach. On one side Montalembert, with his Papalism, prepared to make concessions to the State in order to secure an invaluable piece of legislation, and because they shared in the ideas of their time so far as these were not definitely opposed to Catholic principle. On the other side were a number of Catholics whose policy became characteristically identified with a newspaper, the party of the Univers. Like Veillot, they may have had some idea they would have influence over the spiritual policy for the Church the control of her own religious life. They wished to secure for her the predominance which in an ideal word the spiritual would have over the temporal, and which in fact the Church did partly enjoy in the Middle Ages. Such an aim was incompatible with the ideas and practices prevailing among a people who were far from being medieval in faith, but Veillot and his party were prepared to fight for it by bitter antagonism to free-thinkers, by opposition often bitter enough to those, even should they be bishops, whom they considered lukewarm Catholics, and in order by making lordly eyes on the Ultramontanes of the middle of the century. A man of far greater intellectual power than de Maistre, the Vicomte de Bonald emphasized the weakness of the individual man in finding out for himself the truths of history and conduct. What a contrast between the disagreement of philosophers and the agreement of practical men about practical matters! The individual reason rightly, therefore, falls back for support on the convictions of society and on tradition. This "traditionalism" Lamennais combined with the Ultramontanism of Joseph de Maistre. Lamennais's passionate temper always made him push a thing to its extreme limit, and he turned de Bonald's trust in tradition into a universal test of truth. The voice of the pope was for him the expression of this "universal consent." In his first stage he combined legitimacy with Ultramontanism; in his second he appealed to the people and tried to make democracy the exclusive ally of the Church. The Avenir, which Lamennais and his friends edited in 1831, was probably the most brilliant expression of the earlier stage of 19th cent. Ultramontanism. The enemy which the Avenir fought was the Gallican tradition of State control over the Church which had been reinforced by the revolutionary doctrines of St. Simon. The aim was liberty—liberty of conscience, of association, of education, of the press. Devotion to Rome was the great instrument of liberty, for the Gallican Church was the universal Church and was independent of the different governments. It provided also an element of fervour and historic sentiment at a time when Europe, under the influence of the Romantic movement, was casting off the 18th cent. and all its works and recapturing the power of religious enthusiasm. The exclusive form in which Lamennais's ideas were expressed ultimately set Rome itself against him, but the movement continued under wiser men, Lacordaire, Montalembert, de Ravanign, and others. They succeeded in all but destroying the old Gallican spirit and in putting a new life into the French Church. In the Revolution of 1848 the Church, which had been so unpopular in 1830, exercised a powerful influence. The defeat of Gallicanism, however, brought out a division in the Ultramontane ranks which the struggle in which the Ultramontane movement was passed under the Second Republic and which broke down the old State monopoly of education, led to the first open breach. On one side Montalembert, with his Papalism, prepared to make concessions to the State in order to secure an invaluable piece of legislation, and because they shared in the ideas of their time so far as

"When twenty-five years ago," he said in substance, "we boldly professed ourselves "Ultramontanes," the Ultramontane school was then the school of liberty. We asserted the inde-

dependence of the spiritual power against the encroachments of the temporal power, but we respected the Constitutions of the Church and of the State. The pope was not the whole Church nor the Emperor the whole State. On the one side there were bishops and consistory, a real authority, a religious, democrati-

can and democratic elements with their rights. No doubt there are those flashes of crisis when both the Pope and the civil government may override all rules. The old Ultramontanes admitted this, but they did not turn the exception into a rule. The new Ultramontanes have pushed every thing to extremes and accepting to the full the idea of power they have argued extravagantly against all liberties whether in Church or State."

Another French bishop could write that the fanaticism of the Univers had done more harm to religion than that of Voltaire. It is indeed difficult at first to understand Veillot's popularity among French Catholics. He seems the most perfect representative of that "insolent and aggressive faction" which never tired of calumniating their brethren in the faith and of trying to force their private opinions on the Church. For men not of the faith, whom he considered its enemies, for the free-thinkers, for 'the race of Cain,' he had no pity. He had never any hesitation in distinguishing between the wheat and the tares. Yet the Univers was never in any way identified with the Church, and Veillot appealed far more than Montalembert to most French Catholics. To begin with, he was intensely democratic. Himself a man of the people, he was always thinking of the people. It was his passionate desire to protect the simple from the aggressive irreligion of the bourgeois free-thinker, while his fondness for the extreme point of view in controversy, his scorn of moderate opinions, and his manner of expression, were metaphors in matters of religion were more in sympathy with French character than the constitutionalism of the Montalembert school. It must be added that the extreme character of French Ultramontanism under the Second Empire is partly to be accounted for by the reactionary policy adopted by Pius IX. when he returned from the exile to which he had been driven in spite of his liberal principles, to which his most complete expression of this reactionary policy was the Syllabus of 1864. More sympathy would be felt now than in optimistic mid-Victorian days for a document which was long regarded as having gone astray by the neglect of God and of Catholic principles. At the time, however, what appeared

ULTRAMONTANISM

There was an echo of these continental battles even in England in the controversy which was raised by the issues raised by the editions of the 1846-1848 Berlin Review and the Foreign Review. These reflected, though in a more moderate form, the views of Döllinger and the ecclesiastical-pragmatists. They were taken by William George Ward and the Dublin Review. Neither side disputed the authority of strict definitions of dogma; but the controversy turned on the right to depart from the guidance of Rome. Acton claimed absolute liberty outside dogmatic definitions, while Ward looked to the paxQuo for positive direction. A loyal Catholic, he maintained, should accept not only the defined teaching but the 'doctrinal institutions' of Rome.¹

Underneath these controversies of the sixties we seem to see two tendencies at work. The more liberal Catholics wished, in various degrees, to keep in touch with the times, to make the best of the learning, the thought, the science, the political conceptions of the age. With some this might and did lead to a real contempt for traditional Catholic practices and methods. The Ultramontanes, on the other hand, felt the danger which lay in excessive sympathy with the 'spirit of the age.' The 'Rambler'... appeared to Mr. Ward to worship the modern ideal, both in ethics and in politics, with an unconscious which was quite inconsistent logically with the principles of Christianity.²

Ward had no hope in the movement led by Döllinger. To him contemporary thought was moving away from Christianity, and the one essential thing was to react against it, to preserve the purity of the faith and the Catholic faith. He called the view farther, much farther than Ward ever pushed it, and you come to Veilhut's extravagances with his conflict between the 'race of Abel' and the 'race of Cain.' Now the papacy under Pius IX. undoubtedly took the Ultramontane side, and the liberals found themselves more or less in opposition to the tendencies prevailing in Rome, while the Ultramontanes were anxious to make these tendencies prevail everywhere and, in opposition to the nationalism of the day and the attacks on the temporal power, to magnify the authority of Rome in the government and teaching of the Church. Veilhut, you looked forward to the time when papal bulls would take the place of all conciliar deliberation. Thus it is that the question of the doctrinal authority of the pope was raised and that the Syllabus led to the Vatican decree of infallibility. Yet there is a certain unreality about the controversies which ranged round the Council in 1869 and 1870, for the number of those who actually disbelieved in papal infallibility was small indeed. The papal Definition of the Immaculate Conception in 1854 had been accepted universally. What most of the opposition feared was the added governmental authority which they conceived the decree would give to the pope, the increase which it would produce in all those centralizing and autocratic tendencies which they dreaded.

¹I am much more concerned,' said Montalembert, 'about the government of the Church than about the definition of Papal Infallibility.'²

It is obvious too that the opposition of Dupanloup and the 'Inopportunists' was due to the fear that the Definition would lead to conflict with the State and would emphasize the differences between the Church and modern society. The language of the more extreme Ultramontanes in speaking of the pope as 'inspired,' or in such mad phrases as amongst the Pope thinks, it is by Acton's guarantee.

in him,' must have contributed not a little to make the 'liberals' fear that the Definition might mean the triumph in the Church of the more extreme faction.

This Definition came, after months of discussion, in a form more moderate than even such Ultramontanes as Ward had originally expected. It had the effect of making a clearer distinction between the doctrinal and the administrative functions of the Church. It is a strange position for an Ultramontane to claim that every utterance of the pope on matters of faith is protected by God from error. Papal infallibility is defined and in so far limited, and the conditions laid down in the Council of Trent have seldom, if ever, been satisfied by the papal doctrinal pronouncements of the last forty years.

Ultramontanism became, therefore, a vaguer term after 1870. The party of the Univers continued, indeed, to exist and to carry on its controversial methods in support of the temporal power of the pope or of the royalist movement in France. It saw in a political coup d'état the only defence against the doctrines of the Republican party directed against Catholic education, the religious orders, and other forms of Catholic life. Louis Veulliot died in 1883, but the Univers remained the most popular of Catholic newspapers under the editorship of de Cas-sagne's Bonapartist L'Autorité. It seems absurd, however, to call this party Ultramontane, since that at least during the pontificate of Leo XIII. its aims were opposed to those of the papacy. The pope was anxious to reconcile the Catholics with their governments both in France and in Germany. In Germany he succeeded in bringing the Kulturkampf to a close; though at the cost of putting pressure in 1886 on the so-called Ultramontaines of the Centre party, in order to secure their support for Bisмарк's seven years' army estimates, whilst in France his policy of urging the French Catholics to accept the Republic met with much opposition from the royalist.

In a sense, however, the term 'Ultramontanism' may be rightly applied to the administrative centralization which is a mark of papal policy since the middle of the last century. The enthusiasm felt so widely among Catholics for Pius IX., the great prestige of Leo XIII., a conscious reaction against disruptive national movements, the mere improvement of the administrative machinery of the Church are some of the causes which explain such a centralization. It was a particular feature of the pontificate of Pius X. and of the measures which he took against 'Modernism.' It has certainly helped to protect the unity and the tradition of the Church in the midst of growing hostility or at least indifference, and often enough Rome has proved more broad-minded than the local ecclesiastics. Thus two of the greatest bishops of the second half of the century, Ketteler and Manning, were appointed by the direct action of the papacy. Many Catholics would, however, welcome a reaction in the direction of the constitutional traditions of the Church, especially in such matters as the election of bishops and their synodal meetings.

LITERATURE.—It is difficult to give a bibliography on so general a subject. For the Gallican controversy see art. GALICANISM; for the 19th cent. Ultramontanism, F. Nielsen, Histoire de la Papauté au XIXe Siècle, Eng. tr., 3 vols., London, 1886, and by the same author, Histoire de l'activité ecclésiastique de l'administration papale, in Weifrd Ward, William George Ward and the Catholic Revival in England, 1851-1910 [see also G. Lecam, Notice sur l'histoire des rapports entre le royaume d'Espagne et le royaume de Catalogne, 4 vols., 1875-09]. For the Venetian Council see art. Concilia (Christian: Modern); for the measures taken by Pius X. against the Modernists see art. Modernists.

F. F. Urquhart.
and only incidentally by Daulatshāh (end of the 15th cent.); moreover, the author of the Chahār Maqāla, referred to in the literature of astrology in separate sections, places 'Umar among the astrologers and makes no reference to his poems. The most ancient MS, preserved in the Bodleian Library and dated A.D. 1461, contains 198 rubā'īs; a second MS, the first edition published by E. Heron-Allen. In later MSS and editions the number of quatrains is very much larger. Concerning the authenticity of these poems nothing can be said. The contents of the collection are systematic and, if account was taken of anonymous quatrains, either written as verbal tracts or transmitted orally, then the entire collection or part of it was ascribed to the mystic poet. Still another MS preserved in the Bodleian Library and dated 1897, contains 128 quatrains. These quatrains, if we can judge from the style, must have been written in the 10th cent. or later. They were certainly not written by a man of learning of whom nothing is known, but they may have been written by a man of learning whose name is unknown. Even in the oldest and presumably least adulterated MS the proportion of 'wandering quatrains' already discovered and assigned to their proper authors is about 12 per cent. Of the remainder many are probably genuine, but we have no means of identifying the original 'Umarian nucleus or determining its size. The whole collection must be viewed, not as the work of an individual, but as an anthology reflecting various aspects of Persian spiritual and intellectual life and covering a period of six centuries.

It follows that the character of 'Umar Khayyām cannot be read in the Rubā'īyat attributed to him, which give expression to diverse and often radically inconsistent modes of thought. Two notices, however, cited by Schukovski from writers of the 13th cent. throw some light on the matter. The first, from Distīn-Qīfī (see reference above), describes 'Umar as a man who tried to conceal his want of religion and shrank from uttering his real opinions. Concerning his poetry, Ibuw-Qīfī remarks that it is circular and reveals an religious spirit to those who look below the surface, although its literal sense is sometimes in accord with the teaching of the Īsfāhs. He then quotes four Arabic verses, of which the following is a translation:

'If my soul is content with a livelihood sufficient for my needs, which is gained by the labour of my hands and arms, I am safe from all changes and accidents, and care not whether Time threatens me or flatters my hopes. Have not the revolting heavens determined to reduce all happiness to misfortune? Therefore, O my soul, abide patiently in thy sleeping place: its towers will not topple down until its foundations have collapsed."

Najmu'ddin Dāya († A.D. 1256), author of a mystical work entitled Mi-rūd'l-Ṭahd, reckons 'Umar among those unhappy philosophers and materialists who have gone astray from the truth, and quotes two sceptical quatrains as evidence of his 'utter shamelessness and exultation.' This passage is most important because it shows that an ardent Sāfi of the 13th cent. looked upon 'Umar as an enemy to mysticism; and, insomuch as the rubā'īs quoted are probably authentic, we cannot but agree with those who regard 'Umar as the champion of materialism, when brought by Sufís and theologians against scientists and philosophers, carries no weight: 'Umar is as unlikely to have been a materialist as he is likely to have been a free-thinker. An instance is noted, further, that the name Khayyām occurs in twelve quatrains, and constitutes at least a presumption in favour of their authenticity, and that, taken together with two quoted by Najmu'ddin Dāya, exhibit the principal elements of the Rubā'īyat, viz. hedonism, philosophical contempt for the profanum vulgus, attacks on the orthodox, lamentations for the cruelty of fate, meditations on the incompatibility of a supreme intelligence with the sufferings of life and on the nothingness of man, hope of divine mercy, and a certain morality which recognizes the duty of doing good to others. But the Sāfi mysticism seems to be excluded, although the poet often makes use of Sufic terms.'

REYNOLD A. NICHOLSON.

UNCLEAN.—See Holiness, Tabu.

UNCTION (Christian).—As a religious rite, and apart from social usages, unction was taken by the Christian Church immediately from the Jews, though for some purposes it was borrowed by the Jews from other nations. In the OT unction was used in the 'consecration' of priests, kings, prophets, and places. 1 In connection with the complete rite of baptism.—This use of unction was almost universal from very early times up to the Reformation.

(a) The New Testament.—It is disputed whether the apostles used unction in the rite of Christian initiation. In 2 Co 19, 1 Jn 2, 27, all Christians are said to have been anointed. This is undoubtedly metaphorical, but it perhaps points to the actual use of oil in the apostolic age before or after baptism, at least in some places; as it was then certainly in use for other purposes, 2 the metaphor would in that case be more apposite. On the other hand, in Acts, where two accounts are given of the laying on of hands, the propriety of the laying on of hands is described, unction is not mentioned. Tertullian certainly thought that the apostles used it in connexion with baptism, for he traces it back to the 'primitive discipline' of the OT. 3 It is possible that it was used in the apostolic age in some places, but not in others, and it is noticeable that laying on of hands and anointing are not for this purpose joined together in the NT, though they were both there used for other purposes. 4 Or it is possible that the custom of anointing at baptism arose in sub-apostolic times, being due to a literal interpretation of the NT metaphor. 5

(b) The subsequent ages.—After NT times or at least from the middle of the 2nd cent. onwards unction was used, sometimes preceding, sometimes following immersion, or both before and after. But it is necessary to note that, originally and for many centuries, immersion and its complement, which in the West from the 5th cent. onwards has been known as 'confirmation,' were as a normal

rule a single rite; and it is immaterial to consider whether any particular anointing belongs to the one part or to the other.

We get no light on the subject in the scanty literature of the first three quarters of the 2nd cent., but it is to the Aramean

that mention is not usually mentioned in the Didache, though it gives the words of baptizing into the threefold Name. 1 Towards the end of the century Tertullian tells us that anointing was administered after the immersion, as a long-standing custom. 2 Ireneaus says that the Gnostic Marcossians used it in the parody of Christian baptism; 3 and early in the 3rd cent. Hippolytus says that the Naissenes (or Ophites) used it. 4 Theophilus of Antioch also mentions anointing as being the reason of the name 'Christian,' 5 and thus implies his belief that the custom was apostolic.

Ireneaus and Hippolytus, in the works mentioned, do not actually say that the Catholic used anointing, though we may infer this from the fact that the Gnostics were clearly copiyists in their baptismal rites; but the matter is now set at rest by the fact that the so-called Egyptian Church Order in all its versions has anointing, in this case before as well as after immersion, and in the Latin version, which appears to be the oldest, is wanting in the description of the rite. 6

I. The Mode of Administration.

We find only one anointing, and that before immersion, so that in this Church the confirmation took place before the rite at the font, instead of after it, as everywhere else and as in the NT.

The evidence for this custom is now full and complete; it continued till the 5th or 6th century. Probably Severus (patriarch of Antioch, A.D. 215-36) introduced the post-baptismal anointing among the West Syrians (Monophytes), and the Syrians (Monophysites), and still later the East Syrians (Nestorians). The only known exception is in a commentary ascribed to Ephraim, 7 where an anointing after immersion, and not before, is mentioned, but that work is rather later than Ephraim's. These commentaries are a catena of notes on the OT, many byJacob Barsal. The position of the Deut. 8:6 anointing in the heading is often doubtful, and the extracts may be paraphrases rather than quotations. If at any point they are not in accord with affixed citations of Ephraim (as is the case here), we may safely conclude that they are not his.

The ordinary custom, then, from the time of Hippolytus, was to have an anointing before, and at least one after, immersion; in that case ordinary olive oil was generally used before immersion and chrism or unguent (ασπόρο) after, the latter being mixed with balsam, spices, etc. But there are several exceptions. In Theodoret's 8 chrism of ασπόρο is used before immersion; in the Armenian and East Syrian rites oil is used throughout.

(c) At the effects.—This was a ceremony in the West (called in Spain afeitatio) which took place several days before baptism, and was named from the Baphokus. That it was accompanied with anointing and with the ears and nose being touched. For this ceremony oil was originally used, as we see in John the Roman Deacon's Epistle to Senarius 1 and in the works of Iulianus, bishop of Toledo. 2 Afterwards, as in the Rituale Romanum; 3 and in later pontiﬁcals, salvia was used instead.

In several authorities, such as Ambrose, 4 the Bobbio Missal, 5 the Stonus Missal, 6 Alcuin, 7 and Amalaris of Nore, 8 neither salvia nor oil is explicitly mentioned at the effects itself; but in the Gregorian Sacramentary 9 and the Gelasian, and, so elsewhere, the effects take place just before the anointing of shoulders and breast. It is quite possible that this anointing may be the anointing which takes place just before immersion, put into an earlier position.

(d) In consecrating the font.—In both East and West oil or chrism or both were often poured in the form of a cross into the water at the consecration of the font. We ﬁnd this in Iulianus 10 in Spain; at Rome, the Ordos Romani Septuagesimam; 11 in Gaul in the Missale Gallicum Vetus; 12 also in the Bobbio Missal 13 and the Missale Gothicum; 14 and in most Western pontiﬁcals. It is also common in the East. It is mentioned in the writer who possesthe Dionysius the Areopagite; 15 and is found in the Greek rite of baptism, 16 and the Armenian, 17 the Coptic, West Syrian, Maronite, and (in some MSS) the Eastern pontiﬁcals. 18

(e) During the catechumenate.—There are a few traces of an earlier anointing than that of the effects mentioned above. Augustine, speaking of our Lord's anointing the blind man with the clay in the gospels, says in De Bapt. 19 perhaps made him a catechumen. 20 This may refer to a custom of anointing at the reception of candidates into the catechumenate. In Spain Isidore of Seville speaks of catechumens being anointed before they became 'competentes,' i.e. accepted candidates for baptism. 21 The Roman Synod held A.D. 402 speaks of their being anointed at the third scrutiny. 22 But the phrase 'oil of catechumens' usually means the oil administered just before immersion, as opposed to the chrism administered after. In the later Western authorities three oils are distinguished: (1) holy oil, to sign the 'heathen child' on the breast and posteriorly on the shoulders before immersion; (2) 'holy chrism,' after immersion; (3) 'nick man's oil.' 23

(f) Consecration of the chrism.—In the West the chrism was ordinarily unction by the diocesan bishop, in the East by the patriarch, on Maundy

    12 In Cest. ii. 9.
Thursday; so, in the West, in the Gregorian and Gallican Sacramentaries; Leo the Great in his Pastoral Letters that the procedure existed in the East in the 5th century. Proterius, bishop of Alexandria, was murdered on that day, and Leo says that the inholding of the chiasm has failed. But in the East, the Ambrose of Malabar rite, in which ordinary oil is used instead of chrism, is consecrated by the presbyter at the time of baptism; indeed, the little of the 'holy oil' said to be descended from St. John is allowed. There were exceptions. At the first Council of Toledo (A.D. 400) permission was given to consecrate chiasm at any time. In Gaul it was perhaps consecrated on Palm Sunday, formerly the Armenians sometimes allowed deconsecration of the oil, but this is now confined to the catholics.

The rule that bishops alone may hallow the chiasm is laid down in the first Council of Toledo, and Pope Innocent I, at the second and third Connell of Carthage, at that of Hippo, by Augustine, by the Council of Valon in Gaul, by the second Council of Seville, by Ambrosius of Meta, and by Thomas Aquinas; and also in Egypt, early in the 4th cent., by Didymus of Alexandria. But the time of consecration in Africa was laid down to consecrate the chiasm, as John the Deacon tells us. In the West the oil, as opposed to consecration, was ordinarily consecrated at the time of the service of the officiant, whoever he might be.

(g) Meaning of the anointing. Originally the anointing was considered to be the consecration of the Christian to the royal priesthood.

So Tertullian compares the baptismal anointing to the anointing of the Aaronic priests. The same idea is found in the Epistle and (epaphrasically) in the derived Apostolic Constitutions; Jerome, apparently alluding to the use of the word 'baptism,' in his widest sense, says that 'the priesthood of the kingdom is baptism.' The idea of consecration to the priesthood is also found in Augustine; Ambrose, John the Deacon, Eusebius of Seville, Alcinus, and his disciple Rabanus Maurus, and became a consecrating Chrism at consecrated was specially connected, by John the Deacon, Alcinus, and many others, with the anointing of the head immediately after immersion.

A special significance was attached to the post-baptismal anointing in places where the laying on of hand was dying out, or was less emphasized, and even in Egypt, where that ceremony was long retained.

The gift of the Spirit, elsewhere associated with the imposition of the hand, was then ascribed to the anointing.

This case is with Sarapion of Thmuis in Egypt, Ambrose (probably), and even Pope Innocent I. The North Italian author of the De Sacramentis says that signing (with chrism) the bishop (sacerdos) invokes the Holy Ghost in his several offices, and that the gift of the Spirit is thereby connected with the anointing in the sense that, in the East, where the imposition of the hand in confirmation died out early, we should perhaps see in the connection between the Chrism of Jerusalem which the object of the χρίσις to convey the Holy Spirit (Acts 10: 38).

SYRIAN) apparently calls the unction 'the drug of the Spirit,' and certainly speaks of the gift received in the anointing as the Spirit given by the Spirit.

In the developed Eastern rites we sometimes find the association of the gift of the Spirit with the chrismation; explicitly in the Coptic rite in the prayer for the imposition after immersion, and in the Ethiopian. Other Eastern rites are confused on this point, but, as immersion and confirmation are never separated in them, they are not particularly careful to specify a special significance to one or other part of the service.

(h) Unction at the reception of heretics. This is in reality part of the question which we are now considering. For, as all agreed that the Holy Spirit could not be given outside the Church, even in the great controversy between Cyprian and Pope Stephen as to heretical baptism in the 3rd cent., the ceremony used when heretics were converted and admitted to the Church had normally as its object the reception of the Holy Ghost. It was the custom in the West and in 'Africa,' and originally (it seems) in at least some parts of the East, to receive heretics by the imposition of the hand. But in places where the latter ceremony was less emphasized they were received by anointing.

This was the case in D巨inos of Alexandria, at the councils of Orange on the Rhone and of Epson in Burgundy, and at the Trullan Council of Constantine. Basil also directs the reception of heretics by anointing, and Gregory Thaumaturgus says that this was the custom in the East. Theodore says that the Novatians were anointed on reception, because they did not receive baptism in the 3rd cent.

2. Uction of the sick. The early history of this subject has too often been considered, by writers of all schools of thought, merely from the standpoint of the post-Reformation controversies. It is more profitable to put these, in the first instance, on one side, and to deal with the purely historical question of the use by the Early Church of unction for sick people, whatever was the purpose of such unction. In the opinion of the present writer, it will be found that the evidence for unction of the sick is very much the same, as regards time, as that for unction in connexion with baptism, the only difference being that, while for the latter the evidence of the 2nd cent. is stronger than that of the 1st, for the former the case is reversed, and the evidence for unction of the sick, which is strong in the apostolic age, is even in the case which followed it. It will be found, it is believed, that the commonly expressed opinion on this subject will have to be reconsidered.

(a) The New Testament. Unction of the sick is mentioned as having been used during our Lord's ministry: in Mk 6: 13 the Twelve 'anointed with oil many that were sick, and healed them.' In the subsequent period it is condemned by St. James: 'the sick man is to call for 'the presbyters of the church,' who are to pray over him, 'having anointed him with oil in the name of the Lord,' and this 'prayer of faith ' is both for bodily healing and for forgiveness of sins. We read also of our Lord anointing with salve in performing cures; and of the figurativeointing of the eyes with eye-salve in the Apocalypse. The oil and wine used has period Samaritan had no religious significance, though they have received a spiritual interpretation. The passage in St. James is reconsidered by Origen and Chrysostom. The

latter implies that the unction of the sick was still practised in his day: he is speaking of the power of the priest to forgive sins.

(b) 2nd and 3rd centuries. The first known record of a unction of the sick after St. James applies to the reign of the emperor Septimius Severus (A.D. 193-211), or more probably to a time before his accession. Tertullian says \(^1\) that the Christian Priscus Torpacion had once (ulli-quaque) healed \(^2\) Severus, the father of Antoninus \(^3\) (Caraclalla) by anointing. If unction was used for the healing of a sick heathen, a fortiorem it would be used for Christians. It might be held that this was a purely medical use of unction. But any possible doubt on this head has been taken away by the investigations of R. H. Connolly with regard to the Egyptian Church Order (already referred to).\(^4\)

In the Latin as well as in the Ethiopic version of this Church Order there is a form given for the blessing of the oil for the sick, offered apparently by the lictor. This form we may with confidence assign, with the great bulk of this work, to Hippolytus of Rome, and therefore we have evidence of the unction of the sick from Rome early in the 3rd century. The form states that the unction is for the healing of the body, but nothing is said as to spiritual blessing. This new evidence shows that we must correct the statement of the committee of the Lambeth Conference of 1898, that 'there is no clear proof of the use of unction in the Christian Church and bishops of the fourth century'—a statement which has been frequently repeated.

(c) From the 4th cent. onwards. In the 4th cent., we have a sentence of Church Order which shows that the unction of the sick was a common practice. In the Testament of Our Lord\(^5\) a form is given for blessing oil and water for healing; this prayer is independent of the Hippolytan form, and much fuller; it incidentally refers to spiritual benefits. The oil would be for application, the water for drinking. The Apostolic Constitutions give a form\(^6\) for consecrating oil and water by the bishop, or by the presbyter, but this refers to healing, but incidentally also to demons and other spiritual ills. This form is not found in the epitome (of the eighth book of Apost. Const.) known as the Constitutions through Hippolytus.\(^7\) In the Canons of Hippolytus an oil for the sick and first-fruits are blessed; no form is given, but 'Gloria Patri' is added. In the Sacramentary of Sarpiion oil and bread and water for the sick are blessed; by the bishop, as the book contains only the portions of the services said by him.

The form contains the words 'Let every Satanic energy depart from...these thy servants,' and it has been suggested that this is the earliest instance in which the oil was consecrated specifically for use.\(^8\) Elsewhere in this work there occurs, after the anaphora, a 'precious anointing anoint these believers and waters that are offered' (by the lictor). In both these prayers bodily healing is primarily asked for, then spiritual blessings, and protection against demons and the like. A form for consecrating oil for the sick is found also in G. Horner's Statutes of the Apostles.\(^9\)

In the above works the people seem to have brought their oil (and water and bread) for the sick to be blessed by the bishop or presbyter, and then to have applied it themselves, in spite of Ja 5.14. At the same time they also brought firstfruits to be blessed.

We have a good deal of other evidence of the use of unction for the sick, the earliest referring to Egypt.

Pallassius, bishop of Hellenopolis, in his Historia Lusitana, describes how the monks of that country in the 4th cent. used oil for the sick and for the purification of the temple (c. 597), Macarius of Antioch (c. 597), and John of Lycopeolis.\(^3\) The first of these monks healed the sick by touch, the other by oil consecrated by himself.\(^10\) Eusebius also tells us how the monks of Egypt in that century anointed a paralytic with oil and healed him; and Rufinus makes a similar statement. On the other hand, Ambrose mentions only imposition of the hand in healing the sick; the Catholics would not allow an Ariad to lay a hand on a sick man's head.\(^11\) Thus unction and other modes of providing for the sick are alternatives, and we see the same thing in the NT: Mt 26.67 Lk 1.40.\(^12\)

In the 4th cent. Chrysostom says that the sick were healed with oil from the church lamp, and this was afterwards a common practice.\(^13\)

In the 5th cent. Pope Innocent I., asked if the sick might be anointed with chrism (sanctum oleum chrismatis), and if bishops might anoint, answers in the affirmative; \(\text{the oil blessed by the}\) bishop may be applied by any Christian if necessary, but it cannot be applied to penitents, because it is of the nature of a sacrament.\(^14\)

Some eighty or more years later Cæsarius, bishop of Arles (452), says in one of his sermons; 'Whenever any sickness comes, let the sick man receive the body and blood of Christ and then anoint his body,' and the promise made by St. James will be fulfilled. And in another sermon he says that it is better than money to anoint the body. Thus all Christians might anoint the body and blood of Christ, and faithfully and copiously to anoint (perumanent) oneself and one's own with blessed oil, and to receive not only the body, but also remission of sins, as James the apostle says.\(^15\)

Here then, in the beginning of the 6th cent., it is contemplated that an anointed man should ordinarily anoint himself, though the oil has previously been consecrated.

From the 6th cent. onwards we read of 'the oil of the cross' in healing. This oil was touched by a relic of the true cross, and was considered to be especially efficacious.\(^16\)

Among the Easterns we find the use of oil for the sick to be almost universal.

(2) Armenians in practice anoint only sick priests, not deacons or lay people.

The Instruction in the Christian Faith, by Chorhor, says that the unction is for the healing of the body and the forgiveness of lighter sins; the apostles sometimes laid hands on the sick, and sometimes anointed; unction is not essential, but prayer is, and, if necessary, this sacrament may be administered without the anointing of oil.\(^17\)

The earliest mention among the Armenians of unction as a preparation for death is c. A.D. 800; and no rite of consecrating the anointing oil for this purpose had in any ancient encolophos or mashotz.\(^18\) The old Armenian office for the visitation of the sick consists of prayers and communion.\(^19\) Deninger mentions a similar custom of anointing the faithful (not only the sick) on Maundy Thursday with butter (not oil), blessed by the bishop.\(^20\)

(3) East Syrians (Nestorians).—In the Tkhbās, or Missal, it is directed that the holy oil of baptism is not to be used for consecrating churches or for anointing the sick; \(\text{for an unction of the sick}\)

A single collect is appointed, and is to be said by the priest when he blesses the oil. In this Church (except of (if necessary), dust from the tombs of the martyrs, is mixed with oil and water and applied to the sick person. In the ordination of presbyters prayer is offered that they may lay their hands on the sick, and they may be healed.

(f) The Coptes have an office of the 'holy oil' which they call 'the lamp' (φανέρ): imposition of hands is included in it, and seven presbyters officiate. The Greek Orthodox also have a direction to anoint the sick with 'the holy oil from the lamp.'

(g) The West Syrians (Jacobites) also have an office for blessing 'the oil of catechumens, which is also the oil of the sick.'

(h) The Orthodox.—Here seven priests, if they can be had, administer the oil. The Russian Longer Catechism says that anointing with oil is a sacrament, in which, while the body is anointed with oil, God's grace is invoked on the sick to heal him of spiritual and bodily infirmities; and it then quotes Mk 6:12, Jas 5:14.

(i) The Church of England.—Theodore, archbishop of Canterbury, in his Capitulare (A.D. 680), says that Greeks allowed presbyters, if necessary, to make the exorcized oil and chism for the sick, but Romans confined the consecration of oil to bishops. The fee is fixed by the Synod of Egberton, archbishop of York (A.D. 732–749), say that the sick are to be anointed with oil hallowed by bishops (sacerdotibus), and that the presbyter is to have the 'cæliarum oils,' which in the Latin church may not be used without consecration. King Edgar's Canons (A.D. 960) order every priest to have anointing oil for the sick.

(j) The 18 Canons (c. A.D. 1000) direct the priest to 'have hallowed oil apart for children (i.e. for confirmation), and apart for sick men, and always to anoint the sick in bed.' Some sick men are haelful', so that they will not consent to be anointed (they feared that anointing would kill them). If a man is anointed and recovers, and then once more falls sick, he can again receive anointing; it is not an ordination, but in it is healing and forgiveness.

The form of blessing the oil is given in the Pontifical of Egberton, archbishop of York. It pray that it may be to every one who touches it for protection of mind and body, for the driving away of all pains and all infirmities, and every sickness of body, and to refer to the anointing of priests, kings, prophets, and martyrs. The form in the present Roman Pontifical is nearly the same.

In the later instances we see the restriction of the administration of the oil to a priest. This led to the practice of extreme unction, and then anointing was made to precede the last communion.

The anointing of the sick was retained in the First Prayer-Book of Edward VI. (1549), and was on the forehead, and explicitly for the healing of both soul and body. It was omitted in the Second Prayer-Book (1555), but restored by the Non-jurors.

3. Extreme unction.—When the Bridge of Egberton, archbishop of York. It pray that it may be to every one who touches it for protection of mind and body, for the driving away of all pains and all infirmities, and every sickness of body, and to refer to the anointing of priests, kings, prophets, and martyrs. of a female's front. At each anointing he prays for forgiveness in these words: 'By this anointing and His most tender mercy and compassion, He has forgiven thee what thou hast done against him through sight, (hearing, etc.). A psalm is said between each anointing, and after the unctus a blessing is given, referring to the ascension of mind and body. Then follows a prayer which has special reference to the sick man's approach of death, but this is not in the R. M. (2015) reprinted in Massel's note, and seems to be later than the rest. The sick man is then communicated if he is capable of retaining what he hears. Otherwise, he is accorded that spiritual communion suffices, and the well-known words are quoted: 'Vatumcredus tuum in manus Domini dedit.'A distinction of Office, probably of Hereford or Canterbury and of the 12th cent., the first prayer mentioned above ends differently; here there is only one prayer: 'Suffragio'; the various sentences are combined. 2 In this Pontifical two different prayers follow the blessing, referring to the forgiveness of sins.

Only one priest is mentioned in the Sarum Manual as administering unction, but Walter Raynold, archbishop of Canterbury (1315–37), speaks of sacerdotis in the plural; and W. Lyndwood glosses this by saying, except in case of necessity. 3 Raynolds says that all over fourteen years of age should receive extreme unction; 4 and also that it can be repeated only if a year has elapsed.

The oil was consecrated on Maundy Thursday; 5 and this was the case also at Rome. 6 By a constitution of J. Peckham, archbishop of Canterbury (1278–94), any unused oil was burnt. 7

The Council of Trent says that extreme unction was instituted by our Lord as a sacrament of the NT, outlined (insinuationum) by St. Mark, and confirmed to the faithful and promulgated by St. James. The matter 'is oil blessed by a bishop, for the unction represents the grace of the Holy Spirit, and the form is 'By this unction,' etc. 8

The effect is primarily forgiveness and strengthening of the soul, and occasionally restoration of bodily healing by the minister of bishops and priests. Extreme unction is to be used for those who appear to be dying; if they recover and then again fall ill, it may be repeated. 9 See also Art. Extreme Unction. 10

4. Unction at ordination.—The idea of anointing at ordination is consecration to God and endowment with His gifts. The custom is derived from the OT, where kings, high priests, priests, and prophets were anointed. In Ex 29:7, Lv 8:11, Moses anoints Aaron, whose anointing is also mentioned in Ps 133:1, Sir 43:24. In Ex 29:7, 29:30, Lv 8:10, 16:31, it was administered as priests; in Lv 21:9, Nu 25:3, high priests in general receive unction. In 1 K 10:26, Hanoil, asphaltum, and 'the oil of anointing' were used. This last was anointed in Ps 105:16, Is 61:3, perhaps metaphorical. The anointing with oil and spices in Ex 30:22. 'Oil of the vineyard in the name 'the Christ,' 'the Messiah' ('the Anointed One'), as in Lk 4:18, which quotes Ps 95:3, John 1:41, 20:29, in Ac 10:38, and in He 1, which quotes Ps 45:7; cf. also Dn 9:4.

But, while in Eastern ordinals we frequently read in an anointing in a metaphysical sense, the actual anointing at ordination was confined to the West. 1

1 Only hearse, and those hast eaten. The saying is from Augustine, in Ioan., tract. xxv. 12 (on Jn 6:36), 'cresc et manducasti;' but he is not speaking specially of spiritual communion.

France Pippin, father of Charlemagne, was anointed in 750. But in these cases there is no mention of crowning, and the anointing was the central feature of the ceremony. The other hand, the emperors who were crowned for many centuries at Constantinople—for no emperor was crowned at Rome before Charlemagne—appear not to have been anointed on the 9th. cent. (In Basil the Macedonian [367-386] is thought to have received anointing), or as some believe, not before the 12th or 13th cent. In the latter case the earlier references are nongraphical only. In the Greek rite of coronation as fully developed, and hence in the Russian rite which is derived from it, anointing is a prominent feature. It is uncertain if Charlemagne was anointed as Roman emperor. It will thus be seen that anointing at the inauguration of kings is earlier than at that of emperors. Both England and France claimed to have a miraculous chrismon sent down from heaven for the purpose.

The Abyssinians have the custom of anointing at the coronation of the Negus; it is probable that this is not derived from European practice, but is directly deduced from Holy Scripture.

The coronation service for an English king found in Egbert's Pontifical is the most ancient of those extant; it is printed by Martène and Mabillon, and the latter gives in his notes a collation of the same service in the Liber Missal. In Egbert the king is anointed once only on the head, one of the bishops ('unus ex pontificibus') saying the prayer, and the others anointing him. There is here no coronation of a queen-consort, though we find one later (with unction), in the 10th century. There was more than one recension of Egbert's office; that called the Liber Regalis, which probably dates from the time of Edward II, remains almost unchanged till the coronation of James II. In the service in the Sarum Pontifical given by Mabillon the king's hands, head, breast, shoulder-blades, and elbows ('ambae compasses brachiorum') are anointed. The custom of anointing has been retained in England ever since the Reformation, at the coronation of a king, of a queen-regnant, and of a queen-consort. Notices of unction at the coronation of James I. and his queen, of Charles I., Charles II., William and Mary, and Victoria may be found in Hierurgia Anglicana. At the coronation of George V. the king was anointed thrice in the form of a cross over the right breast of the Garter (laying over him a rich pall of silk or cloth of gold): first on the crown of the head, then on the breast, then on the palms of both hands. Charles I. was anointed first on the palms of the hands, then (after a prayer) on the breast, then between the shoulders, then 'on the boughs of both arms,' then on the crown of the head; this followed the more ancient custom. The English coronation rite is the remaining office in Christendom where the full rites of the anointing and all the details of solemn investiture are still extant. The chrismon was, before the coronation, consecrated at the Dean of Westminster if a bishop, otherwise by the Archbishop of Canterbury: but in the case of William

(cd. W. Greenwell), p. 101. Some think that it is later than Egbert. 14 Woolley, p. 36. 15 ib. p. 109. 16 iii. 3. In his notes Mabillon refers to earlier authorities also. 17 ib. pp. 19, 25. 18 Ed. revised by Sir W. Staley, London, 1902-04, ii. 118, 121-124, 383 ff. 19 Maclean, The Great Solomony of the Coronation, London, 1911, p. 36. In this work the full office is given with elaborate notes. 20 ib. p. 309. 21 ib. p. 314. and Mary the oil was blessed in the coronation service itself; this addition to the latter was dropped from the time of Anne.

In France Napoleon I. was anointed on head and hands at his coronation; and his consort Josephine likewise. In Scotland unction was first allowed at a king's inauguration in 1329. After the Reformation there were four Scottish coronations: James VI. was crowned in 1567, when one year old; his consort, Anne of Denmark, was crowned in 1569; Charles I. was crowned as King of Scotland in 1633, Charles II. in 1651; at the first three coronations unction was used, but not at the last.

On the continent of Europe we find anointing retained at coronations in the reformed rite at Prague in 1619, in Prussia in 1701, in Denmark from 1559 to 1840, in Sweden from 1767 till our own day, and in Norway in modern times.

Uection at the consecration of churches, etc.—This also is taken from the OT.

Jacob anointed the stone in Gn 28:18, and S. B. Driver remarks that this was a very common idea among primitive peoples. The anointer was in Ex 28:40, Le 38:3, Nu 7:1. In Jn 6:57 we read of the pouring of a drink-offering to the smooth stones of the valley.

From early days churches and altars were consecrated with chrismon. We read of this in Gaal at the councils of Agde and Agatha 2 and Epaon, 3 in the Censuses of Egbert of York, 4 in his Pontifical, 5 in the Liber of Seconda Familia, 6 in Annales Maurins (A.D. 519), the disciple of Acula, 7 and Walsedid Strabo (A.D. 840). 8 In the Sarum Pontifical 14 the first church consecrated in the church was anointed with chrismon; holy water is also used. But neither oil nor chrismon was used in rechristening a deceased church. 9

We find the same custom in the East. In pseudo-Dionysius the Areopagite (c. A.D. 500) the altar is consecrated with unguent (μύρος). The West Syrians (Jacobites) use chrismon in consecrating altars, 10 as also do the Greeks. 11 From the 9th cent. we read of the Armenians consecrating churches with unguent, 12 even in the case of the rededication of a desecrated church. 13 Among the East Syrians (Nestorians) the consecration of a church is called εὐανερίζων ('laying on of the hand') and is of two kinds, with and without oil; the former is for new or rebuilt churches, or for rededicating a church which has been desecrated owing to some very grave cause, and must be performed by a bishop, the latter is intended for use after minor accidents or breaches of the ecclesiastical law, and may be performed by priests commissioned by the bishop. In the former each wall and the altar and the pier lintel of the sanctuary door towards the nave are signed with the oil in the form of a cross.

In the Sarum Manual of 1543 bells also are dedicated with oil and chrismon, and, at a much earlier date, in Egbert's Pontifical. 22 Similarly the Armenians dedicate with chrismon the apankotor— a wooden board struck by a mallet, and much used by Eastern Christians to call the people to church. 24 The Armenians also solemnly dedicate a cross, even for private use, with unguent. 25 In Dunstan's Pontifical the chalice is anointed when it is dedicated. 26

In England the Caroline divines used oil in consecrating churches. The Puritans objected that they shew us that the church, by the bishop's anointing some stones thereof with oil, and sprinkling others with water, and using from the Roman pontifical some more prayers, some more ceremonies upon it, becomes a ground more holy.  

7. **Anointing of a dead body.**—From the first the Christians prepared the body for burial either by anointing with unction, or with holy oils or ointments, and then sprinkling a little with holy water, or with holy water and oil, in manner of blessing the dead. They did this in contrast to the Roman custom of cremation. References to the Christian usages in this respect are found in Tertullian,3 Clement of Alexandria,4 Minucius Felix5 (early 3rd cent.), and in the Acta of Taraschus, a martyr in the Diocletian persecution (A.D. 304).6

As an ecclesiastical act we find it, in the East, in pseudo Dionysius the Areopagite; the hiarach [bishop] and the rest salute the dead body, and the hierarch pours oil on the departed, just as before baptism the candidates are anointed with the oil of the sacred chrism. In Goar's _Ékoulogion_ we read of a corpse being anointed just before burial with oil from church lamps, or of a cinder from the thruble being placed on it. This custom is also found in the books of the East Syrians (Nestorians). Some of the eleventh-century monks anoint the departed, the Armenians calling it a sacrament; but in practice, while in the case of a departed dignitary the East Syrians retain the solemn final kiss of peace, they do not appear to use unction. The office used by the Armenians for this purpose may be seen in Denzinger.13 In the West, Theodore, archbishop of Canterbury, says that dead monks were carried to church and anointed on the breast with chrism before the mass.14

**Literature.**—This is given in the footnotes.

A. J. MacLEAN.

**UNDER WORLD.**—1. **Origin of the belief.**—The wide-spread conception of an underworld in religion and myth is generally, though not invariably, associated with the dead. An underworld of the dead is not the only conception of their dwelling-place; spirits may lurk about the place of burial or linger among the abodes of the living; they may dwell in distant regions or islands, or they may ascend to a place in the sky. These conceptions may be held simultaneously, especially where classes of rank or order or idea of distribution suggest separate places for different classes of souls. They are also connected, especially in the lower culture, with the idea that man has several souls which will live separately and in different parts of abodes or localities. They may also result from the mingling of different tribal or racial beliefs. We do not know what ideas the earliest men had regarding the dead, or how soon the belief in a spirit, or soul, apart from the body, was entertained. But, while it must have been obvious that death had brought about some difference between the dead and the living, it is doubtful if the dead were ever regarded as absolutely dead and cut off from all life and action. The wide-spread and early custom of burial, the practice of placing articles by the corpse, and the feeding of the dead at the grave, all suggest the contrary. It is not improbable, therefore, that the dead man was regarded as passing some kind of existence in the grave. The grave was his house, and it was this idea perhaps that led to the custom of making very elaborate tombs for the dead, of which the charabanc or chariot of Persephone is an example. That the dead more or less lived on in the grave, while their return among the living was feared, is also suggested by the belief that they could come from it in the body—in which we find the root of the vampire belief—by the custom of hanging around of earth, or placing heavy stones on the grave, and binding the dead with cords. Many folk-traditions represent the dead as coming in the body from the grave, and in the idea of their still living in the grave or barrow is seen clearly in early Scandinavian tradition. Thus the grave was in itself a small under world. This was more emphasized where several persons were buried in one tumulus, or grave, or where the separate graves of members of one family or clan lay side by side. The grave or graves as a subterranean dwelling-place easily passed over into the conception of a hollow region under the earth, an under world where the dead lived. At whatever time the conception of the soul, spirit, or shade arose, it did not alter this belief. The spirit might come and go from the grave or inhabit with other shades the larger under world.

The formation of a belief in an under world was also aided by observed phenomena. The sun seemed to rise out of the earth or sea in the east and to sink into these again in the west. What then more natural than to suppose that during the night it passed through some underground region, to emerge again in the morning? This under world sometimes thought of as beneath the sea into which the sun seems to sink) through which the sun passed was then associated with the abode of the dead, and in many descriptions of the latter we are expressly told that, when it is night there, it is day there, and vice versa. Hence, too, the entrance to the abode of the dead is not always near at hand, but far off, usually towards the sunset, and their dwelling-place is reached only after a long and perilous journey.

Yet for many races the under world was not visited by the sun. Being under the earth, it was a dark and gloomy place, and this was accentuated by the fact that those who inhabited it were shades or shadows. Here, too, we may see another conception leading to the idea of another world. The eyes of the dead were closed; they were in darkness. Their shades were faint replicas of living beings, seen or not seen in dreams. It is possible that we could see their abode? The grave was a dark, hollow place, and men knew also that caves leading into the interior of earth grew darker as the entrance was farther left behind. There might then be a dark, hollow place within the earth, fit abode for those now shut off from light.

Thus the under world may be a shadowy, undesirable place, or, again, it may be a reflection of the upper world, now light, now dark, as the sun visits or leaves it.

2. **The under world in ancient religions.**—It is surprising that cultured races in the past hardly abandoned the belief in an invisible under world. The Babylonians called this region Aralu, and it was conceived as a vast underground dwelling, as 'the land without return,' the dark abode of all the shades of the dead, with its entrance in the west, the region of sunset. The sombre goddess Eresh-Kigal and the terriblegod Nergal ruled over it. Seven walls, pierced by as many gates, 2

surronded this place of terror, where 'dust lay thick on door and bolt,' where the shades dwelt with dust for their food, in darkness and gloom, among signified demons. All these ideas are vividly set forth in the story of the descent of Istar to Hades. By far the conceptions of a better region or of retribution were held by the Hindus and later by the Jains; and these beliefs are discussed here. Gloomy as was the fate of the dead in Aralu, there was a worse fate, viz. where burial rites had not been performed and the spirit had to wander, consumed by gnawing hunger and feeding on offal.

The older Hebrew conception was not dissimilar, and the strong desire to be buried in the family grave or by the side of relatives suggests that Sheol or Hades, like the under world elsewhere, was 'originally conceived as a combination of the graves of the clan or nation.' The shades (refphaim) dwelt in the under world, outside the rule of Jehovah, distinguished from each other according to their state on earth, but in a region of darkness, dust, and silence. The state of the shades in Sheol is seen from such passages as Ps 115:16; 149, Eccl 9:10. While the later belief was generally different from this, it still kept the idea of an under world, but now generally as an intermediate state of the dead, waiting for the day of judgment in different compartments of H, better or worse, for the righteous or the wicked. Sometimes it was a place of torment for the wicked at death, or it or a subterranean Gehenna became the place of torment after the judgment.

An under world does not appear consistently in Egyptian beliefs regarding the dead, their state and locality, which were of a conflicting nature. In the Old Kingdom period, and indeed all through the later periods, the soul was associated with the body in its sepulchre, leaving it and returning to it. An under world is spoken of here and there, probably connected with the grave. But many other regions—on earth's surface or in heaven—were open to the dead. In the Osirian religion the blissful abode was in heaven or elsewhere, and it was sometimes regarded as lying in a deep hole under the earth. The theology of the religion of Ram set the universal counterpart of the other world in the bark of the sun by night, passing through guarded gates into twelve successive regions, perhaps both above and below. These regions were either underground or in what corresponded to an under world—the valley through which the sun passed behind the Mountain of Sun-set until it reappeared in the east. This was the Dust, or Duat, the hidden part of the world.

According to O. Schrader, the primitive Indo-European concept of the realms of the dead was that the ancestral spirits dwelt in the earth. They made no distinction between this region of the dead and the tomb. In Vedic times in India, probably as the result of the newer custom of cremation, Yama's kingdom, to which the spirits of the

Such an under world, sometimes situated beneath the sea, is known to some of the tribes of New Guinea, sometimes as a place resembling this world, sometimes much superior to it, while, as with the Waga-Waga, it is said that, when it is night here, it is day there, and et cetera, signifying that it is visited by the sun during our night.\(^1\) A region under the sea, called Taalaklom, is the place of spirits, according to the New Caledonians—a delightful place, of most fertile earth, where sickness, death, toll, and darkness are unknown.\(^2\) In many parts of Melanesia the other world is above ground, often on a distant island, but in the eastern group of islands it is below the earth and is called Panoit or other names. It is a peaceful place and on the whole resembles the upper world. But, according to some, the spirits die there, and then revive in another Panoit, situated below the first.\(^3\)

Generally in Polynesia, while a superior heavenly region was reserved for men of rank or for those slain in battle, there was an under world for all the others. The under world of the dead is found mainly among the tribes of the south-west, but sporadically elsewhere. It is reached after a long journey, and is generally a pleasant region, and also the place whence the first men emerged on earth according to some. Occasionally, when the underworld abode is one of several, and is to it that drowned persons go.\(^4\) Similar distinctions, according to rank or manner of death, occurred with the Mexicans, whose under world, Mictlan, was a gloomy place, reserved for those who did not go to one of the other regions. This resembled the dismal under world of the Peruvians, the place allotted to the bulk of the people. An under world of the dead is less frequently met with among the S. American tribes—\(\ldots\) the Tacamas, the Muyscas, and the Patagonians, who thought that vast underground caverns contained the souls of the dead, instead of these unpleasing places.\(^5\)

Among African tribes, both Bantu and Negro, the belief in an under world is very common. This country of the dead is usually reached through a cave or hole in the ground, or through a pool or lake. Especially with the Bantu it is a region much like the earth, with villages, forests, rivers, etc., but among some Negro tribes it is less desirable as, some of their sayings suggest.\(^6\) Stories of descent by the living to this under ground region are widely spread over Africa.

4. The under world in Christian belief.—Through both Jewish and pagan influences the locality of the souls of the dead in this region is placed beneath the earth, either as an intermediate state, with part of it as a paradise region (Irenaeus, Tertullian), or, more generally, a place of punishment. This belief is illustrated from theological writings, legends, poems (e.g., Dante’s Inferno), and art. It has now ceased to be a vital part of Christian belief.

5. The under world as fairyland.—In the art, fairy is used to signify how frequently the abode of the fairies, dwarfs, and such like beings is underground, and various theories for this folk-belief are discussed—\(\ldots\) that which regards fairies as spirits of the dead.

6. Divinities of the under world.—The divinity who reigns over the under world is frequently a personification of that region itself, and this is more particularly the case where, e.g., Earth and Under-earth are conceived as personified in one being. The earth-goddess is also the ruler of souls (e.g., Demeter or Persephone), with the under-earth people, the Δημήτριος or Ὑπαρχόν, as her subjects.\(^7\)

LITERATURE.—This is referred to in the footnotes. See also art. STATE OF THE DEAD, DESCENT TO HADES (Ethnio). J. A. MACCULLOCH.

UNDER WORLD (Greek).—The Greek conception of the under world is the product of a long process of evolution. The following strata can be clearly determined.

1. An under world which is strictly local, and in which the attributes of the dead are purely physical.—This conception is well expressed in a vase in the Central Museum at Athens. This archaic vase is of the type known as ‘prothesis,’ a class of vase used in funeral ceremonies and decorated with funeral subjects. Two mourners stand lamenting, one on each side of a grave, erect on which is a ‘prothesis’ vase. Within the grave itself is represented what the mourners believed the grave to contain: (a) the eidos, little winged figures of the dead, and (b) a great snake. The under world was to the vase-painter strictly local; it was represented exactly as itself. The eidos, or spirit, was represented either as disembodied, or, if winged, as shrunk men, represent the individual dead, strengthless and vain; the great snake represents the collective might of the dead, the θάλαμος of life, rebirth, the immortality of the γέροντες or tribe. This θάλαμος in human form was the tribal hero, in later monarchical days the king, like the ancestor of the Athenians, envisaged as half-man, half-snake. He was essentially a local power, and to him the fertility of the local earth was due; his temple was his tomb. This belief in the snake-hero was essentially the faith of a settled people of agriculturists to whom the local earth with its perennial crops was all-important—a people who practised field-magic. With the heroic age, its shifting of peoples, its conquests and migrations, the conception of the under world, dependent like all other religious conceptions on social developments, was bound to change. This brings us to the next development or stratum.

2. An under world remote, non-local, Pan-Hellenic—in a word, the Homeric or heroic under world.—In Odyssey, xli, the so-called Averka, we have a description of an under world which, though its kernel is undoubtedly local, i.e. Boetian, has become in virtue of many accretions Pan-Hellenic. See art. BESSUS, EARLY GREEK TRAVEL AND ADVENTURE, EGYPT AND N. AFRICA, § 4; NEROSES AND W. AFRICA, § 3; A. WERNER, African Mythology (=Mythology of all Races, viii.), Boston, ch. iv. 4.

3 See art. EARTH, EARTH-SIDES, § 7.
UNITARIANISM

Hellenic. This under world is no longer a local grave, but a vast remote kingdom of the dead, separate and distinct from the living world, by the stream of Oceanos, but in confused fashion accessible by a trench dug in the earth. The old conception partly lives on. This under world of Homer reflects, of course, the Homeric social structure in a state of decay. We have the great mass of the people represented by the 'strengthless heads of the dead,' who 'sweep shadow-like around,' and with whom Odyssey sympatizes; but there are the souls of great particular heroes, who, after drinking of the black blood, can hold converse with the living. Instead of the collective Sisypheus, the snake, we have individual aristocratic heroes who emerge in truly heroic fashion. The function of these splendid Homeric dead is not to fertilize the earth for their successors, but to live on themselves after their kind, though in more shadowy fashion. They are no longer either physical or local; they are functionless—no longer perennial, but merely immortal and quite non-moral.

To the literary Nekia of Homer must be added the great fresco of Polygnotus, the Nekia painted by him in the Lesche at Delphi of which Pausanias has given us a detailed account. 1 The Nekia of Polygnotus is, if we may trust Pausanias, based not on the Odyssey story, but on the epic monster, the Minotaur. In it is laid stress on a new element just dawning in the Nekia of the Odyssey, and this brings us to our third stratum.

3. An under world which is moralized, containing new elements—retribution and purification. —These two elements appear very clearly in a black-figured amphora at Munich. 2 To the right is Sisyphos rolling up his stone, to the left the Danaiads are filling their bottomless casks. Sisyphos stands for retribution, the Danaiads mark the transition to purification.

In the Nekia of Homer Odysseus, after he has had speech of various heroes whom he has known in the upper world, sees as in a vision, but does not speak with, Minos the judge of Hades, Orion the mighty hunter, and the great criminals Tityos, Tantalos, Sisyphos. Of these figures the two first are marked by one great characteristic: they are doing in Hades what they did in the upper world. Minos, who judged Crete, is judging in Hades; Orion is still hunting wild beasts. But the three 'criminals' have been usually supposed to be, not carrying on their normal pursuits, but being 'tormented.' S. Reinach has brilliantly and conclusively shown that the three 'criminals' are depicted as carrying on their earthly activities; it is only a later moralizing age that supposes them 'tormented.' We will take only one instance—Sisyphos rolling his stone. Sisyphos is the ancient king of Corinth, and, like all other ancient kings, a Sisyphos: weather and sky powers. He controls the sun; in a sense he is the sun. It is his business to roll the ball of the sun, the huge stone, up the steep of heaven, whence eternally it rolls down again. The senseless punishment becomes intelligible as a periodic function eternally incumbent. Hades is peopled with the Sisyphos powers of an elder world; it is the dower-house of antique religion.

The Danaiads are analogous figures; but about them have grown up accretions more complex; they stand not only for retribution but also for purification, and they are ultimately connected with the mystery-rite of Orpheus. Primarily, however, they are the daughters of the old Danaios, king of Argos. He makes the weather, and they make the rain; they are well-nymphs, projections of ancient rain-making practice to the earth. In order that water may well forth from sky and earth. They are depicted as on the vase pouring water in a pithos—well, the bottom of which was perforated, to fertilize the earth. But their labour is ceaseless, i.e., periodic, year by year. But, when their nature as rain-makers is forgotten, the ceaseless labour is thought of as a punishment, a retribution; they are 'condemned to carry water in broken vessels'; they, the fertility-bringers, are doomed to endless, barren toil. What was their crime? But for Pausanias, we could never have guessed. He saw in the Nekia at Delphi figures represented as carrying water in broken vessels, and he explains them as 'of the number of those who held the Eleusinian mysteries to be of no account.' They are the uninitiated, never purified in the upper world; they ceaselessly seek purification in the world below. Thus the well-nymphs, with their simple physical function as perennial fertilizers, have been moralized by a later and mystical theology.

In the Hades of Homer there are no water-carriers, no uninitiated, for Homer knows nothing of the mysteries. His theology has reached the retribution, but not the purification, stage. But from Homer onwards, as has recently been shown by Gilbert Murray, the conceptions of bliss and torment are in ancient literature, and we may add, in ancient art. So that the image of ancient water-carriers, whether Orphic or Eleusinian. The mental pictures of Heaven and Hell which were current in ancient times and are still to a certain extent traditional among us are based on the actual ritual of the mysteries. The scenes and arrangements, so to speak, of the other world are, in the first instance, projections of the initiation-ceremonies. Such is the purgatorial water-carrying of the uninitiated Danaiads.

UNITARIANISM.—Unitarianism, an English term derived from the Latin unitarius (first used of a legalized religion in 1600), is applied to a mode of religious thought and organization founded on the conception of the single personality of the Deity in contrast to the orthodox doctrine of His triune nature. The corresponding term 'Trinitarian' was first used in the modern sense by Servetus in 1546. The adjective 'Unitarian' has sometimes been employed beyond the limits of Christianity—e.g., in connexion with Muhammadanism; this article deals only with the development of modern Unitarianism on Christian lines. The place of the corresponding doctrine in the NT and the early Church must be studied in the usual authorities on historical theology.

1. Beginnings on the Continent.—The general movement of humanism at the opening of the 16th cent. led to a variety of speculation which was largely stimulated by the publication of the Greek text of the NT at Basle (1516). The emphasis of the famous Trinitarian verse, 1 Jn 5, its aversion to the scholastic type of disputations produced a marked effect on many minds. The earliest literary town of anti-Trinitarians is usually found in a treatise of Martin Cellarius
in constant communication with Holland, supplied most of the victims, down to Bartholomew Legate, of Essex, who declared Christ a 'mere man,' but 'born free from sin,' and who was the last sufferer (1555). He was hanged by Smithfield fires (1612), eighth man, who was burned a month later at Lichfield, charged with ten various heresies as incongruous as those of Ebion, Valentinus, Arius, and Manes. One foreign theologian, lawyer, physicians, mathematicians, men of letters and science, were all astir. They travelled and discussed, and new views were carried far and wide. In Naples a young Spaniard, John Valdes, became the centre of a religious group of noble ladies for the study of the Scriptures till his death in 1541; and in 1539 Melanchthon found it necessary to warn the Venetian senate of the existence of widespread Unitarianism in N. Italy. Out of this circle comes Bernard Ochino (1487-1565) of Siens, who passes slowly through Switzerland to London, serves as one of the pastors of the Strangers' Church (1530-53) till he is banished, takes shelter again in Zürich, and finally migrates to Poland in 1559, and joins the anti-Trinitarian party. There Catherine Vogel, a jeweller's wife, had been burned at the age of 80 in 1559 at Cracow for her testimony, and became, of all the visible and invisible world, who could not be conceived by the human intellect. 1 An anti-Trinitarian movement showed itself at the second synod of the Reformed Church in 1556, and in 1508 secured a leader in the person of a Piedmontese physician, George Blandrata. Dutch Anabaptists started various heretical movements, and David Joris of Delft (1501-56) declared in his Wonder-book (1542) that there is but one God, sole and indivisible, and that it is contrary to the operation of God throughout creation to admit a God in three persons. Thousands of Protestants from Germany, Alsace, and the Low Countries, migrated to England in the reign of Henry VIII., and the Strangers' Church under Edward VI. contained also Frenchmen, Walloons, Italians, and Spaniards.

2. Beginnings in England. — English thought was not unaffected. In the 15th cent. Reginald Peacock, bishop of Chichester, had opened the way by his two treatises, the Reprension of overmuch Blaming of the Clergy, and The Flock of Faith, 2 to the discussion of the relative values of Scripture, tradition, and reason as grounds of faith, and had pleaded for freedom of investigation. Later the Anabaptists represented directions from orthodoxy along independent lines. On 28th Dec. 1548 a priest named John Assheton abjured before Cranmer the 'damnable heresies' that 'the Holy Ghost is not God, but only a certain power of the Father,' and that 'Jesus Christ, that was conceived of the Virgin Mary, was a holy prophet ... but was not the true and living God. In the following April a commission was appointed to search out all Anabaptists, heretics, or contemnors of the Common Prayer. A number of London tradesmen were brought before this body in May. The opinions which they recanted included the statements that there was no Trinity of persons; that Christ was only a holy prophet and not at all God; that all we had by Christ was that he taught us the way to heaven. 3 Occasional executions took place, such as that of the surgeon, George van Parris, of Mains, in 1551 for saying that God the Father was the only God, and Christ was not very God. The Eastern counties, being

UNITARIANISM

cultus addressed to Christ. 1 Socinus pleaded for the adoration Christi as obligatory on all Christians, and urged that the invocation Christi should not be forbidden. In 1579 he settled in Poland, where the rest of his life was spent. The members of the Minor Church were converted to his views, which found an expression in the Catechism issued by them in Polish in 1605, a year after his death. 2 A Latin edition followed in 1609. The Polish adherents of Socinus failed, however, to hold their ground. David of Blandrata and others were powerless. Roman Catholic reaction triumphed. Their college at Raków was suppressed, and finally in 1660 they were offered the option of conformity or exile. Some went to Germany and Holland; some carried their worship to Transylvania, and maintained a slender separate existence till 1735. But the influence of Socinus was perpetuated in the massive volumes of the Bibliotheca fratrum Polonorum qui us Unitarios vacant, published at Amsterdam (1655-69). His theology rested on a rigid view of the authority of Scripture. 3 The modern methods of historical criticism were of course unknown. Philosophy raised no difficulties about the supernatural, but reason started objections from the side of the multiplication-table.

'The essence of God is one,' says the Recognitio Catechism, 'yet the one God is in any way contain a plurality of persons, since a person is nothing else than an individual intelligent essence. Wherever there one, there are numerable persons, their number necessarily in like manner reckoned three individual essences, for in the same sense no one affirmed that there are three numerical essences, it must be held that there one numerical essence.' 4

But Socinus admitted the application of the term 'God' to Christ in an inferior sense (Jn 10:16 5); and he wrote in Jn 21:22 that the water, which Jesus had been conveyed to heaven, where he had beheld his Father, and heard from him the things which he was afterwards sent back to earth to teach. Raised again to heaven after his resurrection, he was made the head of all creation, with divine authority over the world, and in that sense God. He was thus 'nere man,' and deserved divine honours. Modern Unitarianism has departed widely from this Christology. Apart from the necessitarianism of Priestley, it is nearer to Socinus in its view of human nature, which he treated (against the Calvinists) as endowed with free expression of virtue and vice. But the Polish Unitarians did not regard it as intrinsically immortal. A future life would be a gift direct from God, its conditions being made known by him. But those who did not fulfil them there was no hell, only extinction.

Unitarianism acquired ecclesiastical status also in the adjoining province of Transylvania. In 1560, Blandrata was invited by Queen Isabella to the court of her son Prince John Sigismund. At Kolozsvar (Klausenburg) he was brought into contact with Francis David, who had been sent by his Roman Catholic teachers to Wittenberg. There David had passed into Lutheranism, but afterwards, dissatisfied with its doctrine of the sacraments, he joined the Calvinists. His distinction led to his appointment (1564) as bishop of the Hungarian churches in Transylvania. Under Blandrata's influence he began to doubt the separate personality of the Holy Spirit, and became involved in discussions with the Calvinist leader, Peter Melius. In these debates Melius is said to have first used the word Unitarius. David was strongly enough to carry large numbers of clergy and laity with him. In 1568 a royal edict was issued, granting entire freedom of conscience, speech, and giving legal recognition to the Four Religions, Roman Catholicism, Lutheranism, Calvinism (or Reformed), and the Klausenburg Confession. More than 1,000 preachers were ordained for the new churches, and many professors in colleges and schools, ranged themselves under David's supervision. David, however, soon advanced another step, and effectively renounced the Trinity. Christ. Blandrata's attempt to influence him through Faustus Socinus (1578) did not convince him, and in the following year, under a Roman Catholic prince, David was tried for innovation in doctrine and sentenced to imprisonment. Five months later (Nov. 1579) he died in the castle of Deva in his seventieth year.

The name Unitarians first appeared in an authoritative document in a decree of the Synod of Lescalva in 1600. It was formally adopted by the Church in 1638. For two centuries after David's death the community was in frequent danger from political and religious vicissitudes. Their churches were transferred to Calvinists or to Roman Catholics; they were deprived of their schools; they were debarred from public office. A statute of 1721, however, gave protection to 'the Four Religions,' and they have since enjoyed ecclesiastical peace. 6 They have now about 140 churches, chiefly among the Szeklers of Transylvania, with a few in Hungary, including a vigorous modern foundation in Buda-Pesth. Till 1913 their bishops sat in the Hungarian House of Peers. At Kolozsvár they have a university, and they have devoted great attention to education. No doctrinal subscription is imposed upon their ministers, and under the influence of progressive change, and contact with Unitarian teaching in England and America, the Socinian Christology has been abandoned. The secular hymn-book 1855 made no provision for the worship of Christ.

5. Growth of Unitarianism in England.—The teaching of Socinus gradually made its way into England. The Latin version of the Recognitio Catechism was sent to England with a dedication to James I.; it was formally burned in 1614. Two Socinian works appear in the first two catalogues of the Bodleian Library (1629-35), but a considerable number of other books can be traced in the library of the Unitarian bookseller Thomas Hyde in 1674. Bishop Barlow, himself once a Unitarian, in Directions for the Choice of Books in the Study of Divinity (originally drawn up in 1550 and expanded after 1673), named numerous others in connexion with a syllabus of the principal questions at issue between Socinians and other Reformed communions. 7 Theology was deeply concerned with the claims of the Roman Catholics on the one hand, and the controversies of the Puritans on the other, and from the days of Richard Hooker (1553-1600) a series of writers discussed the respective authority of the Church, the Scriptures, and reason. Doubtless revelation was necessary, but Scripture was its medium. If it was the teacher of theology, what was theology, asked Hooker, but the science of divine things? and, what science can we attain unto without the help of natural discourse and reason? 8 The Arminian revolt against Calvinism tended in the same direction, and the ever memorable John Hales (1584-1650), when he 1 See below. 2 The town of Raków, founded in 1569, was the ecclesiastical base of Socinus for many years (1592-1597). 3 His treatise de Auctoritate S. Scripturam, written in 1570, was first published in Socinus's lifetime, and published again by a Jesuit Lopez as his own. Commissioned in 1728 in a charge by Bishop Snall Brooke, it was translated into English by Edward Combe in 1745. 4 Eng. tr. by Thomas Rees, London, 1815, p. 3. 5 See below. 6 Cf. Michael Lombard, Sambucus, Summae Uniterinae Theologicæ Christianæ (1625). The above was written before the great majority of Unitarian Churches published a statement of faith by a Jesuit Lopez as his own. 7 The grammes Remains of Dr. Thomas Barlow, late Bishop of Lincoln, London, 1686. 8 Laws of Religious Politics, bk. iv. ch. vii. 11, ed. Keble, Oxford, 1836, i. 475.
left the Synod of Dort after hearing Episcopalian exposition. In 36, 4 he had John Calvin good-night. 1
A stream of protest flowed against such the mysteries of the Godhead beyond the terms of Scripture. It had been the plea of Aeneas, who, having been among the Accusations of de Provincialis at Amsterdam and William Chillingworth (1602–44) owned him as the teacher of the mischiefs of creeds which led to the "persecuting, burning, cursing, damning of men for not subscribing to the dogmas of men as the words of God." 2 Chillingworth was indebted for acquaintance with Socinian literature to Lord Falkland. He had seen some volumes in the rooms of Hugh Cressy of Merton College, Oxford, who 'claimed to have been the first to bring in Socinian's books.' Cressy afterwards became a Benedictine monk; Falkland was designated by John Aubrey 'the first Socinian in England.' Other and wider influences were at work. Lord Herbert of Cherbury (1583–1648) in his de Veritate 3 analyzed the whole faculties of the mind, and discovered among the notions common, innate, of divine origin, and indissoluble, certain common notions of religion in all men. These he exemplified historically twenty years later in the de Religione Gentilium (completed in 1645), one of the earliest treatises in comparative theology. The great authority of Cremona (1797) gave at once to his exposition of Christianity in the de Veritate Religionis Christianae. 4 He discourses of the attributes of God, but is silent about His triune nature. He proves that there was such a person as Jesus, that he rose from the grave and was worshipped after his death. He vindicates his character as Messiah, but never mentions the Incarnation. His annotations on the NT were generally free from the spirit of reason. It was not surprising that Stephen Nye, the author of the Brief History of the Unitarians also called Socinians, 5 should affirm that he 'interpreted the whole according to the mind of the Socinians.' Under such influences diversity of opinion was recognized as inevitable. Writers so different as Hales, Jeremy Taylor, 6 and Milton 7 declare in almost the same words that heresy is not a matter of the understanding; the faithful pursuit of reason did not make a heretic; the mischief lay in the influences that perverted the will. Chillingworth thought it possible to reduce all Christians to unity of communion by showing the diversity of opinion was no bar to this. That all Christians should think alike was an impossibility; it remained for them to be 'taught to set a higher value upon those high points of faith and obedience wherein they agreed than upon those points of less moment wherein they differ.' 8 Such writers did not adopt the theology of Socinian, but they were in agreement with him in his plea for Scriptural statements rather than dogmatic creeds. 'Vitalis in religion,' said Benjamin Whichcote (1609–83), the leader of the Cambridge Platonists, 'are few.' 9
Meanwhile an occasional English traveller like Paul Best (1590–1657) had visited Poland and returned infected. Milton noticed in the Areopagitica 10 the 'stay'd men' sent by 'the grave and fragil Translatingian' to learn 'the theological arts of England.' The danger of Socinianism was spreading. The Convocations of Canterbury and York agreed in June 1640 to prohibit the import, printing, or circulation of Socinian books; no minister should preach their doctrines; laymen who enunciated their opinions should be condemned. 11 A series of angry writers denounced them with shrill abuse. Parliament made the denial of the Trinity a capital crime (1649), but an English translation of the Elenchos (1609) was published in 1652 at Amsterdam, followed by A Twofold Scripture Catechism from the pen of John Biddle in 1654. These works led the Council of State to order John Owen, whom Cromwell had made Dean of Christ Church and Vice-Chancellor of the university of Oxford, to prepare a reply. His Vindiciae Evangelicæ appeared in 1655.

2 Do not look upon these things, he wrote with heat, 'as things afar off whereas you are little concerned; the evil is at the door; there is not a City, a Towne, scarce a Village in England, wherein some of this poison is not poured forth.'

6. Influence of Biddle and Locke.—John Biddle (1616–62) has often been called the father of English Unitarianism. Sprung from the family of a Gloucestershire yeoman, he graduated at New College, Oxford, and graduated M.A. in 1641. The Gloucester magnates appointed him shortly after to the mastership of the free school in the parish of St. Mary de Crypt. There his Biblical studies led him to renounce the attempts to prove in the understanding of God's works, he the Trinity, the particular difficulty being the deity of the Holy Ghost. Imprisonment in Gloucester and at Westminster did not prevent him from publishing his views, which were opposed to the prevailing orthodoxy. Released in 1652, he founded for the first time gatherings for the discussion of the Scriptures on anti-Trinitarian lines, and these developed into regular meetings for worship. John Biddle, son of a wealthy and generous merchant, who had been the friend of Biddle and also had close relations with Archbishop Tillotson (1630–94), promoted the circulation of literature. The Brief History of the Unitarians, also called Socinians, was published at his request in 1657. The Toleration Act of 1660 excluded those who denied the Trinity on the one side, and Roman Catholics on the other. But an active controversy broke out the following year, which resulted in the production of a long series of Unitarian tracts (1661–70) largely financed by Firmin, in which the chief ecclesiastical disputants, John Wallis and William Sherlock, were cleverly played off against each other, and the argument was enforced on grounds of Scripture and early patristic testimony. The Unitarian influence was so strong that Parliament found it necessary (1669) to bring against those who denied the Trinity on the one side, and Roman Catholics on the other. But an active controversy broke out the following year, which resulted in the production of a long series of Unitarian tracts (1661–70) largely financed by Firmin, in which the chief ecclesiastical disputants, John Wallis and William Sherlock, were cleverly played off against each other, and the argument was enforced on grounds of Scripture and early patristic testimony. The Unitarian influence was so strong that Parliament found it necessary (1669)
to threaten the profession of the obnoxious heresy with cumulative penalties amounting to the loss of all civil rights, and three years' imprisonment. But though at this time a mild and peaceful influence had entered the field. In 1695 John Locke (1632–1704) had published his treatise on The Reasonableness of Christianity.

Locke's Letters concerning Toleration and his Essay on Human Understanding had already placed him at the head of contemporary English thinkers. It was a lamentable sign of the heated temper of the time that the inquisitorial nature of Christianity was published anonymously. Locke did what Grotius and Hobbes (in the Leviathan) had done before him. He went back to the Gospels and the first preachers of the new faith, and found that their message consisted in the proclamation of Jesus as the Messiah, the proof of this character resting on his fulfilment of prophecy and his miracles, especially the Resurrection. He had indeed already confided to his journal in 1691 the pregnant remark that these miracles were to be judged by the doctrine, and not the doctrine by the miracles. But he could still say in 1703 that the Scripture had God for its authority and none for its matter. This did not, however, prevent him from recognizing the occasional character of the apostolic letters; and in the paragraphs of the essay published in his lifetime (1704, after his death) by treating their teaching as relative to the age and persons for whom it was designed, he really laid the foundation of the historical method. His whole theory of knowledge, however, and his polemic against all infallibility, led him to fall back on the conception of revelation, and to find in Scripture an ultimate authority for religious truth. Meanwhile the violence of some of the Trinitarian controversialists drove many minds along the paths already trodden by Milton and Sir Isaac Newton in the direction of some form of Arianism. William Whiston (1672–1752), who had succeeded Newton at Cambridge as Lucasian professor in 1703, was deprived for this heresy in 1710; and it was in the background of the treatise of Samuel Clarke (1675–1729) on The Scripture Doctrine of the Trinity; though he objected to the ancient Arian statement, 'there was (a time) when there was no Son.'

The formularies of the Church of England precluded anything like general change within its ranks, but the Church was organized on the basis of dogmatic creeds. The English Presbyterians under the leadership of Richard Baxter (1615–91) had ardently desired comprehension in the Establishment, but they had as ardently repudiated what they called 'human impositions.' Driven out of the Anglican Church, unable to create a Presbyterian polity, they found themselves side by side with the Congregationalists in 1659. When they took out licences for places of worship, their trustees avoided doctrinal tests, though they themselves were mainly Calvinistic. They often devoted their chapels to 'the worship of God by Protestant Dissenters.' Sometimes the Presbyterians were named, sometimes the Independents, sometimes both conjointly. They reserved to themselves, in the language of Timothy Jollie of Sheffield (1635–1714), 'liberty to reform according to Scripture rule in doctrine, discipline and worship.' The way was thus open to gradual theological modification. The process was slow, and its operation unequal in different places. Pastors and people did not always move together. The transition through varying types of Arianism naturally took place at varying rates; e.g. Nathaniel Cudworth (1634–1678), after resting in Clarke's Arianism, finally abandoned it in his Letter on the Logos. The result was that at the beginning of the 19th cent. nearly 200 chapels were occupied by Unitarians, who were unfavourable to sectarian activity. When the Manchester Academy (now Manchester College, Oxford) was opened in 1766, its first principal, Thomas Barlow, who dedicated it 'To Truth, to Liberty, and to Religion,' was himself an Arian. His colleague, Ralph Harrison, became a Unitarian. True to the practice of their forefathers, the founders refrained from imposing any tests on either tutors or students. The Presbyterian Board, established in 1689, governs the Presbyterian College at Carmarthen—the continuator of a series of academies, the first of which was founded on the same basis by Samuel Jones, sometime fellow of Jesus College, Oxford, one of the 2000 ejected ministers of 1662.

7. The work of Priestley and Beilarm. The process of gradual change was pursued from another side. Joseph Priestley (1733–1804), bred among the Independents, threw off the Calvinistic theology of his youth, and, after resting a little while in Arminianism, while in Aix-la-Chapelle, he began to preach in Leeds, a simple humanitarian view of the person of Jesus. His scientific studies had already gained him the fellowship of the Royal Society (1766), and his Appeal to the Serious and Unbiassed Professors of Christianity carried his name in 30,000 copies over England. His industry, his wide range of knowledge, his clearness of thought and style, his fearless utterance, his untiring earnestness, his elevation of purpose and purity of life, his simple piety, secured for his theological and philosophical teaching a dominant position in Unitarian thought. At Doddridge's Academy at Davenport he had studied Hartley's Observations on Man, and adopted a materialist view of human nature. But this in no way impaired the religion which he learned from the Gospels. The teachings of Jesus, guaranteed by his miracles and triumphantly established by his resurrection, supplied him with a positive ground for faith; and the identification of the God of revelation with the Sole Cause of all phenomena, including every form of human action, a typical materialism, which long pervaded Unitarian devotion. In his Doctrine of Philosophical Necessity illustrated he affirmed that his doctrine should produce 'the deepest humility, the most entire resignation to the will of God, and the most unreserved confidence in his goodness and providential care.' Among the Yorkshire acquaintances of Priestley was Theophilus Lindsey (1723–1808), vicar of Catterick on the Tees. A movement had been started by a small group of the clergy of the Establishment for the relaxation of the terms of subscription. The failure of a petition to Parliament led Lindsey to resign his living (1769). 22 Sometimes the Unitarians were named, sometimes the Independents, sometimes both conjointly. They reserved to themselves, in the language of Timothy Jollie of Sheffield (1635–1714), 'liberty to reform according to Scripture rule in doctrine, discipline and worship.' The way was thus open to gradual theological modification. The process

1829), once like Priestley an Independent, to a theological tutorship in a college at Hackney. A severe and vigorous pen, and took a leading share in promoting the development of denominational activity. This was opened in 1791 by the foundation of the Unitarian College at Highbury with its actual existence, the Laboratory and the Practice of Virtue by the Distribution of Books. 3 Lindsey, Priestley, and Belsham were its leaders. The preamble and rules, drawn up in 1791, declared the professed belief in the power of God, and the simple humanity of Jesus Christ, in opposition both to the Trinitarian doctrine of three Persons in the Deity and to the Arian hypothesis of a created Maker and Preserver of the world. The love of civil and religious liberty prompted a petition the next year (1792) for the abolition of the penal laws affecting religion, to which Charles James Fox lent his aid, and this was accomplished in 1813 (so far as Unitarians were concerned) by the repeal, through the efforts of William Smith (1758–1835), M.P. for Norwich, grandfather of Florence Nightingale, of the clauses of the Toleration Act which rendered the profession of Unitarianism illegal. Meanwhile local Unitarian associations had been founded, and a denominational literature was springing up. Chapels long closed were reopened. Priestley had asserted a Unitarian Fund was started; and missionaries were sent out to various parts of the kingdom. Endowed by the Act of 1813 with civil rights, the Unitarians proceeded to form an association for protecting them (1819); and finally in 1825 a number of separate organizations were amalgamated in the British and Foreign Unitarian Association. This body was created to promote the public welfare of Unitarians. But its founders refrained from imposing any definition of them on its adherents. In the spirit of the English Presbyterians of a century and a half before, they left each member free to interpret them for himself.

The type of Unitarianism then prevailing was largely shaped by the writings of Priestley and Belsham. There were still Arians of different degrees (designated as 'high' and 'low') among Unitarians. Both the enthusiasm of controversy fell more and more clearly on the humanity of Jesus, and the proof of this lay in the Scriptures. The doctrine of their plenary inspiration, that Jesus was not a man, but a claimant of a Christ, that Unitarianism denied already distinguished different documents in Genesis. The narratives of the birth of Jesus were inconsistent with each other, and one or both might be rejected. But both the OT and the NT contained "authentic records of facts and of divine interpositions," and Charles Wellbeloved, principal of Manchester College, York, could write in 1825: "Conscience us that any tenet is authorised by the Bible, from that moment we receive it. Prove any doctrine to be a doctrine of Christ, emanating from that wisdom which was from above, and we take it for our own, and no power on earth shall wrest it from us."

On this basis Jesus was presented as "a man constituted in all respects like other men, subject to the same infirmities, the same ignorance, prejudices and frailties," who was chosen by God to introduce a new moral dispensation into the world. For this end the Holy Spirit was communicated to him at his baptism. He was instructed in the nature of his mission and invested with voluntary miraculous powers during his sojourn on earth. He was equipped with the Messiah, was sent forth to reveal to all mankind without distinction the great doctrine of a future life in which men should be rewarded according to their works. Of this the supreme proof was found in the Resurrection, to which his ascension to the throne of glory was a necessary preliminary; and he was destined to reappear to raise the dead and to judge the world. From this scheme all theories of atonement and penal atonement were eliminated. Baxter with his natural frankness had admitted that a necessitarian "cannot accuse himself of having done wrong in the ultimate sense of the words." 4 But, though this type of Unitarianism had produced a curious reluctance to recognize the existence of a 'soul,' its teachers lived habitually at a high moral tension, demanding a constant conformity of the will of man to the will of God. Associated with the emphatic assertion of the Father's wisdom and beneficence, such views naturally anticipated the final victory of good. Thomas Southwood Smith (1788–1861) in his Illustrations of the Divine Government 5—a book warmly admired by Byron, Moore, Wordsworth, and Crabbe—powerfully impressed on Unitarian thought the doctrine of universal restoration, which had already found expression in the history of Cromwell's chaplains, and gained various champions (Hartley among them) in the 18th century.

9. Legal difficulties. The modifications of belief which had brought many of the occupants of chapels erected by PresbyterianSECTION 2: among Unitarians to Unitarian theology at last aroused the attention of those who remained orthodox. Besides a number of meeting-houses, the Unitarians were in possession of two important trusts—Lady Hawley's Charity in York (1704), and Dr. Williams's Trust in London (1716). A suit was instituted against Lady Hawley's trustees in 1830. Legal proceedings were slow and costly, and on 3rd Dec. 1833 judgment was finally given against them. One of the trustees was the minister of St. Saviourgate Chapel (which Lady Hawley had habitually attended), Charles Wellbeloved. It was at once seen that the whole tenure of the chapels was endangered. A long period of litigation followed, but the Law Lords finally confirmed the first decision in 1842. Meanwhile numbers of suits were threatened for the recovery of the buildings, burial-grounds, and endowments which had descended in undisputed succession through generations of pastors and laity. Between Lady Hawley's pastor, John Hoatham, and Charles Wellbeloved there had been a quarrel, but one moreyt by that time (1833–1800); the three pastorate covered 144 years. In the presence of such continuity of tenure the claim of the existing occupants was irresistible, and in 1844 the Dissenters' Chapels Act, introduced by the Government, gave the needed relief. Without naming either Presbyterians or Unitarians, it secured to such Dissenting congregations as had no creeds or tests the right to change their opinions as they saw fit in the lapse time. 4 The chapels subsequently built by Unitarians, and the funds raised for the support of their ministers, have been almost invariably founded on the principle known as 'open tracts,' - the conscious liberty of this historic evolution supplies the key to the conflict of tendencies in modern Unitarianism between the impulse to theological denominationalism and the desire to realize on however small a scale the 'Catholic communion' which had been the ideal of the English Presbyterians who followed Baxter.

9. Martineau and the modern school. The most potent personal influence, and most successful direction was that of Mary (Mary Anne) Martineau (1805–1900) (q.v.).

4 See Art. Universalism.

5 Cf the speech of W. E. Gladstone, on the second reading, Parliamentary Debates on the Dissenters' Chapels Bill, London, 1844, p. 120.
In his first work, *The Rationale of Religious Inquiry*, he abandoned the position of the older Unitarianism, which would have accepted the doctrine of the Trinity, and, everlasting torments, if they could be found in the Scriptures. "No seeming inspiration," he affirmed, "can establish anything contrary to reason." Three years later by the famous Liverpool controversy (1839), in the midst of intense criticisms of the evangelical scheme of salvation, he laid the foundations of a new view of revelation no longer as a communication of truth, certified by miracles, but rather to the conscience and affections—and a fresh interpretation of the moral life on the basis of free will instead of necessity. Meanwhile he was reading Strauss, and soon reached the conclusion that belief in miracles was not essential to Christianity. The Messianic function of Jesus was thus undermined. Wellbeloved had already insisted on the contemporary significance of many of the prophecies supposed to refer to Christ. When the miracles were disowned, the second guarantee of the supernatural character of Jesus fell away: the followers of Locke found themselves deprived of their "reasonable" Christianity, and the faith of Christ was only a superior kind of natural religion. Martineau meanwhile pursued a double line of study. In a group of articles in the Westminster Review he explored the establishment of Christianity on its critical side, while on the philosophical he indicated the communion of the human spirit with the Divine, and presented Jesus as the expression, within the limits of our nature, of the righteousness and love of God. Revelation was thus transformed from supernatural instruction into the realization of more exalted character; its medium was not a written word, but a higher personality. To establish the principles of spiritual theism and find a place in man's soul for "dwelling in God and God in him" which Priestley had described as the highest type of personal devotion was the aim of a long series of brilliant articles in the *Prospective and National Reviews*, which culminated in two great treatises, *Types of Ethical Theory* and *A Study of Religion*. By these works, as well as by his sermons and occasional Addresses, he exercised an influence which went far beyond his own denomination, so that Gladstone described him as "the greatest of living [English] thinkers." Religious writers were not inactive beside him. The saintly John James Taylor (1797–1869), in his *Retrospect of the Religious Life of England*, delineated with singular breadth of view and literary charm the significance of contrasted principles of authority and freedom; and from his pen came the first formal discussion of the Johannine question in England in his *Attempt to ascertain the Character of the Fourth Gospel*. A long series of scholars had pleaded for the revision both of the text and of the translation of the NT; and, by the advice of the veteran John Kenrick, George Vance Smith was invited to join the company of the Reverens (1870). In James Drummond (1833–1918) Unitarianism possessed a theologian of the older school of learning, whose works on *The Jewish Messiah* (1877), *Philo Judaeus* (1886), *Inquiry into the Character and Authorship of the Fourth Gospel* (1903), and *Studies in Christian Doctrine* (1908) maintained the tradition of devout scholarship. John Rolly Beard (1800–76) led the way with modern dictionaries of the Bible by his *People's Dictionary of the Bible*, and made other valuable contributions to theological literature. Cultivated laymen, also, such as Edgar Taylor and Samuel Jackson, and, rendered no small services to the Unitarian cause. Most influential of all, perhaps, in its protest against prevailing supernaturalism was *The Creed of Christendom* by Ralph Waldo Emerson. Francis William Newman and Frances Power Cobbe found many readers; and the writings of Ralph Waldo Emerson and Theodore Parker, together with the studies of Max Muller, opened the way to the bounds of Christianity. The Hibbert Trustees, who sought to promote the spread of Christianity in "its simplest and most intelligible form," were the first to inaugurate in 1878 a series of lectures on the history of religions, and Manchester College included that subject in its theological course as early as 1875. The discourses of Martineau, J. Hamilton Thom, and Charles Beard provided varied illustration of the preacher's power; and the sermons and hymns of Stopford Brooke, after his withdrawal from the Church of England in 1890, presented, with a rich glow of personal beauty, the main features of religion as understood by Unitarians.

10. Church organizations.—While English Unitarians have been active in education and philanthropy (witness their domestic missions in Ireland and the establishment of the original *Toronto Review*), the new *Christian Examiner* (1835–1918) is an attempt to secure large numerical increase. New chapels have been built, but denominational zeal has never been active. Congregational independence has been steadily maintained. In 1882 a National Conference was organized, which has now 365 congregations in the United Kingdom on its roll, but they have no common name. Proposals for united action on Presbyterian lines were made by Martineau in 1888, but the demand for congregational autonomy defeated them. The individualists fostered by the constant plea for liberty is unfavourable to the growth of corporate church-life. Generous funds have been raised in aid of ministers' incomes and insurance, and the Conference has found it necessary to lay down educational qualifications for access to these benefits, and has thus constituted an accredited class of religious teachers. Unitarianism has thriven actively in some districts in Wales, but it has not become rooted in Scotland. The oldest of its congregations north of the Tweed was founded at Edinburgh in 1776. In Ireland Thomas Emlyn was prosecuted at Dublin in 1703 for denying the deity of Christ. Ulster Unitarianism witnessed a movement against subscription which culminated in 1726 in the formation of a separate Presbytery of Antrim on a non-subscription basis. Many of the ministers passed through Arianism to Unitarianism, and in 1830 the Remonstrant Synod of Ulster was formed. At the same time, largely through the zeal of Martineau, then assistant pastor in Dublin, an Irish Unitarian Christian Society, embracing both individuals and congregations, was established in Dublin, which was merged (1835) in an Association of Irish Non-subscribing Presbyterians and other Free Christians, including the Presbytery of Antrim, the Synod of Munster, and the Remonstrant Synod of Ulster. Finally, in 1910 the Antrim Presbytery and the Ulster Synod united for purposes of church government under the name of the Non-subscribing Presbyterian Church of Ireland.

11. Unitarianism in America.—Unitarianism in America sprang out of the Congregational order...
UNITARIANISM

of the New England churches. Their theology was Calvinistic, but the 17th cent. foundations were variously covenants instead of dogmatic creeds. Thus the First Church in Boston affirmed:

'Ve . . . do hereby solemnly and religiously promise and bind ourselves and all our children and successors in this and all our successors in all our places of worship belonging to the rule of the Gospel, and in all sincere conformity to [Christ's] holy ordinances, and in mutual love and respect to each other, so near as God shall give us grace.'

The way was thus open, as in English Dissent in the 18th cent., to gradual theological change. The literature of the Trinitarian controversy passed across the Atlantic, and the heretical discussion in the works of Sherlock and South, Clarke and Whiston, supplemented by the writings of the Unitarian Emlyn, began to produce its effect. A slow movement towardsarianism and Arminianism had been set in, invigorated by reaction against the 'great awakening' under Jonathan Edwards (1735) and the early preaching of George Whitefield (1740). Jonathan Mayhew (1720-66) and Charles Chauncy (1725-57), pastors in Boston, led the way towards a more liberal faith. Under the ministry of James Freeman (1759-1833) the congregation of King's Chapel purged their Anglican liturgy of all references to the Trinity. By 1780, says the historian of the church, the first Episcopal church in New England became the first Unitarian church in the New World. The writings of Priestley and Lindsay were freely circulated, and at the end of the century the doctrines against which they protested had been rejected by all the Boston ministers but one. The name Unitarian was indeed rarely attached to the churches, but the mode of thought and worship prevailed more and more widely. It was found all the way from Portland (Maine) to Charleston (S. Carolina).

In 1803 William Ellery Channing (1780-1842) came to Boston and began the ministry which so powerfully influenced Unitarian thought. In reaction against a still powerful Calvinism, with its doctrines of human depravity, the wrath of God, and the atoning sacrifice of Christ, he proclaimed 'one sublime idea,' which he defined as 'the greatness of the soul, its divinity, its union with God by spiritual likeness, its receptivity of his Spirit, its self-forming power, its destination to immovable glory, its immortality.' This was the real challenge to New England orthodoxy; it operated with no less force in dispelling the materialism of Priestley and giving a fresh impulse of spiritual life to Unitarianism on both sides of the Atlantic with this excited view of man's true being, Channing declared himself surer that his rational nature was from God than that any book is the expression of His will; and reason and conscience were thus enthroned in the ultimate seat of judgment. Neither philosopher nor scholar in the technical sense, he exercised by his religious genius and the force of his ethical appeal a far-reaching influence both in the United States and in Europe. 'Always young for liberty,' he protested against every form of sectarian narrowness. He cheerfully took the name Unitarian because unwarmed efforts were made to raise against it a popular load upon religious antagonists in any sense a Trinitarian. But he believed in Christ's pre-existence; he accepted his miracles. He would not, however, exude from his fellowship the strong dogma that [although] the miracles were not miracles altogether. For such a mind denominational aggressiveness was impossible, and this spirit was infused into the leaders of the movement. The centenary in 1858 in the foundation of the Divinity School of Harvard University in 1816, when the Unitarian controversy was at its height.

'It being understood,' said the constitution, 'that every encouragement be given to the serious, impartial, and unbiased investigation of Christian truths; and that no assent to the peculiar tenets of any denomination be required either of the Students, or Professors, or Instructors.'

The movement of which Channing was the most distinguished representative soon demanded some kind of organization. Literature must be circulated, congregations assisted, and churches built. In 1825, on the same day on which English Unitarians formed their association, the American Unitarian Association was constituted. A noble line of eminent scholars, theologians, historians, jurists, poets, statesmen, accepted its principles and gave dignity to its profession of faith. It was not long, however, before new forces appeared on the field. The study of German philosophy produced a school of New England transcendentalism. Ralph Waldo Emerson (1803-82) (q.v.) resigned the pulpit of the Second Church in Boston on the question of the observance of the Lord's Supper, and six years later his famous 'Address to the Harvard Divinity School' (1838) signaled the breach of the new thought with the older views of revealed theology. Edward Hitchcock (1810-60) emphasized the same theme in a much criticized sermon on 'The Transient and Permanent in Christianity' (1841), followed by his widely read 'Discourse of Matters pertaining to Religion' (1842). A new type of Christianity without miracle was thus presented, emphasizing the divine immanence in nature, and holding up the religion of Jesus—the love of God and the service of man—as the 'absolute religion.' Unitarianism faced into the snare from which Channing would fain have saved it, and developed an orthodoxy of its own. When Henry Whitney Bellows of New York proposed to organize the churches (1868) in a National Conference, and its members adopted the declaration that they were 'disciples of the Lord Jesus Christ,' a group of bolder spirits formed a 'Free Religious Association,' where Emerson's name appeared first on the list. In 1894, however, the Conference repudiated all authoritative tests, and simply accepted 'the religion of Jesus, holding, in accordance with his teaching, that practical religion is summed up in love to God and love to man.' The developments of criticism, science, and philosophy, the study of comparative religion, the desire for the widest possible fellowship, and the growing demands of philanthropy, have all contributed to the growth of the Unitarian denomination, and in 1900 the 'International Council of Unitarian and other Liberal Religious Thinkers and Workers' was formed in Boston. It has since held large and successful gatherings in London, Amsterdam, Geneva, Boston, Berlin (1910), Paris (1913), and Boston (1920), assembling a wide representation of different nationalities and faiths.

As in England, so also in America, Unitarianism has been an important influence in religious thought. It represents a mode of approach to the great problems of human life and destiny in which it is closely allied with the time-spirit. Its loose- ness of denominational organization has made possible an advance over vast intervals of time, and hesitating, but its churches steadily increase, and in 1918 the list (including Canada) comprised 490 societies. The Divinity School of Philadelphia was opened in 1833, and in 1834, and the Unitarian Theological

School at Berkeley (California), founded in 1904, have remained more definitely within Unitarian lines.

2. World-wide influence.—(a) The Colonies and India.—The British Dominions, Canada, Australia, New Zealand, Africa, all have Unitarian churches. English and American Unitarians are also in close touch with the Theistic churches of India, and with the Unitarians in Japan, and receive students from the Far East into their theological colleges, besides sending out representative ministers to preach and lecture.

(b) Germany.—Contemporary thought has been affected by the same general influences which produced the Unitarian movement in England and America. The writings of the English Deists of the 18th cent. helped to foster German rationalism, and the critical study of the Scriptures led to the abandonment of doctrines of mechanical inspiration and Biblical authority. Belief in miracles was partly undermined by the influence of science and philosophy; and the denial of the divinity of Jesus by F. C. Baur, together with the investigations of F. C. Baur into the development of the early Church, opened new paths for the historical treatment of the origins of Christianity. Baur and his followers reached by Baur were modified by the subsequent researches of some of his own pupils, but a powerful school of Unitarian thought, led by teachers such as H. Holtzmann (Strassburg), H. Holstein (Heidelberg), Carl von Weizsäcker (Tübingen), A. E. Biever (Zürich), R. A. Lipsius (Jena), O. Pfleiderer (Berlin), reached a position which was substantially Unitarian, though it did not employ the name or lead to withdrawal from the State Church. In 1865 a liberal union was founded under the title of 'The protestantverein,' which gave practical expression to this mode of thought. It still exists, though in a state of somewhat diminished activity. Recent theological liberalism has tended to take one of two directions. Under the influence of Albrecht Ritschl (q. v.) of Göttingen, a higher value has been ascribed to the person of Jesus, quite apart from external miracle, than was usual among the older 'liberal' theologians. Among the leaders in this direction are A. Harnack, W. Herrmann (Marburg), and H. H. Wendt (Jena). On the other hand, the study of Christianity in connexion with the religions of the empire has led younger scholars to emphasize its relations with contemporary phenomena; and along these lines the names of W. Wrede, J. Weiss, and W. Bonnset, and the brilliant group led by H. Gunkel, E. Troeltsch, C. Clemen, H. Weinel, W. Heitmüller, and H. Lietzmann have all been working. The valuable translation and commentary issued under the general editorship of Johannes Weiss, and the long series of Religionsgeschichtliche Volksbücher, represent the general attitude of liberal theology on the problems of primitive Christianity.

UNITED PROVINCES OF AGRA AND OUDH

North-West Frontier Province, which was formed out of some Districts of the Punjab. The joint jurisdiction of Delhi and the two Provinces between N. lat. 23° 52' and 31° 18', E. long. 77° 3' and 84° 39', with a total area of 107,267 sq. miles and a population in 1917, 14,822,000. The Provinces contain a hilly and submontane country lying to the north-west to the part of the Central Indian plateau to the south; while the central and more important region constitutes the W. and Central Indo-Gangetic Plain, the basin watered by the rivers Ganges, Gomti, and Brahmaputra. These Districts between these two main rivers until they join at Allahabad (q.v.) are known as the Duāb, 4 land of the two waters.

1. History.—The United Provinces form one of the best-known historical regions of India. The original population, wrongly classed as Dravidian (q.v.) by Risley, was probably of the Mon-Khmer stock. These 'pre-Aryans' have left traces in stone implements in the hills and plains, cup-marks on boulders in the northern hills, and cave paintings in the Kaimūr range to the south. At some unknown date, possibly about 1000 B.C., these peoples gave way to a new vendetta settled for a considerable period in the E. Panjāb 1 seem to have moved gradually eastward, and the Mahābharata and the Rāmāyana epics describe the fortunes of the two brothers of these Aryans, one of them to the west with their capital at Hastinapura (q.v.), the other at Ayodyha, the modern Ajodhya in the Faizābād District. One wave of invaders or colonists seems in the early period to have moved along the base of the Himalayas into Madhūra or Bihār; the other occupied Mahāyadēsa, the 'Middle Land,' or the Duāb and its surrounding Districts. 2 For the earliest period there is no settled history till the time of Gautama Buddha (c. 507-487 B.C.). The next fixed date is that of Chandragupta Manuṣya (321-297 B.C.), the Sandracoottus of classical writers, who rose to power after the invasion of Alexander the Great. His grandson was the famous Aśoka (q.v.), three of whose pillar edicts have been found in the Provinces. We know little of the Kушān or Saka invaders who entered India about the middle of the 2nd cent. B.C. The Gupta dynasty rose to power about A.D. 320 until 450, when the first Hun invasion took place. This was remarkable because many of the Rājput (q.v.) houses sprang from its chiefs. In 1518, however, Babu, the great Malabar invader, raided the Provinces, and under the early Muhammadan kings Delhi was the capital, being succeeded by Agra early in the 16th century. Bābur defeated the Afghan king Ibrahim in 1526 and founded the Mughal empire, which with its capital at Agra or Delhi, under Humāyūn, Akbar, Shāhjāhān, and Aurangzib, lasted till the death of the last in 1707. Then commenced a period of anarchy until by treaty with Asaf d-daula, Nawāb of Oudh, most important in order of population being Lucknow, Benares, Agra, Cawnpur, Bareilly, Meerut, and Muhammadda. The composition of Oudh, of which the population is 1,000 of each faith only 72 Hindus, as compared with 399 Moslems. Having been deeply impressed with the social and religious effects of the abolition of the old system of zamindaries, the British Government has been most attentive to the development of the Provinces, and the results are strikingly shown in the rapid rise of education and the improved condition of the whole population.

2. Religion.—Hindus (85-94 2%) are much in excess of Muhammadans (14·77 %) or Christians (38 %), but now Hindus are slowly decreasing, and there is an increase in Muhammadans and Christians. The progress of Islam is not to any great extent the result of direct propaganda, but is due largely to social conditions. Muhammadans are more prolific; they live more in towns and under less insatiable conditions than Hindus; their diet is more varied and liberal, and they are less addicted to the use of drugs like the preparations of hemp; they marry later and allow widows to remarry, while high-caste Hindus prohibit widow-marriage. The progress of Islam is largely due to its better health in seclusion (parda), and being confined to the house, they are more liable to attacks of plague. 3

(a) Brahmanic Hinduism.—What has been termed Brāhmanic Hinduism is the creed of the better classes, while the lower castes are largely animistic. It is impossible to draw the line between these two. But while all grades of society converge and intermingle, a great deal of Hinduism is regulated by a body of Brāhmans numbering 43 millions, many of whom enjoy a high reputation for sanctity, act as domestic priests, or advise on philosophical, and ethical questions. The majority, however, exercise no religious functions, and make their living by agriculture or domestic service, or take employment in the army or the police. Some of the most sacred places of Hindu pilgrimage are found in these Provinces: Hardwar, shared by Saivas and Vaishnavas; Mathurā, devoted to the cult of Kṛṣṇa; Prayāg or Allahābād, the sacred junction of the Ganges and Jumna. 2

(b) The development of monotheism.—An important development in recent times is the tendency to adopt a form of monotheism.

To quote R. Burn, 'the general result of my enquiries is that it is certain that the great majority of the people, the Supreme God, called Bhagāwan, Parameśwara, Ishwar, or Narān. Mr. Balie made some enquiries 2 which showed that this involved nothing more than a single person and I am inclined to think that this is not limited to the more intelligent, but is distinctly characteristic of Hindus as a whole. There has been much discussion as to whether this monotheistic idea has been a natural result of contact with Islam or Christianity. As pointed out above, however, the idea of a single personal God was not unknown to Hindus long before they came into touch with adherents of these two religions, and I am inclined to think . . . that the tendency of Hinduism, with all its eclecticism and elasticity, is to develop more on the lines of innumerable beliefs, than on an entirely new, directed, and copied more or less from some foreign religion. 4

The Hindōos, a Saiva or a Vaiṣṇava has no real place for Parameśwara in his religious ideas, and would probably explain his presence by saying he was Śiva or Vishnu. According to the Purifico philosophy, Parameśwara is the universal spirit when manifested as a personal god, who, according as he is designated by activity (reign), goodness (enfr), is separated from the divine personalities, Brahma, Śiva and Vishnu. This, however, is merely stated to explain his nature, for it is a religious theory which does not trouble the ordinary Parameśwara worshipper. To him Parameśwara is the supreme personal god, the sovereign of the world, is pleased by good and displeased by evil deeds, but is too much excited to trample much about mundane affairs. If the Hindu is not satisfied with Śiva or Vishnu, he will look on Śiva and Vishnu as the whole or a Vaiṣṇava. 5

2 See art. PILGRIMAGES (Indian), § 7.
5 Mann, Lewis, II. 31.

subordinate to him, though much more valuable helpers in the work of the grace as his paramahansas may be, it makes him at bottom a nonentity. But it is to some extent worse to say that he is a "worthless" paramahansa. He may or may not repeat his name in the morning, and occasionally he has the Sad Naardnap Radhak recited in his honour; but that is all. It is a waste of time to import a god with prayer and sacrifice when his attitude is one of avove aloofness: -

and the Hindu reserves his attentions for the minor gods and goddesses.'

(a) Itlam.—The local distribution of Muhammadan-
danism is dictated partly by historical, partly by economic causes.

The Muhammadan is found chiefly where Muhammadans held sway in the past: in Meerut and Rohilkhand Divisions, the "Home Concessions" of the Moghul Empire, in Agra, Farrukhab-
bad, Jamnapur and Oudh, all centres of Muhammadan States or
provinces. In Cawnpore, Allahabad and other districts with large cities, his tendency to urban life is sufficient to explain his numerical strength; this is also a factor which affects his presence in such historically Muhammadan centres as Agra, Meerut, Lucknow, Fyzabad, and Bareilly.

(b) Jainism.—Jains, numbering 75,427 in 1911, show a tendency to decrease. The city mercantile class, deficient in virility owing to their sedentary habits, produce small families, and, as E. A. H. Blunt reports, the country Jain shows little en-
thuism for or knowledge of his religion.

"The truth seems to be that whatever theoretical differences may be between Jainism and Hinduism their followers in the same creeds in the same community do not differ very greatly in their religious lives. The bar to caste barriers is no more insuperable than between Roman Catholics and Protess-
antes. — Men of to-day think less about religion because the conditions of modern life have become more complex than they were for other
than mundane affairs. The active pursuit of religion, which made the active performance of ritual, if not merely old age,
the official or professional man takes to religion when he retires." 1

It is natural also that, when a Jain girl is married into a Hindu family, she rapidly succumbs to the influence of the more popular faith. Jainism being reticent and unenterprising, she naturally adopts religious usages which enjoy more prestige and which are regulated by Brahmons, whom Jains themselves employ for their domestic rites.

(c) Sikhism and other faiths.—Sikhs, numbering 15,186, are foreigners, mostly sepoys or policemen. Parsis, Jews, and Brahmins are also foreigners and possess little influence, while Buddhists, re-
presentatives of a faith once dominant, now number only 780, and are mainly confined to the Tibetan frontier, with a few Nepalese, Chinese and Mohammedan converts, and other small groups.

The Arya Samaj is chiefly confined to the upper and educated classes, and seems as yet to have made little impression on the peasantry. 2

(e) Christianity.—Christians show a remarkable increase. The propaganda began with the visit of a Roman Catholic priest to Agra in 1578. It became active through the work of Henry Martyn at Cawnpore in 1810. In 1811 the Baptist Mission-
ary Society, and in 1813 the Church Missionary
Society, entered the field. Christians, including those in the Native States, numbering 58,518 in 1891 and 102,955 in 1901, increased to 170,694 in 1911.

"The new convert, may be, is no better than his prede-
cessors; but a new generation, the children of the first genera-
tion of converts, is growing up. If the missionaries could
and can get little out of that first generation, the second generation is in their hands from their earliest years. The children of the converts, besides being different from their parents; their grandchildren will be better still. It is this which provides the hope to the believers so often drawn of the inefficacy of Christian conversion. And this generation is now beginning to make its influence felt. The Hindus follow of these converts have now to acknowledge not only that they are in many ways better off than themselves, but that they are being helped by the operation of a power which has contributed so much to the better estee in which Christians are regarded. . . . A convert, no doubt, is still outcaste, but he is now regarded as a member of a fresh caste, and Hindus bear with his idiosyn-
cracies as they do with those of his paramahansa.

W. CROOK.

UNITY.—See CHURCH.

UNIVERSALISM. — i. Uses of the term.—The word 'universalism' has been used in at least three distinct senses. (a) It is convenient to take first in order the use of the word which is in fact the most modern. It designates the setting aside of the belief that a nation or a race is privileged to enjoy the special protection and favour of God, or of a deity whom it recognizes as peculiarly its own; and contemplates all nations and races as standing, actually or potentiaily, in one and the same relation to one and the same God. Universal-
ism in this sense has become current largely owing to the influence of E. C. Baur; its opposite is particularism. In the OT the view of the special relation of Jehovah to his people is expressed in such passages as Jg 11 II, when Jephthah says to the Amorite: 'Will not thou possess that which Chemosh thy god giveth thee to possess? So whosoever the Lord our God hath dispossessed from before us, them will we possess.' The steps by which this particularism yielded to the larger thought, first of Jehovah's rule over all peoples as God above all gods, and next as being the only God, whose sway is universal, but who has chosen Israel as his special care, are sufficiently familiar. There are within the pages of the OT occasional indications of a desire to extend to other nations the Messianic hope and the kingdom of God. 2

In the NT we are familiar with the distinction between the universalism of St. Paul and of the Lukan writings, 3 in contrast with the exclusiveness of the Jew and the Judeo-Christian, who, if they did not entirely disapprove the profer of the gospel to the Gentiles, yet wished to make conditions and impose practices which St. Paul strongly repudiates. In the NT the larger thought seems to win its way through the announcement of a salvation which, beginning from Israel, shall be unto all peoples, to the Apocalyptic vision of the 'great multitude which no man could number, out of every nation, and of all tribes and peoples and tongues,' 4 and of a New Jerusalem whose gates are never shut.

(b) The second use of the term 'universalism' has to do with the theological question of the extent of the benefit wrought by the atoning death of Christ, and with the relation of the Calvinian doctrines of election and predestination (qq. v.) to the expressed purpose of the gospel, that all men might be saved. The Armenians had maintained, as the second of their five points, 'that Jesus Christ by his death and sufferings made an atone-
ment for the sins of all mankind in general, and of every individual in particular,' but they went on to say that none could be partakers of this benefit but those possessing a true faith, which can belong only to those who are regenerated by the operation of the Holy Spirit, and who have thus by their own contribution contributed to the better estee in which Christians are regarded. . . . A convert, no doubt, is still outcaste, but he is now regarded as a member of a fresh caste, and Hindus bear with his idiosyn-
cracies as they do with those of his paramahansa.

UNIVERSALISM

The doctrine of universalism is the belief that all mankind will be saved, or redeemed, by a process that is universally applicable and effective. This belief was popularized in the 17th century by Jean Amyraut (1576–1641), who defended the universality of redemption in his 'Disquisitio de Deo' and 'Disquisitio de Deo et homine'. Amyraut's work was influential in the development of the doctrine, and it was further developed by such figures as Richard Baxter and John Owen.

The concept of universalism is often contrasted with particularism, which holds that only a select group of individuals will be saved. The universalists argue that all mankind is benefited by the redemption that Christ accomplished on the cross, and that salvation is offered to all through the grace of God.

The universalist position has been held by numerous figures throughout history, including John Calvin, who was a key figure in the development of the doctrine. Calvin's teaching on universalism was influential in the development of the Reformed Church, and it has been a prominent feature of the Christian faith in many contexts.

The doctrine of universalism has been a topic of debate in Christian theology for centuries, with proponents and opponents on both sides. While some have argued that universalism is a necessary aspect of the Christian faith, others have rejected it as incompatible with the teachings of the Bible.

In conclusion, the doctrine of universalism is a significant aspect of Christian theology, and it continues to be a topic of discussion and debate among Christians today. The concept of universalism offers a compelling vision of the saving grace of God, and it challenges believers to consider the implications of this belief for their own lives and for the world at large.
Death is the means whereby the soul is made more immediately subject to redeeming influences, and through corruption and reformation rise to various stages of spiritual development, the highest of which is eternal communion with infinite goodness. To such a view of this is to be attributed a large share of that likeness of God whereby men was made at the beginning.

Origen († A.D. 254) extended the notion of the discipline of souls much farther both in scope and in detail; his mind was at times more laborsome and more speculative than Clement's. He conceived a chain of existences in which the human life of this world is but a link. Souls arrive from an infinite past, in which their experience and their destination have been carried on with the most varied results, to exercise here their privilege of reformation, of the free will of God, according as they have accepted or resisted the spiritual influences that are perpetually striving for their redemption. Into future worlds beyond this life Origen carries the divine work of leading souls towards the goal of all sentient being, which is attained in likeness to God, for in the end God will be all in all. Fallen angels and demons will be rescued to share with mankind the ultimate salvation. It is to be noted that, when Origenism was anathematized as heresy, under Justinian (A.D. 541-543), it was not his view of the universality of salvation that was condemned, but then, as afterwards, his doctrine of the pre-existence of souls and of the final salvability of devils.

Gregory of Nyssa († A.D. 394) moves towards the same result from his central conviction as to the ultimate perfection and multiplication of all evil, as he says: "If God will be in all existing things, evil, plainly, will not then be among them." 1 The resurrection is nothing else than the reparation of our nature in itself" 2 Nothing that has its origin from God will fall out of His kingdom. Wherever the God that is intermingled with the good is mixed up with evil, everything that originated from God will become such as it was from the beginning, before the event of its separation.

The same view was taken by Didymus of Alexandria († A.D. 365), who explicitly endorsed Origen's opinion on the conversion of devils.

Among the Anabaptists in the Church in the East it suffices to mention Theodore Mopœmenus († A.D. 428), an opponent of Origenism, who maintained that sin and its penalty were both agents in the moral purposes of God as conducive both to self-knowledge and to repentance, and thus effective for the restoration of the wicked.

The current of Alexandrian thought came again to the surface in the 9th cent. in the mind of John Scotus Eriigena († A.D. 777), in the form of a pantheistic theology. He predicts, at the conclusion of a complicated and somewhat inconsistent scheme, the absorption of all into the divine; wickedness, death, and misery are all transformed into good, or, as he puts it, "the soul is in all beings." In the period immediately preceding the Reforma-tion, the doctrine of universal salvation is found in connexion with very various forms of doctrine and life; e.g., this belief is seen in combination with the Antinomianism of the Brethren of the Free Spirit (q.v.), and the fanatical asceticism of the Albigensian Cathari. 4

3. Universalism in Germany.—A certain prevalence of Universalism among the German Anabaptists has been attributed to the influence of Hans Denk, scholar and mystic (1495-1527), but his extant writings do not show that he gave it any prominence in his teaching. That the Anabaptists were largely credited with such opinion is evident from the cap. of the Anabaptist Confession of the Augsburg of 1530, where there is formal condemnation of the Anabaptists 'who believe that there will be an end of the punishments of the damned and the destruction of the world.' At the end of the 17th cent. and the beginning of the 18th controversy was very rife on three points—the eternity of punishment, the millenium, and the restitution of all things. A number of the most eminent and ableminded Protestant divines, especially on the last-mentioned topic, are embodied in a great work published in three volumes folio at Frankfurt in 1701-10, entitled Missiven ausserordentlicher Wahrheit, oder das Geheimniss der Wiederkunft aller Dinge, compiled by Johann Wilhelm Petersen (1638-1727). Petersen had been professor at Rostock and a prominent divine of the Lutheran Church. He was deposed from office in 1692, because of his having embraced Universalist opinions, to which he had been converted by his wife, Johanna Eleonora von Merlau. She had been influenced in this direction before her marriage by the writings of the English mystic, Jane Lead, whose opinions were widely circulated in Germany by her disciples, who conducted the Philadelphia Society. Petersburg was a very voluminous writer, and both he and his wife contributed largely to the contents of the great compilation.

For many years after the appearance of Petersen's work a great number of writings, for and against the doctrine of restoration, were published. On the orthodox side appears the great name of Johann Lorenz von Mosheim (1694-1755). On the other side the most notable was the treatable published in America. It is proper to be written by Paul Siegvoi, but it is known that the author's real name was Georg Klein-Nicoli, for which Paul Siegvoi is the transparent disguise, executed with the aid of German, Latin, and Greek.

Such subjects as eternal punishment were from this time open to latitudinarian treatment in Germany, but it remained for F. D. E. Schleiermacher (1768-1834) to give to his contemporaries and successors a definite direction towards Universalism. Among systematic theologians the one who has most closely followed Schleiermacher (q.v.) in his eschatology is the Zürich professor, Alexander Schweizer (1808-88). 3

4. Universalism in England.—It has been inferred, from a mandate of Simon Langham, archbishop of Canterbury, dated 5th Nov. 1605, 4 that doctrines of universal salvation, extending even to the salvability of devils, were current at that time in England. A number of opinions are condemned as erroneous, extending from the possible salvation of Sarmene, Jews, and pagans to beliefs such as, e.g. , "it is not possible that one should be damned for original sin without actual sin," and that the nature of demons may not be essentially irreparable. This statement is addressed to the governors of the University of Oxford, and it is surely more probable that it intends to deal with the possible re-appearance of Origenistic speculation in academic disputations than with any popular advocacy of such views.

The 42nd of the English Articles of 1553 has for its title 'That all men shall not be saved at the length,' and it runs:

'They also are worthy of condemnation who endeavour at this time to restore the dangerous opinion, that all men, be they never so ungodly and at least, preserved, when they have suffered pains for their sins a certain time appointed by God's justice.'

It is generally admitted that this condemnation is directed against Anabaptist opinions promulgated by foreign refugees who had then recently come to England in large numbers and been permitted to establish churches. The doctrine is not attributed to the English Lollards, save probably in one document, viz. The Protestation of the Clergy of the Lower House within the Province of Canterbury, with Declaration of the Faults and Abuses which heretofore have and now be within the same, worthy

1 See art. PHILADELPHIENS.
3 D. Wilkins, Collectanea Magnae Britanniae et Hibericae, London, 1737, II. 75.
special Reformation (1536), where, under no. 4, we read:

"That if there be a place where they [souls departed] be punished, God is not yet born, nor He that shall redeem the world."

Here, obviously, not a doctrine of temporary punishment is contended for, or punishment at all is condemned. The return of foreign Protestants to their own countries on the accession of Queen Mary (1553) probably accounts for the withdrawal of the Articles 40, 41, and 42.

If it were not strange if, in the general outburst of the most diverse religious opinions from 1640 onwards, the maintenance of universal salvation had not found a place. It is warmly advocated in a little anonymous book entitled:

"Divine Light, manifesting the love of God unto the whole world: with the True Church.

Wherein the holy Spirit of Truth manifesteth the Glory of God in Christ, exalting Christ, a spiritual Christ, and All-saving Jesus; shewing that Christ is a sure Foundation, and chief Corner-Stone for all Spiritual building, unto the raising up lively hopes for all People to proceed in Believing the great Mercies and loving-kindness of our God in Christ, in whom God hath redeemed us his saints, and All; having wrought all things for us, and all in Christ, wherein we are made perfect. So that was freest of all the Londoners, whom he had appointed his servant for the Good of All:

in bringing Glad Tidings of Good Things unto the whole Creation." Eps. 52. 7. 13.

The Lord will work for the manifestation of his Truth in this his due time. Printed in the year 1646. 1

The author does not deny that the elect are found in all nations, but that they are the only ones who are chosen to proclaim to the world general redemption and the holy covenant. It is evident that the work attracted much attention, for in A Testimony to the Truth of Jesus Christ as also against the Errors, Wrongs and Blasphemies of the Time and the Toleration of them, Inscribed by the ministers of Christ within the Province of London, December 14, 1647, we find that the 'errors against God's eternal decree of Election and Reprobation' are taken verbatim from the Divine Light. Under date 4th Feb. 1646 the Lords and Commons put forth an order for a day of public humiliation 'for the growth and spreading of Errors, Heresies and Blasphemies,' and among the 'errors enumerated are two, referred to Divine Light:

"(e) That God's eternal election is of all men, one as well as another; and all shall be saved at last, both men and devils, and that they that deny it are the great Antichrist; that true faith is to believe it; and that though this Faith of general redemption is a doctrine in the world, it should be sufficient to save all the rest of the Creation."

In the so-called Draconic Ordinance, passed by Parliament in 1648, while deniers of the Trinity are threatened with death, those who maintain that all men shall be saved are declared liable to imprisonment.

Another vigorous little tract, of six pages, written by Henry Hoole, and published in 1653, deserves mention in connexion with the Divine Light, viz. The Light of God spreading itself in all the dark Corners of the Earth; with glad Tidings to all People, with a Restoration of all Things, and the Lyon's Power overthrown.

At this time three men were itinerating in the country, preaching Universalism, and gathering small bodies of adherents. They often preached in corners that were frequented by the clergy in public dispute after the manner of the 'gifted brethren' of the army. These were William Erbury (1601-54), Gerrard Winstanley († 1652), and Richard Coppin († 1659). The last-named was frequently imprisoned; his works largely consist of accounts of debates with his clerical opponents and his judges. One of his chief contentions is that there may be redemption from hell, and in support of this he argues that, in Biblical language, 'everlasting' does not mean 'endless.'

The latter point is elaborated at length by Samuel Richardson, a Baptist, in his work entitled Of the Torments of Hell: The Foundation and Pillars thereof, discovered, searched, shaken and demolished, wherein it is demonstrated that there shall be a Punishment after this Life, for any to endure, that shall never end, printed in 1658, and reprinted in The Phoenix, ii. (1708). In this little work the author carries himself beyond the end proposed, but he convinces himself of the ultimate salvation of all men.

In 1661 appeared an anonymous treatise entitled A Letter of Resolution concerning Origen and the Chief of his Opinions, reprinted in The Phoenix, i. (1707). The author was George Rust, who in 1667 became bishop of Dromore. His statement of Origen's opinions is not mere exposition, but reveals the author as more than favourable to the notion of universal restitution.

A classic of Universalist literature was being produced at this period by Jeremiah White (1629-1707), Fellow of Trinity College, Cambridge, and chaplain to the Lord-Lieutenant, whom he had appointed his servant for the Good of All:

in bringing Glad Tidings of Good Things unto the whole Creation. Eps. 52. 7. 13.

The Lord will work for the manifestation of his Truth in this his due time. Printed in the year 1646. 1

tion in Parliament Court, London, and was suc-
cceeded there, on his return to America in 1794,
by William Vidler (1758-1816), who had been a
laureate, Unitarian, and, embracing Universalism in 1792, had been expelled, with his
congregation, from the Kent and Sussex Associa-
tion of Baptist Churches. Vidler was not success-
ful in maintaining a large congregation in London,
but he maintained his views by editing the
Universalist's Miscellany, which in 1802 became
The Universal Theological Magazine. This con-
tinued to be published until 1860, and was
succeeded by The Monthly Repository (1805-37), a
valuable record of men and movements on the
liberal side of the old dissent.

Universalism, apart from any attempt at the
organization of a Church, found an advocate in Sir
George Stonhouse († 1703), a Syriac scholar of
eminence, who had spent much time in the ex-
amination of Syriac MSS in Continental libraries.
At Oxford he had been a member of the little
band of Methodists over whom John Wesley pre-
sided, nicknamed the Holy Club, and had main-
tained, against his fellow-members, the doctrine of
holy communion. In later life he resided at
East Brent, Somerset, and was much interested in a
society formed in the neighbouring parish of
Burnham and called the Burnham Society, 'to study
religion and divinity and debate on the differ-
cence of religious opinions, in brotherly love.'
The minutes of the society record dis-
cussions on the pre-existence of souls and universal
restoration. Stonhouse published (anonymously
at Bristol in 1761) Universal Restoration or A Scripture
Doctrine, and two subsequent volumes on the same
subject in 1768 and 1773.

Another independent study is The Restitutio-
on of All Things: An Essay on the Important Purpose
of the Universal Redeemer's Destination (1758), by
James Brown, chaplain of the British garrison at
Savannah in the Province of Georgia. The author
is apparently quite unaware of any efforts or
books of purport similar to his own.

At the close of the 18th cent. Universalism
began to spread among English Unitarians. John
Prior Estlin, of Bristol (1747-1817), published Dis-
courses on Universal Restoration (1815), directed
principally against the doctrine of the final annih-
lation of the wicked. A more generally interest-
ing treatise of the subject was put forth by T.
Somervell Smith (1768-1833) in his Illustra-

David Thom (1735-1802), minister of the Scot-
church, Rodney Street, Liverpool, having been
licensed by the Presbytery of Glasgow, was in
1825 censured and suspended by that Presbytery
upon charges of heresy, which, however, lay ei-
tirely within the sphere of Calvinistic doctrine.
His adherents formed an independent congregation,
which soon became known as Berean Universalists,
for Thom now espoused the doctrine of a ' finished
salvation,' analogous to that of Kelly, and
constructed on a distinctly Calvinistic basis. His
work consisted of labours and often paradoxical
interpretations of Scripture, but in 1850 he re-
published Jeremiah White's Restoration of All
Things with a historical preface. The same year
marked the appearance of a magazine, The Un-
iversalist, edited by Richard Roe, to which Thom
became a constant contributor, his efforts being
largely devoted to restraining the Unitarian ten-
dencies of contemporary Universalism, especially
in the United States.

Universalism has, at a later time, been approached
from various sides by writers within the Church of

5. Universalism in Scotland.—As early as 1755
certain Unitarian congregations in Lanca-
ashire) which had been associated with the Reformed
Presbytery (a branch from the Cameronian side of
the Scottish Covenanters) united in declaring their
belief in 'the boundless love of God and the uni-
versal redemption of all men.' The young minister,
who was a zealous and eloquent preacher, was
suspended, and in 1758 was forced to leave his
charge, but in 1760 he was received into the Church of
the New Phœnix, a Unitarian body. About 1779 he
became minister of the Congregational church in
Dovercourt, Essex, where he remained for the rest
of his life, and where he died in 1810.

6. Universalism in America.—The progress of
Universalism in America has found a competent
and judicious historian in Richard Eddy; hence
its main lines may be readily traced and succinctly
stated.

The first advocates of universal salvation were
probably the German Baptists, called Dunkers or
Tunkers, who were settled in Germantown, Pa.,
as early as 1710, and there established a church.
They brought or imported Universalist books from
Germany, and among them was The Everlasting
Gospel, attributed to Paul Siegvolk (see above).
The translation and printing of this, which may

1. Extracts, etc., were printed in 1788.
be regarded as the primary document of American Universalism, is probably due to the influence of G. W. Murray, after suffering persecution for preaching Universalism in France and Germany, settled in Pennsylvania in 1741.

The title runs thus:

"The Universal Gospel, commanded to be preached by Jesus Christ, Judge of the Living and Dead, unto all creatures, Mark xvi. 15, concerning the Eternal Redemption found out by him, and by his Son, Sin, Hell and the Devil abolished, and the whole Creation restored to its primitive Portion, by the present Antichristian World. Written in German by Paul Siegvolk, and translated into English by John Rechhal. Germantown: Printed by Christopher Sower, M.DCC.LXX."
In 1822 a further stage was reached, in which Jacob Wool, who wrote under the name 'Restorationist,' gave evidence of the difference of opinion which was at this stage beginning to appear in universalism. Wool, in his Glimpses of the Christian Body, and of the Incompatibility of the Two Doctrines—viz., that of 'universal salvation at the commencement of a future state' and that of the 'final restoration of all men by Jesus Christ,' adding:

'The doctrine which admits all characters alike to heaven at death, is subversive of a just distinction between virtue and vice.'

This diversity of opinion led to an actual schism. In 1831 a number of Universalist churches formed the Massachusetts Association of Universal Restorationists, which continued for ten years. The great majority, including many who had a doctrinal affinity with the Restorationists, strongly disapproved of the schism. The seceders, while adopting the Winchester Profession, altered, in 1833, the first clause of Art. iii. so as to read:

'We believe in a retribution beyond death, and in the necessity of faith and repentance.'

The 'no future punishment' creed disappeared in 1878 as the motto of Universalism, when the Universalist ministers of Boston and its vicinity approved a declaration of the faith, in which these words occur:

'We believe that repentance and salvation are not limited to the religious conditions of time; that, as a living and experimenting being, man is held responsible for the acts of evil done by him during his earthly existence, and for his thoughts in the future life, is salvation by Christ, and gives no warrant to the imputation to us of the "death and glory" theory.'

Art. iv. runs:

'Whatever differences in regard to the future may exist among us, none of us believe that the horizon of eternity will be always open to either largely or for a long time covered by the clouds of sin and punishment, and in coming into the enjoyment of salvation, whosoever that may be, all the elements of penitence, forgiveness, and repentance are involved. Justice and mercy will then be seen to be entirely at one, and God be all in all.'

Already for many years the objections to Universalism from the side of the Unitarians had been disappearing, as the views here stated were gaining ground among Universalists. The Universalists, combining a liberal faith with an evangelical fervour, appealed to many whom the drier light of Unitarianism did not reach, and without any formal alliance the two denominations have been constantly associated in social efforts and religious sympathy.

In 1903 a centennial meeting, held at Winchester, N.H., re-affirmed the Profession in its original form. In 1886 the following 'conditions of fellowship' had been added to Art. iii. in a general convention held at Boston:

'The acceptance of the essential principles of the Universalist Church of Universalism; (2) the universalism of the Church; (3) the spiritual authority and leadership of His Son, Jesus Christ; (4) the absolute need of salvation; (5) the final harmony of all souls with God.'

The latest statistics of the Universalist Church in America record the names of over 600 recognized ministers, and a still larger number of parishes and meeting-places; seven in Canada, some of which have fellowship with Universalist conventions in the United States. There are numerous women's missionary societies and mission circles; a regular mission is maintained in Japan, and a congregation has been formed in Cuba. There are also eight colleges, theological schools, and academies.

JAMES EDWIN OGDENS.

UNIVERSALITY.—I. Definition.—The universal is defined by Aristotle as 'whatever may naturally be predicated of many things,' or 'that which is included under a single universal is more than one thing.' The important word in these definitions is 'naturally.' It is explained by the following:

'I call that universal which belongs to the subject, distinc-

trively, essentially, and as it is what it is; in scholastic
terms, which is true de omni, per se, and quodv uis ipsum.'

By de omni Aristotle means 'in every case and always.' By per se and quodv uis ipsum explain the 'naturally.' There are four senses of per se: (1) when the predicate is part of the definition of the subject, (2) when the subject is part of the definition of the predicate, (3) when which is not predicated of any other subject, (4) when the subject itself is the cause of the predicate.

Aristotle means by universal in the strict sense—the primary universal, as distinguished from the collective universal. Per se and quodv uis ipsum are the same, but he seems to have in view per se in the first and the second sense only; for he has just said that whatever is universal is inherent in things, and consequently he says that everything is inherent in either of those ways or according to accident, but accidents are not necessary. This is what Aristotle means by universal in the strict sense—the primary universal, as distinguished from the collective universal, as when we say that triangles have their internal angles equal to two right angles, or that two contradictory predicates, 'straight' or 'curved,' imply the notion of line.

Grote and Prantl reduce the third and fourth senses to the first. Grote says of the third:

'The predicate must not be extra-essential to the subject, nor attached to it as an adjunct from without, simply concomitant or accidental.'

Of the fourth sense he says:

'The like distinction holds in regard to events: some are accidentally concomitant sequences, which may or may not be realized (e.g., a flash of lightning occurring when a man is on his journey); in others, the conjunction is necessary or causal (as when an animal dies under the sacrificial knife).'

The same identifications are made by Prantl:

'The latter explains the third sense of per se thus: 'what is enunciated not is predicative manner as property, but as individual substance, remains identical with itself in the multiplicity of possible predicates.'

Prantl expressly identifies the fourth sense of per se with the first. The third and fourth are both regarded as resting upon the activity of the creative concept and its necessary causality.

The meaning of Aristotle seems to be this. In certain cases attributes are essentially conditioned by the nature of the subject in which they are found, but we do not see this. The predicates may not after all be true de omni. Similarly with regard to events. The nature of the living thing may essentially condition the effect of the wound, but after all it may not. Such wounds may not be always fatal. We cannot, therefore, make such universals the basis of a demonstrative science. We do not see the primary universals or the necessity which belongs to such universals.

This interpretation of Aristotle common to Prantl and Grote, is in accordance with the scholastic treatment of demonstration, especially the demonstratio possibilita. The property of possibility as flowing from the determination of a thing as a rational natural is an illustration of the third sense of per se. Possibility was supposed to belong to man essentially. This is certainly not evident in itself and has led to an extremely different interpretation of Aristotle, occurring by Saint-

1 De Interp. vii.

5 Prantl, Grundriss der Logik des Abendlandes, I, 122.
Hilaire and Mansel. With regard to the third sense of the word, he interpret it as referring to the existence of the substance. Saint-Hilaire says:

'The individual substance is never necessary; and, moreover, it is for itself alone, and is never in a subject other than itself.'

As to the fourth sense he says:

'No more does it carry in itself a character of necessity; thus in the first sense, the necessity that the man die by strangulation; for there is a crowd of other totally different men who was not.'

This would restrict the universal and the necessity it involves to the first two senses of the word per se.

In this restriction Mansel agrees with Saint-Hilaire, and puts forward a theory of the demonstrative syllogism which limits it to the demonstrations of mathematics.

2. The two universals.—The truth is that Aristotle has two universals—the primary universal, where subject and predicate are co-extensive, and convertible, which is characterized by necessity, and another universal in which this is not the case. In one passage he says:

'By universal here, I mean that which is not convertible with its subject.'

His object is to show that such a universal, unless it issues in a primary universal, is valueless for scientific purposes. Indeed, in the universe belongs to mathematical science and other deductive sciences; the other universal belongs to the uniformities of co-existence and sequence which experimental science investigates. Locke, Dugald Stewart, and Mansel have regarded deductive science, especially mathematics, as involving an essentially distinct logical procedure from that of the inductive sciences. J. S. Mill seeks to reduce mathematics to the inductive level. Medieval thought and Platonism tend to enlarge the scope of demonstration. The teaching of Aristotle is the same as that of Locke, Stewart, and Mansel.

It is this distinction of the two universals which some later logicians seem to have in view. Petrus Hispanus distinguishes between predicatable and universal. Predicable is affirmed of many things, but universal exists in many things. Others make the distinction turn upon whether in the proposition we tell of the subject quod sit or quale sit—what it is or what are its attributes or characters. This, he says, is that only is a universal which is predicated of inferior classes; but a predicatable which is also predicated of coordinate classes would not be a universal. There are thus five predicables, but only two universals—general and species.

3. The problem of universals.—The above doctrine of universals considers the universal as its nature is affected by the precise relation in which the predicate can stand to the subject in a proposition; and the distinction of universals which it sets up affects the consideration of universals taken in their widest sense. The most difficult problem relating to universals—a problem still unanswered—is that concerning their existence. Do they exist only in the mind? If outside the mind, where? Are they mere names?

4. Plato and Aristotle.

'Two things,' says Aristotle, 'may be fairly ascribed to Socrates—inductive arguments and universal definition, both of which are connected with the starting point of science. But Socrates did not make the universals or the definitions exist apart; his successors, however, gave them separate existence and set the kind of thing they called Idea.'

2 Angel, Pod. II, 1.
3 Petrus Hispanus, Summae logicae, tract. II.; cf. R. Sanderson, Logica Arbor Compendium, Oxford, 1876, bk. I. ch. II.

They at the same time treat the Ideas as universal substances, and again as separable and individual. That this is not possible has been shown before. The reason why those who say the Ideas are universal have renounced those two views it is certain that they did not make the Ideas substances identical with sensible things. They thought that the sensible particulars were in a state of flux and none of them remained, but that the universal was apart from these and different. And Socrates gave the impulse to this, as we said before, by means of his definitions, but he did not separate them from the particulars; and in this he thought rightly, in not separating them.

These agreements of Aristotle with Plato are at the Platonist theory of Ideas—the theory as expounded in the earlier dialogues. Whether in the later dialogues the Platonist theory undergoes a change we shall consider below. Aristotle knows of no such change. Plato's theory as conceived by Aristotle is as follows:

Plato supposed that there existed, besides the individual things of sense, which are continually changing and passing away, another kind of being, apart from matter and movement, which he termed Forms or Ideas, by participation in which each individual and sensible thing is made to be what it is. These Ideas are eternal and self-existent. Material things participate in them, and are copies of the Ideas, which are hypothetical exist in an intelligible region apart from the world. When we, on perceiving sensible things, form general concepts, we, according to Plato, do this by reminiscence or participation in the Ideas, with which we were familiar in a previous state. What we term the general concept is the former, having an existence as an intelligible form in our intellect. Arthur Butler and others have distinguished the Platonic Idea from the general concept in the sense of the understanding; but this separation is rejected by Bonitz and Zeller.

Whatever may be thought of this theory, it is remarkable that the most essential objections to it have been brought forward by Plato himself in the Parmenides.

'Perhaps,' says Jouvet, 'there is no passage in Plato showing greater metaphysical power than that in which he adds his own theory of Ideas. The arguments are nearly, if not quite, those of Aristotle.'

The difficulties—how without division or multiplication the Ideas can participate in the many, or the many in the Ideas; the necessity of a still higher universal to unite the Ideas themselves with its corresponding phenomena; the so-called third-man argument; most serious of all, the uselessness of Ideas for knowledge, arising from the ipse dixit of the understanding; but this separation is rejected by Bonitz and Zeller.

The perplexities,' says Jouvet, 'which surround the one and many in the data of the Ideas are also alluded to in the Philebus, and no answer is given to them. Nor have they ever been answered by any one else who separates the phenomenal from the real.'

This statement may be allowed to stand, but the question arises: Did Plato separate the phenomenal and the real, or did he unite them? The answer is that he did both. The imperfect soul is a category of the spatial and temporal. The Idea is spaceless and timeless, yet it does not exist in total aloofness from phenomena. It is in this way that we answer the difficulties which have been raised in this connexion, and which have led to the theory of a 'later Platonism.' There is in reality no essential change. The force of these objections—perhaps quite correctly considered by some school, perhaps pressed home by Aristotle—was no doubt felt by him. But what happened in this case is what in such cases always happens. The old point of view is retained and an effort is made to show that it answers the new questions. In this respect there is a striking parallel between the later philosophy of Plato and that of Fichte. Originally, in Fichte, the Ego projects from itself a purely ideal and universal world. Schelling showed

UNIVERSALITY

537

that the world in its cura produces the Ego, and thus also through the world enters the history of philo-

sophy.
The Absolute is in the world, therefore, as well as in the Ego. Fichte in his later philosophy seeks to show that his Absolute—the Ego, pure Being, the one universal, living and passive phenomena. In the Philebus, Sophist, and Timaeus Plato does the same. The Idea is spaceless and timeless, but nevertheless one with mind and life and power in the phenomenal world. It is just in this that the change wrought in the philosophical standpoint by Aristotle consists. He denies the transcendental existence of the Idea or universal, and places it in the composite world of matter and form. The world thereby ceases to be merely phenomenal. Matter itself becomes something positive. It is no longer a mere negativity. The centre of gravity has passed from the ideal to the real world. Both Plato's and Aristotle's doctrines have been called realism. Both affirm the reality of the Idea or Form; but in Plato it is a reality above the world, in Aristotle in the world. Aristotle rejects the detached existence of the universal. He holds that the subjective concept is related to the objective reality, but in place of the transcendental existence of the Idea, in contradistinction to individual objects, he regards the Essence or Form as im-

manent in the things. The precise nature of this immanence, in Aristotle, has been a matter of dispute. According to Hamilton, 1 he has been viewed as 'a Realist, a Conceptualist, and a Nominalist, in the strictest sense.'

The questions at issue are formulated by Porphyry thus: whether genera and species do really exist in nature, or in mere conceptions only; whether or not they are bodies or incorporeal; whether they are inherent in the objects of sense or dis-

joined from them. 2 Even though Aristotle brought down the Idea from its super-celestial sphere and embodied it in things, it still has an existence in the Divine Being, the Form of Forms. If the Divine Mind be one with things, i.e., if Aristotle be interpreted pantheistically, we have still the questions as to the nature of this union— the unity and multiplicity of the Idea. If the Divine Mind be different from things—i.e., if he be interpreted theistically—the Idea has a trans-

cendent existence. If, however, the Divine Mind where the unification of the Idea lies; and what is the nature of it is the subject of the great controversy between nominalism and realism in the Middle Ages. The difficulty consists in this: that, if the universal is merely something repeated over and over again in in-

dividuals, then genera and species fall asunder in merely resembling individuals, essential com-

munity of nature is denied; but, if such repetition be rejected, and the universal be considered as some one thing throughout the individuals, then the plurality becomes merely phenomenal and illusive. Extreme representatives of realism, like William of Champeaux, held that the universal exists for itself as a universal in individual things, and were thus led into pantheism. 3

Fichte realms, not the moderate realism of St. Thomas Aquinas we have a fusion of Aristotel-

ian and Platonie realism. St. Augustine had already interpreted Plato's Ideas as the thoughts which God had of things before He created them. St. Thomas Aquinas admits the existence of the universal or the Form in a threefold sense, ante rem, in re, and post rem. 4 The universal ante rem corresponds to the Platonie Ideas, understood as archetypal ideas in the mind of God—the patterns

In the Divine Intellect after which all things were made. With regard to the universal in re or a parte rei, the universal nature does not exist as the same in the individuals as it exists in them objectively. It is only alike in them. We, in a more comprehensive consideration of it, regard it as a unity of community of form, as one and the same. The universal nature exists as a universal, in the human intellect, by virtue of its power of recog-

nizing the common nature. This is the universal realism. There is, however, a universal, as it were, not only in the act of recognition in the mind, but also in the unification of the world, and in the human being as he makes the world, or the objects of sensation. The common nature which is known by the mind? Moderate realism answers this question by its doctrine that universals are fundamentally in things. Universal sia sunt formalitas in mente fundamentali in rebus iisus.

'‘To the universal nature thus fundamentally taken, it does not essentially belong, to be one or many, in the intellect or out of the intellect, in individuals or outside them, communicable to a number or incommunicable.' 1

If we ponder on this universal, we shall not find it so very different from the timeless and spaceless Idea of the Platonie Philosopher and Sophist, but it approaches the conception by which Plato sought to allay the difficulties and doubts he himself raised in the Parmenides.

6. The doctrine of formalism.—It was almost in-

evitable that this doctrine should pose the question at the roots of things an Essence or Form in itself subject to no individualizing conditions, should beget a new form of realism. This is precisely what did happen. Duns Scotus distinguishes carefully between the unity of an individual and the unity of a universal nature. The last he conceives almost as certain modern logicians conceive the unity of a series in a property as preserved in things. The universal appears in the particular individual things, but it is apprehended as universal by the understanding. In itself it is neither particular nor universal, but just what it is. It is something antecedent to universality and particularity, but as antecedent in itself, indifferent to either. 2 This is what distinguishes the realism of Duns Scotus from the earlier realism of Bernard of Chartres or William of Champeaux, that uni-

versals are not apprehended as actus such in ob-

jective reality. 3 This would be to reduce them to individual unities; or, rather, numerically the same nature would pervade the individuals. In the system of Duns Scotus a primitive universal unity—matter—is progressively pluralized and individualized by form, almost as a single throb of Bergson's clau veil is broken into its manifold reverberations in nature. Each throb, however, is in Scotus a system of unities; and it is evident that these universals, if they are neither to be pluralized in the individuals nor consolidated into a single being in a real universal, must be con-

ceived as passing over into the individuals, and yet as each retaining its own unity in them. This is the view that underlies the doctrine of formal-

ism elaborated in the Scotist school. Universality is thus conceived as in the things, not by a dis-

tection of reason, as moderate realism would hold, not by a distinto real, as extreme realism would hold, but by a formal distinction which still allowed it to be identified with the series of individual things.

7. The realism of Francis de Mayronis.—It is obvi-

ous that such a view approaches very close to

2 Porphyry, Intro. ch. 1.
3 Prantl, lii. 120.

the doctrine which regards the universal as such as existing in things, and, if we regard this universal as numerically one with the universal as contemplated by the Divine Mind, we are in danger of being led back to a pantheism such as was usually held by Thomas of Chalmas. If now we are to escape such pantheistic conclusions, there is one, and only one, way of escape within the same general point of view; it is to give the universal a separate existence, as Plato did, independent of the Divine or any mind. This step was taken by the greatest of the disciples of Scotus—Francis de Mayronis. Relations are divided by Mayronis into relationes secundum esse and relationes secundum dict. The former are between things which in their entire being fall under the category of relation; the latter are between things which, taken by themselves, are absolute, but are understood with reference to something else and remain entitatively distinct from the relation into which they enter. This corresponds to what has been recently called the monistic and the monadological concept of relation. The relation between subject and object of knowledge is so distinct from its terms that it exists separately—from which it follows that ideas are veritable entities.\(^1\) Universals in themselves therefore exist neither in the soul nor in things. They are not a something as against another something; but they are something as against nothing or as against a mere mode or manner of being. They are extrinsically and the-same thing independent of being and of the idea. They are not necessary, nor are they contingent. They have an intelligible being from themselves essentially distinct from God. With Duns Scotus, Mayronis distinguishes between esse essentiae and esse existentiae. It is the latter esse that comes from God. To the same kind of being—esse essentiae—belongs the primum principium commonitas, i.e. the principle of contradiction, which he regards as a hypothetical copulative proposition.\(^2\) In all this we may see in Francis de Mayronis a medieaval 'new realist'.

8. Nominalism. The realism of the Scotists tends to pantheism or else to the setting up of uncreated entities independent of the Divine Mind. The only other course is to identify completely the universal with individual things, i.e. to give up the universal as such, to recognize only individual things—the doctrine of nominalism. It has been sometimes questioned whether medieval nominalism is really nominalism and not rather conceptualism. With regard to the early nominalism, it is hard to put any other interpretation on the opinion attributed to Roscelinus by Anselm, that universals are flos vocis. His pupil Abelard is supposed to have approached more nearly to the concept of id, standing. To Abelard, however, it is a classification of relations, not of theories about relation. Such relations are moreover real, not mere relationes rationis, and have a being distinct from the existence of the things between which they relate. The relation between the subject and object of knowledge is so distinct from its terms that it exists separately—from which it follows that ideas are veritable entities.\(^3\) Universals in themselves therefore exist neither in the soul nor in things. They are not a something as against another something; but they are something as against nothing or as against a mere mode or manner of being. They are extrinsically and the-same thing independent of being and of the idea. They are not necessary, nor are they contingent. They have an intelligible being from themselves essentially distinct from God. With Duns Scotus, Mayronis distinguishes between esse essentiae and esse existentiae. It is the latter esse that comes from God. To the same kind of being—esse essentiae—belongs the primum principium commonitas, i.e. the principle of contradiction, which he regards as a hypothetical copulative proposition.\(^4\) In all this we may see in Francis de Mayronis a medieaval 'new realist'.

9. Modern philosophy; the psychological problem. All the problems of modern philosophy have been set to it by medieval philosophy. The problem of the universals is no exception. The schools of the thirteenth century, in their attempt to modern philosophy a problem which had to be solved psychologically. What constitutes the community of nature between general thoughts within us as a whole? Is it the universality of a soul, that, metaphysically, philosophy has been driven in Ockham to give up the belief in a common nature in things.

(1) Hobbes. In modern philosophy we find the psychological consequence in Hobbes. The idea of a common nature in things is given up. Thoughts are as individual as things. 'There is nothing,' says Hobbes, 'universal but names.'\(^5\)

(2) Locke. To Locke, on the other hand, all knowledge consists in the perception of the agreement or disagreement of ideas. Names can be general only if they stand for general ideas. Locke has been termed a nominalist, but it has even been stated that he could be interpreted as a realist. But, if conceptualism means finding the universal in the idea, then Locke is what he has been generally considered, a conceptualist. According to Locke, 'the mind makes the particular ideas received from particular objects to become general... by considering them as they are in the mind, such appearances, separate from all other existences, and the circumstances of real existence, as time, place, or any other concomitant ideas. This is called abstraction, whereby ideas taken from particular beings become general representations of all of the same kind, and their names general names, applicable to whatever exists concomitantly to such abstract ideas.'\(^6\) Abstractions are fictions and contrivances of the mind, that carry difficulty with them, and do not call upon us to offer ourselves any terms that are ready to imagine. For example, does it not require some pains and skill to form the general idea of a triangle (which is yet some of the most abstract, most general, and different forms of which it must be neither oblique nor rectangle, neither equilateral, equiangular nor rightangled, and none of those at once). In effect, it is something imperfect, that cannot exist; an idea wherein some parts of several different and inconsistent ideas are put together.\(^7\)

(3) Berkeley. This doctrine Berkeley, the protagonist of modern nominalism, attacked in the Introduction to The Principles of Human Knowledge.

Whether others have this wonderful faculty of abstracting their ideas, they best can tell. For myself I find indeed I have a faculty of imagining, or representing to myself, the ideas of those particular things I have perceived, and of various compounds and dividing them. I can imagine a man with two bodies or the whole body of a man joined to the body of a horse. I can consider the hand, the eye, the nose, each by itself abstracted or separated from the rest of the body. But then whatever I imagine or erect I imagine, it must have some particular shape and colour. Likewise the idea of a man that I trace to myself, must be either of a white, or a black, or a tawny, a straight, or a crooked, a tall, or a low, a middle-sized man. I cannot by any effort of thought conceive the abstract idea of a horse by itself abstracted. And it is equally absurd for me to form the abstract idea of motion distinct from the body moving, and to think of myself as moving in another manner nor revolving; and the like may be said of all other abstract

5. As cited in this chapter, § 9.

---
general ideas whatsoever. To be plain, I own myself able to abstract in one moment, as when I consider some particular parts or qualities separated from others, with which, though they are united in some object, yet it is possible they may really exist, without the connection of any of those another, or conceive separately, those qualities which it is impossible should be annexed; or that I can abstract from a general notion, by abstracting from particulars in the manner aforesaid—which last are the two proper acceptations of abstraction.1

Berkeley explains precisely what he means by universality:1

'It is, I know, a point much insisted on, that all knowledge and demonstration are about universal notions, to which I fully agree. But is there not something more? These notions are formed by abstraction in the manner premised—universalitv, so far as we can comprehend, not consisting in the abode to

positive nature or conception of anything, but in the relation it bears to the particulars signified or represented by it; by virtue whereof in that things, names, or notions, being in their own nature particular, are rendered universal.2

In the edition of 1734 he says:3

'And here it must be acknowledged that a man may consider a figure merely as triangular; without attending to the par-

ticular qualities of the angles or relations of the sides. So far he may abstract. But this will never prove that he can frame an abstract, general, consistent ideas of a triangle. In like manner we may consider Peter so far forth as man, or so far forth as animal, without framing the aforementioned abstract ideas, either of man or of animal; inasmuch as at all that is per-

celved, in this case, is considered.

(4) Hume.—Berkeley's doctrine on this subject was pronounced by Hume to be 'one of the greatest and most valuable discoveries that have been made of late years in the republic of letters,' and he besought himself that "in the name of that great man, he had a duty to others, and to his own mind." Hume's view was essentially different. Berkeley had said that all general names signify indifferently a great number of particular ideas. Hume attributes to him the opinion that all general ideas are nothing but particular ones, annexed to a certain term, which gives them a more extensive signification, and makes them recall upon occasion other individuals, which are similar to them.4 This Heritage is not so his own to himself. He holds that the idea before the mind is always some particular idea. Abstract ideas are in themselves individual, but, when we have found a resemblance among several objects, we apply the same name to all. The name, being applied to other individuals, different in some respects from the idea we have first on hearing it, does not revive the idea of all these individuals, but the custom of applying the name to them as a readiness to survey any of them, which produces any other individual one for which we have occasion. It is clear that Hume differs from Berkeley in this, that he does not recognize, and does not allow the mind to abstract of regard-

ing the individual idea as representing and stand-

ing for the class to which it belongs. In Hume the idea is particular, and only possesses the power in association with the name of calling up other particular ideas. The nominalist doctrine, as it appears in Berkeley and Hume respectively, determines the counter-conceptualist doctrines of Reid and Brown.

(5) Reid.—Reid contends that Berkeley unwillingly or unwarily grants all that is necessary to support abstract and general conceptions:

1. A man may consider a figure merely as triangular, he may form a conception of this object and consider it for no man can consider a thing which he does not conceive. He has a conception, therefore, of a triangular figure, merely as such. I know no more that is meant by an abstract general conception of a triangle.1

2. He who considers Peter so far forth as man, does so merely for the sake of the meaning of those abstract general words man and animal, and he who conceives the meaning of them has an abstract general conception.2

(6) Brown.—According to Brown, the feeling of resemblance in certain respects is the true general notion, or general idea, as it has been less properly called, which the corresponding general term expresses.3 Brown holds that between the perception of two or more objects and the invention and employment of the corresponding names there must rise in the mind an intervening general notion of resemblance, the feeling or notion of the resemblance being immediately subsequent to the perception. It is the omission of the stage of the general notion that constitutes in his view the error of the nominalists.

Thus, as Reid regards the power of considering a figure merely as triangular, or Peter merely as man, as a proof of having the abstract and general conception, so Brown regards the circumstance of felt resemblance between two or more objects as the general notion of such objects. Brown has been criticized by Hamilton, but J. S. Mill in his Logic has been influenced by Brown's view.

(7) James Mill.—James Mill held that a general idea is that of a combination of individuals belonging to the class. The word 'man' calls up the ideas of an indefinite number of individuals. The name 'man' is the name of every individual and of the whole combination. This confounds general and collective terms. 'Tree' does not mean a wood.

(8) Hamilton.—According to Sir W. Hamilton, the opposing parties are really at one. The whole controversy arises from not distinguishing the images of sense and the unpercutible notions of intelligence. The situation depends upon the interpretation expressed in German by the terms Beqgriff and Anschauung. The images of the imagination, which were what Berkeley and the nominalists meant by ideas in general.

If we were only this distinction that was wanting, the controversy would have ended long ago. Not to mention the schoolmen, the distinction was present to Berkeley himself. The really important question is, What is the relation between thought proper or pure imagination and intelligence? Is the image always necessary to the realization of the concept? Hamilton held that it was:

'The concept horae, I say, cannot, if it remain a concept, that is a universal attribution, be represented in imagination; but, except it be represented in imagination, it cannot be applied to any object, and, except it be so applied, it cannot be realised in thought at all.'

This is what Hamilton termed the 'relativity of concepts.'

(9) J. S. Mill.—When this view of the relativity of the concept to the image is adopted, there is but little difference between the conceptualism of Hamilton and the nominalism of Brown.

According to Mill, 'We have only complex ideas of objects in the concrete: but we are able to attend exclusively to certain parts of the concrete idea: and by that exclusive attention, we enable those parts to determine exclusively the course of our thoughts as subsequently called up by association; and are in a condition to carry on a train of meditation or reasoning relating to those parts only, exactly as if we were able to conceive them separately from the rest.'

The distinction between Hamilton's view and Mill's thus reduces itself to that of 'a potential universality as against an universal potentiality,' but in neither writer is there an attempt to account for or to show the necessity of the relativity of the concept, or, what is the same thing, the power of a partial consideration of an idea to lead out beyond it.

(10) Mansel.—A different view of the relation

between the concept and the image is taken by Mansel:

'...it is a fact that the image may be represented by the concept, and the concept by the image, though probably not in the same way as that in which the concept may be represented by the image, and the image by the concept. But, if intellect and its laws are in correlation with, and form an organic unity with, the inner essences of things and the forces which control them determine, and are determined by, spatial relations, it will follow that the formulation of a philosophical theory of the concept and the image is impossible without a recognition of the concept and the image as entities of energy which may exist, move, and be transformed into one another. It is not from the

UPANISADS.—The Sanskrit treatises or dialogues known as the Upānisads are the expression of the philosophical speculation of Indian sages and teachers during many centuries. The period of their fullest fruition, when with most originality and insight Hindu thinkers proposed to themselves and to the circle of their pupils solutions of the world's greatest mysteries, both mental and spiritual, is supposed to have been from the 6th to the 4th centuries before our era. There is no age of the Brāhmaṇas; for the Upānisad literature appears as a strata after the early Vedic poetry, and the prose treatises of the Brāhmaṇas with their minute ritual and ceremonial observations. And it is precisely with this feature of the concept as a sort of insubstantial principle that Lotze has in view when he says:

'Of the true universal, on the other hand, which contains the rule for the entire formation of its species, it may rather be said that its content is always precisely as rich, the sum of its marks possess in as great a measure as that of its species themselves; only that the universal concept, the genus, contains a number of marks in a merely indefinite and even universal form; these are represented in the species by definite values or particular characteristics, and finally in the singular concept all determination is contained in the genus, replaced by one fully determined in quantity, individuality, relation to others.

In the last chapter of the Posterior Analytics Aristotle asserts the existence of a faculty—the organ of primary truths, the basis of demonstrative science—by means of which reason can pierce the objects of sense and penetrate to the universal and the cause. The whole of medieval philosophical speculation assumes such a power. Aquinas, Scotus, Ockam, all alike imply it. Modern philosophy uniformly rejects it. Empiricism or empiricism denies it. Idealism denies any real essence whatsoever from thought.

UPANISADS

Sanskrit root sad, 'to sit down,' 'to be seated,' with the prefixed prepositions upa and ni. Original and definite doctrines are in general the property of the teacher, and its use as a title of the treatises in which the doctrines are conveyed may be compared to the Greek εὐαγγέλια, or the English 'Gospel.'

The native Indian equivalent of upanisad is rahapsam, 'secret,' 'hidden.' The latter term apparently always connotes the idea of secrecy or concealment of a text or doctrine, the knowledge of which should be communicated only to those who are accounted worthy. Thus in one passage it is enjoined that the teacher should not teach the doctrine to his eldest son, 'but to none else, whoever he may be.' This conception of a secret or esoteric knowledge has always determined the treatises of the Upanisads to be regarded as sacred writings, and in many of the sects of the Upanisads, as many as are maintained to this day as an inviolable principle of their religion.

The number of these treatises is very considerable. A late collection contains more than 100 names. And, if all works, early or late, that include mystical teaching or propound special theories or doctrines concerning the unseen are to be regarded as having just claim to the title Upanisad, there would seem to be no reason why such treatises should not be indefinitely multiplied at the present time. The total number, according to Barth, 'amounts to nearly 250,' including an 'Allah' Upanisad, assigned to the time of Akhrar.

Most of the later Upanisads are sectarian in character, and with more or less fidelity expound Upanisad doctrine from the point of view of the popular religions, excluding Vaisnava, or Siva, or endeavouring to promote the discipline and teaching of the Yoga, or with other limited aim. Many are attached especially to the Aitareya and of these the majority are of comparatively late origin. The treatises quoted or referred to by Saikara in the 9th cent. in his commentaries on the sacred texts are usually and without correctness supposed to be older. The fact is however, that they contain earlier and later material, strata of thought or language which have been worked up and welded together, and have all undergone modification and interpretation at the hands of later teachers and revisers. These older works are few in number, and together with the earlier Atharvyan treatises may be regarded as forming the Upanisad form of the sacred writings in the more restricted sense of the term.

2. Authorship.—Of the authors of these treatises, nothing is known with certainty. Many names of teachers or authorities have been preserved, and in some instances the document is signed at the side of the firm of the teacher, the attitude of the pupil who respectfully listens to his master's words. In ordinary usage, however, the word is employed to designate the doctrine which the teacher inculcates, and, finally, mystical or secret doctrine in general. It is in this sense that the Upanisad teaching the Vedanta, the end (anta) and aim of the Veda, the substance and sum of all true wisdom and in practice the fundamental principle of all Hindu literature, the word is thus confined to the highest and most abstract teaching or knowledge, the speculative doctrines which are regarded as within the province of truth, divine revelation. Its use as a title of the treatises in which the doctrines are conveyed may be compared to the Greek εὐαγγέλια, or the English 'Gospel.'

The native Indian equivalent of upanisad is rahapsam, 'secret,' 'hidden.' The latter term apparently always connotes the idea of secrecy or concealment of a text or doctrine, the knowledge of which should be communicated only to those who are accounted worthy. Thus in one passage it is enjoined that the teacher should not teach the doctrine to his eldest son, 'but to none else, whoever he may be.' This conception of a secret or esoteric knowledge has always determined the treatises of the Upanisads to be regarded as sacred writings, and in many of the sects of the Upanisads, as many as are maintained to this day as an inviolable principle of their religion.

The number of these treatises is very considerable. A late collection contains more than 100 names. And, if all works, early or late, that include mystical teaching or propound special theories or doctrines concerning the unseen are to be regarded as having just claim to the title Upanisad, there would seem to be no reason why such treatises should not be indefinitely multiplied at the present time. The total number, according to Barth, 'amounts to nearly 250,' including an 'Allah' Upanisad, assigned to the time of Akhrar.

Most of the later Upanisads are sectarian in character, and with more or less fidelity expound Upanisad doctrine from the point of view of the popular religions, excluding Vaisnava, or Siva, or endeavouring to promote the discipline and teaching of the Yoga, or with other limited aim. Many are attached especially to the Aitareya and of these the majority are of comparatively late origin. The treatises quoted or referred to by Saikara in the 9th cent. in his commentaries on the sacred texts are usually and without correctness supposed to be older. The fact is however, that they contain earlier and later material, strata of thought or language which have been worked up and welded together, and have all undergone modification and interpretation at the hands of later teachers and revisers. These older works are few in number, and together with the earlier Atharvyan treatises may be regarded as forming the Upanisad form of the sacred writings in the more restricted sense of the term.

3. Classification.—It is usual to classify these older treatises in three or four groups, which may be distinguished not only by the character and fullness or archaism of their teaching, and the style and diction which they employ, and the more or less archaic nature of their composition. It is not possible, however, to go beyond a provisional and general statement or to have much confidence in details of arrangement which may find expression in a definite scheme of chronology. As a whole the Upanisad literature is later than the Aitareya (9-7n.) and earlier than the condemnation of philosophical rule and precept into mnemonic Sutras. The internal dependence and succession set forth below is substantially that of Denzsen, to whose work all students of Indian literature and philosophy are greatly indebted. On broad lines and in substance the arrangement may be accepted, at least provisionally. With our present knowledge broad and tentative conclusions only are justified. Earlier and later elements in thought and style and composition are not always separable, or capable of being assigned to their right position in the history of the texts. Some treatises, notably perhaps the Svetasvatara, which is in extent and on general grounds is placed comparatively late in the chronological order, contain archaic elements, on which have been imposed later doctrines until the various strands of thought are almost inextricably interwoven, and the teaching presented is with difficulty reduced to self-consistency.

(2) The oldest group consists of six treatises, written in prose of an archaic style. At the head of the group are the Brihad- 

aryagana and the Chhândogya Upanisads, which are acknowledgment to be the most complete and authoritative exponents of Upanisad doctrine. The other members of the group, in the order named, are the Taittirīya, Aitareya, Kaṇāṭaka, and Renā. The last-named is composed partly in verse, and as regards its teaching also seems chronologically to approximate to the second group.

(3) In the second group the composition is almost entirely metrical. The oldest and most independent member of the group is the Kātha or Kāthaka Upanisad. There follow the Ṛgvedā- 

ātāra, or the Svetasvatara, and the Mahābhārata. The authors of the third and fourth treatises are said to be directly indebted to the latter two, and a direct or a mediate relation is maintained between the last three treatises on the one hand and the Mahābhārata on the other. This is the leading principle of the Upanisad teaching, which in the earlier group appears in a formative stage and open to discussion, are apparently regarded as established principles in the Vedas and India. It is of course probable that Saikara was acquainted with other treatises of the type, but which may be included among those which have been preserved; but, if so, they are now known under different names. The Sanskrit texts are probably, but not always, also separately; see the 'Litera- ture' at the end of this article.
sustained by the character of the teaching which they impart. Two of the later number of the Upanisads, together with the Brahmana, are attributed to the Atharvaveda. 

Of the latter group of seven, the seven are sectarian in character, or belong to the Atharvaveda or the systems and schools of the principal sects. For the most part they are very short, more rarely in prose and verse intermixed. Their doctrine or teaching varies with the sect to which they belong, they apply sectarian principles to sectarian ends, and to establish the religious doctrines of their several creeds. The most interesting perhaps and important are the oldest teachings to the Vedas philosophy, not a little force they urge and maintain the fundamental doctrines of the Vedic sects, but not the Upanisads of this group, which are accessible in modern renderings. Thirty or more are usually enumerated as the oldest and most instructive. A short list includes: Brahmanda, Aranyak, Mahat (Yajnavalkya); Atharvaveda, Revalya (Svivita); Brahma, Aranyak, Mahat (Yajnavalkya), Yoga-Sutra (Vasistha); Atharveda, Revalya (Svivita).

4. Translation and interpretation.—The difficulties of translation and interpretation of these treatises are considerable. Like the other scriptures of the Veda, the texts have certainly been preserved in the Sakhis with fidelity and accuracy from ancient times. Previous, however, to a final determination of form and limits they were evidently treated with much freedom, being revised, re-edited, interpolated or explained, and in general made to conform to later or individual standards of orthodoxy and belief. A considerable number of them were made accessible for the first time to Western students in the latter half of the 19th cent. by Anquetil du Perron, who worked for a Persian translation in the year 1656 of a collection of 50 Upanisads known as Upanishat. The text itself is the strangest medley of Latin and Persian, with Sanskrit words transfigured or adopted, almost unintelligible without a key. As is well known, Schopenhauer (q.v.) regarded the publication as epoch-making in the history of Western philosophy, and the system of his own mind. Thirty years later Rammohan Roy, the great Indian reformer and founder of the Brahmo Samaj (q.v.), published English translations of several treatises. He was followed in English, French, or German by H. T. Colebrooke, E. B. Cowell, P. Regnanda, O. Böhtlingk, A. Weber, and others. The most important and satisfactory renderings are those by Max Muller in SBE, and by Deussen in his Sechzig Upanisads. The latter contains introductions to the several treatises which are of great value.

5. Contents and analysis.—A brief analysis of the number of these treatises and the more significant treatises will enable a fair conception to be formed of their general scope and character. Often the Upanisads are not easy to analyse on account of the desultory nature of their style and contents. The abrupt changes of subject, the absence of any logical method or arrangement, the universal employment of metaphor are constant stumbling-blocks in the way of classification or orderly analysis. The entire treatment is suggestive rather than intimate oral instruction than of methodical exposition. There is little development of thought, nor is any attempt made to set forth a progressive and complete exposition of the truth as the authors conceived it. The most important writings are the Brhadāranyaka and the Chāndogya.

1 For a full statement of the reasons for the order adopted, and the mutual dependence of the treatises, see Deussen, SBE ii. 22 ff.

2 See Max Muller, SBE i., p. 18 ff., who gives an example of Deussen's style from his rendering of the Chāndogya (Upanisads).

3 The Brhadāranyaka is the most interesting, containing the figure of most of the principal teachers of all the Upanisads, and presents the most systematic exposition of doctrine. It is attached to the Jājasa-neyin school of the Yajurveda, and in its present form it is a collection of the first three books, the Sāntapatha Brāhmaṇa, of which according to the Mādhyamindī añkhā, it forms the last of the four añkhās, or collections, into which the Brāhmaṇa is divided. In the Kāśa añkhā, or school, it is the second, longest, first of the three main divisions of the Shāstras existing form is composite, and not the work of one author. It comprises six añkhās, or chapters, of which the last two are of later date and adopt a different theological and philosophical standpoint, especially, as it seems, with regard to the doctrine of transmigration. The first four añkhās are Vedantic, and of these the earlier two exhibit the philosophic doctrine of the dīnman, which is more or less familiar, and transcending the finite, the sympathetic worship of the gods. The third and fourth chapters may be regarded as the kernel of the treatise, in which is recorded the final teaching of the Upanisads. It is in its essential character characteristic of the Brhadāranyaka. In reply to questions addressed to him Yājñavalkya with elaborate detail and subtilety expounds the metaphysical doctrine of Brahman or the dīnman, which ideally is the infinite, undivided, and not merely a type under whose shelter many convergent thoughts and reasonings have found expression, Yājñavalkya may claim a place with the greatest thinkers of the world of any age.

The earlier chapters of the first añkhā are to a large extent occupied with symbols and fanciful plays upon words. Mṛtyu, or death, is at the beginning of things and produces successively the creation, speech, light, the sky, the earth, etc. The whole is explained as intended to promote the worship of Vīra. The third chapter to the Šudra Brāhmaṇa, representing under the form of a contest of the dīnman and asuras in song (adyātīth) the antagonism of good and evil. The ārtī describes the last of the senses in turn, but are themselves overcome by the agency of prāna, or the breath, and victory remains with the dīnman. The passage is too long to quote, but is a good example of the allegorical method of the Upanisads. In the fourth and following chapters various cosmological theories and processes, more or less fanciful, are set forth, consisting of the fundamental assertion of the unity of the self (dīnman) with the triad nama, rūpa, kāya; the name, the body, the spirit; of which are given rich speech, subhāsas (the eye), and dīnman, i.e., the bodily or lower self. "Thus being a triad is one, that self (dīnman) is three; it is that in which all dualism is divided; therefore is it immortal, guarded (covered) by the true. Prāna (breath) is the same as the name, the dīnman (or form) are the true; by these is the breath guarded." Following upon the teaching of the first añkhā, the second expresses the knowledge of the higher knowledge, the higher self, the self in the dīnman with which the last paragraph of the first añkhā seems to form a complete whole. The first chapter of the Brhadāranyaka a substance also in Kaye, iv., is remarkable in that it represents a Brahman as seeking enlightenment from a ruler of Kṣatriya race, Aśvatātra of Benares (Kāśi), who refutes his erroneous conceptions of the Brahman and makes known to him the real truth concerning the nature of the dīnman. This representation of the dependence of a Brahman upon Kṣatriya instruction is usually understood and probably rightly, to be indicative of an early condition of Indian society, in which the Brahmans did not hold the practical monopoly of all knowledge which was there in later times; they were equalled or surpassed by members of the warrior caste. The discussion makes free use of metaphor and simile, and many passages present difficulties of interpretation. In the first chapter Charaṇa, a Brahman, then proceeds to the definition of the dīnman which is the first of the dīnman. The substance is given to him by his guru, the master of the art of self-knowledge, who, in turn, a higher master is given to him, and so on, until the true nature is then explained under the figure of profound slumber (snyata); the sleeper is at rest, unconscious, no longer subject to any external disturbance or influence. "From that dīnman all prānas (senses), all worlds, all dīrmans, all creatures proceed. The secret (āntā) "this is the truth." The "truth" (aditya samstāna, or the reality of the reality," i.e., the most essential reality). The prānas are the true, of them he (the dīnman or Brahman) is the translation; he is two, material and immaterial, mortal and immortal, the latter being the dīnman (sāntapatha), the first that and this, that, the real and the unreal. . . . Further, with regard to the dīnman this is the material, that the spiritual, the body (dīnman); this is the mortal, the permanent, the true. Of this material, this mortal, this permanent, the essence is the transcendent of the essence of the body. Breath, however, and the other within the body are
UPANISADS

immortal; this is the immortal, the impersonal, the īśwara; of this immortality, this impersonal, this īśwara, the essence is the purusa (person) in the right eye; for it is the essence of the īśwara. . . . Accordingly its significance (adhibhūta, inherent) and its characteristic (neti neti) is expressed by neti neti); and so on; but beyond this, that you say it is not so (īśwara), there is nothing further. Perhaps, however, is 'the reality of real' (neti neti neti); that is the senses (prajñā) are the real, and is their reality.

The fourth chapter expounds the doctrine of the true Brahmān, the all-comprehending and universal Self, in the form of a question, given by Yājñavalkya about abandoning the world for the life of a recluse, to his master Maitreya. The narrative is repeated with unimportant variations in iv., and the master Maitreya replied, 'What is the worth of me to that of me? I do not know immortal? What my lord knoweth declare to me.' . . . And Yājñavalkya said: 'There is no soul for the love of husband is the husband dear: but for the love of the self (ātman) the husband is dear. Not indeed for the love of the wife is the wife dear; but for the love of the self (ātman) the wife is dear.'

The same formula is then repeated for sons, wealth, cattle, the Brahmān and Kṛṣṇa, the worlds, gods (deva), Vedas, creatures.

‘Not indeed for the love of all is dear: but for the love of the self (ātman) is dear all. The self is indeed to be seen, to be heard, to be perceived, to be beheld, O Maitreya! When the self is seen the body, the senses, the mind, the ears, etc., will vanish. For wherever the Brahmān caste other than in the ātman (self) him the Brahmān caste rejects; who knows the Kṛṣṇa caste other than in the ātman him the Kṛṣṇa caste rejects; who knows the other caste other than in the ātman him the other caste rejects; who knows the gods other than in the ātman him the gods reject; who knows the Vedas other than in the ātman him the Vedas reject; who knows the creatures other than in the ātman him the creatures reject; who knows everything other than in the ātman him the everything rejects. This Kṛṣṇa and Brahmān caste, these worlds and gods, these Vedas, all these creatures, this self is all.

As the sea is the meeting-place of all waters, of all contacts the skin, of all tastes the tongue, of all forms the eye, of all fragrances the nose, of all sounds the ear, of all scents the mind (vijñāna), of all sciences the intellect, of all actions the hands, of all productions the feet, of all communications the skin, there is no existence of these creatures (elements), into them it again vanishes; after death there is no existence.

‘For where there is as it were duality there one sees the other, smells the other, tastes the other, greets the other, hears the other, perceives the other, touches the other, knows the other, but where the self (ātman) alone is all this, how should be another, smell another, greet another, hear another, perceive another, touch another, know another? How should he know him whereby the self (ātman) is not? H. O, the ātman is not so; not; not (neti neti); incomprehensible for he is not comprehended, indestructible for he is not destroyed, unexhausted for he is not annihilated, un.signalized for he is not called by names, uncomputed for he is not counted, imperishable for he is not destroyed, impermanent for he is not destroyed, unessential for he is not destroyed, unaffected for he is not affected, unknown for he is unknown, unimpassioned for he is unmoved, unmodifiable for he is unmodified, unadulterated for he is unclouded, uncreated for he is not created, unformed for he is not shaped, uncoloured for he is uncoloured, unshaped for he is unshaped.

After a fifth chapter, in which the doctrine of Brahmān is set forth and elaborated under the symbol of honey (nāha), the world is the honeycomb (nāha-roopa, nāha-shālī), giving in succession the names of the teachers by whom the doctrine has been transmitted, leading up to Brahmān and Svayambhū the self-existent.

Apart from the divine or mythological origin to which the succession is traced it is impossible either to allude or to dispose of the correctness of the names given in these lists. It is sufficiently probable that the fame and names of the masters of the schools would be preserved within the schools themselves, and not likely that the lists are entirely due to imagination or invention. The presence of the records here would seem to indicate that the two adhyāyās once formed a separate whole, which has been more or less interpolated, and has been mixed with other parts of the book, in a single treatise. A similar list, coincident with this for two-thirds of its length, is found at the close of 1 Bhāṣya, i. iii.; cf. r. xv. 16, iv. 4, 10, 15, 15. It is difficult to tell how far these are the Śāṅkara terms which are employed. The ‘last’ and ‘trans- cendent’ (neti neti) is the extreme refinement of Upanisad teaching with regard to the higher Brahman of the birher Brähman, the fourth adhyāya, and a different and shorter grammatical scheme at the end of the Upanisad. There are variations also in the two recensions of the text.

The Yājñavalkya books, adhyāyās iii. and iv., begin with his acceptance of a challenge by King Janaka, which his other children had been unable to take up. In nine chapters questions on abstract and metaphysical problems touching the life after death and the nature of the self are put to him by his rivals, and by his successful dealing with these, his vindications and the claim to be the son of all. The ninth chapter concludes with a renewed challenge on the part of Yājñavalkya to meet any questions put to him, but no one ventures to presume the rôle of questioner. The book is in general introductory, asserting the authority and predominance of the great teacher, who is to expound the ultimate truth in the dialogue of the succeeding adhyāyas.

In the first chapter of the book King Janaka Vaidheha repeats various definitions of Brahmān that have been given to him, as speech (vṛddha), mind or will (prāna), the heart (ātman). Yājñavalkya has no difficulty in proving that these are imperfect explications, mental approximations to the truth, but not the truth itself. In the second and following chapters Yājñavalkya asserts the doctrine of inherent control, from which it is difficult or impossible to escape, of simile and metaphor. Brahmān is the purusa in the eye, the ātman in the ear, the neti neti, the self-illuminating (atman), is the true and only light, within the heart, self-illuminating (bhūmikā), is a better simile, self-illuminating (neti neti), is explained in the Vedas as well.

There is then a father not a father, a mother not a mother, the worlds not worlds, the gods not gods, the Vedas not Vedas.

Then a thief is not a thief . . . mendicant not a mendicant, a hermit not a hermit; unexuded by good, unexuded by evil, he has then purveyed the divine favors of the the gods.

Though he then sees not, yet is he seeing, though he sees not; for there is no interruption of seeing for the Seer, because he is pure and imperishable; and is one, and is unique, and is not divided into parts of from him, that he could see.

A similar assertion is made with regard to the senses of smell, taste, speech, hearing, thought, sensation or touch, knowledge; all designed to show that the affirmations and predicates of ordinary life are meaningless when applied to the ātman:

There where as is it were another, then would one see the other, smell the other, taste the other, address the other, hear the other, think the other, feel the other, know the other. A solitary ocean is the Seer, without a second (ekadis.), that is the Brahman-world, O King.2

The fourth chapter further illustrates and explains the nature of the ātman, the fifth is the instruction to Maitreya, as in iv., and the sixth and last chapter of the adhyāyas give the ātman.

The fifth adhyāya opens with an invocation, asserting the twofold nature of the ātman, the mind, and the external air-filled space. There follows the well-known parable of Prājñāpati and his disciples.

The three (races) of Prājñāpati's sons, gods, men, and asuras, lived as students of their father Prājñāpati. Their period of studentship finished, the gods said: 'He pleased to tell us, sir.' He said to them this syllable Da. Have you understood?" he said. "We have understood," they said. "'You have understood.'" Yes, he said, 'you have understood.'

Then the men said to him: 'He pleased to tell us, sir.' He said to them this syllable Da. Have you understood?" he said. "We have understood," they said. "'You have understood.'" Yes, he said, 'you have understood.'

This same divine voice, the thunder, repeats Da Da Da, that is, Subdue yourselves, Be generous, Be merciful. Therefore should these three be enjoined, self-restraint, generosity, mercy.

The further chapters of the book relate for the most part to the question which are more or less adequate representations of the truth. The most interesting is the exposition of the four feet (pada) of the ātman of the Brähmanas. Each foot has a special meaning. The one foot (daśarūpa) is the right foot (dhyāna) symbolizes the bright or shining one, the sun or the purusa in the sun. The last chapter of the adhyāya of Aditya, or the sun, repeated in Vịṣṇu, Up. xvii–xviii.

1 Bhāṣya, i. iii. 22 f. 2 Bhāṣya, i. ii. 31 f. 3 Adi. iii. xxii. 10, v. xxxix. 1; cb. vi. iii. 6.
The sixth and final adhyāya is khôṣā, additional or supplementary. It supplies little new information or teaching, and is in parts even more highly metaphorical and difficult. The usual routine is followed, and Nachiketas is moved to anxiety, thus Yājñavalkya's authority is claimed for some at least of the instruction offered.

(c) It is hardly necessary or worth while to follow through in similar detail the Čhandogya, which shares importance with the Brhadāraṇyaka as the most ancient written source of Upanisads. It has been divided into eight chapters, or prājyāsaktas, not all of which are parts of the original treatise. There has been combination, adaptation, and insertion; but no data are available for determining the changes that have been made or for restoring the primitive form. The additions or interpolations are probably more numerous than the losses.

The treatise is highly charged with symbolism. Meditation on the sacred syllable Om is enjoined, which is the essence (rāṣā) of all things, and is the udgīthā, on which in its successive forms as prāṇa, nāth, etc., the deus meditate in their rivalry with the ausaras. Om is the immortal impulse (śakti), a name, or, in accordance with prāṇa, prapāṇa, or the udgīthā, to the syllables of which a symbolical interpretation is given.

(c) The Katha or Kāthako Upanisad is placed by many authors, and perhaps with reason, among the ancient metrical Upanisads. It belongs to the literature of the Black Yajurveda, of which the Kaṭhas formed a well-known school; and it is perhaps the best-known of the Upanisads, having been rendered into English by Rühmohlen Iyoy in the early part of the 19th century. Since that date many editions and translations have been published. Its historical and literary affinities are not easy to determine. Dampier's critical evidence of direct dependence of the Īṣa- and Śvētāvatara Upanisads upon the Kaṭhā; and that the Śvētāvatara has exercised an indirect and less powerful influence upon the two other members of the group, the Muṇḍaka and Mahāmārāṇya. The general classification may be accepted, but the details of interrelationship are still very obscure.

The text of the Upanisad consists of two adhyāyas or six sūtras, the first three of which contain the story of Nachiketas and the three gifts which he obtained from Death, the all-knower. The fourth sūtra is a further exposition by Death of the Brhāman, a polemical answer against pluralism. In the fifth and sixth sūtras the atman or Brhāman is described under various figures or metaphors, the one Self and lord, all-comprehending, self-existent, the eternal thinker. They who discern the Self within are wise and secure to themselves eternal happiness and peace. The legend of Nachiketas is found also in the Brhāmava of the Black Yajurveda, and is there explanatory of a well-known religious rite. To judge from analogy, the myth was probably invented to account for the existence of a rite which bore this name, the original circumstances or foundation of which had been forgotten.

Nachiketas is the son of Vājṣāraṇa, a religious householder, who at the call of religion is represented as making the voluntary sacrifice of all his worldly possessions (sānyāsa) in order to provide for his spiritual interests. The name perhaps signifies 'annointed,' 'unobserved,' and was designed, as in many names, to produce an effect, to cause those who heard it to think of inconspicuous, and 'unobserved' by the watchful powers of evil. Vājṣāraṇa distributes all his goods in alms, and Nachiketas, knowing that the sānyāsa of the father involves the giving away of the son also, is anxious to learn his fate. He chooses to be guided by Nachiketas, signifying thereby that filial relations and claims have thenceforward no meaning to him, and is taught that the Self, in the turn of the sānyāsa, takes the answer literally, and goes off to the house of Yama, where he stays for three days, and in the absence of the master of the house is left without entertainment. Yama is so annoyed that a Brähman guest has been thus inhospitably treated, and follows him, teaching him, and thus Nachiketas learns that his father's fate may be overcome, and that he may be moved to kindness and sympathy towards him. The second request is for an explanation of the fire-sacrifice, the ritual of which Yama reveals and promises that it shall henceforth be bear his name, the Brhāman, it is a knowledge and Nachiketas may have correct and right, and the sacrifice should be performed. However, that is difficult arises with the third boon: 'When a man is dead, there is a doubt—some say he is, others he is not. This I would fain know, taught by thee. This is the third gift that I choose.'

'Heresy or heretical talk old have been in doubt. Hard to understand and reconcile is this subject. Choose another boon, Nachiketas; do not urge me, excess words.'

'Though the gods have here been in doubt, and thou thyself, O Death, hast acknowledged it to be hard to understand. Hard to believe as it seems; no other boon is comparable to this.'

'Choose long-lived sons and grandsons, cattle in plenty, elephants, gold, and horses; choose rich possessions on the soil, and life for thyself as many years as thou wilt.'

'If there is no doubt in the knowledge in these the spirit—wealth and long life. Be lord over the wide earth, Nachiketas; I grant thee command over all desires.

Whatever desires are difficult to realize here below, ask according to thy will—liberal medium with his chariot and music, not to be envied by any man, give them to him, Nachiketas. Ask me not, Nachiketas, concerning death.'

'What produce is this? All produce which, O Death, are est above, or long life and industry and indulgence and pleasure? That, O Death, which doubts rule here below, declare to us what will be in the great Hereafter. No other boon does Nachiketas choose than that which unlocks this mystery.'

Yama is under the necessity of yielding; and he begins by congratulating Nachiketas on his preference for knowledge rather than wealth or pleasure. But he is not an easy way:

'Though anxiously sought it is not to be gained when taught by common men, and without a teacher access thereto there is none—so small that it eludes the grasp of the mind.

Reasoning will not find the way, but taught by another one is easily learnt. It is thine now: a true seeker art thou; an inquirer such as thou is to be desired.'

The exposition then begins with the identification of the sacred syllable Om (q.v.) with the Brhāman. It is one of the most commonly chosen metaphors of the Upanisad writers:

'This syllable is the Brhāman, this syllable is the Self; he who knows this syllable, whatever he wishes is his.'

The text then sets forth in metaphysical terms the nature of the transcendent in the individual, and of his character which he may be known.

'The Self is Saccā, and does not die; he has no origin and no descent. Unborn, eternal, abiding is that Ancient One. He dies not, when the body dies. If the slayer determine as he slays, if the slain thinks himself slain, they both are in error; there is no slayer, and no slain.

Smaller than the great, smaller than the great, the Self is concealed here in the heart of the creature. Free from desire and from grief, his senses subdued, a man sees the majesty of the Atman.

Sitting he moves fast; lying he goes everywhere. That god of joy and not-joy who save himself he does not know to save.

Ridless in the bodies, changeless in the changing, the wise man discerns the atman, great, all-pervading, and is saved from sorrow.

Not by dissertation nor by wisdom nor by much sacred lore is that atman ever attained; only by him who chooses in him to be gathered; to him the atman discovers his own being.

He who has not devised from evil, who is restless, ill-content, whose mind is not, who has no knowledge cannot gain him.

Him to whom Brhāman and Kṛtaśrī are alike indifferent, and death would not come by reason, who could not find him?'

In the third sūtra the Self, the highest Brhāman, is the charioteer sitting in the chariot (the body). boddhi (intellect) guides the car (the mind), sorrow, rūpa (the senses), the horses, the objects of sense the road on which they travel:

1 Chhāndū, Up. v. i. 1; Kauṇ. Up. p. iii, iv. iii; Prāśna Up. p. iii.
3 In i. 8; see SBS xv. p. xxii f.; Deussen, p. 292 f.
Sāṅkara wrote a commentary upon it. The relation of the individual and the universal Self is asserted and discussed from an entirely Vedântic point of view. On this basis, however, were superimposed the later and sectarian systems of the chief and doctrine, which introduced freely the dogmas of the sects, and even the names of sectarian divinities. Sāṅkâra and Yoga conceptions also, intermingled and reiterated, and in some parts predominated over the principles of the Vedânta.

The Upaniṣads therefore Sāṅkara does not reduce to himself, and even greater explanation and analysis. Its modes change too rapidly to be fixed and indexed. The text also is in many instances corrupt, and out of various readings, which seem to be more or less conjectural, it is sometimes only possible to select that which appears to give a tolerable sense.

The treatise begins with an interpolation and a challenge: What is the cause of the universe? and is it to be found in the entities at the beginning of the creation or in the eternal Brahmā? Or are there two kinds of eternal beings, one of which is only the highest, the other the entire world?—the former is Brahmā, the latter the universe. And who is the one who is the highest of the two, and who is he who is the creator of the world?—the former is Brahmā, the latter the universe. And what is the name of this Brahmā?—there is no name by which he is known. There is no name by which he is known. He is the highest of all, the whole, the one who is the cause of the world.

The first seven verses of the second adhyāya are a hymn in praise of Sâńkâra made up for the most part of texts from the Vâjasaneyas and Taittirîya Sâṅkhilas. The rest of the chapter is written in the style of a Yoga, adoration of the god who is above and behind all phenomena.

The opening of the third adhyāya again is sectarian; Rudra is creator, sustainer, lord of all. The (imperative) Brahmâ is higher than all, and those who know the great purûya, shining as the sun beyond the darkness, are immortal. The purûya is the incarnate Self (âtman).

Without hands or feet he grants and moves, eyeless he sees, various he hears. He knows what can be known, but none knows him; he is the name purûya, the first, the great. Smaller than him is the sun-god, the greatest of all, which, exalted in the heart of the creator. Passionless, by the grace of the creator one sees him unmoved (akrtvam, lit. without will). Deussen, or synopsis of the Brahmâ, the great lord, the unaging Ancient, the self of all, all-pervading, omnipresent; for him Brahman, Brahmâ, the one who is identified with all, who is known by the Vedas, the eternal, creator of all, dwelling in the heart of him:

"Of him there is no image whose name is Great Majesty. His form is not visible, none ever sees him with the eye. They who with heart and mind know him thus dwelling in the heart become immortal." 

The section ends with a brief prayer to Rudra.

The fifth adhyâya contains teaching on the two themes of knowledge and ignorance, of the means of deliverance from the latter, and of the Brahmâm as transcending all. He manifests himself in various ways, 'migrating through his own works,' and is seen only in this and not in any shape, he appears to many, as knowing his own form, manifest under many forms. In the sixth and last adhyâya neither nature nor time is the source of all, but Brahman alone. He is the beginning and cause of all, the one god, hidden in all beings, without parts or attributes, immortal, the lord, protector and ruler of all, the universe. This is the word which is the universe in the Vedânta, not to be communicated to one who is unworthy.

6. History of doctrine.—It would seem, therefore, that the characteristic central doctrine of the Upaniṣads, the doctrine of Brahmâ or the âtman, was at first developed and systematized within Kârttikeya, as Kârttikeya andâtman was the central and controlling idea of the Vedânta, as the word kârttikeya was always occupied by the term kârttikeya, as'what is occupied by a name is always occupied by the word. This combination of royal functions with the mood of a philosopher or a poet was not unfamiliar to Oriental experience. The Brahmâ, on the other hand, occupied himself almost exclusively with...
the ritual and the securing of his class ascendance; and only later adopted a doctrine of the universe which had been formulated on the other hand, but which harmonized with his modes of thought, and lent itself readily to his schemes for the establishment of his own predominance on the basis of secret or superior knowledge. The reference to the Kaṭṛtya Brahman was, if possible, monopolized by him, but which had not been in accord with the facts. Probably also the doctrine and several duties of the átmanas (p.c.), whether widely practised or not, afforded an opening and facilities for the assimilation of the new knowledge. In later times the position was reversed, and with the establishment of intellectual and class pre-eminence the Brahmanas confirmed their claim to a monopoly of the supreme wisdom; and this was conceded to them the more readily as the other castes became more and more immersed in political intrigue or business enterprise. In the issue, by perseverance and the skillful use of circumstances at Brahmanas secured the first place in knowledge as in honour, and were regarded as the depositories of the secrets of wisdom and right instruction.

This highest and most treasured teaching, for which divine authority was claimed, was formulated as the cardinal doctrine of the Upanisads literature, an idealistic monism, which consisted essentially in the assertion that all is one, 'one only without a second,' and as a necessary corollary that the material universe as it manifests itself to and is approached through the bodily faculties is an ill (maya). Only Brahman, the unknown Self (ātman), is in possession of a real existence. Brahman, moreover, is an abstract impersonal neutral, not an individual or masculine. The attribute of personality, as all other attributes, is denied to him, and he or 'it' can only be defined, if such may be called definition, by negatives (neti neti). The human self, the self of the living being (ātman or jīvātman), is subject to delusion only so far as it imagines itself to be an individual, distinct from all other selves. In reality it is itself the supreme Self (ātman), identical with Brahman; there are not two or many selves; but Brahman and every so-called individuality in this world, and the same. There is no 'difference,' in the realm of true understanding and insight. 'One only without a second' (ekdvēdyam) expresses the ultimate thought and the fundamental postulate of the speculation of the Upanisads; or, as the doctrine has been formulated by Deussen and others in the form of an equation which summarizes Upanisad teaching in this respect,

Brahman = ātman.

The formula is not of course due to or used by the authors of the Upanisads themselves.

8. Secondary teaching. This idealistic and monistic doctrine of the self or reality of Brahman underlies all the teaching of the Upanisads. Although not peculiar to the Indian literature, it is there developed in its most complete form and carried to its utmost logical conclusion. A considerable portion, however, of these treatises expounds what is generally known as the doctrine of the lower Brahman, a compromise or concession to the views and the presuppositions of the universe as stable, for all practical purposes permanent, conditioning his daily life, limiting and satisfying his outlook upon reality. This teaching was thus accorded to those only, who were incapable of comprehending and using the higher knowledge, whose mind worked within the limitations imposed by the faculties of the body. For these there was constructed or traditionally maintained a cosmological doctrine. Thus Brahma appears as the creator of a real world, which is then informed, sustained, and its working ensured by his universal and vitalizing presence.

In this sense the attempts at speculating on the doctrine which has no existence apart from him, and will ultimately be resolved or cease to be, returning into the source from which it came. Brahma therefore in the cosmological theory of the Upanisads, is regarded in his capacity as the unchangeable and does not contain or convey the secret of the highest knowledge, becomes individualized, endowed with properties and capacities, and an apparent or provisional reality is allowed to the universe and to the souls therein. The human ātman or jīvātman possesses a measure of freedom and individuality of its own, it thinks and determines, and of its own free and enlightened will promotes its return to the paramount, the supreme soul in which it was derived. Thus far therefore the Upanisads may be said to contain the germs at least of a real theism. It is for the most part in the later and comparatively later speculations in the 'Sāṁkhyā, the doctrine of the idealism of the ātman doctrine, tentatively harmonized with the latter and subordinated to it in the Upanisad teaching. All things would ultimately return to their primitive source, and their impermanent and unreal character would be made manifest. Thus the higher doctrine or faith was conserved under the forms and as the ultimate truth of the later doctrine.

9. Psychology. To the same secondary teaching belongs the psychological doctrine of the Upanisads, so far as these treatises may be said to present a consistent or coherent doctrine concerning the human soul. It is evident that this teaching also is derived from external sources, originally independent, and only artifically and with difficulty accommodated to the fundamental presupposition of Upanisad thought. Where all souls are one, and there is no difference, there is no room and no need for a psychology. On the lower plane of teaching, however, souls created by or emanating from Brahman are in a certain sense distinct and individual, and it is from the recognition of distinctness is ultimately due to maya and to maya alone. Some provision therefore must be made for their return, their final and universal reunion with Brahman, if a permanent duality was to be avoided. The last alternative as a solution of the mystery of the soul's nature and existence did in fact find expression in some of the Upanisads in premonitions and intimations of the later doctrine of the Sākhyas, which is avowedly dualistic. In general, however, the psychological teaching expounds two independent themes or subjects—the states of the soul, and the means or methods of its return. No definite connexion is made between these, or any relation suggested. They are due to different systems of thought, and no attempt apparently is made or regarded as necessary to co-ordinate them. The latter doctrine, including especially that of the two paths, is closely related to the wider doctrine of predestination.

The four conditions or states of the soul are: (1) the waking state; (2) dream-sleep, in which the soul remains conscious and active in its dreams; (3) dreamless slumber, snánapa, snánapa, in which the soul is as passive, and for those only, who were incapable of comprehending and using the higher knowledge, whose mind worked within the limitations
UPANISADS

is unknown to the older Upānisads. It was perhaps invented to secure or complete the correspondence with the four āramas, the turiya being the sublime but undefinable state to which the mahāyoga leads. The three earlier Upānisads derived also mystical names: vaidśārṇa, that which is common to all, the habitual mode or outlook of all men; taitāra, luminous, vigorous, intense; priyākta, intense, similar states or states familiar in the experience of European and other mystics.

But Here, cf. cf.: make in substance states sīvpti. one subject doctrine of far the parallels passes the lime mystical epirit. Chhdnd. 410.

In dream-sleep the soul fashions its own world in the imagery of its dreams, the spirit serves as light for itself. But the dreamer the scenes and experiences through which he passes in his dreams appear real, and in this his dream-world no other has part. The illusion of duality, however, is still maintained; there is one who knows and another that is known. In other passages the spirit is represented as quitting the body during the dream-sleep and wandering hither and thither, returning sometimes only with difficulty to its accustomed home.

In the third state all distinct consciousness of knowing subject and known object is superseded, the human spirit is one with the eternally knower, the supreme intelligence, priyākta ātman. In the teaching of the earlier Upānisads this is apparent, for the whole universe is held to be in an eternal union with Brahman. "When a man has fallen so sound asleep, and has so passed over from his body, that he knows no dream-image, that is the Self, that is the immortal, the fearless, that is Brahman." 2

The introduction of a fourth state appears to have been based upon a recognition of the transitory character of the suppliant. The number is increased, and the spirit of the suppliant may then return to the waking state in which it is troubled and anxious, and the external visible universe is regained. The object of knowledge when the three states of the mind have ceased, and the spiritual subsists alone by itself, contrasted as a spectator with all the things as a substance undifferentiated, set free from all existing things, this spiritual state is called the turūpa. 

The introduction of a fourth state appears to have been based upon a recognition of the transitory character of the suppliant. The number is increased, and the spirit of the suppliant may then return to the waking state in which it is troubled and anxious, and the external visible universe is regained. The object of knowledge when the three states have ceased, and the spiritual subsists alone by itself, contrasted as a spectator with all the things as a substance undifferentiated, set free from all existing things, this spiritual state is called the turūpa. In this state the divine spirit has union with the Brahma. This, however, is not to return by any return to a lower condition; nor does it interfere with or destroy the memory of a time in any of the illusory activities of ordinary life. Worldly duties and employments do not affect the soul that is one with Brahman.

10. Eschatology.—The Indian doctrine of the two paths, the deva-yána and the pitṛyána, the way of the gods and the way of the fathers, by one or the other of which the souls of the dead make their way from this world to a future abode of happiness or misery, presents easily recognized parallels to similar teaching in other faiths. That the theory of the independent existence of the soul in India admits of little doubt. Later it was elaborated and brought into close association with the kindred doctrine of transmigration and was then carried far by wandering Indian missionaries; and in this way it may have interested and influenced the beliefs of other peoples, especially the Mithraic teaching concerning the ascent of the soul to the highest heaven. As early as the Rgveda reference is made to the deva-yána as the path by which Agni bears the offerings to the gods, and on which the gods themselves descend to partake of the sacrifices. On the same road the faithful worshipper ascends through successive stages or 'stations' to the highest felicity in Brahman. The passages in the Upānisads which enumerate the 'stations' give no indication of the origin of the theory, nor attempt to explain its meaning or purpose. The earliest is probably Chhdnd. IV. XV. 51:

He (who knows this) . . . (after death) goes to light (arśka, brightness), etc. to day, etc. from day to day, from day to the light half of the moon, from the light half of the moon to the six months of the sun's northward movement, from the month of the first to the month of the second year to the two months after, and from the moon to the moon, from the moon to the lighting. Thereupon an unerringly correct guidance conducts him to Brahma. They who proceed thereby do not return to the changing life of man. 1

The pitṛyána, on the other hand, is the way of darkness, for ignorant and defiled souls, and progress is marked by analogous but contrary stations; e.g., the dark half of the moon is substituted for the light half, etc. Those who travel on this road do not reach the goal, but are born in the moon till their karma is exhausted, after which they return to earth, and are again subject to rebirth.

But those who in a village fulfil their religious duties and give alms (i.e. gṛhastha) go to the smoke, from the smoke to the moon, from the dark half of the moon to the six months of the sun's southward movement. They do not attain to the year. From the months they go to the world of the fathers (pitṛloka), from the world of the fathers to the other, from the other to the moon. They ascend to the wind (vāyu). Having become wind (i.e. gṛhastha) becomes smoke, having become smoke becomes vapour, having become vapour becomes cloud, having become cloud becomes cactus in rain, and exists as such rice or corn, herbs or trees, seashore or boats . . . They who have lived a good life in this world will be a reward attain a good rebirth, they who have lived a life of misery, they who in this world have lived a shameful life will attain a shameful rebirth. That is a pigr or an ostracized subject. 2

There is thus in the Upānisads tentative if somewhat indefinite teaching with regard to the fate of the soul at and after death. Two conceptions were thus involved, with the probability originally independent and belonged to different orders of ideas. Neither of them was due in its inception to the thinkers of the Upānisads, but both were derived from external and pre-existing sources. The thought of a return of the soul to the earth, to be embodied again in human or animal form, or even in the form of an insect or plant, is common to nearly all primitive peoples, and is undoubtedly of great antiquity. The distinct thought of a recompense of felicity or suffering in another world for the deeds done upon earth is neither universal nor so old. It has usually been accepted as an alternative to the earlier view of the soul's future destiny, superseding or displacing but not amalgamating with it. The contribution which the Upānisads thinkers made was in effect to combine these ideas by transferring the retribution from an other world to the future existence in the known and visible present, and by asserting the precise equivalence of the recompense after death to the deeds, good or evil, of the earthly life. Thus all the elements of the Indian doctrines of karma and transmigration are found in the oldest Upānisads. They obtain here their final and fullest expression. No evidence or proof, however, is offered in support of these theories, nor is there any reference given to previous history or development, which might explain or justify the statements made. They are supported, as is all the teaching of the Upānisads, by an appeal to the authority of eminent teachers of the past. It seems strange that no attempt should be made to fortify so important a doctrine as transmigration by reference to analogy, or to a wider and reasoned view of life as a whole. They are simply recorded as the definite and complete statement of the final destiny of the soul.

11. Summary.—Thus a very considerable part of this literature is occupied with ideas that belong to the lower Brahman, and are avowedly inferior to the ultimate and supreme truth that Brahman is all in all. They are half-truths, 1 SES. I. 69; cf. Chhdnd. v. I. 11. 12, Brah. v. I. 12, Kaus. ii. 3. 2 Chhdnd. v. x. 31. SES. I. 69. 3: Deussen, p. 234 f. and references.

2 [On the soul see besides the Upan., and the references there given. Deussen regards the introduction of the turiya as due to the influence of the Yoga doctrine, which involved the belief that by intense meditation, abstinence, and self-control the union of the human spirit with the one eternal spirit might be secured.
guiding and controlling the practical life of the universe, which lose interest and significance when it is understood, in an absolute and self-sufficient manner. It is undoubtedly older in India than the period of the Upanisads, and gives expression to the austere quality which is native apparently to some forms of Indian religious life. The Upanisads, moreover, never seem to have been logically or otherwise, what is called a system; in fact, it is a collection of disconnected prose poems, each uttered as a kind of theocentric prophecy, at a moment when the speaker's religious experience was at its peak.

The Upanisads...
USURY (Babylonian) 549

of flocks and herds being at least 200 per cent per annum, that of crops in the fertile soil of Meso-

damia at least 400 to 500 per cent, the rate of interest was excessively high according to our stan-
dard. But security from loss by misfortune or disorder, must have led to a rapid increase of wealth. A fortunate possessor

must soon have owned more than he could possibly provide for. He was bound to employ others as shepherds or labourers merely to preserve his property. Unless he could command the services of slaves or subjects, he had to pay for such services. He might, and in Babylonia usually did, allot a portion of his flock to some shepherd to tend, demanding back after the pasturing and breeding season, his own again with a stipulated rate of increase, which we may loosely call usury. He might let out his farm or part of it to husband-
men, demanding a stipulated share of the crops, and leaving the rest as wages for the labour expended. Whether this constituted usury or not may depend on whether the amount demanded as return from the labourer bore a more or less reasonable relation to the average crop likely to be obtained. The reasonability of the trans-
action depended upon many considerations which would not be said to the present day. In cases where a man's former prosperity had enabled him to realize his profits in the more stable form of money, he might lend that money as an accommodation to one who had less or even none, on the understanding that he was to receive again his own with usury, but where to draw the dis-
tinction between fair interest and usury must depend, not only on the custom of the country; but also on the yield it might reasonably be expected to produce when invested directly in agriculture or farming. So long as the return for the accommodation which a creditor demanded kept well within the naturally expected profit to be made by the borrower, both were sharers in the benefits brought about by the accommodation. The abuses which might constitute usury arose by a demand for excessive return or by failure to accept responsibility and share in the unavoidable loss which fell on the borrower. It must early have occurred to the lender to demand security for his loan. But in an early established custom the person of the debtor was held as security. This personal security extended over all the borrower's posses-
sions. The debtor who failed to pay had to work off his debt by selling his land, or his cattle. It was not fair that the members of his family should be called upon to help him to discharge his debt. Thus he might assign any or all of his family—wife, children, or slaves—to work off his debt. This was to their advantage as much as to his, for they were thus secure of a living, though precluded from the profit of their labour, while, if he was bankrupt, he had no means of providing for them any more than for himself.

But the situation was full of possibilities of oppression, and the rich or prosperous man would soon have become master or partial owner of his poorer brethren indebted to him. So long as such a master treated his dependents fairly, and the land was secure from foreign conquest, a few rich men with a large industrious body of well-treated servants, certain of adequate maintenance, might well constitute a prosperous community. But the raids made in war, the spoliation of the rich man's capital, or the failure of a crop must have reduced the condition of the tenants. They might have been 

seen that an overworked or underfed population would grow discontented and so be unreliable in case of invasion to maintain the security of the land against foreign aggression. Hence legisla-
tion was introduced to check the abuses which might lead to an undue exploitation of labour by capital. The celebrated Code of Hammurabi, the best-
known body of legislation dealing with the subject, which we must regard as the outcome of innum-
erable other attempts in the same direction, devotes a large part of its regulations to controlling the tendencies of the state of society to permit oppres-
sion by the exaction of unfair enforcement of the literal terms of what had been entered upon as a free contract. These regulations of the code are already dealt with in the art. LAW (Babylonian), vol. vii. p. 817, and may be briefly summarized here. When a debtor owed for rent or share of crops and was unable to pay by reason of the failure of the crops not due to his own negligence, he was allowed to postpone payment to the next year. It was not legal to insist on the payment of any debt in one special form of tender, though this was often specified in a contract. Produce was made legal tender in any case, thus obviating the difficulties which would arise if its value were low, or money scarce, and equalizing the variations of exchange. The right of a creditor to seize the person of the debtor or of his dependents, and hold him or them in servitude until the debt had been worked off, was an obvious opening for great abuse, but was modified by the Code. By its enactment that such service should not exceed ill-treatment and, in any case, extend beyond three years, it clearly eliminated much injustice. The text of the Code as treated in art. LAW (Babylonian) was not then complete; but a contemporary, or at least very early, copy from Nippur1 gives one of the lost sections enacting that, if a man borrow grain or money from a merchant and has not grain or money sufficient to repay him, he shall give the merchant whatever he has in his power in place of the debt that he owes in the presence of the city elders, and the merchant may not declare to accept it. This was a far-reaching enactment, and may be suspected of aiming specially at the enforcement of debts or at any rate to men not exactly neighbours. By far the larger number of debts of which we have any record were owed to the temples, which stood to the people in the relation of agricultural banks. Their advances were of the nature of fines forced to meet the steady scarcity at seed-time, or to meet the expense of harvest operations when the last year's produce had already become exhausted, though a fresh crop was now in sight. They were mostly for a short term with-

out interest, interest being demanded only in the case of delay to repay at the fixed time. Many of these temples were large land-owners, and also owned numerous flocks or herds. They, like other great owners, often farmed out the nucetar system, furnishing to their tenants seed, agricultural instruments, and working animals, while advancing wages in kind. The numerous records of temple transactions which have reached us, due to the recovery of large temple archives, may easily have distorted the picture that we are able to draw of social life at that period, but they must have dominated the general custom. The landlord on this system was bound by that custom and his own interest, as well as by humanity, to see that his debtor, who was his tenant, should not be oppressed or exploited, tending to paralyse his efforts for their mutual profit.

1 See ASL, April, 1915, p. 225.
that debt and the servitude to which it led were very common features of Babylonian society. It was further met by a general amnesty from capital or seisin-bailiffs, proclaimed by many a sovereign apparently to inaugurate his new reign, to secure popularity and encourage loyalty and thereby to achieve power to maintain his rule. The ability thus to double on fields the power over which the king had over temple revenues, as the temples were the chief holders of credit. Their responsibility to the citizens who sustained that credit was the last sight of the Lord. They were called upon to redeem members of their city who became captives in war if these were without means to redeem themselves. The temples were stewards of their wealth for the god who watched over the welfare of his people. The loss to certain members of debts unpaid was a loss to the community at large who had furnished the source of their wealth, but, as this was the result of prosperous years, it might fairly be taxed to equalize over a term of years the incidental losses due to accident or bad seasons, to the ‘hand of God,’ or to enemy action. To grant such an amnesty, which seems to have involved the release of those in view, the restoration of liberty to prisoners and hostages for debt, was regarded as an ‘establishment of equity’ and was the prelude to fresh legislation. It is not completely clear that this amnesty touched only those who were indebted to the very rich persons or the temples, which were naturally in the power of the king. If private indebtedness was cancelled, it is difficult to see how injustice to the private creditor was avoided. By what compensation should have received for the forfeit of his capital and interest.

Most writers on the subject appear to have regarded the rates of interest charged for loans as exorbitant, but the high interest is associated in all periods with oriental custom and economic conditions. The multiplication of capitalists and the competition between them for investments have reduced the rate of interest under modern conditions to what we regard as fair, but any national scarcity of raw material or capital is bound to raise the rate again. Practically the risk involved determines the rate charged for a loan. Professional money-lenders were then more rare, and had to take greater risks. The profits which a borrower was able to secure by actual trading or farming were so high that accommodation for interest was less attractive to the lender unless the rate was high.

USURY (Christian).—i. In the New Testament.—The words of Jesus contain allusions to borrowing and lending, but, as we should expect of one who refused to be a judge and divider (Lk 12:48), there are no direct precepts to guide the Christian conscience. Mt 22:34 and Lk 6:42 are but translations of an unchallenged exhortation of the spirit of charity.

The Parable of the Talents (Mt 25:14–30) and the Parable of the Pounds (Lk 19:11–27) allude to banking and interest, but in casual phrases, not in the pith and marrow of the teaching. Borrowing itself would be an evil if in that age and country, not so much of the commercial type, but more of the loose and personal kind, as between friend and friend, kinsman and kinsman. The shiftless Oriental is ready if at all conscienceless borrower, and the Syrian peasant who to-day loans out his earnings in petty usury doubtless had his like-minded début in his forefathers.

The ethic of these personal borrowings was adequately covered by the general principles enunciated by Jesus; there was no call, nor was it His method, to deal with usury as an economic and commercial factor.

What mattered for the future centuries was that by His life and example even more than by His words the great Master had suggested a certain attitude towards this activity. Himself reared among the poor and needy, He lived the life of a travelling teacher without home or material possessions; to those who left home and kindred and lands for His sake He had promised everlasting life (Mt 10:9); and to the rich young ruler, morally perfect though he claimed to be, He had given the arresting command to sell all and give to the poor (Mt 19:21). Among the slaves and the folk of the lower orders who formed the majority of the early converts such teaching was treasured and, it may be, unduly emphasized; its potency appears in the communist movement of Acts (4:32) and in the fact that the love of goods was regarded as a disqualification for the ear of the Christian society was the care of the poor. It is as but one phase of a general attitude to this world’s goods that we must explain the Church’s dislike of usury. In their simple, fraternal communities, with their pervasive atmosphere of kindly charity, the hard bargainer for gain was a chilling and unwelcome intruder, the personification of the spirit of the alien work without.

2. In the Fathers.—The early Fathers looked upon usury with severe disapproval. They may have been influenced in certain cases by the classical moralists, the determining standard for them was the OT legislation and the general principles of the NT teaching, more especially a strained interpretation of Lk 6:22. Tertullian, Cyril of Alexandria, and Clement of Alexandria accept as still binding on Christians the OT precepts (Ex 22:25; De 24:18; Ps 15:5, Exk 18), the first-named regarding the prohibition of interest as only a preparation for the higher demand of the Gospel to forgo even the capital; ‘Quo facultas assisserat honorem ipsi praebens ficta est fraudulenta miserae.’ Among the general prohibitions of the NT, Lactantius condemns it. The Fathers of the 4th and 5th centuries write to the same effect, only with a rising vehemence that suggests that the evil was increasing in decadent times. To Chrysostom, ‘It is evident that there is应在 the category of crime;’ Audent etiam foerestas dicere, non haboe alium vivere. Hoc nisi et latrocinium etopium in animis; esset autem dicere...et bonum...et malum...Basil and Gregory of Nyssa in their days, the spirit denounced the usurers as a breed of vipers that gnaw the wound that bears them.

The standpoint of the Fathers, however, is not to be explained as a mere narrow reading of Scripture: it is the view of men whose Christian conscience abhorred the exploitation of the defenceless and unfortunate. The practice of usury is regarded throughout this period not as an economic but as a moral question. Borrowing was still largely for the urgent personal needs of poor men who were fit subjects not for exaction but for charity. It was the soulless miser—living safely and meanly, gloating over his gains ill-gotten by pitilessly faramous and unremorseful. All men, who sat for the portrait of the usurer and drew the fire of the preacher. The Christian conscience was finely sensitive to the obligation of charity. Wealth was the gift of God, and man was but stewards, debtors, and not possessors.

USURY (Christian) 551

'Understand then, ye rich, that ye are in duty bound to do service to him, who hath had more than ye yourselves need. Be ashamed of holding fast what belongs to others. Imitate God's equity and now shall be poor.'

This note struck in The Preaching of Peter is typical. To a teacher like Ambrose rights of property were a creation of avarice; charity or almsgiving was an act of simple justice. 2 In all this the Church is moving in the realm of precept and not of law. Although the notion of usury is in law distinguished between consumables (e.g., a loaf) and fungibles (e.g., a house). In mutumum the thing borrowed was for consumption; its whole value lay in its first use; the use and the substance were inseparable: an adequate compensation was made when an equal quantity was returned.

In this category money was ranked. When A borrowed money from B, his ownership over it was absolute; it was more than possessio, it was dominium; the process of exchange had the quality of a sale, and to sell an article and then charge for the use of it was unjust.

This was the decision of the canonist conscience; in itself the loan of money did not justify a charge for its use. In those days of limited opportunity for investment it was doubtless often a gain to the lender to agree to accept currently the money, so long as it was returned intact. And the Schoolmen were ready to face the logic of facts and to make allowance for special cases. The custom sprang up of admitting compensation on various extrinsic grounds.

3. A vision which was the decision of the canonist conscience: in itself the loan of money did not justify a charge for its use. In those days of limited opportunity for investment it was doubtless often a gain to the lender to agree to accept currently the money, so long as it was returned intact. And the Schoolmen were ready to face the logic of facts and to make allowance for special cases. The custom sprang up of admitting compensation on various extrinsic grounds.

4. The Church had to reconsider her whole attitude to trade and economic practice. The old view that business was an evil, with its roots in covetousness, had to go. The interchange of goods by which men lived had to be accepted; only its methods must be morally examined. Christian principles had to be applied to the practical issues of life. The middle of the 12th century saw the publication of the Scholastic works of Thomas Aquinas. Even as he formulates his judgments on usury he has to make concessions, and, once one gap is made in the hedge of restriction, other gaps appear as the centuries pass, until

3. Council of Seaux (515), can. 55.
4. J. Ashley, An Introd. to English Economic History and Theory, I. 150.
5. They accepted the dictum of Aristotle, made familiar to us from The Merchant of Venice, that barren metal does more good than money. Money was increasingly used as a medium of exchange; the modern concept of capital had not been evolved. The fact was overlooked that the money borrowed could purchase, e.g., a cow, a corpse, or a.cross breed. This view is repeated by the Council of Aix-la-Chapelle (789), and by the 9th cent. ecclesiastical law becomes positive in extending the prohibition to the laity; bishops are to remit all Christians to private persons to obtain usury, and to punish the recalcitrant. Legislation thereon has changed its form to the usury laws, which are in the context.

3. Legislation thereon has changed its form to the usury laws, which are in the context.

4. Legal and ecclesiastical law made the distinction that usury is forbidden only to the laity, and that a cleric who lends money is cut off from the communion of saints. The 2nd Council of Lyons (1274) went further, forbidding any community, corporation, or individual to permit the letting of houses to foreign persons. Spiritual penalties are reinforced by civil; by another canon the wills of unrepentant usurers were declared invalid, thus bringing usury definitely within the jurisdiction of the ecclesiastical courts. The Council of Vienne (1311) brought matters to a climax, declaring that usury is a sin, as of no effect or branding as a heretic any one who partially held that usury was not sinful.

4. In the Middle Ages,—This growing stringency indicates the advance of a tide that could not be checked. 'Since in almost every place the crime of usury has become prevalent,' admits the canon of the 3rd Lateran. Significant is the concession made in favour of the Jews by the 4th Lateran; only vast sums of money were exempted from usury. By the 11th cent. commerce was finding new channels; towns were arising, markets opening, and thus problems of trade became urgent. Churchmen themselves needed large sums for building and for Crusades. This activity in the money market called for readjustments and new methods. The Church had to reconsider her whole attitude to trade and economic practice. The old view that business was an evil, with its roots in covetousness, had to go. The interchange of goods by which men lived had to be accepted; only its methods must be morally examined. Christian principles had to be applied to the practical issues of life. The middle of the 12th century saw the publication of the Scholastic works of Thomas Aquinas. Even as he formulates his judgments on usury he has to make concessions, and, once one gap is made in the hedge of restriction, other gaps appear as the centuries pass, until

5. A squar or drawing a fixed rent for a piece of land could transfer to another that right. Real productive property (ser frigilgs) was the indispensable basis for this contract; but the privilege was extended later to shops, toll-booths, etc., so that even the不由 trader and usurer could raise money to expand their business in this way.

6. The stay-at-home merchant could entrust his goods to an agent—e.g., a son of a trading ship—by keeping the share of the profit of the venture. This partnership assumed many forms. There were two conditions: (1) the partner remained the owner of his capital; and (2) he shared in the risk, thus earning a moral right to a share in the profits. In view of all these gaps in the hedge it is difficult to maintain that the ban on usury seriously hampered trade and commerce. Indeed, no schoolman or canonist would have tolerated a contract which

1 E.g., Thomas Aquinas, Summa, II. ii. qu. lxviii.
2 Politics, I. 3, 32.
3 Cf. Ashley, II. 397 f.
long to impede forces so potent as the trading instinct in man and the international necessity of commerce. The masses during these centuries still lived largely by agriculture and the primitive crafts. Hence, not only farmer and craftsman had a big margin of wealth to tide over ill-health or bad harvests or grievous taxation. In such conditions the petty usurer was a temptation and a snare, as he is to-day in similarly undeveloped communities — e.g., India and Egypt. Moreover, interest calculated per month, as was the system then in vogue, resulted in exorbitant charges. As the zealous guardian of the poor and the distressed, the Church was probably wise in keeping her hands off usury. Her policy was certainly a long step in advance of the pagan practice by which the debtor was suffered to fall to the status of a slave. After the flight of the barbarians, moreover, there was a period of chaos; commerce was stagnant rather than seeking for new outlets. What wealth an impoverished society possessed was swallowed up in the necessities of life; only after her recovery would there be free wealth for development, and that found open channels in partnerships and rent-charges. When capital was thus scarce and lending the monopoly of a few, unlimited freedom to impose interest led to violence and produced a social cancer in that unripe age. Further, the Church was not herself detached from the realities of the economic world. She was one of the largest holders of property and monies, and Churchmen, as stewards of that material wealth, were driven to find ways and means of investment. The lessons of their own practical difficulties were not lost on them, as in their experience of the mortes prioriter.

The Franciscans, with their sensitiveness to the needs of the poor, instituted at Orvieto (1463), Pernig (1467), and elsewhere thereafter a system by which man-funds with a small loan to the poor on the security of pledges. 'But, writes Ashley, 'even with papal patronage and the promise of spiritual and temporal advantages to those who should subscribe towards so charitable a work, the managers of the mortes found it necessary to make a small charge for the loan in order to cover working expenses.'

A wordy warfare followed between the various orders, resulting in the notable judgment of the Lateran Council of 1515 by which the mortes were allowed to levy moderate interest, provided their object was to cover working expenses and not to make a profit. Such a verdict could not fail to have far-reaching effect. The Church, which had resisted usury in the interests of the poor was now compelled to allow moderate interest to an institution which existed on behalf of the poor. The Council itself apparently felt that the question had reached a new phase, and re-defined usury thus:

"This is the proper interpretation of usury, when gain is sought to be acquired from the use of a thing not in itself fruitful (such as a rock or a field), without labour, expense or risk on the part of the lender."

The controversy on the triple contract in the 16th cent. also shows forces moving towards the admission of interest. A capitalist class was emerging—a process that was aided by the large profits made by traffic in Indulgences for which the Church herself was responsible. The powerful banking house of the Fuggers of Augsburg was behind John Eck who championed this method of investment at the University of Bologna in 1515, and John Major argued with energy in its favour.

Three different contracts with three different men were arranged by the Fuggers for the investment of their capital in the banking business of the Augsburg furriers: (1) a contract of partnership, (2) a contract of insurance, (3) a contract of insurance against fluctuation of profit. Could a merchant make all three contracts with one man? That meant that his capital was guaranteed to increase. Was this the case?

At Bologna there was no decision. Yet the campaign taken up by Major and others might have achieved success but for the wave of reaction that came with the counter-reformation. Liberal opinion was swamped, and a reversion was made to the position of 1513, when the Practica of Sixtus v. (1586), which revived the sternest condemnation of usury as 'detestable to God and man, as condemned by the sacred canons, and as contrary to Christian charity.'

5. The Reformation and usury. The yoke of authority was broken by the Reformation and it was inevitable that in the freer atmosphere of Protestantism the binding strictures on usury should be cast off. Not that that process was unopposed. On the contrary, the removal of the Church's ban only showed how strong was the popular sentiment against the practice; witness Martin Luther's earlier deliverances on the subject. These are not the scientific judgments of the theologian, but rather the utterance of a son of the people, feeling keenly that oppression at the hands of the nobles and rich city merchants which led to the peasants' rebellion; there was also in the case his Christian fury against the Jewish usurers' ensnaring of his fellow-believers. His zeal for moral reform tended to swing him back towards the strictures of the Fathers. He called on ministers to preach against usury (1540). In more reasoned mood, however, in cases where the participators are not poor, he allows rent-charges on real land and interest that compensates for actual loss (damnum emergens and lucrce cessiones), provided the charge is moderate (four or five florins to the hundred).

Melanchthon professes to accept the traditional, Scriptural prohibitions. But a practical guiding consideration to his mind is whether the usury is so moderate as to have a disintegrating effect on the commonwealth, a consideration forced upon him doubtless by his study of classical times.

'Societas civilis non potest esse perpetua cum non servatur aequalitas . . . Exauritur ergo altera pars et non servatur aequalitas, si servari ostendit ut concasse fuerant immoediatae usares. . . .'

He allows a payment 'supra sortem,' not only in cases of damnum emergens and lucrce cessiones to those engaged in lucrative trade, but even where there is no damnum emergens, provided always the interest is moderate: 'Licit stipulare de eo quod interest etiam ante moram.'

It was left to Calvin, however, to finally open the sluice, and that, too, with a mood of suspicion intention behind part. His standpoint is really the same as that of his contemporaries.

Only he wrote to 10000 guards a guaranteed opinion, the substance of which was seized on and the reservations slurred over. The expression opposed was not for everybody. He hesitated to make any concession, feeling on the one hand, that to condemn usury altogether was to impose restrictions severer than the Lord Himself desired, and, on the other hand, that, if he yielded an inch, some would take an acre. And what he feared came to pass.

1 The Catholic Church has been slow to give official sanction to usury. As late as 1682 in the Juxta Perfectionis, Justinian II., follows canonist lines. Not till 1839 did the Holy Office allow, in a particular case, that interest could lawfully be taken for money lent by such people who were in lucrative trade. Cf. J. M. Harty, 'Historical Evolution of the Catholic Teaching on Usury,' in Irish Theol. Quarterly, iv. (1910) 17.

by the London municipality in 1363. The exact point of offence is defined in the revised statute (1390) which declares 'he that preaches usury to lend us more than is certain without risk.' The wide-spread bitterness towards the Jew was one other illustration of the popular verdict against usury. The very exorbitant nature of the interest allowed, which per cent. i.e. 433 was enough to breed odium, and kings made rather a questionable use of these strangers. Feeling rose so high that the Jews were expelled from the country, and the following century (1376) the citizens of London called for the same measure against the Lombards, the agents of the grievous papal exactions, who had taken over the detested trade.

The way to change was prepared by the relaxations of the canons themselves, but more by the fact that in the 15th century, money transactions were altering in character. The borrowers were no longer poor men in need, nor barons suddenly confronted with some savage taxation or a levy for a crusade. Traders making good profits now needed money for developing business; they were willing and ready to pay for loans. Many began to find themselves in better times with a margin to invest; the phenomenon of capital was emerging. Still, when Henry VIII in 1545, under the guise of limiting usury, really sanctioned interest at 10 per cent, he was probably in advance of public opinion. At any rate a wave of reaction followed, and the Act was repealed under Edward VI. War conditions marked the closing decades of the period. On the one side, the desire to 'too much squinted towards Moses' preached a stricter standard than even the canons and attacked rent-charges and partnerships.

The 'little more' of interest was likened to a sixth finger, a monstrous; the usurers were as ivy on the oak, all-devouring. 'To what shall I liken this generation? They are like a butterer's box; for as the butterers at last come to the butter, so all the money cometh to the usurer.'

There are indications of resentment of another kind caused by the arrival of a 'new rich' and the dispossession of old families by these 'ungraceful petty Brokers.' Irresistible forces, however, drove the other way. 'But good Lorde, how is the worlde changed,' writes Thomas Rogers, 'that which Infidels cannot abide, Gospellers allow.' The Reformation had broken the old spell of authority, and disciples of Calvin found ready listeners. Henry Bullinger and others spread abroad the doctrine that usury which was not only so far as it was 'biting.' But, as Cunningham has it, 'The most important factor was the revolution in English commerce which interested during the 16th century; for various circumstances had combined to bring about an entire recasting of the ordinary business system of the country. For one thing, the exclusive trading of the great gilds had suffered a series of severe blows and it was open to anyone to engage in commerce and win its rewards. The great improvements in the management of estates—as well as the planting of new industries—brought much wealth into the hands of many citizens all through the country. . . . For the first time in the history of England the circumstances were present which rendered the general formalisation of capital possible.'

The Act of 1571 marks the victory of the liberal school. The rate was lowered to 8 per cent in 1624, but more significant was the fact that in that measure an attempt was made to distinguish between usury and interest. The controversy smouldered on, but really for the time being the question had been settled by the advent of capital and the consequent changed conditions of commerce. The point at issue altered to the rate

2. Henry Smith, Works, ed. Thomas Fuller, i. 99.
5. Ib. sect. 190 (b).
of interest, for the limitation of which Thomas Culpepper, and others pleaded. John Locke entered the lists with some Considerations of the Consequences of lowering the Interest and raising the Value of Money (1691), but it was in another connexion that he made his most significant antecedence, anticipating the next phase of the controversy: 'For it is labour indeed that puts the difference of value on everything.'1 Jeremy Bentham's classic Defence of Usury also indicated a fundamental fact which makes the perennial question, 'The children who have eaten their cake are the natural enemies of the children who have theirs.'

The repeal of the usury laws in 1839 appeared to be 'the end of an old sin.' But the freedom was abused. The usurer with his merciless exactions again came under control by the Money-Lenders Act of 1860, which requires the registration of their business names and addresses and allows the court, where the lender prosecute s for debt, to cancel the contract if the rates are excessive. Petty loan business, however, still survives.

7. The modern phase of the problem.—History repeats itself in the present phase of the controversy. Usury has come to mean exorbitant interest, but the legitimacy of interest is still debatable. The early attacks on usury were motivated by the theory that the usurer will always be poor; the latest attack finds its strength in the plea that interest is an unjust tax on the labouring classes.

'The usurer, my Lord,—and observe as a final and inevitable truth—that whether you lend your money to provide an infested population with crotches, stretchers, hearth, or the railroad accommodation which is so often synonymous with the three, the tax on the use of these, which constitutes the shareholding of the debenture holders, is, naturally, exalted by avarice, and by no means an aid granted by benevolence.'3

Henry Smith said that the usurer was like a butler to whom all the counters returned. What offends the moralist-to-day is that money is lent by those who have abundance and returns to them to increase that abundance, the increase being the unpaid dues of labour, which alone, the argument runs, produces wealth.

'It is not only that "every gate is barred with gold," but that year by year the burden of the past is becoming heavier on the present. Wealth passes down from father to son like a gathering snowball, at the same time as industry gets massed into larger and larger organizations, and the guidance and supervision of the industry is taken more and more out of the hands of the worker and given to the capitalists.'

By interest, then, the socialist claims, the rich are made richer and the poor poorer and the very evil that Melanchthon had feared.

Is interest, then, an unjustifiable tax that could be eliminated? The experience of the Franciscans with their mendicant friars and Foucher with his Exchange Bank6 may well give pause. In spite of the strength of the socialist indictment, neither in theory nor in practice has the way out been demonstrated. The contention that labour alone creates value and that interest is the unpaid wage of the labourer and therefore wrong is not established unless it is reckoned that the service rendered by capital involves no sacrifice. The waiting or abstinence of the capitalist has not been swept out of court in spite of Lassalle's picturesque of the ascetic millionaires of Europe... like Indian penitents or pious saints... holding a plate to tempt the people to collect the wages of their abstention.'

'It is not true that the spinning of yarn in a factory after allowance has been made for the wear-and-tear of the machinery, 1 Of Civil Government (Collected Works, London, 1777, vol. ii. ch. v, § 49.
2 London, 1787, letter x.
3 John Hucin, 'Usury,' On the Old Road, London, 1855, ii. 225 f.
4 W. Stuart, prel. to Bülow-Flavinus.

is the product of the labour of the operatives. It is the product of their labour, together with that of the employer and subordinate managers, and is as capital employed; that is the product of labour and capital; and therefore the spinning is the product of labour of many kinds, and of waiting.'

Could even a socialist community abolish interest and so give the labourer the full value of his labour? The difficulty lies in the fact that so many kinds of labour are not equally productive. A vintage is harvested in 1920 and valued at hundreds of pounds. But in 1940 that value has increased enormously. Can labour be recompensed according to the value in 1940? It would be simple if the labourers could wait till 1940. But can they? Someone must wait, and that is the plea for interest—the price of waiting. Interest has been defined as 'human impatience crystallized into a market rate'; the premise that a man is willing to pay for this year's over next year's goods.'

Only if all labour yielded products of immediate use could the community return the same each year value for his whole labour. But in a progressive society effort must constantly be made for bettering conditions; expenditure must be put forth on schemes that can yield no immediate return. If the community has hired the next finer means of transport and a nobler social equipment, can they do so without denying themselves a portion of the value of their labour? Is sacrifice not inherent in progress? A socialist state might possess itself of much capital, but that capital would not be inexhaustible. Some day the question would arise: where is the capital to come from for these improvements? How can a state engaged in these enterprises with deferred returns except by raising some contribution from other fields of labour? This could be done only by raising the price of other goods above the level of their labour value, or by paying the labourers less than the value of their labour. Thus the socialist society has to impose a burden upon its citizens and deny them the full value of their labour just because of this fact that certain goods take time to mature; i.e. the element of waiting cannot be eliminated, and the price of that waiting must be paid.

'The complaint against interest is after all only a complaint that the great advantages of rapid progress cannot be had for nothing.'

What practical policy can be suggested? It is admitted that laws directed against usury simply lead to more exorbitant charges to cover the risk of breaking the law. The most successful antidote is the co-operative bank, which meets the needs of those most subject to temporary distress, such as the artisan and the peasant farmer. The popular dislike of interest springs from the worker's resentment towards the idle rich. That privileged individuals should draw from a community enough for a life of idleness and luxury 'will always be regarded as a fundamental immorality.'4

But, as Cassel goes on to point out, that really calls for a more equal distribution of the nation's wealth rather than tampering with the method of interest. Society must consider rather the methods by which superabundant wealth comes into a few idle hands—as the laws of inheritance, unsaved increment, and all forms of monopoly. Meaning the concept of the Christian Church is not to dictate any particular economic method but to maintain a zealous watchfulness over all developments in behalf of her ideas of justice, charity, and brotherhood.

4 Ib. p. 182.
USURY (Hebrew).—1. Terms.—These do not throw much light on the moral and religious ideas connected with the subject. The word 'šēq' [Shaqa], and has been supposed to imply the dependence of the borrower on the lender, but it is more probable that there is no connexion between the two uses of the word. 'Za' (to 'borrow') is also used in the sense of 'lend,' they have been supposed to imply the binding of the debtor to the creditor. Nouns from these roots are used for 'pledge' or 'security.' 'Za' is used for 'secure;' 'Itz (or 'Itza) means 'pledged,' 'nego,' 'neqah,' and 'neqah' 'interest.' 'Noshahah also means 'bide;' and 'neqahah is supposed to mean 'something bidden off,' or to refer to the injuries and ruthless behaviour of a creditor in exacting interest. The AV 'usury for neqahah simply meant 'interest' when AV was translated, and the suggestion which it now makes of exorbitant interest is misleading; it is simply 'interest,' as far as the mere word is concerned, apart from the implications of any special context. From the obviously neutral word ναχα, EV 'interest,' from ανα, 'to be great,' is often used as a parallel and synonym of 'neqahet; and the word is rendered in the LXX by ραγχή, and in the Vulgate by usura, which are simply the ordinary words for 'interest.'

2. History.—Debt plays only a small part in the OT, partly, no doubt, because it was not an important factor in primitive times, though it became more so as Israel grew more civilized and life more complex. In an agricultural community the failure of the crops might lead to borrowing (Nu 15:14), i.e., in debt by becoming security for a friend (Pr 6:1). In later times taxation for a native government or for the payment of tribute to a foreign suzerain was a source of some importance. As for a legal case of concern, debt always seems to have originated from such causes; the OT has little or nothing to say about the spendthrift who got into debt through sloth or extravagance. Moreover, there is no commercial borrowing, which is a source of profit to the borrower, though known at a very early period in Babylon—e.g., in the time of Hammurabi—does not seem to have existed in ancient Israel. There is no certain and definite information as to the rate of interest. The clause Neh 5:1, 'Restore ... the hundredth part of the money,' has been understood to mean that interest was at the rate of one per cent per annum, and that creditors were to forgo their interest; but most recent authorities—e.g., Batten, ICC—read 'neqaha' 'interest,' for 'm'ath, 'hundredth.' Two apparently contrary words were used with the interest being determined mainly by the urgent need of the borrower. The consequences of debt might be severe; loans were sometimes obtained on the security of land or houses, i.e., on mortgage; when the debtor could not pay, the creditor took the property. Where there was no such security, the debtor and his family might be sold as slaves (2 K 12:4, Neh 5:4).

3. Moral and religious significance.—Like other misfortunes, debts and the usury which was sometimes committed in connection with them is sometimes regarded as judgment on sin (Dt 15:10-15), and it is one of the characteristics of the wicked man that he borrows and does not repay (Ps 57:10). It has been supposed to help with the debtor and seeks to help and protect him; his position is regarded as the result of unavoidable misfortune. It is the duty of the prosperous man to help his poor neighbour in distress benevolent loans; it is not to be a pure matter of business (Dt 15:1-7); Ps 37:11, Pr 19:17). Necessaries are not to be pledged; thus the widow's ox, or her clothing, or a millstone are not to be taken in pledge (Dt 24:6, Job 24:4). Clothing when pledged must not be kept over night (Ex 22:26, Dt 24:8). In fact the OT does not regard with approval the practice of taking pledges (Job 22:24).

In view of the fact that the insolvent debtor and his family might be sold as slaves, Ex 21:11, which directs the emancipation of the Israelite slave at the end of the seventh year, was designed to give some measure of relief to the debtor. This attempt is carried to an extreme in Dt 15:1-7, which appoints a sippur, or release, at the end of every seventh year, when all debts were to be taken away. The sequel shows what a large-hearted generosity the Deuteronomic writer demanded from his fellow-countryman:—Beware that there be not a base thought in thine heart, saying, The seventh year, the year of release, is at hand; and thine eye be evil against thy poor brother, and thou give him nought (15:10). There is, however, no evidence that the law was ever enforced; it is on the face of it impracticable. Indeed, the Deuteronomic writer himself seems conscious that he is only setting forth an ideal. This appears from 15:1. We may set aside the AV 'Save when there shall be no poor among you,' and adopt the RV 'Howbeit there shall be no poor with thee, i.e. no one shall need to borrow,' for Jehovah will surely bless thee ... if only thou diligently hearken unto the voice of Jehovah thy God, to observe to do all this commandment. As Driver says in his comment on this passage, there will be 'no occasion for the present law to come into operation, if only the nation so comports itself as to merit Jehovah's blessing.' On the other hand, Dt 23:19-25 and other commandments, so that there were poor, the nation was not likely to observe this particular ordinance; in either case, it would be a dead letter; so it seems to have been. Other authorities propose the less probable rendering, 'Howbeit there should be no poor in thee, i.e. the nation should establish a social system which would make poverty impossible. The Priestly Law of jubilee (Lv 25) has a similar object to the release. It provides that at the year of jubilee all land shall go back to the family to which it originally belonged, and that an Israelite sold for a slave through poverty shall be treated as a hired servant, and released. As the loss of the family inheritance or of personal freedom was often due to debt, this law would have mitigated the unhappy consequences of what we should call bankruptcy. Here again this law, like that of the release, was a dead letter. Nevertheless, these laws are evidence of the anxiety of the legislators that neither an individual nor a family should be permanently ruined by insolvency.

A persistent feature of OT teaching is the prohibition of interest as between Israelite and Israelite, although interest may lawfully be taken from a foreigner (Ex 23:18; Deut 23:19). A higher rate than 25% is sometimes regarded as usury (Ps 15:7; Pr 28; Ezek 18:1-7; 22:25; Neh 5).
USURY

Interest would often be exorbitant and indebtedness long in arrears. Ex 22:24, (Deut 23:20), understand it to be fraudulent and unjust claims, successfully asserted through the corrupt administration of the law or by sheer violence. There can be no doubt that borrowing and its consequences contributed to the transference of the land from the yeoman farmers to comparatively few wealthy landowners against which the prophets protested. Doubtless the evils of the system largely arose from exorbitant interest, and from the unreasonable and imperious behaviour of creditors; but, as has already been pointed out, *neshekh, EV 'usury,' is not usury in its modern sense of excessive interest, and we cannot give it that meaning in the OT passages in which it occurs; it means interest generally. It is true that Ex 22:24 specially refers to the poor, but even then Benzing and Nowack are probably wrong in holding that it means only excessive interest; and in inutor passages there is no ground for any such limitation. As we have said above, the writers had not commercial loans in view, and their teaching was not intended to apply to interest in that connection. The objection to 'interest,' seems to rest on two main grounds: (1) that the prosperous man with a superfluity should help those in difficulties, suffering from want; if gifts were made voluntarily, at least there should be free loans; (2) as in modern times, it was constantly the interest that ruined the debtor, where he might have repaid the capital, so that the social evils which crushed the poor were largely associated with interest; the simplest and most effective remedy seemed to be to prohibit interest altogether. In other words, the principle involved is that wealthy men should see in the misfortune of their fellow-men a need for generous assistance and not an opportunity for exploiting the need of the unfortunate.

The prohibition of interest and the other provisions in favour of debtors, like many other humane provisions in the OT, apply only to Israelites; lending to foreigners is expressly allowed (Dt 23:20), and is spoken of as a privilege granted by God to the faithful Israelite (Dt 29:9).

This is another example of the particularist attitude often found in the OT.

**Literature.**—See sections on 'Debt' in Heb. Arch. of Ewald, Bechtel, Bank and Nowack; the commentaries on these passages cited, especially Driver on Ex 22:25 (Cambridge Bible, Commentary of the CO, Oxford 1896), and the present writer's article 'Debt' and 'Usury' in BDB.

W. H. BENNETT

USURY (Jewish).—I. General views of Mishnah and Talmud. In the Mishnah and Talmud usury is indicated either by the Biblical word פִּיסָא or, as is more frequently the case, by the term פָּרָק. Both terms denote money, food, or any article which a man gives on loan to his fellow-man, on the condition that the latter repays something for the loan in addition to the original sum lent. The discrimination made in modern times between 'usury' and 'interest' is unknown to Jewish law. All 'increase,' whether large or small, is prohibited. Judaism has ever regarded the lending of money by one Jew to another Jew as merely a way of relieving the latter's temporary distress, an act of pure charity. The basic assumption is that the borrower is poor and wants money to satisfy his own personal wants. It is one of the 365 'negative precepts of Judaism that a Jew may not lend on loan to another Jew. This prohibition is based on Lv 25:7, 'Thou shalt not give him thy money upon usury, nor lend him thy victuals for increase.' Another of the 365 'negative precepts of Judaism is that a Jew may not borrow from another Jew on interest. This is derived from Dt 23:20, 'Thou shalt not lend upon usury to thy brother—'the peculiar 'Hippli' form of the verb מָמַשָּׁה 'to increase.' This prohibition is aimed in this case at the borrower. Likewise the Judaism of Talmud and Mishnah forbids any Jew to be an intermediary or agent or surety or co-borrower in any usurious transaction between Jew and Jew. The Rabbis by a curious exegesis derived this prohibition from the redundancy of the phraseology in Ex 22:25, 'If thou lend money to any of my people that is poor by thee, thou shalt not lend him as usurer, neither shalt thou lay upon him usury.' The medieval Jewish codes lay it down that, in the case of a Jew who has become a convert to another religion, it is forbidden to a Jew to lend to, or borrow from, him on interest. Likewise it is forbidden to a Jew to lend to, or borrow from, a Karaita Jew on interest.

2. Different kinds of usury. The Talmud and the medieval Jewish codes enumerate several kinds of 'increase' (מָמַשָּׁה). These are (a) פִּיסָא פָּרָק, i.e. 'fixed increase,' (b) פָּרָק פָּרָק, i.e. 'the mere dust of increase,' (c) פָּרָק פָּרָק, i.e. 'the semblance of increase,' and (d) פָּרָק פָּרָק, i.e. 'some means other than money.' They all refer, of course, to dealings between Jew and Jew. The first of these denotes the ordinary transaction where interest on loans is paid direct on a loan, in violation of the express command of Scripture. The second (often called 'Rabbinical increase' as distinguished from the first, which is frequently known as 'increase under the Mosaic Law') denotes interest paid in some indirect way connected with bargain and sale, or interest the amount of which was not stipulated nor mentioned at all when the loan was first transacted but which was paid subsequently or unjustly by the borrower or taken voluntarily by the lender with the consent of the borrower. It also covers cases where interest was paid by the borrower on the mere anticipation of a loan. A rule of this kind would forbid, on the ground of usury, the sale of futures, made when the market-price has not yet been fixed. Thus the Talmud says:

A man should not say to his neighbor: 'Give me a kor of wheat and I will return it at threshing-time.' because the market-price of wheat might rise in the meantime and the lender would profit.' Or, again, 'a lender may not lodge in the borrower's house free of charge nor may he rent anything from him at less than the standard rate.'

The third of the four above-mentioned kinds of 'increase' is illustrated by the case of a Jew who, after the loan has been paid, is allowed by the latter to perform some religious work on his property in connexion with synagogue-worship or home-ritual.

It is astonishing to read what an emphasis the Talmudic Rabbis laid on these sins of 'moral' usury. A loan from one Jew to another should be an act of kindness without the least expectation of profit. This, the OT 'Debt in all lands' has been upset by the Rabbis inexorably, in spite of changed times and conditions. Turning again to the already-mentioned four species of 'increase,' we should say that (a) פִּיסָא

1 See T. B. Bakkah 30a, Qm. 2 Th. 70b. 3 Th. 64b.
557, where charged, was recoverable at law, before the Jewish court ('Beth Din'). If the defendant refused, he was hanged by order of the court, unless for a small debt. The penalty was the same.

This was different. This was not recoverable. But, if the lender desired 'to fulfil his duty in the sight of Heaven,' it was obligatory on him to return the charge made. In other words, it was an act of religion, not of law.

According to the medieval Jewish codes, the prohibition against taking or giving interest was suspended in the two following cases:

(a) Acting Rabbis or teachers of the Law, in borrowing from, or lending to, one another articles of food such as grain, etc., were allowed a fixed interest up to 20 per cent. But such charges were not to be made with frequency lest they might thereby set an undesirable example to the laity. As Rabbis were not commercial men, such transactions were not to be regarded as usurious. It was merely one of the ways of Rabbis helping one another and helping themselves at the same time. It hence came under the heading of 'charity' rather than 'usury.'

(b) Money left by bequest or gathered for the support of orphans or the poor, or for the upkeep of schools for religious instruction or for the building of a synagogue, might be lent out on interest. This relaxation was made inevitable by the fact that in most countries of medieval Europe Jews were precluded by the prevailing laws from investing any funds in landed property or in any other business, as their reputation was closed to them, they felt complete justification in investing public funds on what was, in the strict sense, an undeniably usurious basis.

3. Usury as between Jew and Gentile.—According to Maimonides, a Jew lending money to a Gentile is relatively free from the temptation to charge interest. Maimonides regards this as one of the 'affirmative' precepts of Judaism, deriving it from Dt 23:19, which, according to him, should be translated 'lending and charging money to a Gentile.' But this view of Maimonides has been severely criticized by the later Jewish legalists and codifiers, and has never found acceptance generally. The prohibition of usury here is simply that in all transactions between Jew and Gentile interest may be given and taken by both parties.

Commerce is usurious. Usurious transactions, as was natural, frequently involved both Jew and Gentile. Hence, it was only to be expected that, where Gentile intervention took place in a loan between Jew and Jew (and vice versa, where Jewish intervention took place in a loan between Jew and Gentile), the temptation of the part of a Jewish lender or borrower to find a loophole for taking or paying interest, and thus evading the Jewish prohibition of usury as between Jew and Jew, was considerably more strong. Hence, when well aware of all these contingencies, and their enactments on many a nice point in this connexion are very searching. Here, e.g., are a few specimens culled from the Shalah' Arith of Qara:

'Suppose the money of a Jew is deposited in the hands of a non-Jew who went and lent it to another Jew on interest. If the non-Jew was responsible for the safety of the money then the Jew is allowed to receive the accruing interest. But if the non-Jew is not responsible for the safety of the money, then interest is prohibited.'

'Suppose the money of a non-Jew is deposited with a Jew. If the latter is responsible for its safety then he may lend it to a Jew on interest. But if he assumed no responsibility for the money, then he is allowed by Jewish law to lend it to a Jew. But he must not do this because it might convey a wrong impression.'

'A Jew says to a non-Jew, Come and lend me my money for interest to Jews and I will pay you as much for your work. The non-Jew accepts. Hence, because the money belongs to the Jew and the clerk has no responsibility. But if a non-Jewish money-lender asks his Jewish clerk to do the same, the transaction is prohibited. But, in fact he must not do it on account of the wrong impression which might be conveyed.'

'Suppose a Jew borrows from a non-Jew on interest, then it is forbidden for a follow-Jew to be a surety unless the lender distinctly stipulated that in case of default of principal he would make payment in specie against the surety [who would then sue the borrower and thus infringe the usurious law as between Jew and Jew].

These are but a few instances out of a large number given in the Shalah' Arith. USURY (Jewish)

4. History underlying the Jewish laws concerning money-lending and borrowing; vi. 4, 5 and 8. T"eh"a Beth, Laws of Usury, 1603.
UTILITARIANISM

in their efforts to earn an honest and reputable livelihood, the Jews were shackled. In England, Spain, and many other European countries he was absolutely forbidden by law to follow most of the trades and handicrafts which were open, without question, to all other citizens; and when, in rare instances, freedom was given, it was penalized and embittered by the imposition of special taxation. The Church left the Jews nothing to do except to deal in money or second-hand clothes. But it would be erroneous to suppose that the usurers of the Middle Ages were confined solely to Jews. The increasing spread of commerce and commercial enterprises in those days made it imperative for governments to devise expedients for evading the canonical embargo upon usury. Italy was the first European country to start this evasion. Others soon followed—with the result that the competition between the Christian (chiefly Italian) and Jewish money-lenders in England became so keen as to render the Jews less indispensible than they formerly were to the English Exchequer. The impression, that was brought England by Edward I. was the corollary of this fact.

5. The views of modern Judaism on usurers and usury.—The somewhat disproportionate tendency of Jews in recent times to follow the trade of money-lending may be set down as a piece of sheer atavism. Racial characteristics have a way of surviving long after the original causes which created them have disappeared. But it must be strongly emphasized that money-lending is considerably on the decrease among Jews of the 20th century. Commerce, handicraft, the professions of law, medicine, dentistry, literature, art and science, and daily—the present day are entering these callings in great numbers and with great gusto. Many of them are recruited from the ranks of the poorest parents. The trade of usury is looked upon with shame; and the usurer is stigmatized as a reproach to his people. In some Jewish communities to-day the money-lender is forbidden to have any voice in the affairs of the Synagogue and is socially tabued by the Jews themselves.

In fine, the attitude of modern Judaism towards usury practically coincides with the attitude of the Judaism of the OT, the Mishnah, the Talmud, and the codes. The trade of the OT is summarized in Exk 138. [He] ‘when there rise up upon usury, and lieth taken increase: shall he then live? he shall not live . . . his blood shall be upon him.’ On this passage the comment of the Talmud is, ‘The money-lender is compared to a murderer.’ The Mishnah2 includes the usurer among those who are disqualified from giving evidence in a court of law. The Shulhan Arukh—the code on which modern orthodox Judaism, whether as creed, law, or life, is based,—says:2

1 When can usurers be considered as having returned from their evil ways and as being again admissible as witnesses in a court of law? When they have torn up all the documents on which the principal and interest due to them from clients are recorded, and have cut up and destroyed them, so that they will never again lend on interest, not even to non-Jews. They must also restore to their former clients all the interest they have ever taken from them. If they can no longer identify all their clients they must devote the money to communal purposes.2

Those voices of the past are still expressive of general Jewish conviction to-day.

UTILITARIANISM.—I. INTRODUCTORY.—The term ‘Utilitarianism’ is used for both an ethical theory and a practical movement. The practical movement will be dealt with under II. 3. ii. below. As an ethical theory it signifies that the ultimate end is and ought to be general happiness, and that the action which the agent thinks will do the greatest good or the greatest happiness to the greatest number.

In Mill’s words: ‘The creed which accepts as the foundation of morals, Utility, or the Greatest Happiness Principle, that the conduct which, under any given circumstances, is objectively right, is that which will produce the greatest amount of happiness on the whole; that is, taking into account all whose happiness is affected by the conduct.3 By happiness Sidgwick means pleasure and freedom; and pleasure he defines as ‘feeling which the sentient individual at the time of feeling it implicitly or explicitly apprehends to be desirable; desirable, that is, when considered merely as feeling.’4

For utilitarianism Sidgwick prefers ‘some such universalism as Universalistic Hedonism,’5 He says ‘universalistic’ in order to show that the utilitarian end is general, not individual, happiness. G. E. Moore: ‘The utilitarian standard is not the agent’s own greatest happiness, but the greatest amount of happiness altogether.’6 Hedonism (q.v.) is a general principle regarding all systems of ethics which regard pleasure as the end actually aimed at (psychological hedonism), or as the end that ought to be aimed at (ethical hedonism). We may say that strictly the latter is alone worthy of consideration, for psychological hedonism, if true, makes any system of ethics irrelevant. But the earlier utilitarians based their theory of general happiness on the psychological assumption that man always desires pleasure, and that he is a co-operative creature, subject to the governance of two sovereign masters, pain and pleasure. It is for them alone to point out what we ought to do, as well as to determine what we shall do.7 Even J. S. Mill did not clearly distinguish between psychological and ethical hedonism.

The name ‘utilitarian’ (taken from ‘utility’ in the sense of pleasure or excess from pain) was first used by Bentham in 1831. In 1832, writing to Dumont, he said: ‘To be sure a new religion would be an odd sort of a thing without a name: accordingly there ought to be one for it—at least for the professors of it. Utilitarian (Engl.), Utilitarion (Gall) would be the more proper.’8

In his earlier writings Bentham used the word ‘utility’ with great freedom. In later life he preferred to speak of ‘felicity’ or ‘happiness’ as pointing more clearly to the ideas of pleasure and absence of pain. ‘Utilitarian’ had been as little used by Bentham that J. S. Mill believed himself to be the first to apply it to those who accepted the greatest happiness principle. Mill tells us that he found the word in Galt’s Annals of the Parish. It is there used to designate people who held certain revolutionary views current at the end of the preceding century. It was through Mill that ‘utilitarianism’ became the generally accepted names for the party and the creed.

II. HISTORICAL.—Utilitarianism, both as an ethical theory and as a practical movement, is English. The idea of the greatest good for the greatest number is no doubt to be found in Greek philosophy, in the Stoic conception of the ‘citizen-

ship of the world.' Leibniz, again, by establishing the general good or happiness as the end of law and of morality, is spoken of as the precursor of utilitarianism. The Benthamists of the 18th cent., especially Holbach, Montesquieu, and von Holboc, were to some extent occupied with the same ideas. But the movement to which the name is given is an English movement, and, with the first descriptive treatment of it historically, the account may be confined to English writers.

1. We must begin with Hobbes. The theory of association which played so large a part in the earlier utilitarian speculation, can be traced to him, although he never worked it out. His influence, which continued for two centuries, is best seen in the effect it produced upon those who opposed his theories. His conception of man as an unsocial and egoistic being with an insatiable desire for power, and his notion of morality as political obligation, had to be answered. And these answers were often the means of modifying the philosophical beliefs of his opponents, among whom were the utilitarians.

The answer to Hobbes made by the Cambridge Platonists does not concern us here. A contemporary of theirs, however, Richard Cumberland, foreshadowed utilitarianism in his De Legibus Nature, published in 1672. This work was lengthy and confused, and utilitarian principles were combined with others. Cumberland's object was to prove, as against Hobbes, that morality was natural, man being by nature social. He defined good as 'a preservation,' following Hobbes here, but he included in preservation both perfection and happiness. Most stress was laid on the latter, and most practical use was made of it in the working out of the theory. Individual happiness, he held, must coincide with the good of all because of the Divine sanction: 'The greatest Benevolence of every rational Agent towards all, forms the happiest state of every . . . and therefore the Common Good is the supreme Law.'

A popular fallacy makes Locke (Essay concerning Human Understanding, 1689) the founder of English utilitarianism. Moral action was necessarily selfish to Locke, but this he held in common with other non-utilitarian moralists. He did not adopt the greatest happiness principle, and he did not work out the pleasure side of his theory. English utilitarianism, largely due to him, was, of course, of immense importance in the development of utilitarianism.

An answer in the 18th cent. to the unmitigated egoism of Hobbes came from the Moral Sense school. Their method was psychological rather than rationalistic, and took the form of a new account of human nature. Of this school Hutcheson, through his emphasis on benevolence, approached nearest to the position which utilitarianism was to take up, and from Hutcheson came the formula 'the greatest happiness for the greatest numbers.' A slight change of this formula, as Cotterham, in another translation (1767) of Beccaria's Dei Delitti e della Pena, states that he got it from Priestley. That was probably a mistake, as it does not occur in Priestley's works. The exact formula used by Bentham, 'the greatest happiness for the greatest number,' is found in a translation (1767) of Beccaria's Dei Delitti e della Pena. Whether it was suggested to him by Hutcheson is not known.

In 1731 there was published anonymously a small dissertation stating the conclusions of King's Origin of Evil. It was entitled Preliminary Discourse concerning the Fundamental Principle of Virtue or Morality. The author was John Gay. This was the first definite statement of the utilitarian position. Brown, Tucker, and Paley are the logical successors of Gay. Their theories, far as essentials are concerned, may be regarded as expansions of Gay's outline. In the Dissertation Gay treats first of the criterion of virtue, then of the motive, and finally of the sanctions. This was the programme which was the psychological groundwork of his theory of ethics. The' immediate criterion' of virtue Gay found in the will of God. But, as God must will the happiness of men, the latter is the 'criterion' of God's will. Happiness is defined as a 'sum of pleasures.' The motive of the moral agent is egoistic, for all desire is desire of pleasure. Gay is then faced with the fundamental difficulty which beset all the utilitarians, up to and including John Stuart Mill, of proving the coincidence of the pleasure of the individual and of society.

For, if men were all to be actuated only by a desire for their own pleasure, it was manifest that the coincidence of the pleasure of the individual with general pleasure must be proved before the latter could become an object of desire. Gay met this difficulty by the theory of the happiness of others. He enumerated four sanctions—the natural, the social, the legal, and the religious. He emphasized the last, for he realized that there is no sanction which can ensure the complete coincidence of the interests of the individual and of society. Happiness is not the only value of the individual except the supernatural sanction. It is their emphasis on this sanction which constitutes Gay, Brown, Tucker, and Paley theological utilitarians, and which, starting as they did with the selfish theory of the moral motive, renders their system of utilitarianism alone consistent. In his discussion of the supernatural sanction Gay brings out clearly his theory of obligation, which became the accepted one. The moral imperative was not categorical but conditional, he held—conditional on the required action being a means to the happiness of the individual. Complete obligation to virtue could then come from God only, for He alone could make the coincidence between 'my happiness and general happiness' perfect.

Then those who, either expressly exclude, or don't mention the will of God . . . must either allow that virtue is not in all cases obligatory . . . or they must say that the good of mankind is a sufficient reason. But how can the good of mankind be any obligation to me, when perhaps in particular cases, such as laying down my life, or the like, it is contrary to my happiness?'

The latter part of the Dissertation is given up to the discussion of psychology. The psychological basis for the utilitarianism of Gay found in association. Through the law of association other things beyond the pleasure of the individual might be desired as proximate ends, though the ultimate end was pleasure. In this way altruistic desires might be developed. Gay held it unimportant that the ultimate motive was always egoistic. If a man helped another, his immediate motive being kindness, the fact that his ultimate object was to benefit himself was of no consequence.

It has seemed worth while to discuss Gay's treatise rather fully because, though it consisted of 50 pages, was published anonymously, and attracted little notice at the time, it contained all the essentials of the utilitarianism that we now advocate. We find no important modification of Gay's utilitarianism made by any one until we come to John Stuart Mill.

In 1740 David Hume published his first treatise on Ethics, being book iii. of the Treatise of Human Nature. The Inquiry concerning the Principles of Morals was published in 1758. Hume's standpoint was very different in the two works. It is
unnecessary to discuss the cause of this change; so far as concerns ethics, the Inquiry seems to represent his real position. In his analysis of the moral influence of the works of Hume, Mill recognizes modern utilitarianism. But he exercised no influence until the time of J. S. Mill. In the Treatise Hume makes the moral motive ultimately egoistic; his principle is enunciated by Gay, and afterwards found in Hartley, Brown, Tucker, Paley, Bentham, and James Mill; whereas in the Inquiry his account of human nature implies original benevolence as well as egoistic tendencies. Disinterested benevolence is natural.

'Hume's treatment of the moral motive is more important than his treatment of the principle of utility. He accepted the latter, but he did not use it consistently in his analysis of the virtues.

Between Hume's two works there appeared Observations on Man, his Frame, his Duty, and his Happiness (1748) by the physician David Hartley. In this work Hartley elaborated the theory of the association of ideas in a way which greatly influenced the later associationist school and especially James Mill.2 Tucker was not a typical associationist-utilitarian. Much of his work was given up to theological discussions. He accepted the utility principle, but, like J. S. Mill, he held that there were qualitative differences in pleasures. In practice also he seems to have held that conduct should be guided by 'obedience to the Scripture precepts' rather than by consideration of consequences. He was probably the first to raise the difficulty of the hedonic calculus. It is impossible, he says, 'for the most sagacious and experienced persons to make any accurate estimate of the future consequences of particular actions, so as, ... to determine justly, what action would contribute most to augment happiness and lessen misery.'3

2. Theological utilitarianism. — Just twenty years after Gay's Dissertation there appeared the Essays on the Characteristics (1751) by John Brown. In 1768 the first volumes of Tucker's The Light of Nature Pursued were published, and in 1785 came Paley's Principles of Moral and Political Philosophy. Brown, Tucker, and Paley, along with Gay, are the exponents of theological utilitarianism, the first definite form which utilitarianism took, and which exercised an influence during the time and its influence. A generation trained in Locke's was not disposed to adopt the system of the Moral Sense school; but welcomed the rival system whose groundwork was a conception of consciousness as composed of separable atoms, sensations and ideas, aggregated into clusters.

The outline of theological utilitarianism was found in Gay's Dissertation, and neither Brown, Tucker, nor Paley added anything vital to it, though they amplified and popularized it. J. S. Mill says that Brown in his Essays on Shaftesbury's Characteristics produced an able argument for utilitarianism. His account of the essays that Mill refers. Brown's argument was in brief, that common sense pointed to conduciveness to happiness as being the essence of virtue. He argues that 'those very affections and actions which in our ordinary course of things, are approved as virtuous, do change their nature, and become vicious in the strictest sense, when they contradict this fundamental law, of the greatest public happiness.'

The ultimate end Brown gives as the 'voluntary production of the greatest happiness.'1 The moral motive, he says, is egoistic. 'The moral motive, by which individuals can possibly be induced to the practice of virtue, must be the feeling immediate, or the prospect of future private happiness.2 How can the end and the motive be reconciled? 'It is self-love alone that can be called seeing and all-powerful God' alone can do it, a God who will hereafter make them happy or miserable, according as they designedly promote the happiness of their fellow-creatures.' This is all entirely in line with Gay. Brown did not touch psychology. For that he definitely refers his readers to Gay.

Abraham Tucker was an extraordinarily prolix writer. There are seven volumes of The Light of Nature Pursued. The first four appeared under the name of 'Edward Search' in 1768; the last three were issued posthumously. Like Gay, Tucker turned to theology, and, like him, he held that ultimately men were egoists—though not in the sense of Hobbes. Altruistic tendencies were explained by contingency and translation. Tucker seems to have convinced himself that the agency is to him no more than the dependency of actions upon volition.4 The will follows the strongest motive. All this was thoroughly consistent with the Lockeian groundwork and with the ordinary utilitarian theory of obligation. Two points remain to be stated. Tucker says that there are no qualitative distinctions in pleasure. This had been implicit in Gay and others. The second point has reference to the hedonistic calculus. Tucker argued, and Paley followed him here, that there must be general rules of expediency, and that these must be followed rather than any effort made to calculate the probable felicific consequences of any particular act. Tucker states many of the modern objections to the calculus.

1 Our tastes,' he says, 'varying as much as our faces makes us very bad judges of one another's enjoyments.... Nor do we judge much better of our own pleasures, for want of being well aware of their aptness to clay upon repetition and to change their relish perceptibly according to our dispositions of body or mind or the circumstances we happen to stand in.'

2 In 1785 William Paley published his Principles of Moral and Political Philosophy. Paley received a complete philosophical system from his predecessors, and he acknowledged freely the debt he owed, in especial to Tucker's Light of Nature Pursued. But he applied and popularized their principles in such a successful way that the name now associated almost exclusively with his name. His definition of virtue—the doing good to mankind, in obedience to the will of God, and for the sake of everlasting happiness—lends itself easily to caricature. Though his views did not differ in any essential from those of the previous theological utilitarians, he emphasized more unpleasantly than any of his predecessors the selfishness of the moral motive, and the doctrine of rewards and punishments after death. He was consistent on obligation. 'We can be obliged,' he said, 'to nothing, but what we ourselves are capable of gaining or losing something by. If it is possible, however, to make too much of the weaknesses of theological utilitarianism as found in Paley, and to forget the sound sense of most of his teaching. In computing the consequences of his teachings he took into account what would ensue if all men acted as the individual was acting. 'Whatever is expedient, is right.' But then it must be expedient on the whole, at the long and the very particular end. The conclusion is not applicable.
forgery is a damage of twenty or thirty pounds to the man who accepts the forged bill: the general consequence is the stoppage of paper-currency. 1 And he brushed aside the specious argument that an act done under pressure of necessity can have no moral consequences. 'Those who reason in this manner do not observe, that they are setting up a general rule, of all others the least to be endured: namely, that savagery, whenever savagery is practicable, will justify any action.' 2 Paley analysed the commonly accepted morality of his time to prove that considerations of utility underlay it, and he applied this utilitarian criterion to pressing problems of the age. He exercised very considerable influence, and his Principles became the standard text-book at Cambridge.

3. Empirical utilitarianism and the philosophical radicals.—Ethical theory of Bentham. — Jeremy Bentham was born five years after Paley, but he lived until 1832. Paley having died twenty-seven years before. Paley went to Cambridge, and Cambridge became the centre of his method of utilitarianism. Bentham went to Oxford, but it was in London that he gathered disciples round him and founded his school. The Introduction to the Principles of Morals and Legislation was published in 1789, but it was not published until 1799, four years after Paley's Principles had appeared, and only then through the insistence of Bentham's disciple, John Stuart Mill.

Bentham made little mention of his indebtedness to his predecessors, but of Hume's Treatise and of the treatment of utility in it he said: 'For my own part, I well remember, no sooner had I read that part of the work which teaches on this subject, than I felt as if scales had fallen from my eyes.' 3 Priestley also, according to his own account, influenced him. Apart from these acknowledgments, and those to French and Italian utilitarian writers, he states his ethical position as though it were original to himself. So far as his theory is concerned, the only originality lay in his treatment of the hedonistic calculus. At the same time utilitarianism will always be associated with the name of Bentham. There is no doubt that the hold it obtained on men's minds was largely due to his thorough application of the utility principle in the spheres of economics, jurisprudence, and politics, and to his gathering round him a devoted group of followers who applied, taught, and popularized his doctrines.

Bentham's system is nowhere better set forth than in three works—A Fragment on Government (1776); The Principles of Morals and Legislation (1799), where, however, the author's first concern is with jurisprudence rather than with ethics; and the Deontology published posthumously in 1834. J. S. Mill held that the Deontology had been considerably altered by John Bowring, who edited it. The crude egoism of Bentham's theory is more apparent in it than elsewhere, but there seems no reason to doubt that it substantially represents his views.

Bentham assumed dogmatically the hedonistic end, 'the greatest happiness of the greatest number.' 4 His 18th-c. individualism led him to picture society as composed of a number of separate and largely antagonistic units. As J. S. Mill put it in his 'Essay on Bentham,' written at a time when he was emerging from the influence of Bentham: 5

Bentham's point of view with regard to sanctions was somewhat different from that of the theological utilitarians. They used sanctions to prove the ultimate harmony of the interests of each with the interests of the community. For Bentham, sanctions were the result of the general desire of the rational individual to act for the general good. He did not attack the problem of cases where no system of legal rewards and punishments could bring about the consequences he sought.

The list and number of sanctions differed in the three ethical works, but in the Principles Bentham mentioned four. They are practically the sanctions of social contractism. They are, the natural consequences of actions such as 'disease produced by dissipation'; the political sanction, or legal penalties and rewards; the moral sanction, or public praise and blame; the religious sanction, or the effect of religious hopes and fears. The last was of little importance: 'As to such of the pleasures and pains belonging to the religious sanction, as regard a future life, of what kind these may be, we cannot be open to our observation.' 6 Bentham's teaching on sanctions is summed up by himself in the following passage:

'It has been shown that the happiness of the individuals, of whom a community is composed, that is, their pleasures and their security, is the end and the sole end which the legislator ought to have in view, that the sole standard to which each individual ought, as far as depends upon the legislator, to be made to conform his behaviour. But whether it be this or any other thing else that is to be done, there is nothing by which a man can ultimately be made to do it, but either pain or pleasure. Therefore four distinct classes of forces from which pleasure and pain are in use to flow: considered separately, they are the natural, the physical, the political, the moral, and the religious; and inasmuch as the pleasures and pains belonging to each of them are capable of giving a binding force to any law or rule of conduct, they may all of them be termed sanctions.' 7 In a footnote he adds: 'Sanction, in Latin, was used to signify the act of binding, and, by a common grammatical transition, any thing which serves to bind a man: to wit, to the observance of such or such a mode of conduct.' 8

Bentham, driven by the determination to have some weapon with which to attack abuses consecrated by custom, elaborated the hedonistic calculus. The morality of an act, he said, was to be decided by majority principle; he devised a calculation of the consequences of the act in terms of pleasure. In order that the calculation should be scientific certain things must be taken into account, viz., the utility of the act, the pleasure, its certainty, its propinquity (Sidgwick points out that this has no locus standi unless it affects the certainty), its fecundity, or 'the chance it has of being followed by sensations of the same kind,' and its purity, or 'the chance it has of not being followed by sensations of the opposite kind.' 9 The extent of the pleasure, or the number of people affected, should also be taken into account and the whole so balanced that the total quantity of pleasure attendant on an act should be known. Quite consistently Bentham disallowed any difference in quality in pleasure: Other things being equal, joy is as good as happiness; and happiness is as good as contentment; so he urged that government should be put into the hands of all, and advocated universal suffrage, voting by ballot, and annual parliaments.

1. Principles, ii. viii.
2. ib. ii. vii.
3. A Fragment on Government, sec. 1., ib. viii.

Bentham's utilitarianism was based on the assumption that every individual has a natural right to be happy. His theory of government was in harmony with his psychology. Members of Parliament, he held, must be restrained, and restrained, to be restrained at all; so he urged that government should be put into the hands of all, and advocated universal suffrage, voting by ballot, and annual parliaments.

1. Principles, i. iii. § 10.
2. ib. i. iii. §§ 1, 2.

VOL. XII. — 36
In 1776 Bentham's first work, *A Fragment on Government*, was published anonymously. Towards the close of his life the *Code of Parliamentary Reform* appeared, and *The Constitutional Code* was published posthumously. Not only political theory but also jurisprudence received attention at his hands. 'He found the philosophy of law a cluse,' Mill said, 'and left it a science.'1

Bentham attracted a band of disciples and founded a school. It is to the efforts of his disciples that we owe the publication of the bulk of his works. Bentham, needless to say, was intemperate in his estimates of different to the fate of his writings. Among all Bentham's followers James Mill had the greatest ability. He joined Bentham in 1802. From that time the philosophical radicals were a group of men with a definite ethical, political, and economic faith. J. S. Mill said of this creed

1 'It was not mere Benthamism but rather a combination of Bentham's view of that of the modern political economy and with the Hartelian metaphysics. Malthus's population principle was quite as much a banner and point of union as Bentham. Those only are happy (I think) who have a system of dispensation.'

Bentham and James Mill were contemporary rather than successive leaders of the school, as Leslie Stephen put it, 'Bentham's life was cut short; Mill lived only four years after Bentham's death. A prominent part was also played by George Grote, the two Ausins, and, last of all, J. S. Mill. In 1824 the *Westminster Review*, the organ of the school, was first published, and did much to spread its creed. Psychology was supplied by James Mill in his *Analysis of the Phenomena of the Human Mind*. Mill adopted the association psychology of Hartley, but discarded his cumbersome, some physiological theory. His theories of the self, the external world, and belief—largely Hume's position—were also accepted by the school. In economics, the views of Ricardo and Malthus were adopted. As they held the theory of the iron law of wages, the only method of amelioration lay, they thought, in restraining the increase of population. Their general policy was one of laissez-faire, and this attitude was a contributory cause to their disappearance from politics. They returned some members to the first reformed parliament, but they were afterwards swallowed up in the Whigs.

iii. John Stuart Mill. J. S. Mill spoke of his father as 'the last of the 18th century.' He himself was a transition thinker, and many of his inconsistencies are explained by his endeavour to reconcile Benthamism and utilitarianism, as illustrated in his utilitarianism and his positions, or by saying that he was one of the two great fictional minds of England in this age.

J. S. Mill gradually moved away from the position of Bentham and his father. In 1863 came what he called 'a crisis in my mental history,' when he fell under the influence of German idealism.

1 'Never, indeed, firmware in the conviction that happiness is the test of all rules of conduct, and the end of life. But I now thought that this end was only to be obtained by not making the direct end. Those only are happy (I thought) who have their minds fixed on some object other than their own happiness; on the happiness of others, on the improvement of mankind, even on some art or pursuit, followed not as a means, but as an end in itself.'

In 1833 Mill published in the *London Review* an answer to Adam Sedgwick's criticism of Paley. Under the influence very largely of Sedgwick and of W. Whewell the theological utilitarianism of Bentham's followers in the school. In his reply to Sedgwick Mill indicated what was his own theory of human nature—that man is originally altruistic. After his father's death he spoke out more plainly, and in 1838 he appeared with the *London and Westminster Review* his 'Essay on Bentham.' The substance of his criticism of Bentham is that his reading of human nature was too narrow. He 'failed in deriving light from other minds by his own' utilitarian principles such as to furnish him with a 'correct and complete picture of man's nature and circumstances.'2 The influence of the idealism of Coleridge, Wordsworth, Carlyle, Sterling, and Maurice can be traced through the formative paragraphs of his later work. 'Man is never recognized by himself as being capable of pursuing spiritual perfection as an end; of desiring, for its own sake, the development of his own character to his standard of excellence, without hope of good or fear of evil from other men. More than this, no one has been interested in the limited form of Conscience, this great fact in human nature escapes him. Nothing is more curious than the absence of recognition in any of his writings of the existence of conscience, as a thing distinct from philanthropy, from affection for God or man, and from self-interest in this world or in the next.'3

In his small work *Utilitarianism* Mill united the two ends of pleasure and spiritual perfection by his theory of qualitative differences in pleasure, and conscience reappeared therein as the internal sanction to be opposed to Bentham's external sanctions. In an essay published in the *Westminster Review* in 1852, entitled 'Dr. Whewell on Moral Philosophy,' Mill, probably under the influence of James Mill, said, 'till, married, reverted to the narrower and more orthodox utilitarianism which he held in early life. This essay of Mill's, however, was only one move in the controversy between Bentham and his leaders of the school of 'Paley reversed.' That school, led by Sedgwick and Whewell, after superseding Paley in Cambridge, found itself confronted with a new Benthamism—a Benthamism which in the hands of Mill and his disciples, were developed by minds by means of a wider interpretation of human nature.

Mill's defence of utilitarianism which appeared in *Froude's Magazine* in 1861, and was published in book form in 1863, was largely directed against the Cambridge school.

1 'I must again repeat,' he said, 'that the happiness which forms the utilitarian standard of what is right in conduct, is not the agent's own happiness, but that of all concerned. As between his own happiness and that of others, utilitarianism requires him to be as strictly impartial as a disinterested and benevolent spectator. In the golden rule of Jesus of Nazareth, we read the complete code of the ethics of utility. To do as one would be done by, and to love one's neighbor as oneself, constitute the ideal perfection of utilitarian morality.'

2 As Sorely says, Mill claimed for utilitarianism that 'it is not selfish, because it regards the pleasures of others as the means of equalizing the number and value of pleasures, it is not sensual, because it recognizes the superior value of intellectual, artistic, and social pleasures as compared with those of the senses.'

3 Mill separated himself most completely from his predecessors in teaching that pleasures differ not only quantitatively but qualitatively. 'It is quite compatible,' he said, 'with the principle of utility to recognize the fact, that some kinds of pleasure are more desirable and more valuable than others;' and again, in the oft-quoted words, 'it is better to be a human being dissatisfied than a pig satisfied; better to be Socrates dissatisfied than a fool satisfied; better to be ourselves even if amiss, than to be others even if in the right.'
development. In Liberty his mind was turning that way when he took for the motto of his third chapter von Humboldt's saying, 'the end of man is . . . the highest and most harmonious development of the individual.' His paragraph on qualitative differences in pleasure contrasts, however, with his statement a few pages earlier in the Utilitarianism as to the theory of Duty. In the latter he said the utilitarian is thoroughly grounded—namely, that pleasure, and freedom from pain, are the only things desirable as ends; and that all desirable things . . . are desirable either for the pleasure inherent in themselves, or as means to the promotion of pleasure and the prevention of pain.\footnote{Utilitarianism, ib., p. 10.} Mill departed from Bentham also in his emphasis on the internal sanction of conscience, which he defined as 'a feeling in our own mind; a pain, more or less intense, attendant on violation of duty.'\footnote{Ib., p. 41.} That the growth of conscience was largely dependent on right education—on the attaching of the appropriate sanctions; and also psychologically it was to be explained by association, Mill held with Bentham. But he also held that the core of conscience was the 'social feelings of mankind.'\footnote{Ib., p. 65.} He reasoned, in his fellowship with our fellow creatures. . . . The social state is at once so natural, so necessary, and so habitual to man, that, except in some unusual circumstances or by an effort of voluntary abstraction, he never conceives himself otherwise than as a member of a body.\footnote{Ib.} Here he follows Hume and Hartley in attributing to man natural altruistic tendencies, in crediting him with 'sympathy,' as opposed to Bentham's theory of self-interest as the motive of action.

Mill's often criticized 'proof' of utilitarianism rested on the doctrine of psychological hedonism.\footnote{Ib., p. 34.}

---

For fuller account of the Mills see art. MILL, JAMES AND JOHN STUART.

The most distinguished of Mill's younger associates was Alexander Bain of Aberdeen. Bain was described by the liberal philosopher as 'the man of most independent and unembarrassed mind; he was neither a philosopher nor a utilitarian, but a genuine and profound thinker.' The point of chief interest in his ethics is his treatment of disinterestedness. 'To obtain virtue in its highest purity, its noblest hue,' he said, 'we have to abstain from the mention of both punishment and reward.\footnote{Ib.} So far as I am aware, to the use of our disinterested impulses, they are wholly distinct from the attainment of pleasure and the avoidance of pain. They lead us, as I believe, to sacrifice pleasures, and incur pains, without any compensation.'\footnote{Ib.} Sorley says of Bain: 'He had no illusions except the great illusion that mind is a bundle of sensations tied together by laws of association.'\footnote{Ib.} In the light of this metaphysical theory of the self—with slight variations the accepted theory of the utilitarians—it is easier to understand the utilitarian conception of an end which is a succession of pleasant feelings, 'a sum of pleasures,' and which left reason out of account.

4. Evolutionary utilitarianism; Herbert Spencer and Leslie Stephen.—Spencer's ethical views are found chiefly in the first and last parts of the Social Statics and in The Principles of Ethics. The first part of the latter, The Data of Ethics, was published separately in 1879; the remainder of the Principles in 1882-83. The Social Statics was published in 1851, eight years before Darwin's Origin of Species. But even at that date the evolutionary hypothesis had taken hold of Spencer's mind—it was in the air. He was led by his investigations into the origin of species, by his researches into the variation of forms found in different natural surroundings, by his emphasis on the principle of natural selection as explaining these variations, gave a wide-spread currency to the evolutionary theory. Nor must the part which A. Russel Wallace played be forgotten. Darwin also saw, however, that natural selection alone would not explain evolved conduct, for this . . . more evolved conduct is, the smaller a part does natural selection play, because civilised society protects the unfit and does not allow them to be exterminated. This difficulty is overcome by the—now largely discarded—hypothesis of the transmissibility of acquired characters. Evolution by natural selection—or, in his own phrase, 'survival of the fittest'—and by means of the transmission of acquired characters was for Spencer the explanatory and synthesizing principle of all knowledge.

Ethics, however, was Spencer's main interest. Everything else led up to this. For his ethics see art. SPENCER, HERBERT, 2 (5).

Our concern here is with the relation of Spencer's ethical system to utilitarianism. We have to see why he himself called it 'rational utilitarianism' as opposed to the empirical utilitarianism of Mill, and why it is generally known as evolutionary utilitarianism. Spencer's opposition was directed against the method of utilitarianism, not against its greatest happiness principle. He accepted pleasance as the good, though even here he was not consistent.\footnote{Ib. Life is good or bad, he said, 'according as it does, or does not, bring a surplus of agreeable feeling.'} The good, he unhesitatingly called 'pleasure.' Pleasure is the end and is 'as much a necessary form of moral intuition as space is a necessary.
form of intellectual intuition.' But Spencer was an evolutionist as well as a utilitarian, and at other times he had defined 'intuition as the perception of a human society' or 'quantity of life measured in breadth as well as length.' It is true that he stated that conduct tending to preservation of life was good because life involved a 'surplus of agreeable feeling.' The preference was for utilitarianism, which should conduct to preservation of the individual, of the family, and of the society, only supposing that life brings more happiness than misery. This supposition is not a series of detached acts, he said, in each of which a man can calculate the sum of happiness or misery attainable by different causes. Like Spencer he held that the evolved state was necessarily a happy one. The radical criticism of Stephen's theory, as of all evolutionary theories of ethics, is that he took what is, namely the trend of evolution, and identified it with the ideal, with what ought to be.

5. Rational utilitarianism; Henry Sidgwick.

E. Albee in his History of English Utilitarianism, published in 1902, spoke of Sidgwick's Methods of Ethics as 'the last authoritative utterance of traditional utilitarianism.' Though his system, Sidgwick differed in some ways from all his predecessors. He was 'a Utilitarian,' but 'on an intuitional basis.' He found in certain fundamental 'intuitions' the basis of his system, whereas the earlier utilitarians were opposed to all forms of intuitionism, though in J. S. Mill a new spirit of understanding and appreciation of the rival school had begun to show itself. Sidgwick, further, though an adherent to the discarded psychological hedonism, which had formed part of the stock-in-trade of preceding utilitarian writers, including J. S. Mill.

Sidgwick's analysis of the nature of desire was very similar to Butler's. 'Our conscious active impulses,' he said, 'are so far from being always directed towards the attainment of pleasure or avoidance of pain for ourselves, that we can find everywhere in consciousness extra-regarding impulses, directed towards something that is not pleasure, nor relief from pain. He naturally discarded also the utilitarian theory that extra-regarding impulses were not primary but were due to 'association' and 'translation.'

'to what I may call my own school, to Hume, Bentham, the Mills, G. H. Lewes, and Mr. Herbert Spencer. Indeed not following Spencer in defining the good as length and breadth of life; he defined it as the 'health of the social organism.' Society may be regarded as an organism,' he said. This organism is several in the social tissue, modified in various ways so as to form the organs adapted to various specific purposes. The working of evolution could be seen in the social organism.'

Leslie Stephen was opposed, like Spencer, to the hedonistic and evolutionary view. Life is not a series of detached acts, he said, 'in each of which a man can calculate the sum of happiness or misery attainable by different causes.' Like Spencer he held that the evolved state was necessarily a happy one. The radical criticism of Stephen's theory, as of all evolutionary theories of ethics, is that he took what is, namely the trend of evolution, and identified it with the ideal, with what ought to be.

UTILITARIANISM

amounted to little more than the acceptance of what purported to be the verdict of common sense. He arrived too rapidly at the conclusion that the good was desirable sentient life, and from that it was no great step to define it as

Sidgwick found a second principle—the maxim of prudence, that 'one ought to aim at one's own good on the whole'—to be as fundamental as that of utility. This maxim, when one's own good or pleasure is emphasized rather than good 'on the whole,' brought confusion into Sidgwick's theory. He admitted that there were times when a choice had to be made between individual and general pleasure and when all mundane sanctions failed to reconcile them. To rationalize his system a harmony between universal and particular reason had to be shown. This harmony depended on the existence of a supernatural Being. Unable to accept the Christian faith and gaining no positive assurance from psychical research of an all-good and all-powerful Being, Sidgwick left his system with the dualism in it unresolved. For a further account of Sidgwick's ethics see art. SIDGWICK (HENRY).

6. Present-day utilitarianism.—Little has to be said about utilitarianism since the time of Henry Sidgwick. To-day it is not a theory of paramount importance in ethics. As J. S. Mackenzie says, it is still the dominant view among writers on economics, but it has ceased to have much hold on English ethical thought. 1 To him, utilitarianism can be distinguished. One contains Sidgwick's disciples. E. E. Constance Jones, who may be taken as representative of this school, has under the title Rational Hedonism re-stated Sidgwick's position and met objections to it. 2 Another school, that of the rationalist utilitarians, has found a spokesman in J. M. Robertson. In his Short History of Moral Robertson calls Sidgwick's ethical logic inconclusive, 'leaving as it did that earnest thinker conscious of a need for a future state.' 3 There is, however, an unresolved antagonism in Robertson's own theory. For, while accepting the greatest happiness principle as the ethical end, he says, 'there can be no stronger "obligation" than that of following your own happiness as you see it.' The two ends, he thinks, would often be in harmony owing to the individual's natural altruistic tendencies, or to pressure exerted by society or the working of conscience. A man 'cannot, unless he is abnormally selfish, escape discomfort in knowledge of suffering or injustice or failure in reciprocity.' But what of the 'abnormally selfish' man? In Robertson's theory, no blame, in the ethical sense, attaches to him for his failure to act for the common good. He is what he is through no fault of his own. The criminal is the result of 'pathological conditions,' or a 'product of maleducation or stress of circumstances.' Free will is demolished and with it moral responsibility.

1 For the critical utilitarian... the bad character remains bad, baseness remains baseness, the liar a liar, the thief a thief; and his task is simply to try to guard himself and society against each form of evil in the best way, as society acts against the madman, in whose case even the free-willer recognizes the physical causation. 2 And what of the man, not necessarily abnormally selfish, who is in spite of the discomforts of our actions contrary to the interests of others, doing what appears to himself to be for his own pleasure? He is, on Robertson's principles, doing that which is his own strongest 'obligation'; nor does any blame

I. INTRODUCTION.—1. The utilitarian theory of duty.—Utilitarianism failed signalily in dealing with duty. It tended to 'identify duty with coercion; to change the "ought" if not into a physical "must" at least into a moral "must" of fear of pain and hope of pleasure.' 1 This was the natural outcome of the psychological hedonism on which the ethical theory was based. Bentham said of pleasure and pain that it was for them alone not only 'to point out what we ought to do' but 'to determine what we shall do.' 2 On this basis he was consistent in adding in the Dictionary that it was 'very idle to talk about duties,' and that 'ought is a word that ought to be banished from our vocabulary.'

According to psychological hedonism, all desire was desire for pleasure, and the strongest desire excited by the keenest pleasure moved to action. Bain said:

'Wherever two present sensations dictate opposite courses, there is an experiment upon the relative strength of the two. The resulting volume of one is stronger, and is the ultimate canon of appeal.' 3

On such a foundation as this no scope is left for the concept of moral obligation.

But the consciousness of duty could not be ignored—the consciousness of something higher than and conflicting with inclination, in the light of which inclination 'ought' to be suppressed. Utilitarians accordingly dealt with the duty consciousness empirically by explaining its genesis and function. It owed its origin, they said, to sanctions external or internal; pleasures and pains so attached to acts that the individual forbore to follow his first inclination and to act for his own selfish interest, and acted for the interests of all. Now there is no doubt that an individual is brought to a consciousness of moral obligation and to a knowledge of particular duties through social influences. It is not here, but in its account of the ultimate nature of moral obligation, that the utilitarian explanation is inadequate.

Later utilitarianism, as represented by Sidgwick and his school, was not hampered by psychological hedonism. Sidgwick said:

'It seems that the notion of "ought" or "moral obligation"... does not merely import (1) that there exists in the mind of the person judging a specific emotion... nor (2) that certain rules of conduct are laid down which will follow on their violation... What then, it may be asked, does it import? What is the definition of the "right," or "right," and other terms expressing the same fundamental notion? To this I should answer that the notion which these terms have in common is too elementary to admit of any formal definition.'

Sidgwick thus refused to resolve the "ought" into anything else. As we have seen in the account of the views of J. M. Robertson, rationalist utilitarianism has no place in its system for moral obligation. The "ought," as understood by the ordinary moral consciousness, is excluded from any determinist system. For this reason, it is not certain that on a thoroughgoing analysis of the system of Sidgwick and his school any logical place would be found for the concept of moral obligation.

2. Motive and intention.—The controversy as to whether the proper object of moral praise and blame is 'motive' ('spring of action') or 'intention' (the object of desire) is a bitter one. 'An action done from duty,' Kant said, 'derives its moral worth, not from the purpose which is to be obtained by it, but from the maxin by which it

is determined.1 In opposition to this we have the utilitarian position. 'There is no such thing,' Bentham said, 'as any sort of moral that is in itself bad. All moral right and wrong depends entirely upon the consequences, what to do. And J. S. Mill holds that the moral right and wrong depends entirely upon the intention.2 'Intention' Mill defined as 'what the agent wills to do,' as opposed to motive, 'the feeling which makes him wish to do it.' It is important to note that Bentham and the Millis were entirely consistent in holding that moral quality did not lie in motive. On their own theory, that pleasure was the only motive, they could have come to no other conclusion.

'Let a man's motive be ill-will; call it even malice, envy, cruelty; it is still a kind of pleasure that is his motive: the pleasure he takes at the thought of the pain which his own or any one whose he expects to see, his adversary undergo. Now even this wretched pleasure, taken by itself, is good.4

The sharp line drawn by utilitarianism between motive and intention has had a considerable influence. It has tended to induce other moral theories which rested on a truer psychological basis to make a separation between motive and intention, attributing moral quality to one only. Secondly, it has tended to make morality external. With regard to the first point the truer attitude seems to be. With regard motive and intention as distinguishable but not separable—as the effective and ideational sides of the same thing—and to hold that moral judgment belongs to the two taken together. This was the whole moral position of Bentham's definition of motive and intention puts this well: 'Intention is the outcome foreseen and wanted; motive, this outcome as foreseen and wanted.'5

With regard to the second point, utilitarianism, finding no real quality to reside in consequences, though in 'attempted' consequences, made morality an external thing. According to Mill:

'The morality of the action depends entirely upon the intention—that is, upon what the agent wills to do. But the motive, that is, the feeling which makes him will to do what he does, makes no difference in the act, makes none in the morality: though it makes a great difference in our moral estimation of the agent, especially if it indicates a good or a bad habitual disposition—a bent of character from which useful, or from which hurtful actions are likely to arise.'6

The last part of this paragraph seems to point to character as the final object of moral judgment, and to make it a good in itself. This, however, is illusory. At the end of ch. iv. Mill states the position clearly in the following words:

'The object of the will must be right to do right means to good, not intrinsically a good; and does not contradict the doctrine that nothing is a good to human beings but in so far as it is either itself pleasant, or a means of attaining pleasure or averting pain.7

3. The hedonistic calculus.—J. M. Robertson says that the great task which faces moralists to-day is a system of 'applied ethics.'8 Utilitarianism professes to supply a scientific calculus—the hedonistic calculus of Bentham—which renders this system of applied ethics possible.

Bentham summed up his schema of mensuration in the lines:

\[
\text{Intense, long, certain, speedy, fruitful, pure—}
\text{Sensations of pleasure and in palatable endure.}
\]

Such pleasures seek, if private be thy end:
If it be public, wide let them extend.
Such pains avoid, whichever be thy view:
If pains must come, let them extend to few.1

While still adopting Bentham's calculus, most of his successors pleaded not for a fresh inquiry into every act but for rules founded on well-considered utility.

Is the utilitarian calculus theoretically possible? Some moralists, including J. S. Mackenzie, have denied that it is possible. The calculus implies that a quantitative judgment is applicable to pleasures, that a certain intensity can be balanced by a certain duration of pleasure. The difficulty about the calculus, however, is not theoretical but practical. There is no known unit of mensuration. Further, pleasure-pain values vary according to persons, times, and circumstances. Albee says that the one really fatal objection to the calculus in his opinion is that urged by Spencer in the Social Statics that 'there would necessarily be an important shifting of the scale of hedonic values with every stage of intellectual or moral progress (or decadence) in the order of the individual, the community, the nation, or the race.'2 This practical difficulty, the lack of scientific precision, is intensified when we remember that the pleasure-pain consequences have to be estimated for all who engage in the calculation, all the persons, the individual, the community, the nation, or the race.3

Who are these? Our own family? Our fellow-countrymen? The present generation? Or must we act so as to promote the welfare of future generations? J. S. Mill did not limit happiness to mankind. The good act is one by which happiness is 'to the greatest extent possible, secured to all mankind; and not to them only, but, so far as the nature of things admits, to the whole sentient creation.'4 This widening of the scope of the calculus is in keeping with the modern conception of organic life as a whole. In practice, however, utilitarians have narrowed the scope of the calculus, which seems to point to its failure as a scientific rule.

4. Pleasure the ethical end.—Against those utilitarians who said that pleasure was the only thing which could be desired some critics of utilitarianism have held that pleasure cannot be the object of desire at all, and that, if not an object of desire, it cannot be the ethical end. It seems, however, truer to hold that pleasure may be desired, and other things that pleasures may be, and often are, desired because they are pleasant. Nor should we, with Green, deny the possibility of a 'sum of pleasures' as the ethical end, for by this is meant no more than pleasure lasting as long as possible and as intense as possible.

The first criticism of pleasure as the ethical end that must be made is that it lacks the quality of virtue which the moral consciousness demands in the good and affords no explanation of the essence of the particular virtues. Huxley's statement, 'If it can be shown by observation or experiment that theft, murder and adultery do not tend to diminish the holiness of the person, they, in the absence of any but natural knowledge, they are not social immorality,' has simply to be denied. J. S. Mill's admission of a qualitative difference in pleasures is really an admission that for moral conduct one must transcend pleasure as either the supreme standard or the supreme good. Further, as Green said, there must be permanence in the ethical end. Pleasure does not fulfill this requisite.

4. Utilitarianism, p. 17.
The ancient city of Vāsāli (Visālā of Ramāyaṇa) was equally sacred to the Jains and the Buddhists long ago. It is now represented unquestionably by the village named Basār or Basārī (not Basar or Bāsār, as in nearly all books), situated in the Hajipur subdivision of the Muzaffarpur District of the Bihar and Orissa Province, in 25° 59' N. and 85° 8' E. The site of the city occupies a space about ten miles in circuit, which includes several villages besides Basār and many ruined mounds. The most interesting group of remains, situated near the village of Bakhirā at the north-west corner of the site, probably stands outside the line of the city walls, which, so far as is known, appear to have been built of mud, not masonry. The largest and most prominent mound, evidently the site of the fortified palace or headquarters of the local ruler, stands in the south-east corner of the city area and is called Bisalgarh, 'the fort of Kajā Bīśālī,' the eponymous hero of the place. The village of Basārī is on the south and south-west of that mound. The identity of Vāsāli with the group of remains associated with the village of Basārī is conclusively proved by the survival of the ancient name with only slight modifications; by geographical bearings taken from Patna and other places; by topographical details as compared with the description recorded by Hiuen-Tsiang (Yuan-Chiaw), the Chinese pilgrim in the 7th cent.; and by the finding on the spot of sealings of letters inscribed with the name Vasiśa. The documents, which were addressed to officials and other residents, have totally disappeared. The sealings found number about 1000, of which two or three bear the name of the town. The collection ranges in date from about 200 B.C. to A.D. 500, and is of much interest for many reasons, but need not be further described here, as it gives no information concerning the history of religion.

1 H. Barker, in Mind, 1899, p. 418.
2 L. I. 47, sc. 13 in Schlegel’s text.

Although the site of Vāsāli has been visited and described by three professional archaeologists, Cunningham, Bloch, and Spooner, their explorations, owing to limitations of opportunity, have been extremely slight and superficial, so that in reality very little is known concerning the local remains of antiquity. The area of the city offered tempting possibilities for future inquirers. No distinct local tradition of the ancient glories of the city has survived. The identity of the site has been completely forgotten by the people, and is known only to a few students of Indian antiquities. No pilgrims visit the ruins, and no consideration of the ancient town or shrine exists among them. Yet few places in India have stronger claims upon the veneration of both Jains and Buddhists. Vardhamāṇa Mahāvīra, commonly spoken of as the founder of the Jain Church, belonged to a noble family of Vasiśa, where he was born and spent all his earlier life. After he had entered upon the ascetic career, he is said to have resided in his native town or the immediate neighbourhood for twelve rainy seasons, during which travelling was unlawful for persons of his profession. The Jain scriptures often mention Vasiśa. The archaeologists have not sought for Jain remains on the site, and nothing in their reports would lead the reader to suppose that the Basārī area was the birthplace of Jains, as it is known to moderns. Brāhmanical tradition ignores Vasiśa almost completely, and no remarkable event in the history of orthodox Hinduism seems to be connected with the locality, although in the 7th cent. the territory of which Vasiśa was the capital contained several scores of Hindu temples, besides hundreds of Buddhist stūpas and vihāras, which have been obliterated and deserted. The Jain establishments at that time were still numerous, and remains of them must survive. Nobody has thought of even looking for them. Such attention as the site has received has been bestowed almost exclusively on efforts to trace Buddhist holy places described by Hiuen-Tsang.

1 The best account of the life of Mahāvīra is that in ch. III. of Mrs. Sinclair Stuart’s The Heart of Jainism, which gives a summary of the conflicting legends of the various sects. See also II. Jacob, Jainas Sutras, pt. 1. (SBE xvii.), and art. JAINAS.
Vaisesika

Tsang. The discovery of the sealings mentioned above was accidental in the first instance. The earlier Chinese pilgrim, Fa-Hian, who visited Vaisali at the beginning of the 5th cent., mentions only a few of the most notable sacred buildings which were then standing. His account implies that in his time the city was inhabited and that the holy places were maintained. The sealings establish beyond doubt the fact that during the reign of Chandragupta II. (c. A.D. 375-413), at the time when Fa-Hian was travelling, Vaisali was an important place, governed by a prince of the imperial Gupta family. It was in the province of Tirra or Drabhukti, the modern Thirutt. The decay of the city and the gradual desertion of the Buddhist institutions took place in the interval between A.D. 405 and 637, the approximate respective dates of the visits of Fa-Hian and Huen-Tsang. The ruin of the city may be ascribed to the decline of the Gupta power and the troubles connected with the Hun invasions of the 5th and 6th centuries. Nothing is known concerning the local history between the days of Buddha, about 500 B.C., and the visit of Fa-Hian nine centuries later.

In the time of Buddha Vaisali was the capital of the Lichchhavis, a tribe, people, or nation who were regarded as descendants of the Vaisali sect of the Vaishali nation. But Huen-Tsang distinguishes the Vaisali territory from the Vyri country to the north-east, roughly equivalent to the modern Darbhanga District. The origin and affinities of the Lichchhavis, who certainly were foreigners, afford much room for speculation. Spooner seems to suggest that they were domiciled Persians. The writer of this paper believes that they were a mixed Mongolian race, akin to the Tibetans and other Himalayan peoples. They had many peculiar customs, quite different from those of ordinary Hindus. Manu 1 treats them as Vrišya Kṣatriyas, who did not observe fully Hindu dharmas. They lived under the government of an aristocratic oligarchy or senate, of which the president was called king. The legendary splendours of their capital are often mentioned in Buddhist books. The Dūlta, or Tibetan Vinaya, thus describes them:

"There were three districts in Vaiśali. In the first district were 70,000 houses with golden towers; in the middle district were 14,000 houses with silver towers; and in the last district were 21,000 houses with copper towers; in these lived the upper, middle, and lower classes, respectively." 2

The city was imagined as a kind of earthly paradise, beautified by splendid buildings and charming parks, in which countless birds made melody. The Lichchhavis were believed to have lived in a round of continuous festivities. The chiefs waged war with both the Bimbisāra and Ajātashatru, the kings of Magadha with whom Buddha had dealings. The city, according to an early tradition in the Dūlta, was reckoned among the six great cities, the other five being Śravasti, Saketa, Champa, Vārānasī (Benares), and Rājagaha.

The political pre-eminence of Vaiṣali at an earlier period is indicated by the strange story in the Bhuddha-Sāla Jātaka. 3 We are told that the wife of Bandhula, commander-in-chief of the Śravasti kingdom, felt a longing instinct to the condition of pregnancy, and insisted on her lord taking her to Vaiṣali because, she said, 'I desire to go and bathe in the waters of the Śravasti city where there is one place of the kingdom where the king may get water for the ceremonial sprinkling.' 4 Although it is impossible to explain the allusion fully, it is clear that the water from the sacred tank at Vaiṣali was regarded as the last resort in the law and consecration of 'the kings' wherever they may have been. The LichchhAVISIS at a later period were Vaiṣali and Bimbisāra.

Vaiṣali stood on the ancient royal road leading from Pātaliputra (Patna) to Nāpāl, the line of which is marked by four Āsoka pillars and other notable ancient remains. The city thus was in direct communication with the imperial capital and with many places of high importance in the olden time. The distance from Patna is about 27 miles in a direction a little west of north. The Lichchhavis were the only city distant enough to dwell for about eight centuries from 500 B.C. to A.D. 300, when they reappear as the source from which Chandragupta I. (q.v.), the founder of the imperial Gupta dynasty derived. That chief married a Lichchhavi princess, and his powerful son, Samudragupta (c. A.D. 330-375), habitually described himself as the 'son of the daughter of the Lichchhavi.' Probably the Lichchhavis of Vaiṣali had been subject to the suzerainty of the Kusans, had become independent when the Indo-Scythian dynasty waned, and then had made themselves masters of Pātaliputra. Their own city certainly flourished.

1. Thereafter, for the discussion of this subject the reader is referred to the references given in the Introduction of the forthcoming volume of the Lichchhavi excavations, by the late Mr. Hoernle, F.R.S. 2. N. 465 of Cambridge tr., vol. iv. p. 94. 3. See art. COSMIA (Buddhist).
therefore introduce an entirely new element into the world of Brāhmaṇ thought. Further, both systems in their common definition and arrangement of logical ideas upon which their influence and fame depend. These common characteristics have led to a complete fusion of the two systems in the later philosophical literature of India, and to a failure to distinguish Vaiśeṣika and Nyāya doctrines on the part of earlier European students of Indian thought. Now, however, for a better understanding of the systems, we must enable us to determine the original distinction of the two systems. The Nyāya used to be regarded erroneously as the earlier, and it is only recently that the priority of the Vaiśeṣika has been recognized.

Its founder bears the name of Kanāda, Kanābhāṣka, or Kanāgabhū. All three names have the same meaning, viz. 'devourer of atoms'; whence it follows that these names must have originally denoted a system of mockery bestowed on account of the atomistic character of the Vaiśeṣika doctrines. The atomlessnicknames, which in course of time have become real names, are often met with in the Indian world of letters. Kanāda is supposed to have composed his text-book, the Vaiśeṣikākāra, between 500 and 400 B.C. He is supposed to have been the inventor of a system, a part of which, or all of which may be known, and for that purpose assumes six categories, which in his judgment comprehend all existing things. In discussing these categories and their subdivisions, he treats of the most diverse problems, especially in cosmology and psychology, so that a complete system of philosophy is built up upon his doctrine of the categories. The following are the categories: 1. substance (dravya); 2. quality (guna); 3. movement or action (karanam); 4. association (samādhyā); 5. difference (viśeṣa); 6. inherence (saṃveṣa).

To the category of substance are assigned: earth (i.e. all organic and inorganic substances with the exception of the remaining four elements), water, fire, air, ether, time, space, soul, and the organ of thought (manas). To begin with, it appears to us strange that time and space are included among substances. Kanāda's conception of substance, however, is wider than ours; he intends by it that which has qualities and movement, and is the immediate basis of phenomena. The resemblance of the category to the nature of time and space, to which Kant was the first to give a final answer, is discussed, strangely enough, only incidentally and occasionally, in the whole of Indian philosophy. In this respect the Sāṅkhyā philosophy has made a distinct advance, in that it regards time and space as two qualities of the eternal matter regarded as a unity.

The exposition of the category of substance affords Kanāda the opportunity of setting forth his atomic doctrine, which is derived from Buddhist sources. This has been shown by W. Handt in his treatise on the Vaiśeṣika philosophy. According to the doctrine of Kanāda, the atoms of earth, water, fire, and air are eternal and uncreated. Although they themselves have no extension, their heterogeneous nature is the cause of the extension and visibility of the combinations of atoms. How this is to be understood, and where the visibility of these combinations begins, on these points Kanāda himself—apart from the silence of the Vaiśeṣikākāra—does not seem to have provided any definite views. Later teachers of the school set forth the theory that an aggregate of three atoms (try-ānuka)—others say, of three double atoms (dev-āyuka)—possesses extension; when it is visible, the shape of the dust mote (trasaṃreṇa) dancing in the sunlight.

The whole of this doctrine is vigorously combated in the philosophical works of the Vedánta and Sāṅkhyā, and indeed for reasons obvious on both sides. The adherents of these two systems assert that, if the individual atoms are possessed of extension, the aggregate cannot be extended: for every quality of a product is determined by the similar quality of its material cause. The cosmogeny of the two systems of Vaiśeṣika system depends upon its theory of the atoms. It is also dominated by the wide-spread Indian conception, that periods of creation and destruction of the universe follow one another in regular order; and on each occasion the evolution and decay of the universe are effected in the same way and by the same causes. The following explanations are in conformity with the exposition of W. Handt, only that they do not begin, as he does, with the dissolution of the universe, but with its development.

During the period of dissolution, by which, however, the three infinitely great and therefore eternal and unchanging substances, ether, space, and time, are unaffected, no combination of the four elements of gross matter takes place, nor any union between the numberless individual souls and the atoms. But the soul possesses an element in a latent condition in the shape of dispositions. When the retributive force of merit and demerit with all its inevitable consequences, which here also, just as in the other systems of Indian philosophy, is the power that urges the universe on its course, is again aroused, the period of dissolution comes at once to an end. The souls therefore unite afresh with the atoms; and by this means a movement is started in the universe which marks the beginning of a new creation of the material universe. This movement first originates in the atoms of the air, giving rise to double atoms, and through them to the gross matter by which &c. forth and fills space. Thereupon within the elements of air the atoms of water combine together, whence in the same way the great ocean of the universe is produced. Within this ocean again the earth atoms come together, and form after the rise of double and triple atoms the solid mass of the firm earth. Finally, the element of fire comes into being, its atoms also combining in the same way within the water. The resulting fire is divided into the fiery element, which in a certain sense represents the guard that restrains the destructive force of the fiery element, in order that its destroying power may be prevented from interfering with the organic course of the evolution of the universe. After the material universe has thus come into being, empirical existence begins afresh for the souls. These unite with bodies in accordance with the consequences of their work, still unconquered from the preceding world-cycle; and in a new series of existences leap up for themselves merit and guilt, and earn reward and punishment until the cycle comes to an end. In the Sāṅkhyā philosophy, a cause is assigned compelling the dissolution of the universe; but in the Vaiśeṣika the process of its dissolution is accounted for in a very remarkable way. By their continual wandering through numberless souls the souls are so weakened and exhausted that they need a long period to recruit. Just as living creatures upon earth after the sufferings and toils of the day sink at night to sleep, and remain in their tins unoccupied and with their experience of pleasure or pain, so a universal night spreads over the universe, wherein the individual souls may recover from the sufferings of the saṃsāra. Further, a remarkable explanation is not possible in a system which,

1 Die atomistische Grundlage der Vaiśeṣika-Philosophie nach den Quellen dargestellt, Rostock, 1900.

VAISNAVISM

670

like the Sankhya, maintained that souls were
Only a soul that actually
destitute of qualities.
experiences, wills, and knows could be thought of
as in a condition of exhaustion. That, in fact, the
Vaisesika philosophy does conceive of souls as
endowed with qualities of their own will be understood from a consideration of the second category.
The process of the dissolution of the universe
goes on, then, in the following manner. The affections disappear which are evoked by the action of
merit and demerit in the individual souls, and
which form the bond between body, the senses,
and the external world. The motive force therefore is restrained which maintains the cycle of
existence. The bond is consequently broken which
exists by the power of merit and demerit between

the material atoms and individual souls. The four
atomic elements are now dissolved in regular succession, the earth in water, the water in fire, the
fire in air.
The process of the dissolution of the
atomic elements is effected in the reverse order to
that of the formation of the material products from
the atoms, affecting first the triple atoms, and after
their destruction, when only double atoms remain,
seizing in turn upon these, so that finally each of
the four elements maintains its existence in the
form of isolated atoms.
From this stateinent of the cosmology of the
Vaisesika system, which the original texts present
in connexion with the category of substance, we
turn to the category of quality. This category
comprises the ideas of colour, taste, smell, toucn
(together Avith temperature), number, extension,
individuality, connexion, separation, priority, posteriority, knowledge, joy, pain, desire, aversion,
and will. This list bahkaramisra enlarges in his
commentary on VaiSesikasutra I. i. 6, with seven
other qualities, which, though included in the
seventeen preceding, yet in his opinion deserve
special mention.
They are weight, fluidity,
adhesiveness, sound (the characteristic quality of
the ether, which is the medium of the undulations),
after-effect (or self-reproduction, samskdra, manifesting itself in three ways, as continuance of movement in obedience to a given impulse, elasticity,
and memory), finally, merit and demerit.
It will be seen that this enumeration comprises
mental as well as material properties. This affords
Kanada an opportunity under the category of
quality of developing his psychology.
Contrary
to the philosophical teaching of the Vedanta and
Sankhya, mental qualities according to the
Vaisesika system are attached directly to the soul,
as has been indicated above, but only in the form
of dispositions.
For no psychological process is
possible for the soul that finds itself in an isolated
condition.
It is only in consequence of the soul's
union with the organ of thought [manas) that its
faculties are capable of activity.
Both souls and
the organ of thought are eternal substances but
the soul is all-pervading, i.e. not bound down to
time and space, while the organ of thought is an
atom. The latter is the intermediary between the
soul and the senses, since urged by the soul it
betakes itself on each occasion to that sense
through which the soul desires to perceive or to
act (for the capacities of walking, speaking, etc.,
are, according to the Indian view, comprised under
the idea of the senses a distinction is therefore
made between the senses of perception and action).
Thus the organ of thought contmues to move as
long as it is actuated by a process of perception or
a bodily activity. If it rests motionless in the soul,
the union of the latter with the senses ends, and no
perception or act or experience is possible.
Kanada declares the organ of thought to be
an atom, because in his view different perceptions or other psychological processes do not take
;

;

place simultaneously, but always one after the
other, though frequently in exceedingly swift sucOn account of its minute size as an atom
cession.
the organ of thought can unite at any given instant
only with a single sense, and can only convey the
idea of a single object. If the organ of thought
were omnipresent like the soul, or if the soul
could enter into immediate relation with the
objects of knowledge, aU objects would be simultaneously perceived. As the organ of thought, on
the one hand, imparts the quickening power to the
soul, so, on the other, it acts as a kind of ciieck by
preventing the soul from exercising more than one
function at the same time.
The subdivisions of the third and fourth categories, those of movement (or action) and association, are of little significance. Difference, the fifth
category, on the contrary, holds an important place
in the Vaisesika system, inasmuch as by virtue of
it the difference of the atoms renders possible the
formation of the universe. The name, therefore, of
the entire system, Vaisesika, is derived from the

word

for ditt'erence (vi^esa).

From

the very beginning, the sixth category,
inherence (or inseparability), the enunciation of
which reflects great credit on the insight of
Kanada, attracted the attention of Sanskrit
scholars.
This conception is clearly distinguished
from that of occasional or separable connexion,

applied

Introductory.— The term
to

that

Hindu

sect the

which worship in a special way Visnu,
as contrasted with the two other greater ^ects, the
Saiva, or worshippers of Siva, and the Sakta, or

members

of

worshippers of ^akti, the female personification of
energy. Their worship is not to be confounded
with the orthodox worship paid by the higher
classes of Hindus to Visnu as their individual
patron deity (ishta-devata). Like Saivism, Vaisnavism is a form of monotheism, tlie setting aside of
the triune equality of Brahma, Siva, and Visnu in
favour of a single god.
No attempt has been made at the more recent
enumerations to collect statistics of the numbers
I'ow of the rural classes follow any
of these sects.


distinctive sect, and it has been found impossible to record the numbers of their adherents with any approach to precision.  

3. The development of the worship of Viṣṇu.—Since the Vedic period the development of the cult of Viṣṇu has undergone many modifications. Though he is an important deity in the mythology of the tenth book of the Mahābhārata, he holds a subordinate position in the Rigveda; his essential feature being that he takes three strides, interpreted by some authorities to mean the rising, culminating, and setting of the sun, but more probably meaning the three successive deities through the three divisions of the universe. The later development of his personality has been fully investigated by R. G. Bhandarkar, who traces its stages as follows: in the 5th cent. B.C. a religious reform arose like that which gave origin to Buddhism and Jainism, but based on theistic principles; this soon assumed a sectarian type in the form of the Pāñcarātra or Bhāgavata religion; this, again, was combined with the cult of Nārāyaṇa, the "resting-place or goal of gods"; soon after the Christian era the Áhūtra tribe of shepherds contributed to it their tribal hero Kṛṣṇa; in the 6th cent. this faith, the predominant characteristic of which was devotion, or love, came into contact with the doctrine of spiritual monism and world-illusion promulgated by Sāṅkara-chāryya (q. v.); the hostility to spiritual monism, especially that of the Pāñcarātra, which was brought by the Rāmānuja (q. v.) made strenuous efforts to displace it by the religion of bhākta in a re-invigorated form; he was followed in the north by Nimbārka, who advocated the cow-herd element and enjoyed the cult of Rādā, mistress of Kṛṣṇa; the same policy was continued in the 13th cent. by Madhva or Anāndatīrtha, who established the doctrine of pluralism and brought into prominence the name of Viṣṇu as supreme god; in the north Rāmānādava added the cult of Rāma, and his successor Rāmānuja that of Nārāyaṇa; Kāśī in the 15th cent. preached strict monolothism, the cult of Kṛṣṇa, and condemned idolatry; Vallāhī in the 16th cent. founded the erotic cult of Kṛṣṇa and Rādā, and Chaitānya in Bengal that of the boy Kṛṣṇa and Rādā, a corruption which led to the degradation of Viṣṇavism; in the Deccan Nārāmānava and Tukārām discarded the worship of Kṛṣṇa-Rādā, cultivated a more sober type of worship, disseminated their ideas not in Sanskrit but in the vernacular languages, preached pure love of God, and endeavored to unite the heart and morals as a necessary to salvation.

3. Viṣṇu and his incarnations.—Viṣṇavism has thus developed on several distinct lines according as the object of devotion, Viṣṇu, varies in his manifestations, incarnations, or "descents" (avataṃ). This theory tends towards syncretism, the absorption of the lower animal-gods or totems of the more primitive tribes into the Brāhmaṇical pantheon. The incarnations of Viṣṇu are sometimes enumerated as six, ten, or twenty in number; but those of Kṛṣṇa and Rāma are the most important. The cult of Rāma goes back in the Viṣṇu Purāṇa to about the 5th cent. B.C.; in the Rāmāyana of Vālmīki, which in its original form is based on pre-Buddhistic materials, while its kernel was probably composed before 500 B.C. and the more recent portion was probably added till the 2nd cent. B.C. and later, Rāma is depicted as a high-souled hero, and thus with his faithful wife Sita he won the affections of the Indian people. But it is not till the 12th cent. that his cult was fully developed. This cult is described in the Viṣṇu Purāṇa, which seems to go back to the Gupta period (A.D. 320-455). The tenth book of the Viṣṇu Purāṇa has exercised a more powerful influence than any other work of its class, was translated into Hindi by Lalā Rāma Kavi under the title of Prakā Sāgara, 'The Ocean of Love,' and is now the most popular manual of the cult of Kṛṣṇa. The cult of Viṣṇudeva-Viṣṇu seems to be mentioned by the Greek traveller Megasthenes; and, if it prevailed in the period of the first Maurya emperors, it must have originated long before that time, and probably owes its development to that stream of thought which began with the Upanishads and culminated in Buddhism and Jainism. Kṛṣṇa seems to have risen to be a local deity known as Gopāla, 'cow-herd,' or Govinda, probably a later form of Govind, 'finder of cows,' which was an epithet of Indra. He was worshipped by the Áhūtra shepherds, who wandered with their flocks over the region from Mathurā to Dwarkā. The spread of this world-illusion of pantheism, which was brought by the Rāmānuja, and which was at first also indulgent of pantheism, was the cult of an oceanic god of the western sea localized at Dwārākā. How far this cult was influenced by Christianity, which makes the case of the Kṛṣṇa as the "Saviour" of the Caucaian is still a question of controversy.

The imperfect combination of the cults of Mathurā and Dwārākā is shown by the vagueness and inconsistencies which were invented to account for the late Kṛṣṇa cult.

4. The subdivisions of the Vaiṣṇavas: influence of the creed: sacred places.—The subdivisions of the Vaiṣṇavas follow the teaching of the great missionaries, of whom an account has elsewhere been given. The most important is that of the Sri Vaiṣṇavas, founded by Rāmānuja, the followers of whom are more numerous in Southern than in Northern India. The second school is that of Madhva, or Anāndatīrtha, who preached the doctrine of duality (dvaita), in opposition to the non-duality of Sāṅkara-chāryya. The third follows the teaching of Rāmānādava, whose characteristics were that no distinction was made between the Brāhmaṇas and the so-called "untouchables," and the use of the vernacular tongues as the medium of his teaching. The fourth is the Vallāhīachāryya, whose works have left us practically nothing. Vaiṣṇavism is essentially monistic, while Śaivism is often ultimately pantheistic or, rather, is apt to relapse into pantheism, though it, too, is monotheistic.

5. "Taken as a whole, one of the chief characteristics of the United Provinces population is a real and unaffected kindliness. Vaiṣṇavism would certainly appeal to them, and it adopted would tend to enhance the very quality which would cause its adoption."

It represents to a large extent the Buddhist

5 Bhandarkar, p. 52f.
8 Ibid. p. 705; A. L. Basham, Lālā Rāma; Māyā; Madhava; Rāmānuja; Rāmānūja, Ramāyana.

10 Ib. p. 129.
type of life and morals, in which regard for the sinner, a feature of Valentinianism, is a predominant feature. 1 Tod records that the spread of Krsna-worship among some of the Rajputs (who generally, being warriors, favoured the Saiva cult) exercised an ameliorating influence on their life and manners. On the other hand, Dubois expresses a less favourable view of the sect in S. India.

The feeling of aversion which orthodox Brahmins entertain for Vaishnavite Brahmins is shared by Hindus of all castes. A stigma of procracy appears to cling to them. It cannot be the case, however, that the disaccord with which they are regarded is entirely due to their worship of Visnu. I think it must be largely imputed to their excessive pride and arrogance, their extreme severity, and their superstitious manners: for though all Brahmins share these characteristics, it is generally acknowledged that the Vaishnavites display them in an intensified form. 2

Again, the erotic tendency of some Vaishnava literature, particularly in connection with the cult of Krsna and Radha, has aroused opposition among the more sober-minded Hindus, and it must be noted that the rival cult of Rama is singularly free from excesses of this kind. Growse remarks on one set of poems:

1 If ever the language of the brothel was used for temple use, it has been so here. 3

In Bengal the licentious habits of some orders are notorious.

The Bairagi and Bairagiya [male and female] Vaishnavas are often seen at the races. The races being recruited by those who have no relatives, by widows, by individuals too idle and degraded to lead a steady working life, and by prostitutes. Visnavori or Boishtis, according to the vulgar proscription, has come to mean a courtisan. 4

In N. India the cult of Vijnana or Krsna is specially observed at Mathura (p.q.v.) and the adjoining towns of Brindaban and Gokul (pp.v.v.); Vijnan is worshipped at Pur (as Jagannath; p.v.); he has a famous shrine at Badarinaras (p.q.v.); in Gujrat Krsna is worshipped at Dwarka; at Pandharup in the Sholapur District, the Deccan, Vijnan is worshipped as Vithoba; in the south his chief seats are Conjeeveram and Tirupati. The Valabharhcharyas have their chief temples at Gokul and at Nthdwara in the Mewar State of Rupatãn, Rama-worship centres in the scenes described in the Râmâyana, Ayodhya, Chitrakért, and Nasik.

W. C. CROOKE.

VALENTINIANISM.—Valentinianism is a form of Gnostic teaching which originated with Valentinus, about the middle of the 2nd century. The term is a somewhat vague one, for Valentinus was generally regarded as the chief master of the Gnostics, and all the Gnostic schools were affected in some degree by his influence. His name was often attached to systems which had borrowed from him superficially, as well as to those which had grown directly out of the teaching of him.

4 See above.

1 Life and writings of Valentinus.—Of the life and writings of Valentinus comparatively little has come down to us. He was born on the coast of Egypt, at the end of the 1st or the beginning of the 2nd cent., and was educated at Alexandria. For some time he worked in that city as a Christian teacher, but eventually migrated to Rome, where he lived during the period between the episcopalates of Hyginus and Anicetus (A.D. 137-166). He must have come forward as a Gnostic teacher before his arrival in Italy. For Justin mentions having heard of the conspicuous heretics, and appears to have discussed his theories in the Synagoga, written about A.D. 160. Epiphanius states that he first became the head of a sect in Cyprus, and that he broke with the Church because he was passed over in the election of a bishop. A personal grudge of this kind is, however, commonly imputed to famous heretics in the controversial writings, and there is no reason to doubt that Valentinus advanced towards his later position by a natural process of reflexion, which would be stimulated by the Gnostic atmosphere of the Alexandrian Church. It is more the probable tale that he never formally detached himself from orthodox Christianity.

Valentinus was the author of a number of writings which have now perished, with the exception of some fragments, in the form of hymns, homilies, epistles, and possibly a treatise entitled Sophia. A late tradition makes him the author of a Gospel, but of this there is no evidence. His adversaries themselves pay tribute to his eloquence and intellectual power, and their testimony is fully borne out by the meagre specimens of his own writing which have been preserved. His system as a whole is known to us only from hostile witnesses, whose acquaintance with it had been formed at second hand; but through this obscurant medium it is still possible to recognize in Valentinus the foremost of the Gnostics, and one of the most gifted and versatile minds of the early Church. He was at one a poet, a philosophe, and a great religious teacher. Out of the chaotic materials of Gnostic tradition he constructed a harmonious body of thought in which there are not a few elements of real speculative value.

2 Sources.—Of the patristic accounts of Valentinus the earliest was that of Justin, and an outline of it has already been given. A.D. 1-3. Hippolytus described the system in an early work which is now lost, but can be partially reproduced from pseudo-Tertullian, Philaster, and Epiphanius. Our remaining sources are Irenaeus, Tertullian, and the Philo sophoumena of Hippolytus; but Tertullian is for the most part directly dependent on Irenaeus. Hippolytus and Irenaeus—the two cardinal authorities—are broadly in agreement, but their differences are sufficient to prove that they worked independently. Preference has often been given to the account of Hippolytus, which is shorter, clearer, and more symmetrical. But a number of indications make it almost certain that Irenaeus is closer to the original sources, although he has presented his material with little discrimination, and has confused the teaching of Valentinus himself with that of his disciples. The notices of the controversial writers are supplemented by the Excerpta from Theodotus, a selection of passages from an early Valentinian writer which is appended to the Stromata of Clement of Alexandria. The value of these extracts is greatly impaired by the difficulty of arranging the detached sentences in any intelligible order, and by the intrusion of comments which cannot with certainty be distinguished from the text. Curious parallels arise from the similarities in thought, and occasionally in lan-
VALENTINIANISM

guage, between the Encoptes and the account in Irenaeus. A direct connexion is not probable, but there is reason to believe that the writer quoted by Irenaeus has been influenced by the works of Valentinus, which, if he, have made use of the same document. In addition to the sources enumerated, we have the Fragments of Valentinus himself, by which we are enabled to compare and interpret the evidence of the patristic writers. A number of fragments have also been preserved from the works of later Valentinian writers—notably the Letter of Ptolemaeus to Flora, which is quoted at full length in the Epiphanius, and the excerpts from the commentaries of Hermogenes, which are given by Clement and Origen.

3. The system of Valentinus. It is stated by Irenaeus that Valentinus adapted the principles of current Gnosticism to a doctrine of his own; and his system clearly betrays this dependence on earlier phases of the Gnostic movement. At Alexandria he can hardly have failed to come into personal contact with Basilides, and the influence of the older teacher is apparent in various details of his system (e.g., the multiplication of logoi, the doctrine of the passions as alien spirits invading the soul, hence the word ‘espoused’ as the sphere of the Demiurge). To Basilides, too, he may have owed the impulse to build a philosophical system on the basis of Gnostic tradition. For the un instructed listener, however, he reverberates to the older Gnostic constructions. It seems to have been his purpose to form a comprehensive system which should gather up in itself the more valuable elements of all previous gnostic. To this we may attribute the complexity of detail which marks the system, and which has sometimes been set down to later elaboration. From this too we can best explain the remarkable diffusion of Valentinian gnosticism. All the Gnostic sects were able to recognize in it their own characteristic tenets, brought into a larger context, and impregnated with a deeper meaning. As Valentinus borrowed from the earlier types of Gnosticism, so he adopted many suggestions from those Eastern religions which lay behind the whole Gnostic movement. The division of dogs into groups of eight, ten, and twelve recalls the similar grouping of divinities in the Egyptian religion. The conception of the Pleroma as made up of thirty rods has its obvious counterpart in the thirty supreme gods of Zoroastranism. Some of the details in the history of Sophia and the Soter appear to have been directly taken from Pyrrhonian and Phrygian myths of the mother-goddess rather than from their Gnostic analogies. But, while thus elaborating the mythological framework, Valentinus informs it, to a far greater extent than any of his predecessors, with a philosophical significance. Hippolytus may be right in his contention that the system is largely indebted to the Pythagorean theory of numbers; but the chief philosophical influence (as Hippolytus himself acknowledges) is undoubtedly that of Plato. Valentinus endeavours in his own fashion to work out the Platonic conception of an ideal world reflecting itself in the world of visible things. His doctrine of the soul as longing to be restored to the kingdom of light from which it has fallen is ultimately derived from Plato. The Gnostic mythology, as remoulded by him, partakes in some measure of the character of the Platonic myths. His aeons are no longer separate divine beings but aspects of the nature and activity of God. They spring from one another no longer in the manner of the Chaldean theologians. The traditional episodes of the Gnostic history of redemption are more than half allegorized into inward experiences in the life of the soul. Gnostic in the hands of Valentinus attempts to transform itself into a real philosophy, offering a solution of the metaphysical problems of the origin of evil, the relation of spirit to matter, the creation of the world, the nature and destiny of the soul. With Valentinus the distinctly Christian element is much more pronounced than in earlier Gnosticism. He had begun his career as a Christian teacher, and perhaps never regarded himself as alienated from the Church. So far as can be ascertained, he instituted no peculiar rites or sacraments to mark out his following as a separate sect. All through his system we can trace the desire to bring his thought into as close relation as possible to the Christian teaching, and with this intention he makes a continual appeal to Scripture. In no recorded instance does he fall back on the esoteric writings which were favoured in Gnostic circles. His practice is rather to make use of the Scriptures acknowledged by the Church, OT and NT alike, and to read the esoteric meaning into them by a forced application of the allegorical method. But, while he thus appeals to Scripture in order to commend his teaching to orthodox Christians, he regards it as at best a secondary source of revelation. This is apparent as well from his historical mode of interpretation as from his explicit statement:

'Many of the things written in the public books are found also written in the Church of God: ... The law written in the heart is the precept of the Beloved (i.e., the spiritual race has come from God, and is itself an immediate source of divine knowledge).'

Not only does Valentinus accept the Christian Scriptures, but in his scheme of redemption he makes room for Christian believers as the "psychical" class, intermediate between the "pneumatic" and the "hydro". Earlier Gnosticism had allowed only for the higher class, predestined to life, and the lower, in which all spiritual potentialities were lacking. In the Valentinian system the third class is also capable of salvation, although in an inferior degree. This estimate of the "psychical" nature was not due, as the Fathers complain, to arrogance and exclusiveness, but to a genuine solicitude for the mass of ordinary Christians. But the Christian affinities of the system are most clearly discernible in its central motif; for its various speculations all converge in a doctrine of redemption, in which the chief place is assigned to Jesus. The redemption is conceived, in the first instance, as the deliverance of the spiritual element from matter, but it was connected, at least in Valentinus's own teaching, with a pure and lofty ethic.

The heart is purified by the expulsion of every evil spirit; and when the only good Father visits it, it is sanctified, and grafted with light; and he who possesses such a heart is so blessed that he shall see God."

It would be too much to say that with Valentinus Gnosticism joined hands with Christianity, but we may fairly credit him with a sincere endeavour to mediate between the two forms of teaching. He sought, on the one hand, to bring Gnosticism into closer sympathy with the Church and, on the other, to secure the Church's recognition of the elements of truth in Gnosticism. The Valentinian system as described by the Fathers, whose evidence is consistent, in the main, with that of the Fragments, falls into two clearly marked divisions: (1) the events within the Pleroma, (2) the history of the creation and redemption. One difficulty, however, which has often been considered as of paramount importance, meets us at the outset. According to Irenaeus, not only does the Church by the Pleroma have a female consort, while Hippolytus, who is here supported by the Fragments and the Exeget. Theod., speaks of a supreme principle who is the

---

2. ib., in Strom. ii. 20.
source of all being. Irenæus himself admits that on this point there is a difference among the various schools. The discrepancy is not, perhaps, so serious as might appear at first sight, especially when we remember that for Valentinus the idea of the Logos was more metaphysical than personal. He apprehends the supreme principle as a unity, but as still containing within itself the possibility of distinction. This, indeed, is the presupposition of the whole system—that the supreme principle was capable of being first of a self-unfolding into the multiplicity of being.

The supreme being, whatever conceived as monad or as dyad, is moved by an inner necessity of love to impart its fullness, and by a certain deficiency to seek the supplementation of its fulness. A dyad constituted the Pleroma. Bythos and Sige put forth Nous and Aletheia, from whom proceed the two pairs, Logos-Zoe and artisans. These four pairs, or 'syzygies,' make up the Logos world; which is complete in itself—a Pleroma within the Logos world. Logos is the former world; Sige, second world; Bythos, third world; and Sige, fourth world. From the anthropological and ecclesiastical world proceeds the Pleroma, as the second world proceeds from the first. Thus the Logos, the inferior to the Logos, is the Pleroma, which is also the supreme. If these lower pairs the male is designated by an adjective, the female by a substantive—in keeping with the Valentinian doctrine that the female contributes a vague substance, on which the male imposes form. The harmony of the Pleroma is maintained by the opposition of the younger son, who aspire, by one account, to comprehend the unknowable Father, by another, to create like the Father in virtue of her sole activity. She produces an ablation, but, on the prayer of the other members of the Pleroma, two new sons, Christos and the Holy Spirit, are put forth by Nous and Aletheia, and separate Sophia from her formless offspring. It falls out of the Pleroma, but is sought out by Christos and the Spirit, who endow it with form and then return. As a thank-offering for the restored harmony the thirty sons in fellowship put forth a new son, Jesus.

The second part of the system is concerned with the events outside of the Pleroma, after the departure of Christos from the lower Sophia (called in Irenæus by the Aramaic equivalent 'Achamoth'). Bereft of her helper, she is afflicted by the four persons of the Pleroma, the flesh, formlessness, and the form, and Jesus, the common fruit of the Pleroma, is sent forth to be her consort and to beget a son for her. As a result of her and his joint activity a new world is created. It is the world以内 of our actual world, which is of the Logos and Sophia nature. Jesus incarnates within this world, in the form of a man, and because he is a spirit, he is able to enter into the anthropological world, for he is the Logos of this anthropological world. He therefore, together with the Logos of the Pleroma, makes it possible for the anthropologcal world to be saved through his incarnation. He underlines the importance of the Logos within the anthropological world, and shows that the anthropological world depends upon the Logos for its existence.

Sophia is saved by Christos, her offspring by Jesus, the fruit of the Pleroma, while Jesus, the son of Mary, redeems the souls of men. It may be inferred from several indications in the Eusebian Theod., and the Positio Irenæi manuscript of 350, that these two symbols were sometimes regarded as aspects of a single redeeming power.

From this brief survey of the system it is evident that Valentinus conserves, and even accentuates, the mythological traits of older Gnosticism, while seeking, as he must, to rationalize them. Instead of unmeaning names, the terms bear designations which imply intellectual or religious qualities. The several stages of the history are determined not by astral conceptions but by a speculative scheme, carefully thought out, though in many respects obscure. Valentinus, moreover, has made a deliberate attempt to overcome the dualism implicit in all Gnostic thought. The cause of Sophia’s fall, and of the consequent origin of evil, is not so much a sin as a presupposition, due to an impulse in itself good. Her fall takes place within the Pleroma, where she continues to abide.

The Pleroma no longer stands in sharp opposition to the lower world but is linked up with it and is the ground of its existence. The Demiurge, though an inferior power, is imperfect rather than evil, and he is raised up into something higher. The worlds without the Pleroma are copies of it on a lower plane, and at each descending stage its history is repeated. One of the most significant of the changes due to Valentinus is the addition of Horos to the Gnostic cosmogony. For the Oriental conception of two opposite realms of being he substitutes the Greek one of a limit, preserving all existences in their due place and order. To a Greek instinct we may likewise assign the pervading thought that the divine activity, at each stage of the cosmic process, impresses form on formless substance. But with all his effort Valentinus does not succeed in resolving the dualism which lay at the foundation of Gnostic theory. It is tacitly assumed that from the beginning there existed along with God a world of alien matter or not-being. This is capable, in varying degrees, of being moulded by the divine Artist, but in the end there is a residuum with which He can do nothing. The world of utter chaos is left over to the demons; the 'material' souls can seek for no participation in the Redeemer’s gift.

4. Underlying purpose of the system.—Valentinus is at once a philosopher and a religious teacher, and from this double point of view we must consider the underlying purpose of his system.

(1) On the one hand, he seeks to bring the abstract and inaccessible God into relation to the actual world. The Pleroma is the first outgrowing of God from Himself, the manifestation of the Absolute in a sphere of being which is still, in some sense, one with Him. This process of self-unfolding is continued on an ever-descending scale until at last the divine principle is merged in the depths of matter. A hymn of Valentinus, preserved by Hippolytus, gives vivid expression to this normative idea:

I behold all things suspended by spirit; I perceive all things borne on by spirit—flesh suspended from soul, soul upheld by air, air suspended from ether, and fruits produced by bythos, and the child born from the womb.

Matter, it is here implied, is linked with the cosmos, the cosmos with the lower heaven, this with the Logos, and this again with bythos, from which absolute source all being has its birth. In another striking passage Valentinus compares the world to an imperfect image of God, which is inscribed, however, on the curtain of His whom it represents so as to authenticate it:

† Quoted in Strom. iv. 12.
Thus the whole universe is conceived as an infinite gradation of being, instinct, though ever more faintly, with the power which has called it forth. Valentinus, like other writers in this stream, is associated with the idea which had hovered before the minds of Greek thinkers ever since the days of Plato, and which finally received its classical form in Plotinus. His thought is disguised and hampered by the Gnostic ideas which he received from the philosophical point of view he may be classed as one of the chief precursors of Neo-Platonism.

(2) The philosophical interest is, however, subordinate. Valentinus was primarily a theologian, and it was in the effort to solve religious problems that he was led to the speculations on which he bases his system. The controversial writers, who are intent on exposing the absurdities of the heretical teaching, are chiefly occupied with these strange speculations; but they are far less prominent in the surviving utterances of the Valentinians themselves. The Fragments and the Exc. Theod. only touch on them incidentally. Heracleon, in the extracts from his commentaries which we possess, makes hardly any reference to the Pleroma, and the questions which he discusses are intrinsically theological. Valentinus' speculations are considered seriously and sometimes accepted by Clement and Origen. The Valentinian theology, like that of the Church, has its centre in the problem of redemption, but this is approached from the metaphysical, instead of the ethical or mystical, side. Redemption, as understood by the Gnostic thinkers, is the deliverance of spirit from the material element, which is literally the fallen state of man. How is this fall of spirit out of its native sphere to be explained? No answer is possible except that some disaster has taken place within the spiritual world, and the Gnostic sets himself to discover the nature and origin. Not only so, but he is required to show how the primal error has been corrected. There can be no redemption for men on earth unless we have the assurance that order has been re-established in the upper world; the restoration, like the fall, must begin from above. Valentinus, therefore, sets out from the doctrine of the Pleroma, and the redemption achieved in heavenly places after Solstitial diversity has restored the original harmony. But these speculations form only the background of the system. They supply a prologue in heaven, which is not to be mistaken for the real drama, although it provides the key by which it must be interpreted. Valentinian, like the orthodox teachers, is occupied all along with the redemption accomplished by Jesus, and differs from them chiefly in his endeavour to correlate it with a universal redemption. This involves him, however, in further differences, which affect his whole religious attitude. In spite of his desire to construe the universe as the harmonious unfolding of a single principle of being, he is compelled, like other Gnostic thinkers, to fall back on an ultimate dualism. The fall of spirit cannot be metaphysically explained unless it is assumed that from the beginning there existed something alien to God. This duality reveals itself in the world of men as well as in the cosmos generally. Souls differ from one another in kind, and are not capable of the same idea or purpose of redemption; man makes a greater effort to break through the exclusiveness to which all previous Gnostics had stood committed. At the risk of inconsistency he recognizes the intermediate power of God, and out of this it is one of the chief objects of his system to find a place for them within the scope of the redeeming process.

But in the end he is driven back on the traditional Gnostic doctrine that only the spiritual can be truly saved, and that their salvation is nothing else but the inherent prerogative of their nature.

'Ye are originally immortal, and children of eternal life, and ye would have been distinguished to you, that ye were sanctified andish it, and that death may die in you and by you; for when ye dissolve the world, and are not yourselves dissolved, ye have dominion over creation and all creature.'

In this remarkable saying Valentinus appears to hint at a lofty doctrine of the obligation resting on 'spiritual' men in virtue of their privilege. They are placed in the class of the righteous, and therefore voluntarily entered it, in order that they may cooperate with the higher powers, and that through them the dominion of death may at last be utterly destroyed. In the light of such a saying it is impossible to doubt the noble religious temper of the great Gnostic. The very doctrine which in other leaders of the movement had served to foster a spirit of egotism and of contempt for the inferior mass of men is transformed by him into a supreme motive for human service. Yet the conception of one class of men who are marked out as essentially different from others is none the less made prominent. These higher natures alone are destined to a true redemption, and for them the work of a redeemer is hardly necessary. Like others they acknowledge Jesus as their Saviour, but what they receive from him is far more than the apprehension of their own native excellence as the children of light. It is this failure on the part of its noblest representative to reconcile the Gnostic teaching with Christian ideas that stamps it most unmistakably as alien, in its fundamental character, to the gospel.

5. Subsequent history of Valentinianism.—The history of Valentinianism as a system is very imperfectly known to us, but there is evidence that the sect extended itself rapidly, and founded adherents in Italy, Gaul, N. Africa, Egypt, Syria, and Asia Minor. Tertullian describes it as in his time 'freqvrentissimum plane hereticorum collegium.' According to Hippolytus, it came to be divided at an early date into two schools—the Eastern, or Anatolic, and the Western, or Italic—and the fact of this division is confirmed by the Exc. Theod., which purport to give the doctrines of the so-called Eastern Valentinianism.

The schism, we are told, was brought about by a difference of opinion as to the body of Jesus. The Easterns maintained that he assumed a pneumatic body, while the Westerners taught that his body was psychic, the Spirit descending on him at his baptism in the likeness of a dove. Both of these views are represented in the Exc. Theod., and from this it has been inferred that the division cannot have been so sharp as Hippolytus affirms, or that it must have followed some other line of cleavage. Clement, however, may have made his extracts from several writers, belonging to different schools, or Thecodotus himself may have quoted from other Valentinians, with whom he was not in full agreement. Why the dispute should have turned on an issue that appears so secondary and artificial it is difficult to say. It may be that the Christological controversy which was to rend the Church a century later was anticipated in some fashion by the Gnostic thinkers. More probably the question as to the nature of the Redeemer's body served merely to focus some radical difference of view as to the scope and purpose of redemption and the constitution of the light body. It is significant that the sect was divided on a matter that concerned not the speculative construction, but the doctrine of the Person of Christ. We have here a circumstance which shows Valentinianism was much more closely allied to

1 Strom. lv. 13.
orthodox Christianity than the records of the Pagans might lead us to suppose. This conclusion is further borne out by the extant writings of the two leaders of the school who were next in influence to Valentinus himself, and both of whom appear to have been personal disciples—Ptolemaus and Heracleon.

(a) Ptolemaus. — In his system as a whole Ptolemaus adhered closely to Valentinus—so much so that Irenaeus has made little effort to distinguish his separate teaching. He added, we are told, new and more complicated details to the esoteric, and thought of the souls as personal beings, not merely as modes and aspects of the divine nature. In his doctrine of redemption he laid particular emphasis on the relation of the work of Christ to that of the Demiurgo. But besides the notices in the Fathers we possess the Letter of Ptolemaus to Flora—the one document of 2nd cent. gnosticism which has come down to us complete. In writing to a Christian of whom he hoped to make a convert, Ptolemaus would no doubt present his views with studied moderation, but his Letter, however, we regard it must be taken as an authentic statement of Valentinian doctrine. It deals with the specific question of the validity of the Law, and distinguishes (1) a Law given by God to Moses; (2) a Law appended by the elder to this Mosaic code. In the Law given by God three elements are likewise distinguished: (1) spiritual precepts, which are of permanent value and were endorsed by Jesus in (2) commandments, which were only for a time and were abrogated by Jesus; (3) ordinances that must be interpreted in a typical or symbolic sense. The teaching of Jesus is accepted throughout as the one criterion of truth. Ptolemaus betrays his Gnostic presuppositions by identifying the God of the Law with the Demiurgo, whom he conceives as an inferior and imperfect God, just rather than absolutely good. But the Letter is evidence that the Valentinians not only were interested in Christian problems but also could discuss them with a sober and critical judgment which we too often miss in the orthodox theologians.

(b) Heracleon. — The name of Heracleon is attached by Epiphanius to a fantastic mythological system, but this account of his teaching may conveniently be set aside, in view of the considerable fragments which have been preserved from his own commentaries. It may be gathered from these that he accepted the Valentinian construction, but that he employed it chiefly as a background for understanding the redemptive work of Jesus. Like Valentinus, he recognizes three classes of men, and makes the salvation of the 'spiritual' consist in an inner enlightenment by means of gnostics. He appears to concede, however, that even the spiritual natures are capable of a fall. He holds, too, that after being saved themselves they must re-enter the world and help to redeem the 'psychic.' In his conception of the Person of Christ he adopts a strongly docetic position.

(c) Marcus. — If Ptolemaus and Heracleon stand for a Valentinianism which had much in common with orthodox Christianity, a different tendency is represented by Marcus, who flourished about the same time. For the doctrines of Marcus we have practically no other source than Irenaeus, whose account of his superstitious and immoral character is perhaps coloured by prejudice. None the less it is evident that Marcus developed the ideas of Valentinus in a one-sided fashion and that he betraying the characteristic feature of his system is number—symbolism. From the numerical values of divine names he seeks to discover the nature and order of the cosmos and the mode by which the world has come into being. The Valentinian theory of redemption is connected by Marcus with the ideas of contemporary magic and astrology. He formed a sect which seems to have stood quite outside of the Church, with institutions of its own and special baptismal rites, accompanied by exorcisms. From such a development as that of Marcus it was manifest that the Valentinian system, in anything like its original form, could not long maintain itself. In the hands of the master and his more enlightened disciples it was capable of serving a genuine philosophical and religious interest. But it had been evolved by an artificial process from the primitive Gnosticism, and reverted in course of time to the earlier type.

For several centuries Gnostic sects continued to arise which called themselves Valentinian, and which preserved the language and occasionally some of the ideas of Valentinus. The Pedita Sophia and the other Coptic writings may on this ground be assigned to the Valentinian school, although their connection with it is often remote. We hear of Valentinians in Italy about A. D. 360, and in Spain at the end of the 4th century. But these late survivals belong to the general history of Gnosticism, and the true Valentinian movement had exhausted itself within two or three generations of the founder’s death.

LITERATURE.—The subject of Valentinianism is discussed in all the general works bearing on Gnosticism (p. ). The Fragments of Valentinus were first collected in J. F. Grabe, Speculumion S. Petrus", 3 vols., Oxford, 1714, which is still valuable. They are reproduced, with commentary, in A. Hiegenfeld, Ketzerrecht und Urchristentum (Berlin, 1872), and in the patristic accounts of the system are also fully discussed. One of the oldest of modern accounts of Valentinianism is that of E. de Faye, Gnostiques et gnosticisme, Paris, 1913, pp. 39-415. The relation of the Ess. Theod. to Irenaeus is discussed by F. W. Dibelius, ZNTW, x. (1930). G. Heinrich, Die Valentinianische Gnosis and die heidnische Schrift, Berlin, 1871, and R. A. Lipsius, art. ' Valentinus,' in Smith’s Dictionary of Christian Biography, 23 vols., 1857-1866, are still indispensable. The most useful work on later Valentinianism is A. E. Brooke, The Fragments of Heracleon newly edited from the MSS., Cambridge, 1891 (FS. 1).

VALHALLA.—See BLIND, ABODE OF THE (Teutonic).

VALIDITY.—I. Introductory.—The notion of validity (from Lat. validitas, validus, to be strong') is largely employed in Kantian thought, and receives a wide and various application. A comprehensive discussion of the notion is a desideratum, and would form a useful introduction to the philosophical and scientific disciplines, including philosophy of religion. In treating of it one must reckon with the fact that validity is a 'noble use of'4 in philosophical usage, so that it is difficult to invest it with a clear and unambiguous meaning. The terms with which it appears to be most frequently associated, with which indeed it is often identified, are those of truth and value. Thus the validity of a judgment has been described as its correctness.5 The validity of an argumentation or inference its truth-producing virtue, or—as it might otherwise be expressed—its truth-conveying capacity. Lotze's valuable and suggestive treatment has done much to fix its use in philosophy; and it seems to the present writer that an examination of Lotze's discussion will serve to bring out the general nature and scope of validity. An examination, further, of the distinction between

VALIDITY 577

origin and validity will illustrate the application of the

2. The datum of thought.—With Lotze the
discussion of validity belongs to the doctrine of
thought, and the problem of validity arises first in
connexion with the ideas or rudimentary concepts
composing the material with which thought sets
out upon its work of reflection. The first operation
of thought (to convert impressions into ultimate
antecedents) is ideas or meanings, so as to
prepare 'logical building-stones' 1 for its
subsequent structures. As a result of this operation
each impression receives a certain objectivity or
validity.

Thus 'green' or 'red,' e.g., remains an object for consciousness as such after the creation of the external stimulus which produces the impression. We no longer present it to ourselves as a condition which we undergo, but as something which has its being and its meaning in itself, and which continues to be what it is and to mean what it means whether we are conscious of it or not. 2

Moreover, its validity or objectivity of meaning for ourselves is confirmed and tested in the experience of others. 3 But the validity or objectivity of an idea, meaning, or thought-content is not

valid until it has the support of a real existence independent of thought. Logical objectification, which converts subjective impressions into objective ideas, cannot give external reality to reality beyond thought, so that no question of ontological as distinguished from logical validity is here raised. Indeed it is matter of

indifference whether certain parts of the world of thought indicate something which has besides an independent reality outside the thinking minds, or whether all that it contains exists only in the thoughts of those who think it, but with equal validity for them all. 4

The discussion of the Platonic world of ideas 5LOTZE offers a sharper representation of the nature of validity, describing it as an ultimate and

underivable conception designative of reality apart from existence and occurrence. The reality of an idea or thought-content is similar to that which belongs to truths and laws; and, though wholly unlike the reality belonging to things or events, it is a form of reality which the mind cannot but acknowledge.

1 We all feel certain in the moment in which we think any truth, that we have not created it for the first time but merely recognized it as valid before we thought it and will continue so without regard to any existence of whatsoever kind.

The idea or thought-content is thus essentially eternal or timeless, being independent of its manifestations in the reality of existence or of its realization in the reality of thought (as occurrence or event). So Plato taught. It is true that Plato ascribes existence to the ideas or universal notions, but it is Lotze's contention that he does not thereby seek to hypostatize their eternal validity into an existence at all resembling the existence of things or events. Here the traditional interpretation of the Platonic doctrine is affirmed to be on wrong lines. 7 Plato's supercelestial world of ideas, without local habitation, and composed of pure intuitions as the reality of all that we ordinarily call the real world (and Plato may be said to indicate this in the very sublimity of the language in which he describes its wondrous landscape) is the intellectual interpretation, though false, is not without excuse. For in the Greek tongue there was no technical equivalent for validity or reality not inclusive of existence, and it was impossible for Plato to predicate of the ideas without at the same time substantiating them, or subsuming them under the general denomination of substance, existence, or real being (ē̄re, oî̄̄sia). To the antecedent ideas Lotze ascribes a secondary sort of existence (dō̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄̄�� 1 14. 5 14. 4 16. 6 200-202. 7 215. 8 But see J. Rowe, The World and the Individual (Gifford Lectures), 2 vols., New York, 1901, 1, 227.

2 ii. 472. 3 1. 2. 4 L. 9.
what takes place in the object-matter—unless the sceptical contention holds that, for ought we know, the process of thought may not mediate a valid knowledge of reality at all.

But, while the subjective processes of thought are more than merely formal, they are not to be regarded as constitutively the real world. In the formation of conceptions, in classification, in judgment and inference, we do not go through processes which take place in things.

The world of valid truth does not, in Lotze's view of it, "undergo changes of contentions and even parallelings in any way the successive steps and missteps, the succession of tentative trials, withdrawals, and retracings, which mark the course of our own thinking."

The activity of the various logical processes is not of a constitutive but of a strictly intermediate and instrumental value. The winding path is only a means to the attainment of the purpose, and must be left behind; the scaffolding—to cite another well-known illustration—is only a means to the construction of the building, and must be taken down to allow the full view of the result. In each case, however, it is a necessary and indispensable means. This illustrates Lotze's contention that, despite the subjectivity of the thinking process, its results may still be objectively valid. Finally, subjectivity in no way discoverable in the process, it may still be present in the product. How this may be Lotze is hard put to it to show; but that it is so, that subjectivity does not necessarily imply invalidity, is none of his most invincible convictions.

The difficulties that beset Lotze in his endeavours to interpose between the scepticism that could not admit the validity of thought for reality and the idealism in making thought determinate reality, seemed to find an ultimate identity between them were largely due to the externalism of his representation of the relation between the thought-process and the thought-product; and one sympathizes with the plea of the 'genetic' logic that the activity and the content of thought should be viewed more historically, from the standpoint of their generating conditions in the movement and reading of experience. It is no mere accident of language that "building" has a double sense—meaning at once the process and the finished product. The product of thought is simply the process carried on into its completion. There can be no possible divorce or separation between the formal and the material in thought. In the activity of thought we are not cast loose from dependence upon material conditions and circumstanc…

5. Origin and validity.—(a) Introductory.—A consideration of the question of origin and validity should throw further light upon the notion of validity. From the revolutionary standpoint of pragmatism it may be a 'musty old antiquity' that is here presented to its historical development; but the development is, according to Lotze, of metaphysical idealism according to which the relation between thought and reality is organically conceived and maintained that reality must be present in the beginning of the thinking process if it is to be reached at the end, and must cooperate with the activities of thought in the production of results.

(b) The sources of validity—The question of origin and validity is directly connected with the general problem of the validity of the thinking process. Validity of the thinking processes, to say the least, is an essential condition of the possibility of the existence of thought. The question of the validity of the thinking process is therefore the most fundamental problem of all. The question of validity is, in fact, the question of the possibility of the existence of thought. The question of the validity of the thinking process is therefore the most fundamental problem of all.

The question of origin and validity is directly connected with the general problem of the validity of the thinking process. Validity of the thinking processes, to say the least, is an essential condition of the possibility of the existence of thought. The question of validity is, in fact, the question of the possibility of the existence of thought. The question of the validity of the thinking process is therefore the most fundamental problem of all. The question of validity is, in fact, the question of the possibility of the existence of thought. The question of the validity of the thinking process is therefore the most fundamental problem of all.
VALIDITY

(b) In logic.—First consider the distinction between origin and validity as applied to logic, taking logic as designative of the whole philosophical discipline which deals with the question of validity in knowledge. Here the problem of origin and validity is that of the relation between psychology and logic in respect of the treatment of the distinction between the two disciplines used to be drawn in this respect. Psychology, it was said, describes the conditions under which thought originates as a psychological process; logic views thought apart from such conditions and in reference to the standard of truth and reality. In other words, psychology was held to be a purely descriptive science, and logic purely normative or regulative.

To psychology fall questions of genesis and history; to logic questions of authority, worth, value.

'Logic is not concerned with the manner in which the elements utilized by thought come into existence, but with their value, when they have somehow or other come into existence, for the carrying out of intellectual operations.'

1 But in the recent logical movement there is a strong tendency to supersede or dispose of this antithesis between origin and validity, or, as it is often called, logical-objectively, origin and value. It is said that judgment, with conception and inference, depends for its significance, for the measure of its validity, upon the stage of organization in which it begins; and, accordingly, the appreciation of the claim to validity should not be made in abstraction from the actual conditions and circumstances of origination.2 Psychology should enter into logical evaluation.

Now the less 'philosophical logic' abides by its essential position. While acknowledging the importance of genetic and historical considerations, it still affirms with Lotze that psychological analysis fails to reveal the complete significance of the operations of thought. The problem of validity or worth transcends the natural history of mental products. Indeed, as B. Bosanquet puts it, natural selection is not at all interested in natural history. 'It is being equal to the whole situation' (i.e. to the situation not of yesterday but of to-day) 'that is the criterion for logic as for morals.'

(c) In ethics and politics.—From the above it would appear that in logic there is no irreconcilable difference between the 'genetic' and the 'philosophical' theorists, between the standpoints of origin and of validity; and that the distinction between origin and validity certainly here exists, and again reflects the recent emphasis upon the genetic and historical. But, if the study of the past means only 'translating the present into terms of the past,' then we need not be astonished at the prevalence in our time of ethical and political scepticism. To trace the ancient pedigree of an idea or institution is not, however, to explain it fully or really, much less to explain it away, and empty it of all ideal meaning. The line of ethical development, e.g., may be traced from the lowest stage of customary morality to the recognition of the inherent goodness of the moral life, without thereby necessarily affecting the question of the validity of the moral law. With some pernicious custom or fantastic belief may be the antecedent and the partial cause of a moral rule now rightly regarded as binding. Sociological fact speaks in Law and Order, vol. ii, ch. 4; cf. also G. Ritchie, Philosophical Studies, pp. 104-105.

be maintained. Faith divorced from reality, like the fruits severed from the roots in the earth, is doomed to wither and die.\textsuperscript{1}

Where the objective reference of religious faith is held to be a reality and no illusion, it must still be allowed to the standpoint of origin that it is implied in, make a rigid separation between psychological fact and logical meaning. Just as in secular and scientific knowledge a judgment having the appearance of immediate certainty is often found to involve subjective influence, so palpable element of subjectivity enters often into the judgments of religion. E.g., when the mystical visions of the medieval saint shape themselves into direct and immediate revelations of the transcendent mysteries of Catholic dogma, we can hardly fail to detect the influence of the subjective or psychological factor in experience, especially if we have followed the course of the dogmatic development in Christendom.\textsuperscript{2} A parallel might be cited in the claims of modern ‘spiritualism,’ whose communications from the dead — even granted that they have a real foundation — are sometimes quite obviously the product of a liberal Protestant eschatology.

Yet, when all allowance is made for subjectivity in religious experience, the consciousness of the developed Christendom is still intact, maintains with the problem attaching to it of the validity of religious knowledge. While we have asserted that the ontological postulate implied in the religious consciousness is not scientifically verifiable, we do not thereby confess the invalidity or irrationality of the analogical mode of reasoning, which religious philosophy has perforce to adopt in common with scientific theory, but of which it is more than its own personal practice must now enter here into a defence of the method of analogy in theistic argumentation, and in particular of the application to divine reality of the anthropomorphic ideas of personality, purpose, and value. It is a merit, to our mind, of the personalistic trend in recent philosophical thought that it finds the only possible clue to the interpretation of God and divine things in the analogy of human experience at its best and highest. But we may be permitted to observe that in the modern theistic use of the analogy of human nature, which is reflective and critical, only a general agreement and correspondence, and not an identity of symbols and meanings in their personal aspects. Nor does it follow from the vindication of the analogical method in religious philosophy that any particular analogy is ultimately valid. Beyond the general logical or epistemological question, Is the method of analogy capable of conveying religious truth?\textsuperscript{3} lies the ontological inquiry, Does the method of analogy actually convey it in such and such a case? Thus here, as in connexion with the process of thought in general, the problem of validity passes into the wider problem of truth.\textsuperscript{4}

place between Muhammadans and Sanyasins. They found themselves in a wild spot called Chanpurāyana, and here the child, aged 4, made a legend narrated by his devoted cows and gopis. The infant Kṛṣṇa, being so small, was not away from the cowherd boys, and only the bees and birds sang. When the boy cried, the bees would fly away, and so would the birds. On one occasion when the boy was playing with a copper bowl of water, and the bowl was overturned, the gods showered flowers, and a divine music filled the air. On another occasion, a chambermaid entered the temple and tried to bring out the sacred image of Viṣṇu, but the image would not move. On yet another occasion the boy said that a horse should be given him, and at once a horse appeared, which he rode and taught the brahmins. He also went to the city of Dvārakā, and lived like a human being, but his birthplace was at Kālia Gān. He lived a life of simplicity and service to the poor, and his teachings were accepted by all. He also taught the importance of devotion to the cow and the cowherd boys, and this led to the spread of the cult of Vāsudeva Vīśnunātha, also known as Vithalnātha.

2. The Mahārāja Gosāinī.—Vālabbha was an accomplished prose writer, and he occupied a high position as achārya, by his son Vithānlā, his eldest son having died soon after his father, this Vithānlā, the second guru of the sect, proved an able successor. Like his father, he made long journeys, visiting the same places and in addition extending his travels to Dvārakā, through Cutch, and to Mālva and Mewār. Turning southwards, he came to Fāngāhrāpur, the seat of the worship of Viṣṇu among the Kṛṣṇa-śeṣas. He is said to have made 226 disciples. His proselytism came from many classes—Bānias, Bhāṭṭānas, Kumbhis, Sūtras, Lōlares; a few Brahmins and Muslimāns were also attached, though, of these various castes, enjoyed the privilege of eating together at the same table—a privilege that was soon rescinded. Vithānlā, who was known by the name Gosāinī, took up his residence at Gokul, the birthplace of Kṛṣṇa, and was frequently designated Gokul Gosāinī, a name adopted by his male descendants. After his death each of his seven sons established his own gūḍi. They dispersed themselves throughout India in order to diffuse their doctrines. Each claimed to be an incarnation of Kṛṣṇa and made numerous proselytes. The Gokul Gosāinīs, the most celebrated of these propagators of the new doctrine, he infused vitality into the tenets of the community both by his teaching and by his writings, and it is said they have always claimed pre-eminence among the members of the sect. They keep themselves separate from the other communities, while these profess equal veneration for all. It was probably during the period of the dispersion of the sons of Vithānlā that those religious heads first acquired the title of Mahārāja or Mahārājīn Gosāinī. The descendants of these Mahārājīs now number probably over 70, of whom about ten have their seats in Dombey and one or two at each of the following places: Surat, Ahmadabad, Nagār, Cutch, Porbandar, Anmerli, Jodpur, Bundi, Kotī. Only two or three of them have any knowledge of Sanskrit; the rest are grossly ignorant and indulge in the worst forms of luxurious living. They endeavour to live up to the title which has been given them in respect of costly apparel and dainty viands. They aspire to the acquisition of wealth and property, and their votaries are drawn very largely from the wealthier and more luxurious communities and are for the most part very scrupulous in the observance of religious custom, and as the Mahārājīs, on the other hand, are not modest in their exactions, the opportunities of the latter for fulfilling their worldly ambitions are ample. At their various seats they possess temples with residences attached. There they celebrate daily their special worship in the presence of crowds of followers, men and women, and indulge in those licentious practices which have won for them, especially in later times, a shameful notoriety.

3. Hedonistic tenets.—The Vālabbhāchāryans have often been called the Epicureans of India, a method the historians of religion have followed. These epicurean tenets are akin to their teaching, in that they are usual living. The process by which this development was reached is profoundly instructive to the student of Indian religion and is in strict analogy with the history of many other religious and spiritual movements.
into Brjâhāsa under the name of Pramâsîgâr ('Ocean of Love'). It was selected by Vallabhâchârya as the foundation of his system. The original form of the sect, as it is held, to symbolize spiritual devotion under the figure of earthly love; but in its interpretation by succeeding Maharâjas of the sect it was converted into a code of religious intricacy, not only sanctioning, but enjoining, the most hideous sensuality.

4. Cult of the guru.—The Siddhânta Rahasya, ascribed to Vallabhâchârya and claimed by him as a direct word from God, deals with them in a different order. It contains the doctrine of the origin of the sin and the mode of its expiation. It consists of only about a dozen lines in Sanskrit, in the course of which we find a characteristic suggestion regarding the supreme importance of the guru, the Gosâñjî, the mediator between God and the sinner:

'The offering which has (in the first instance) been enjoyed by its owner is not acceptable by the god of gods. Therefore in the first instance, in all doings everything should be dedicated.'

The dedication in the first instance, here referred to, is that which takes place when the offering is made to the guru, through whom it reaches Krânya, of whom he is the manifestation. Of the terrible nature of this dedication this divine evidence is given below.

Another writer of this school is even more explicit in his assertion of the lofty claims of the Gosâñjî:

'Whoever holds his guru and Śī Thâkejî [the god] to be different is distinct from a jirdhâ (a kind of bird). Whoever disobeys the orders of his guru shall go to Asîpatra and other dreadful hells and lose all religious merits.'

Śrî Gokâlnâtha, fourth son of Vîthalnâth above referred to, in his Vachandmrt ("Nectar of Precept"), in his exposition of the pûshât-mûrgha, dwells with even more precision on the fate of those who disobey their preceptors:

'He who gets angry in his heart maligns his guru and utters harsh terms towards his guru becomes dumb, and after that he becomes a sinner. He is then the creature of the region of the vegetable kingdom, and after that he is born a creature of the region of the dead. As he remembers Śrî Bhâgavân [God], in the same way he remembers and repeats in his mind the name of his guru.'

Another of the books of the sect runs riot in its laudation of the Gosâñjî or Vîthalnâth, the second in this dynasty of gurus.

'He is possessed of all virtues; he is the very personification of the most excellent being [God]; he is all incarnations. He is himself the creator of the endless crores of worlds wherein his glory is diffused all over.'

In the Guruvasî, another production in the same line, it is said:

'When Hari [God] is displeased with any one, the guru saves him [the sinner] from the effects of the god's displeasure. Therefore a Vaisya should serve his guru with his body and mind.

The principal gurus are Śrî Achâryâ and Śrî Gosâñjî and the whole family called the Vallabh family. The worship of the guru is to be performed in the same way as the worship of God.'

This high claim made on behalf of the guru is not confined to this one sect. The attitude of many Hindus towards their chosen gurus is marked by a similar reverence; the peculiarity of the claim made on behalf of these Vâllabhâchâryas, guruîs is that it is put forth on behalf of a family line, a kind of aca'ryâ, religious dynasty, not on the guru chosen in each case by the devotee, but of one who is set over him in virtue of the right of birth and natural succession. This is quite in keeping with the title honorific, whose Mahâraj his and the worldly ambitions with which it was associated. It may also

be said to be the root of all the degeneracy and moral corruption that have made their name and the name of their sect so notorious.

4. Initiation.—In the Vâllabhâchârya sect there is a special ceremony of initiation into the community accompanied by the repetition of a formula expressing reverence for either Krânya or Râma. In the Vallabhâchârya sect this rite may be administered at the early age of three or four years. In some parts of India it is performed at a somewhat later age. A rosary or necklace, called kanthi, of 108 beads made of tali-wood is put around the neck of the candidate for initiation, and he is taught the use of the eight-syllabled prayer: "Śrî Kṛṣṇaḥ barâgam māma,' 'The blessed Kṛṣṇa is my refuge.'

There is a second initiation called samarpanya, or dedication, which, in the case of males, takes place in the eleventh or twelfth year, and, in the case of females, upon marriage or shortly before it. This rite is also called Brahmasamandana ('union with Brahma'). The formula repeated on this occasion begins with the eight-syllabled formula of the first initiation and continues thus:

't he who is_submitted to, is definitely influenced by being enduring for a thousand measured years with the name Kulâs to the worshiped Krânya dedicate my body, organs of sense, life, limbs and other alms my wife and family, property with my own self; I am thy slave, O Krânya.

There is nothing in this formula that goes much beyond the expressions of devotion that one meets with in other forms of Hindu worship. In form it does not go beyond the 'tan, man, and dhan' that enters so constantly into the expression of Hindu devotion. But the sense in which this initiation was enjoined and accepted by the Vallabhâchâryas is made clear in a commentary on Vâllabhâ’s Siddhânta Rahasya. The commentator, who was no other than the celebrated Gokâlnâtha, the grandson of Vâllabha, the famous fourth son of the second guru, Vîthalnâth, thus expounds the formula:

'Therefore in the beginning, even before ourselves enjoying, wives, sons, etc. (prâna includes daughters along with sons) should be made over because of the expression savra maitre ['all things'] occurring in the text. After marriage, even before using her ourselves, the offering of her (the wife) should be made with a view to her becoming useless by ourselves.'

6. Sensorial Practices.—In this conception we have the fons et origo of the gross sensality that is bound up with the religious practices of this sect. The amorous deeds of the adolescent Krânya, who is the object of its worship, were understood in their literal and normal sense, and under this notion the sect was sought through carnal union with the guru, or religious head, who claimed to be the incarnate of the god, through whom alone the god was accessible to the worshipper. It is only when one realizes the hold which this interpretation of the above-quoted formula of initiation took of the blind votaries of these gurus that one can conceive the possibility of these debauchery that has so long disgraced the religious exercises of this community, through so many generations. The husband who regards with complaisance the desecration of the virtue of his wife, the father who consents to the violation of his daughter by these debauched pretenders to religious sanctity is, obsessed with the monstrous delusion that spiritual gain can come to him and through the sensual indulgence of his spiritual progeny. To him, the male world was, if it is not to his own credit to submit to any degradation that appears to do reverence to these high-priests of delirium. He drinks with avidity the water that has been worked up by the wet heat of this filthy being, eats with relish the remnants of his meals, chews over again the pān supârî (leaf with betel-nut) which has been spat out of the mouth of this divine guru.

1 Monier-Williams, Brâhmanism and Hindûsîm, p. 351.
The immorality of the temple-worship quickly spread itself into the whole life of the community. The rás mandali (carval love-meeting) soon became well known institution in many places. The purpose of these gatherings was to re-enact the scenes of the mythological story of Krishna's amorous sporting with the gopīs by the waters and in the woods of Mathura.

Doctrines and practices such as have been described were bound to call forth, sooner or later, protests from within the community itself. With the growing education and enlightenment of the Maharajas influences some of the better spirits awoke to shame and indignation. One of these was Karsandas Mulji, a resident of Bombay, who in 1856 raised his voice and in the columns of the Satya Prakash ("The Light of Truth"), a weekly paper, began to fulminate against the exactions and corrupt practices of the Vallabhacharyan Maharajas. The Maharajas had at that time suffered a few set-backs to their pretensions. These furnished an opportunity to the dissatisfied in the community. The Maharajas had begun an attack on the Brahmans, of whose influence with the people they were beginning to fear to have been deprived. Those of their own community who were eager to see abuses among themselves corrected undertook to assist the Maharajas in their conflict with the Brahman on the condition that they would reform their own practices. The Maharajas, yielding to this pressure, agreed to accept the proposed reforms, which, among other things, demanded the cessation of the adulterous behaviour of some Maharajas towards the women of their families, especially in the winter temple-service at four o'clock in the morning, and of the violation of the young girls of the community. The reformers aimed also at relief from the heavy money exactions which the Maharajas knew so well how to levy by means of threats of their displeasure. To these and to some other demands of a minor character the alarmed Maharajas gave an unwilling consent, stipulating that the agreement should not come into operation for a year. Further, the Maharajas had been worsted in their attempt to secure exemption from appearance in courts of justice; a objection appeared to the idea that it would be a degradation to them to sit lower than a European. The High Court of Bombay refused to entertain their claim. When, during an action, a plaintiff wanted to subpoena the Mahārājās as witnesses, they closed their temples, and their followers, who could not take their meals without paying the morning adoration to the Maharajas and the image, were kept without, fasting. These fasting followers were released from their unhappy plight only on their subscribing a bond which pledged them to obey the Maharajas and to undertake in no circumstances to summon them to a court of justice. All this gave rise to a large amount of newspaper criticism, which tended to weaken the prestige of the Maharajas.

In 1860 the Mahārājā of Surat came to Bombay and, by presiding at the distribution of prizes at the Gujarati Girls' Schools, appeared to place himself on the side of social reform. Invited to a meeting at which the question of a renaissance of the abandoned women was to be discussed, the Mahārājā appeared among the opponents of the suggested reform and apparently got the worst of the argument in this public discussion. The editor of the Satya Prakāśī then challenged the Mahārājā to a discussion in the press. The Mahārājā, indicated his views through the columns of the Satya Prakāśī ("Praman of our Religion"); a paper published under his patronage. The editor of the Satya Prakāśī accused the Satya Prakāśī of being an article expressing the subjective religion of the Hindus and the Present Heterodox Opinion's, which set forth a doctrine to the effect that the followers of Vaiṣṇavism, at least, were not followers of Mahārājās. In the course of this article he made certain allegations regarding the Mahārājā which became the subject of an action for libel. The case was tried in the Bombay High Court. In the May the Mahārājā died an action for libel against the editor and the printing house of the Vallabhāchāry community, at the instigation of the Mahārājā, attempted to interfere with the course of justice by resolving that none of the cases, unless of except communication, should be heard in the Mahārājā's absence, with the result that they were found guilty and sentenced to heavy fines. The Mahārājīlibel case came on for hearing on 29th Jan. 1865. The Mahārājā occupied the High Court during 24 sittings spread over a period of 40 days. Thirty witnesses were examined for the plaintiff. For the defendant (Karsandas Mulji), some of the latter being men of learning and eminence in the community. The case excited the most interest among learned communities in the city. It led to a complete exposure of the lives and practices of the Vallabhachāry Mahārājās, and the verdict was in favour of the defendant on the main issue of justification, with costs, and for the plaintiff on the defendant's plea of "not guilty," without costs. With respect to this part of the plea the Chief Justice took the view that a public writer could not make an attack on the character of an individual in his private capacity, although he might be deprecated and an adulterer, and besides that the defendant was not justified, without previous knowledge of the plaintiff's misconduct, in publishing an attack on him, although the allegation subsequently turned out to be true. The Puise Judge, on the other hand, held that the article was an attack not on the private character of the plaintiff, but on his character as a Maharajah, or religious preceptor, and that the defendant was quite aware of the existing practices of the sect. The issue of the trial was a complete success for the Vallabhachāry reformer, an important victory for the cause for which he stood, and a crushing exposure of licentiousness in the high places of religion.

Many who witnessed this trial more than fifty years ago have hoped that the death-blow had been given to the prestige and to the licentious practices of the Vallabhachāry Mahārājās. But the astounding fact is that the Vallabhachāry Mahārājās continued to flourish. Twenty years after the trial the Maharajas of the sect was found guilty of complicity in a mail robbery and sentenced at Rajkot to a term of imprisonment. Some of them might have been in the entire Vallabhachāry community would have been shocked by this revelation of depravity in a religious leader. This aspect of the case seems to have affected them little; it failed to impress on the community on other and quite different grounds. They were stricken with horror at the thought of the danger to the caste of their Maharajas that was involved in his being condemned to eat the prison food. Local merchants in Bombay organized a meeting at which it was resolved to petition the Government to relax the prison rules in favour of this sacred personage! Needless to say, their petition was unheeded. Probably in no other country than India would it have been possible for any system to survive such exposure.

This episode in the history of the Vallabhachāryas has been narrated here for these reasons, that it led to the full disclosure of the real character of the teaching of this sect and of the width of the gulf which lies between morality and religion in the current conceptions of multitudes of the people of India, and that it also illustrates the powerlessness of public opinion, as it exists in India, to grapple with social customs that rest on religious sanctions having their roots deep down in the amorphous soil that is the product of ages of pantheistic thinking.

LITERATURE.—A clear statement of the place of the Vallabhachāryas is contained in M. Monier-Williams, Brahmanism and Hindutwa, London, 1879. A very full history of the sect, with a detailed account of the Maharaja libel case, will be found in A. S. Radha-Kunja, "History of Maharaja in B. India, London, 1865. The chief authority of the sect is the Bhagvat-Gita, the hymns of the Kṛṣṇa, was translated into Brijbhas with the title Premadyak ("Ocean of Love"). Among the books of the sect are the Gita and the Bhagvant Tiks Subodhini, the Siddhānta Rādhāgaṇa, both written for Vallabha, the Vaiṣṇavas ("Nectar of Nectar"). Most of these have been translated into commentary on the Prakāśīgīrī, Guraṃrāi ("Gurū- Worship"), Vīrāha Śatāli, Siddhānta Vīrū (a commentary on Gokulamāth, Sri Siddhānta Rāmdarśa, the Bhagatī Rādhā Chaitanya, the Bhagatī Tiks Subodhini, the Bhagatī Rādhanāma, both ascribed to Vallabha, the Vaiṣṇavas ("Nectar of Nectar"). Most of these have been translated into commentary on the Prakāśīgīrī, Guraṃrāi ("Gurū- Worship"), Vīrāha Śatāli, Siddhānta Vīrū (a commentary on Gokulamāth, Sri Siddhānta Rāmdarśa, the Bhagatī Rādhā Chaitanya, the Bhagatī Tiks Subodhini, the Bhagatī Rādhanāma, both ascribed to Vallabha, the Vaiṣṇavas ("Nectar of Nectar").
VALUE.—1. The nature of value.—Value is one of the last of the great philosophic topics to have received recognition, and even now the Encyclopaedia Britannica has an article only on economic value. Its discovery was probably the greatest achievement of empiricism in the 19th cent., but opinions on the subject are not yet crystallized, and it is still one of the growing points of philosophy and one which seems likely to overshadow older views. It is clear from the antiquity of the antithesis of 'fact' and 'value,' and the difference between the standpoints of 'description' and 'appréciation.' It is widely held that consciousness of value differs in kind from consciousness of fact. It is posterior to the latter, and represents a reaction upon fact. It is an attitude assumed towards fact, a weighing of fact in relation to an agent, and his feelings, desires, interests, purposes, needs, and acts; and it expresses his appreciation (appréciation) or repugnation (dépréciation) of it in this relation. It follows (1) that a certain subjectivity, or, better, a relation to personality, is involved in all values; (2) that values are not of the same kind as, and react upon, when it reacts upon stimulation, and that for a purely theoretic or contemplative view no values would exist; (3) that values are something superadded to, and independent of, qualities of the mind, in order to express their relation to its purpose and acts, and do not inhere in objects per se. Indeed they seem to be even more subjective, variable, and personal than the 'secondary' qualities of objects, and hence are often called 'tertiary' qualities. Nevertheless they are also objectified and projected into objects, when these are regarded as valuable objectively and per se, or when the 'validity' of actual valuations is as¬

2. The history of the notion.—Historically the importance of the problem of value has been recognized very slowly, gradually, and grudgingly, and, moreover, its philosophic history is obscure. No early philosophy having made it central, or even expressly considered it. In the light of subsequent developments, however, we may trace its emergence to the Platonic doctrine (in Republic, vi.) of the Idea of Good. When Plato conceived the Good as the culmination of the Ideal world and as the principle which was to unify, systematize, and organize all the other 'forms,' he was really putting 'value' above 'being,' considering as the supreme principle of explanation, and expressing the same thought as Lotze, when he declared that the beginning of metaphysics lies in ethics. For he was proposing to view all being teleologic¬ally, and to make its relation to a 'good' or end (an ethical notion) essential to its being. This was to affirm not only the objective validity of the 'tertiary' qualities, but also their supremacy over the others. Plato, however, did not himself develop this line of reflection, nor succeed in inducing philosophers in general to investigate the problem of values. To the more naturalistic they seemed to react upon perception or intuition in their ultimate reality. Spinoza's wholesale repudiation of their objectivity, at the end of bk. i. of his Ethics, is

typical in this respect. The modern developments of the subject proceed from Kant, who, however, came upon it rather incidentally at the end of his philosophic career, and apprehended its significance very imperfectly. Kant's philosophizing had ended in the theoretical, and practically he practically repudiated, or at least he limited, all essential beliefs in (God, freedom, and immortality) could not be scientifically justified. Yet they had to be presupposed, he believed, for purposes of action; i.e., to carry on life it was necessary to exist as if they were true. He devised therein the notion of a practical postulate, which was to be practically imperative without being theoretically cogent, attaching it to the Moral Law of unconditional obligation, and endowing it with objects of 'faith,' which were to be carefully distinguished from objects of knowledge. He thus established (1) a dualism between faith and knowledge which had obvious interest for theology, and (2) a supremacy of the practical over the theoretic reason, which was more fruitful, because less naive, than Plato's. The latter result tended to raise 'values' above 'facts,' though the former at first masked this consequence, and took such a philosophic long to overcome the Kantian dualism. Both, however, were prolific of further developments, divergent from the main line of post-Kantian speculation, which was that to notice that, just as the existence of fact must be conditioned for us by our knowledge, so our knowledge must in turn be conditioned by our interests and the prospective value of the objects of our cognitive endeavours. For a long time the investigation of value was carried on only in Germany, and even then progress was slow. The first (probably) to see that here was a new problem was F. E. Beneke, a practical psychologist among the German philosophers of his time, and hence a victim of Hegel's intolerance. Already in his Grundlegung zur Physik der Sitten (1821) he sees that, if the science of morals is practical, the notion of value lies at the root of it. He lays it down that the value which we attribute to a thing is determined by the pleasure which it has excited in us, and he makes the whole of ethics depend on feelings of value. In his Grundlinien des natürlichen Systems der praktischen Philosophie (1857-40) he makes it more explicit that valuations arise in the mind as reactions upon stimulation and are conditioned by the things of the external world, distinguishes between subjective and objective valuation (Wertgebung), and traces the growth of 'dispositions' to value and to desire. R. H. Lotze (1817-91) revived the Platonic idea that good ranks above all being, wanting metaphysic to show what ought to be conditions what is (Metaphysik of 1841), and that 'Nature is directed to the accomplishment of Good,' and interpreted the 'ontological' proof of the existence of God as meaning that the totality of value cannot be utterly divorced from existence. In the endeavour to vindicate value he had the sympathy of his theological colleague at Göttingen, Albrecht Ritschl (1822—89), who agrees with him that the facts of concrete experience are the source of our general notions, and not, as Platonism has always held, pale re¬

flexions of the latter. Hence personal experience is not deducible from metaphysics, but vice versa. Ritschl, however, started rather from the Kantian dualism of faith and knowledge and tried to differentiate them from fact, and from the latter, but he was less familiar with distinct objects, those of religion—an independent method, which it shared with ethics and aesthetics—distinct from that of metaphysics and science, and in turn he supposed a further differ¬

1 Microcosm, Eng. tr., Edinburgh, 1894, I. 206.
2 Theologie und Metaphysik, Bonn, 1891, pp. 32-40.
ent in kind from theoretical judgments, though equally capable of validity and certainty. It was therefore to misconstrue the essential meaning of religious affirmations to take them as expressions of theoretic insight rather than of moral truth. It is mainly to Ritschel that it is due the current arithesis between value-judgments and judgments of fact and method. The theoretics of sciences are different in kind according as they use the one or the other. Ritschel, however, recognized that this separation could not be really carried through. He observes: 'All continuous cognition of the things which excite sensation is not only accompanied but also guided by feeling' (pleasure-pain, as indicative of value for self, by way of enhancement or inhibition), and 'in so far as attention is necessary to retain the end of knowledge, will become the vehicle of the purpose of exact cognition; the proximate motive of will, however, is feeling, as expressing that a thing or an activity is worth desiring. Value-judgments therefore are those that determine all connected knowledge of the world, even when it is carried out in the most objective fashion. Attention during scientific observation always desires that such knowledge has a value for him who exercises it.'

This seems to render all theoretic judgments dependent on, and subordinate to, value-judgments; but one might dispute the coincidence of theoretical and independent value-judgments. In the sciences value-judgments accompany the theoretic, whereas 'independent value-judgments are all cognitions of matter-judgments.' They are, therefore, as they excite moral pleasure or displeasure, or otherwise set the will in motion to appropriate goods or to ward off evils. The religions also are composed of such independent value-judgments expressing man's and the world's duty and aim. From this position it was easy to pass to that of W. Windelband (1845-1915), who, while sharply distinguishing between judgments and evaluations or judgments about judgments (Beurteilungen), emphasized that the latter are involved in every judgment in that it affirms or denies, approves or disapproves. Logic, therefore, becomes a science of values, a third normative science, along with ethics and aesthetics, and like them aims at the discovery of universally valid norms. Philosophy becomes the critical study of the universally valid values; their recognition was the duty and aim. Windelband was followed by H. Rickert and H. Münsterberg (1883-1916). The Austrian schools of C. von Eulenburg (1850-1916) and A. Meinong (1853-1920) devote themselves to the discussion of the objects and sorts of values, of their aims and their desires, and will, the laws of the valuation-process, and the accompanying feelings, and apply to all values the economic law of marginal utility. The rise of the social sciences and the influence of the empiricism of (1788-1860), by raising the question of the value of life as a whole, emphasized the importance of values. F. W. Nietzsche (1844-1900) effectively directed attention to the transformations of values, and set himself, before he went mad, to bring about a 'transvaluation' (Umwertung) of all the accepted values. Josiah Royce (1848-1917) acclimatized the distinction between appreciation and description in the English-speaking world with his Spirit of Modern Philosophy (1892), and since then there has been a good deal of (rather unsystematic) discussion of the problems of value, especially in America. Among the intellectual biases of the dominant 'idealism' has been unfavourable to it. The pragmatists, however, were glad to recognize the presence of valuations in cognitive processes, and to deny the intellectual nature of 'pure' thought and 'absolute' truth. They em-

plasize the human, purposeful, and personal character of value, tend to regard all values as relative, primarily to the particular situation which is valued, and declare the existence of efficacy of values to be plain, empirical facts.

3. Sorts and criteria of value.—As the result of this historical development it is generally admitted that distinct sciences of valuation do exist, though there is no agreement as to what they are. However, it is clear that several sciences have been specialized to study them. Thus (1) economic value has long been manifested as a fundamental notion of political economy, which, ever since Adam Smith, has divided it into value in use, i.e. the utility of objects for human purposes, or, as J. S. Mill said, their 'capacity to satisfy a desire or serve a purpose,' and value in exchange, i.e. their power to induce or compel people to pay (other valuables) for the use of them. The former is simply teleological value, which refers to the relation of means and end; the latter is when an object is not only useful but also difficult to procure, and is the special concern of economics (q.v.).

(2) That ethics deals with values is also agreed, but though there is a consensiveness there specific ethical values are and how they are related.

(3) Aesthetic values are also beyond dispute.

(4) Pleasures must be either pleasure and pain (unpleasantness) as a negative value, since even the most ascetic do not really succeed in holding that pleasure is, or in denying that pain is, as such bad. The opposite doctrine, that all intrinsic values are essentially religious, is commoner, but need not disturb the classification of values. For, even if the question whether objects are valuable because they give pleasure or give pleasure because they are desired (valued) were decided in favour of the former alternative, it would still be true that the other values are at least relatively independent. Consciousness of value does not directly imply consciousness of pleasure-pain, nor vary concomitantly with it; e.g., in conscious wrongdoing an ethical value which is felt not as pleasant, but as painful, is nevertheless recognized. Similarly the aesthetic value of a work of art may be recognized, which is yet declared to give no pleasure and to leave the spectator 'cold.'

(5) It has been mentioned that, according to the school of Ritschel, the objects of the religious consciousness are really values, and affirmations about them are essentially value-judgments. And, though other theologians dissent from it, this view gets considerable support both from the psychology of religion, which interprets religious beliefs as expressions of spiritual needs, and from every theological admission that faith, as well as reason, is operative in the apprehension of religious truth.

(6) There are good reasons for recognizing the distinctiveness of biological or survival-values. For they are capable of objective scientific study, and cannot be simply represented, as Herbert Spencer thought, by the hedonic values. Pleasures are not always conducive to life, nor are all pains evil. The relations of survival to pleasure-pain are complex; so are its relations to the ethical values. Survival-values have a high degree of positive value as to compel universal assent and so high a negative value as to entail complete extinction and universal repudiation.

(7) Several schools of philosophy hold that logic is the science of valence, and that truth is the positive, error the negative, value; and this
treatment is often implied also where it is not avowed. It would seem to be borne out by the far-reaching and influential doctrines, and aesthetics as 'normative' sciences, and proved by the conformity of logic with the criteria generally used to distinguish values.

As such oppositions appear to be used: (1) that between existence and value, the 'is' and the 'ought.' Even though there are in man natural tendencies to approve of what has succeeded itself, and to criticize what is being considered worthy of being—i.e. both to realize ideals and to idealize the actual—there remains a considerable discrepancy between the existent and the valuable. It cannot (ordinarily) be argued that, because a thing exists, it is valuable, or that, because it is valuable, it must exist. What is need not be what ought to be, nor need what ought to be exist. Hence the 'laws' of a science of values are not natural uniformities, but 'norms,' i.e. precepts or imperatives; they formulate not what actually does happen, but what ought to happen 'normally,' i.e. if the persons concerned recognize and submit to the order proper to them.

(2) Values appear to be positive and negative. As they express the attitude of a subject to an object, they indicate the acceptance or rejection, putting or withdrawing the force of attractiveness or repulsiveness of the latter. They occur therefore in couples of antithetical predicators, both admitting of degrees of intensity. Hence values may compensate, cancel, or neutralize each other, and the final value of an object may vary according to the balance between its positive and negative value, or become practically nil. A state of consciousness which is 'neutral,' and an object which is 'indifferent,' are cases of such zero values.

(3) All values are disputable. They involve a relation to a valuer whose valuation need not be correct, and need not be accepted. The allegation of a value, therefore, is not equivalent to its validity. All values are to be understood as primarily claims to value, which may be allowed, disallowed, or reversed, when other values are considered. In some cases such reversal is normal: thus, if A and B are enemies or have opposite interests, what is 'good' for A is normally 'bad' for B, and vice versa.

With the aid of these criteria the following kinds of values can now be enumerated: (1) Hedonic values are the pleasant (positive) and the unpleasant or painful (negative). (2) Aesthetic values are the beautiful (positive) and the ugly (negative); also the attractive-repulsive, the fitting-improper, the noble-vulgar, the elegant-coarse, and many others. (3) Utility values are the good (positive) and the bad (negative); also the useful-useless. These last, though they properly have reference to the relation of means and ends ('the good'), naturally pass over into ethics, when this science is conceived teleologically, i.e. as the science of the final end or supreme good. (4) Other ethical values, relative to other conceptions of ethics, are marked by the oppositions of 'good' and 'evil,' 'right' and 'wrong,' 'ought' and 'ought not.' 'Good' and 'bad' seem sometimes to be used absolutely in ethics, but this usage hardly proves the existence of 'absolute' values. On closer inspection, the meaning is seen to be good or bad for the ethical end, however that is conceived. (5) Religious positions reveal their character as values by the interferences of such antitheses as God-devil, salvation-damnation, election-probation, holy-sinful, sacred-profane; also by the frequency with which religious arguments turn out to be not the impossibility of the existence of faith, or the existence of faith in line with the values 'true' and 'false,' 'truth' and 'error.' These also claim to be absolute; but whether what is believed true is so may be disputed, just as whether what is beautiful, or fair, or beautiful, or valuable, or conducive to survival actually has the value which it claims. Even what is felt as pleasant is not always conceded to be a true 'pleasure' in every 'inward or external' sense to be 'real.' This illustrates also a further confirmation of the whole doctrine, that the various value-predicates are freely transferable from one species of values to another, and that the same fact and value collapses, because fact without value cannot be found. (2) The very fact that it is considered so desirable to find it proves that it is impossible to do so. For the importance attributed to the discovery of fact, and the eulogistic sense in which 'reality' is opposed to 'appearance' or 'illusion,' are, in fact, values. This comes out especially in doctrines about the 'degrees of reality,' which are plainly degrees of value, or about the distinction between 'reality' and 'existence.' (3) It is not psychologically possible to reach any fact, except by a process permeated throughout by values, viz., a purposive or end ('good') by a choice of the 'right' means, which implies selective attention, preferences for what seems valuable, and the influence of concomitant value-feelings and of a variety of prejudices and of biases. (4) The logical reason for holding that every fact alleged must contain a latent value, that it claims not only to be 'true' but also implicitly to be better than any other judgment it was possible to make under the circumstances. Its maker was probably aware of this, and consciously preferred it to all alternatives that occurred to him; but, even where he did not think of any, they remain logically conceivable, and hence the actual judgment is only justifiable by its logical claim to be the best. Hence the value-relation and attitude can never be eradicated from even the merest and most stubborn 'fact.'

Nor, conversely, can a recognition of fact be wholly eliminated from knowledge. Pure value exists as little as pure fact. It would be purely fanciful and sheer postulation, and neither fancies nor postulates are elaborated without regard to fact. They are made to be realized, and, when they are recognized as impossible, their value is destroyed or impaired. It is said to be 'not possible' to realize utterly unrealizable ideals. This recognition of fact, however, is always relative to the existing state of knowledge, and may be modified as knowledge grows. Knower are often concerned to raise up false notions for the purposes of an inquiry or a science, hypo-
thetically and experimentally. Hence it is not to be supposed that what is taken as fact, and formally is 'fact,' must remain so. It may turn out to be only a methodologically convenient 'fiction.' In general it may be considered that, since values are always in every the 'facts' that are recognized as such, they are themselves facts, and that the antithesis between values and facts cannot be made absolute. Values are not simply fortuitous and gratuitous additions to facts, which are merely subjective and should be eliminated by strict science, but are essential to cognize process and compatible with absolute value. But, as a result, such ideas too are always reactions—upon prior facts—and are generated by their evaluation; and, moreover, these prior facts may have been merely hypothetical constructs recommended by their prospective value.

5. Value and existence. It would seem to follow from the relations between value and fact that values cannot be denied existence in any world that can exist for men, and this in several senses. First, they are operative in and on human minds and find expression in human acts and embodiment in human institutions; (2) they can occur in, and relatively to, any universe of diction, however false; (3) (found in the fact among itself of some kind of values is sometimes said to be incapable of real existence, and cited as objections to the connexion of values with existence. But both must be so related that it is not applicable to one and to the other, and to conduct to its successful manipulation. Otherwise they become false ideals and futile fictions. Also an ideal which is recognized as impossible appears to lose pro tanto its obligatoryness and power of attraction. 'Ultra posse nemo obligatur.'

Whether it is possible to infer the existence of a valuable object from a recognition of its value alone is a question of great importance for religion. For the objects of the religious consciousness appear to be largely or wholly of this kind, and the religious 'proofs' of their existence to be ultimately such inferences. They are, moreover, stubbornly persisted in, in spite of the protests of common sense against their validity, and have an important function also in the other sciences, in which they are not recognized so openly, but masquerade as 'axioms' and 'prior truths.' If, discussing then in its generality this inference from value to existence, we should remember that all values are initially claims, which may fail of verification. It is an idealism as solid to reside in the reality of the valuable objects on what may be an unheard claim, viz. on the demand for them alone, unsatisfied and unconfined by experience. Logically they are to start with nothing but postulates. It may be legitimate to take them as methodological principles, but even then they must be regarded as hypotheses to be assumed experimentally, until they have adequately approved and verified themselves by their applications to the actual problems which they concern. For example, it may be legitimate to extract from the actual pursuit of ends and of happiness by men the methodological and values, and be regarded as tending towards a supreme all-embracing end towards universal happiness; but can it be maintained that therefore such an end is actually operative, or that perfect happiness (i.e. everlasting and unalloyed pleasure unaccompanied by pain) is possible? To justify such inferences two further assumptions would seem to be necessary. The first is that human operations and the moral life are formable with human nature and bound to satisfy its demands. Now these assumptions, traditionally described as the axioms of the ultimate rationality of existence, are evidently themselves nothing but values for which existence is postulated, and, if they are to be admitted as axiomatic truths on their own assurance, it is difficult to see what limits can be set to the postulation of objects of desire. Even as it is, methodological postulates are given great, and generally undue, power in verifying themselves, because, so long as they work at all, their failures can always be ascribed to the imperfection of our knowledge, and are not values and the value-postulate of total failure to predict the course of events need lead us to abandon the postulate of their 'causal connexion.' Hence the testing of a value-postulate is always, in any sense, the ultimate test, and not in any sense that makes this presupposition alone a sufficient reason for regarding it as absolutely true; still it is better to get a postulated value confirmed by experience than to accept the mere recognition of value as an adequate guarantee of its existence. What kinds and amounts of experimental confirmation are to be considered adequate to verify the existence of postulated objects of value will naturally depend on the specific subject-matter, and, as in addition the various ways sought and got need not be in harmony with each other, and some may prefer unsound to true, and vice versa, the relevance of some of the values found to the existence to be proved may be called in question, opinions will probably long continue to differ on these matters.

6. Value and validity. It follows from the above that the transition from value to validity is by no means a matter of course, though this is often assumed, both as regards ethical and as regards logical values. In both cases the motive is the difficulty of validating value claims, which is a long, and indeed theoretically an unending, process. Hence the temptation to allege absolute and self-proving values which are independent of their working in experience. The absolute values alleged, however, are only formal claims, as comes out very clearly in Kant's account of the absolute value of personality and of the 'law' of duty. The declaration that every person should be treated as an end in himself is merely a recognition of the formal claim that every person makes to be so treated (even though he never is so treated, and apparently could not be, in the actual order of things), which may serve as a definition of personality; while the moral 'law,' that duty should be unconditionally fulfilled, is merely a paraphrase of the obligations of right which hold in every case is any light thrown on the questions how, concretely, any one should be treated, or what, concretely, his 'duties' are. Similarly every judgment formally claims to be true, absolutely and unconditionally, and, as it mentions no restrictions to its claim, it may be said to be so; but, as this is so, however false a judgment may turn out to be, it establishes no presumption in favour of its real truth. Thus it is quite possible, and indeed necessary, to inquire whether the values claimed are really possessed, and to question the validity of the values actually recognized. This indeed is one of the chief occupations of critical philosophy. It means that the problem of value occurs also in the sphere of values; the antithesis of 'ought' and 'is,' which was supposed to differentiate value and fact, arises again over the value of values, when they are taken as facts for the purpose of assessing their value. The explanation perhaps is that error and failure are possible in all human operations and human reflections, in the estimation of values. The values which are claimed are subject to revision and correction, and, if it is decided that they are, but ought not to be, they can be called either 'false' or 'wrong'; for it is intrinsically as legitimate to use the value-
predicates of logic as those of ethics to describe their failure.

The difficulty of determining the precise connection between value and validity is, however, largely due to the obscurity of the notion of validity itself. We are accustomed to regard validity at first as an absolute and (theoretically) unquestionable degree of value, and to illustrate it from the ideal validity of logic and of ethics. On examination, however, this sense of validity appears to be merely formal, and to be nugatory or null as a guarantee of truth. For instance, the values of the individual, the valid and the valuable fall apart. Neither is the valuable necessarily valid, nor is the valid necessarily valuable. Every moral order makes extensive use of inferior moral motives; every science uses probable but invalid reasonings. Whether the ideal validity is ever reached, or would be valuable if it were, seems more than doubtful. Hence it seems proper to reduce the meaning of validity to a high, or generally recognized and practically indisputable, degree of value, and to make value determine validity, not validity value.

VI. Value and valuation.—If value is conferred upon an object by a personal attitude towards it, it is clear that all objects can be valued by being included in a valuation-process. Many objects, however, are so valued according to circumstances, or are so rarely important enough to be valued at all, that they are conceived as neutral or indifferent per se. So it is only if an object is constantly valued in a particular way that its value adheres to it and it comes to seem intrinsically valuable. For it then emancipates itself from the personal valuation and makes its valuation look like a mere recognition of an already existing value.

Values are objectively valued in other ways also. Thus the personal reaction expressed in a value-judgment carries a formal claim to universality, since every one initially regards himself as the measure of all things, until he is instructed by the dissent of others. Thus claim therefore maintains itself only whereas it is not disputed, and should not be taken as more than methodological. By the comparison of value-judgments it appears that different persons value very differently; hence many value-judgments, being in dispute, are regarded as 'merely subjective.' About others many or all are found to agree, and these may therefore have varying degrees of objectivity. Thus objects which have obtained social recognition as valuable come to rank as objective values. A value that has risen to be objective may then maintain itself without continuing to be valued, and even though, under the circumstances, its value may have been converted into the opposite, thus, once a literary work is ranked as a 'classic,' its value remains uncontested, even though few care for it or even read it, except for examination purposes; and King Midas no doubt continued to think gold most valuable in spite of his inability to digest it. It cannot always be assumed therefore that, because a value is current and is recognized, it is functionally, any more than that it is right.

There are then plenty of objective values, which any valuer encounters and has to recognize as given. But they may nevertheless all be considered as products of valuation-processes, and as presupposing prior value-judgments. For when the valuation of an object has been repeated and has long been regarded, led to a change in the reflective value-judgment becomes superfluous, and an immediate apprehension of value results, just as immediate perception supersedes judgment about familiar subjective recognition. In other cases, it is true, this process does not occur in the history of the individual, but it can then be traced in that of the race, whose achievements the individual inherits. And many, e.g., be pleasant, beautiful, or right, without a judgment or process of valuation; but the immediacy of its value-claim is no bar to any inquiry into why it is so valued, how it has come to be so, and whether it ought to be so, and not thankful, or pleasant as it seems to be. Hence the values which are psychically data, and psychologically immediate, may always be logically mediated and translated into objective values for and by the valuable object itself. The function of valuation-judgments is to render the valid and the valuable distinct. They then function as facts to be evaluated.

8. Transvaluations.—The process of reflective reconsideration of given values continually leads to changes in their status. Hence 'transvaluations' must be regarded as normal and entirely legitimate occurrences in every sphere of values, though they are not everywhere as socially prominent in the annual changes of the fashions.

As Dewey says, 'All valuation is in some degree a revaluation. Nietzsche would probably have made much of a sensation, but he would have been within the bounds of common sense, if he had confined himself to the assertion that all judgment, in the degree in which it is critically intelligent, is a transvaluation of prior values.'

One sufficient reason for this is that, strictly speaking, it is not psychologically possible to repeat a valuation. Transvaluations are made possible either because the valuation has lost its novelty, and the delight of discovery is gone; it is acquiring familiarity and beginning to breed contempt or indifference; or again it is growing easier, or the resistance to it is diminishing, as habituation renders it less repugnant. Moreover, valuations necessarily vary according to the changes in the organic needs which condition them. His tenth penny bun will never taste as good nor be valued as highly by a hungry boy as his first. No doubt these changes in value are little noticed because many of them are slight, unimportant, and ephemeral; but they would anyhow be obscured by the general bias in favour of stability. Unless it is discounted, it will hardly be recognized that stable values are exceptions rather than the rule. They bulk large because they are attended to and selected. Their stability is always more or less a construction for methodological purposes, like the extraction of stable objects out of the flux of happenings. It is always to some extent a fiction, because it is never at once a critical, absolute, and unchanging degree of objectivity. Thus objects which have obtained social recognition as valuable come to rank as objective values. A value that has risen to be objective may then maintain itself without continuing to be valued, and even though, under the circumstances, its value may have been converted into the opposite, thus, once a literary work is ranked as a 'classic,' its value remains uncontested, even though few care for it or even read it, except for examination purposes; and King Midas no doubt continued to think gold most valuable in spite of his inability to digest it. It cannot always be assumed therefore that, because a value is current and is recognized, it is functionally, any more than that it is right.

There are then plenty of objective values, which any valuer encounters and has to recognize as given. But they may nevertheless all be considered as products of valuation-processes, and as presupposing prior value-judgments. For when the valuation of an object has been repeated and has long been regarded, led to a change in the reflective value-judgment becomes superfluous, and an immediate apprehension of value results, just as immediate perception supersedes judgment about familiar subjective recognition. In other cases, it is true, this process does not occur in the history of the individual, but it can then be traced in that of the race, whose achievements the individual inherits. And many, e.g., be pleasant, beautiful, or right, without a judgment or process of valuation; but the immediacy of its value-claim is no bar to any inquiry into why it is so valued, how it has come to be so, and whether it ought to be so, and not thankful, or pleasant as it seems to be. Hence the values which are psychically data, and psychologically immediate, may always be logically mediated and translated into objective values for and by the valuable object itself. The function of valuation-judgments is to render the valid and the valuable distinct. They then function as facts to be evaluated.

us to these transvaluations is the stability of words; for these change their form much less rapidly than in the thought. 9. Conclusions.—The above survey of the problems of value may be regarded as confirming most of the preliminary points noticed in § 1. The philosophical importance of the subject has been attested by the great variety and universal prevalence of values. The provisional definition of value as essentially a personal attitude, as a recognition of the value of an object from a personal point of view, has maintained itself and proved a clue to the labyrinth of values. It also renders somewhat manageable the psychological debates of the schools of Meinong and von Ehrenfels as to whether values are rooted in feeling, will, or desire. For a personal attitude is a concern of the whole man and not of psychological abstractions. If, however, it is thought necessary to pick one among such psychological phrases, it is probably best to say that value is a personal attitude, of welcome or the reverse, toward an object of interest. For few are likely to dispute that 'interests' are relative to personality. This relativity, however, is not to be regarded as importing any objectionable subjectivity into values, just because it proves to be the source also of their objectivity. For it turns out that all objects are pervaded by values and constituted for the values that belong to them, and hence their avowed values may just as rightfully belong to them as the values latent in their other qualities. Accordingly the opposition between value and fact breaks down. 'Facts' are themselves values, values established in the endeavour to analyse out the factor of givenness contained in experience, and presupposing purposive manipulation of appertaining objects. They are thus 'made' things, though they are not made out of nothing, but out of previously recognized facts which are subjected to criticism to determine what they 'really are.' Values are also in so far as they presuppose valuations, purposive manipulations of data, and judgments; also in that they have prospective reference to action, and are intended to guide it. Accordingly, the belief that values belong to the practical side of life is well founded, and even truer than it seemed; for in ultimate analysis logic also is a science of values. Its theoretic values presuppose purposes, selections, choices, and manipulations, which manipulate reality in and do not differ in kind from those which are openly 'practical.' It is clear also that the notion of value as something gratuitously superadded upon fact must be modified, if it is interpreted as meaning that values are something unreal, artificial, and optional. Reality in its fullness contains and exhibits values, and they are ejected from it only by an effort of abstraction, which is relative to certain restricted purposes, and is never quite successful. Values therefore are not to be regarded as gratuitous additions to reality, made out of the superfluity of human perversity, but as its highest products and the culminating points of its significance for us.

LITERATURE.—The literature is extensive but scattered, and often raises the questions about value only incidentally and in connection with other problems. The historical part of it has been mentioned above in § 2; the modern is still largely contained in periodicals, in English journals, Philosophy and Psychology (1915), in discussions conducted under W. M. Urbau (vol. xiii. [1919] nos. 17, 25, xiv. [1920] nos. 5, 9, 11, 19, 25), consideration of the articles (2), J. Dewey (1919) 19, 10, H. W. Schneider (4v. 6, 29), R. B. Perry (4v. 7), C. von Eilberg (1925) 25, xvi. 4v. 7, W. R. Wells (1925, etc.). In mind art. by S. Alexander (new ser., 1, 1921) 92, E. J. Mackenzie (1925) 292, E. P. Thompson (1926) 292, H. J. K. van den Born (1927). See, e.g., in the Schiller Jahrbuch, 1927, 404, 406, and in the Jahrb. f. Geschichte der philosoph. Literatur, 2 vols., 1927, 1928.

VAMPIRE.—I. Introduction.—A vampire may be defined as (1) the spirit of a dead person, or (2) his corpse, re-animated by his own spirit or by a demon, returning to say the life of the living, by depriving them of blood or of some essential organ, in order to augment its own vitality. This forms a particular aspect of the general belief that ghosts, or spirits sent by sorcerers, can annoy the living in various ways, or cause their sickness or death. The vampire is often one who has died an untimely death, or whose after life is unhappy, or a dead sorcerer, wizard, or other omnolous person. Blood being a well-known soul-life-vehicle, it was supposed that by pouring blood upon graves, or by other work, one might obtain it, as is seen from the well-known example of the shades for whom Odysseus sacrificed sheep on his visit to Hades, as well as from the custom of pouring blood upon graves. Taylor suggests that, when it was seen how certain persons grew thin and bloodless day by day, the easy explanation was that a nocturnal ghost or demon was sucking out the life blood. The vampire belief might originate. The superstition is also connected with the fear which is aroused by the dead, partly because they are often seeking or calling the living, and, in those aspects of it which concern the return of the revitalized corpse, it is an extension of what may have been a primitive conception, viz. that the dead have a life of their own in the grave, which, was, in fact, often erected as a kind of house, more elaborate than the houses of the living. Many tales both from savage and from barbaric peoples show that the dead are still living in the tomb and can encounter any intruder who comes near them. It is known that the line between life and death seems to have been but vaguely defined. To prevent the return of the dead, whether bodily or as a ghost, many precautions were in use—e.g., enclosing the grave with a high fence, piling heavy stones upon it, diverting the course of a stream in order to bury in its bed and then permitting it to flow as before, binding the corpse securely (though this was done for other reasons also) or mutilating it. 1

2. Range and examples of the vampire superstition.—While the most gruesome examples of this superstition (the vampire as a revitalized corpse) are to be met with among nomadic peoples in modern Greece, and in China, it is found in many other parts of the world and has been entertained in remote ages. It is not easily separated from 1 Odysseus, 4v. 84; H. O. Trumbull, The Blood Covenant, Philadelphia, 1893, p. 115 ff.; cf. art. Blood, § 7.

1 P. C. H. 1872, 1882.

other beliefs of a like kind. Not only the dead, whether in bodily or in ghostly form, prey upon the living, but demons also, who sometimes have originated from ghosts, suck the blood of the living or feed on corpses.

Belief of this kind regarding spirits of certain dead persons are found sporadically in Polynesia, Melanesia, Indonesia, in India, and among African and South American tribes. Among higher races traces of the idea of the dead walking among the living are found among ancient Babylonians and other Semites, and in Egypt regarding the khou.

In ancient Scandinavia the idea that the dead were alive in their barrows gave rise to the belief that they might become unhallowed monsters of the vampire kind, as is seen from the Grettis Saga. Parallels occur in Saxony England and among the early Teutons and Celts. In modern Greece the vampire belief has prevailed for many centuries, but largely moulded by Slav influences. The vampire superstition holds that various persons become vampires after death. The corpse is relativized and thirsts for blood. Its ravages begin with the feet, and it attacks other necromants, and these in turn become vampires. When the grave of a suspected vampire is opened, the corpse is found undeayed, the lips stained with blood. Its ravages nightly, the grave must be re-entered by cock-crow, else the vampire must remain wherever he is, stiff and helpless. A great epidemic of vampire superstition occurred in Hungary in the 15th cent., which was investigated by a royal commission. In China a vampire belief exists, and offers a curious parallel to that of the Slavs.

3. Rites of riddance.—Among the Slavs, when a grave is opened and the corpse is found to be fresh, swollen with blood, and life-like, it is transfixed through the region of the heart with a stake of aspen or maple (Russia), blackthorn or hawthorn (Serbia), but this must be done with one blow, for two blows would restore it to life. A suspected corpse is also buried in this way. A vampire at Laibach in 1672 is said to have pulled out the stake and thrown it back; a person who committed suicide was often buried at cross-roads, the body transfixed with a spear or stake, in Britain and elsewhere, in order that the ghost might not walk, but perhaps in earlier superstition lest it should return. This was forbidden in England by law in 1824.

Sometimes also the head of the vampire was cut off. The heads of murderers whose spirits the living feared were also cut out and destroyed, or set between the legs or beneath the body. Another effectual way was to burn the corpse to ashes, but care was taken to drive back into the fire every creature which might come from it—worms, snakes, beetles, birds, etc.—lest the vampire should have embodied itself in one of them, and so resume its foul work. This was done among the Slavs, and in Bulgaria a sorcerer armed with a saint's picture is supposed to drive the vampire into a bottle containing some of its foul food, and, when corked up, the bottle is thrown into the fire. In Greece any corpse which is found not to have suffered destruction, as well as any suspected of being a vampire, was, and even now still is, exhumed, cut to pieces, and burned, to prevent its further wandering as a revenant. When the body was burnt, water or oil was poured on the grave, and the heart was torn out of the body and dissolved in vinegar. This is a reversion to the old pagan custom of cremation of the dead, and, in spite of Slav influences, the Slavish method of staking the body is in use.

In China suspected corpses were allowed to decay in the open air before burial, or, when buried, were often exhumed and burned. In the absence of the corpse from the grave, the coffin-lid was removed, thus letting in fresh air, which prevents the body from re-entering it. When the corpse was running about, rice, red peas, and pieces of iron were strewn round the grave; it could not pass these, and was found stiff and dead on the ground, and could then be burned.

To guard against the attacks of vampires, various charms, amulets, sacred symbols, and magic herbs are concocted, used in the various countries where the belief exists.

4. Love motive in the vampire belief.—Sometimes the vampire may have intercourse with the living, and sometimes his only motive seems to be the spread belief that the dead or ghosts can have sexual union with the living, and, as far as revitalized corpses are concerned, this motive is found in the ancient Greek story of the girl Philinnia, who after her death was found with the youth Machates in her father's house as his lover, leaving him at dawn. In such stories as this the vampire is linked to the ghostly male, or nightmare, in its erotic capacity. Sometimes one hand—the motor—enters into a room through the keyhole, as the vampire does—and to the mediaval succuba on the other, in so far as the latter, like other erotic demons, preys upon the vital powers of man, so pleasing them. The vampire-lover theme is also illustrated by the 'Dead Rider' cycle, as in Burgers Lenore or Scott's spirited version, William and Helen. Burger's poem is based on the folk-belief that a dead man appears to those dearly loved—lover, wife, or child—because they sorrow so much, or in order to draw them to the grave. The living person rides with him on horseback or follows him, ignorant that he is really leading them to the churchyard. The corpse sinks into his house—the grave—and the living barely escapes being entombed, or sometimes dies at the grave. Of this there are Scandinavian, Icelandic, Albani, Breton, Scots, and English versions, and it is even found among the Araucanians as a purely native tale.

5. Vampire and werewolf.—Attention has been drawn elsewhere to the connexion between the kindred superstitions of the vampire and the werewolf. The main links are that the dead may become werewolves or other wer-animals and prey on the living; and, as in Greece and among the

VANCOUVER ISLAND INDIANS

SLAVS, that the man who was a werewolf in his lifetime becomes a vampire after death.

A further link of connexion is found in the fact that both Slaves and werewolves are believed to be

cause storms, drought, famine, and cattle-Plague;

both are killed by an aspen stake; and the vampire is sometimes the offspring of a witch and a werewolf. With these two is often a witch or wizard who has assumed animal form, both of these are often blood-suckers and eaters of human flesh, with all the perverted tastes of a vampire.3

The earth personified, occasionally as Cerberus, was at some time supposed to be an enter of the dead.4 Demonic beings of the under world were also represented as eaters of the dead—Cyparissus, the Egyptian "eater of hearts" or "eater of the dead," etc.4

6. The vampire in literature.—Such a superstition has naturally attracted some attention in literature. Byron has an effective passage referring to it in The Giaour. His prose work on the subject (unfinished) was completed by Polidori and dramatized by Charles Nadler. Hoffmann introduces it in one of the tales in The Cabinet of Dr. Caligari, in which a gigantic Golgotha is cast out of the grave. It is also the subject of Théophile Gautier's La Morte amoureuse, and of a story in J. S. Le Fanu's Green Tea. But the whole superstition has reached its most effective treatment, with the greatest verisimilitude, from Browning in his Dracula,5 which embodies in a striking manner all that is believed on the subject in Transylvania.

J. A. MACULLOCH.

VANCOUVER ISLAND INDIANS.—The Indians of Vancouver Island are not a homogeneous people, but belong to three clearly defined groups. The northern part of the island is occupied by tribes of Kwakiutl speech; they are closely related to tribes occupying the mainland of British Columbia to the east and for a considerable distance north of Vancouver Island. The southern part of the island is occupied by Coast Salish tribes. These are but a comparatively small section of the widely spread Salish stock, which are found throughout the United States as far as the lower Columbia Valley. The remainder of the island—roughly speaking, the southern two-thirds of the west coast—is inhabited by a group of tribes variously known as Nootka (from one of the best known tribes of the group) or Aht. These Indians are almost entirely confined to Vancouver Island; the extreme northwestern part of Washington, however, in the neighbourhood of Cape Flattery, is occupied by the Makah Indians, an offshoot of the Nootka group. The Kwakiutl and Nootka tribes are quite clearly, if somewhat remotely, related in speech.5

1 Balston, Aborig., p. 492.
3 Cf. Hesse, Metaphysik der Phantasten, in the Organe Hymnica, like the stone sarcophagi.

The Salish languages may also prove to be related to Kwakiutl and Nootka, but only remotely so at best. These three groups of tribes exhibit numerous intertribal connexions, the dominant position, on the whole, being held by the Kwakiutl Indians of the north. In this article the religion of the Nootka Indians will be taken as the type for the aborigines of Vancouver Island. Much of the data on the other tribes will be found in art. SALS.

Beliefs and practices of a more or less definitely religious character enter so largely into almost every phase of life in the Nootka life that it is not altogether easy to mark off religion as a separate subject for ethnologic treatment. For practical purposes the subject of Nootka religion may be considered as embracing the beliefs in supernatural beings of various sorts, prayer, the acquisition of 'power' either by means of amulets and the help of definite beings or by means of the performance of secret rituals of predominantly magical content, shamanism and witchcraft, beliefs in souls, tabus of various sort and other beliefs of more or less clearly religious reference, and public rituals.

1. Supernatural beings.—It is very difficult to classify the various beings of a supernatural order that are recognized in Nootka belief. They range all the way from a Sky Being, who seems almost on the point of becoming comparable to our own conception of a Supreme Being, down to patrons or guardians of tribes, and even the stubborn individuation of birds, such as individual cedar trees or house-beans. The line between beings endowed with a more or less distinctive personality and mere amulets is strangely difficult to draw. In the west of these Salish tribes, there are a considerable number of monsters whose only raison d'être, so far as humanity is concerned, is that some part of their body can be utilized for amuletary purposes. On the whole, the idea of the majority of the Nootka supernatural beings cannot be said to be very firmly defined. As regards their relation to humanity, they might be classified as objects of prayer, beings capable of granting 'powers' of a great many different sorts, beings that are impersonated in rituals, generally in ritualistic dances, beings that figure in myths and family legends, and beings that are visibly represented, by masks or privileged to do so, as creeds. This classification is not a mutually exclusive one, however, as many supernatural beings appear in more than one connexion.

Thus, the Whales is important in ritual, legend, and crest representation, and is believed to grant 'powers' or 'medicines.' On the other hand, the Whale is important as a crest and to mythological beings quite distinctly related. While hunting powers and other gifts are bestowed by him in legends and by virtue of inheritance of such legendary gifts rather than directly in the actual present. Differing from the Whale is the Thunderbird, in that he is not identified with an actual animal species, and that he is very frequently, perhaps most frequently of all beings, impersonated in ritual performances. Again, such a being as the Ahtahakok, a kind of demonic wood-spirit, plays an important part in ritual and as an amulet-dispenser, but is never represented as a crest (his mask is used only in connexion with a ritual).

It is difficult in some cases to tell whether a particular type of being is conceived of as a single personality, like the more important gods and goddesses of the Greeks, or as embracing a class of numerous individuals, like our fairies. The latter is probably far more often the case, though true examples of both are found among the Salish. Sometimes the Indians themselves seem to waver between contradictory conceptions, as in the case of the Thunderbird. He is generally, it seems, thought of as a distinct individuality, at least if that there were originally four Thunderbird brothers, but that three of them were destroyed by the Woodpecker, yet the tendency to localize his home on some particular mountain-peak and to give him position on the current among the different tribes have led in the
minds of some to the rationalizing conclusion that there is more than one Thunder-bird in existence. In the story of the Chief, who enters hardly at all into the life of the natives except as an object of prayer. He is believed to dwell in the sky and to be, in a general way, the dispenser of life in its various forms to the animals. He is not represented either pictorially or in rituals, and never, so far as known, occurs as a character in the mythology, not even as creator or transformer. So popular is this belief that one may be tempted to look for Christian influence, was it not for the obviously standardized form, and hence presumably great age, of the prayers addressed to him.

As in all Indian mythologies, a large number of animals are represented as human or semi-human characters in Nutka myths, many of them being endowed with supernatural powers. Few of these, however, can be considered as of interest in a purely religious connexion; the attitude of the Indian towards many of them is comparable to our own in reference to the fantastic characters of a romance or fairy-tale or even, not infrequently, to the purely human characters of a modern novel. The Thunder-bird, the most northern Pacific Coast tribes as a creator or transformer, plays the part in Nutka mythology purely of a greedy trickster or bully, comparable to the leprechaun in Ireland. The theory is advanced that animals are descended from human-like beings of the mythological period finds its counterpart in the belief that animals to-day, when out of sight of people, divest themselves of their animal blankets and look, talk, and act like ordinary human beings. Most of the animals represented in the mythology and a large number not so represented are impersonated, by means of face-paints, masks, and ceremonial regalia, in the dances of the Wolf ritual (a few of these dances are the Raven, the Woodpecker, the Sea-gull, the Wasp, the Halibut, the Octopus, and the Deer). Even in this connexion, however, it is doubtful if the animal beings themselves, as a whole, have further religious significance than that their representation has become associated with a ritual which is charged with the quality of religious emotion. The animal dances as such seem to be of interest largely as pantomimic performances. Among all these animal beings, however, there are at least some that have a degree of religious importance. One may be observed (or were customarily obtained) from the Wolf, the Whale, the Hair-seal, the Sea-otter, the Shark, the Beaver, and others. Of particular importance among these is the Wolf. The Wolves are believed to form a supernatural community of their own, with four special fast runners of the chief and the Raven as news-tellers. They are looked upon with great reverence—an attitude that finds its fullest expression in the Wolf ritual, founded, according to its origin legends, by the Wolves themselves.

In the mythology we also meet with a number of human-like figures that belong to the supernatural world without being identified with either animals or monsters. Here belongs the creator Kapkimiya, who created the first man out of the thigh of the first already existent woman, made the island of Tlcsin, the home of the Tsishanith tribe descended from them, and assigned them the various foods, animal and vegetable, that they and their descendants were to use. Kapkimiya is evidently the chief figure, and the whole is doubtless paralleled by local creators in the other Nutka tribes. Another important figure in the mythology is Kwatyiats, a sort of creator or, better, transformer, who experienced many curious adventures and events to the end of creating the world in present shape. The rock-carvings in the interior of Vancouver Island are believed to be his work. He is still alive, but it is not known where he resides. With him is often associated the chief of the Raven, is a trickster. Another transformer is known as Creating-everything-to-be-different. His work consisted chiefly in transforming various animals and people into the relatively harmless animals that we know to-day.

We need no more refer to a few of the host of powers with which the Nutka Indian peoples the land, the sea, and the air. The Heli, the small white-headed scaly being who darts out lightning with his red tongue. He is generally represented as a six-legged gliding on the moon or down a tree, or carried like a belt about the Thunder-bird. When seen, a bit of his tail should be tugged off and preserved as a gift for victory in whaling and other sea-associted hunting. The Yasi are fairy-like folk that dwell on the summits of mountains. They wear feathers on their heads and are associated with fire and the aurora borealis. They are occasionally evil beings, frequently dissolving into foam. A supernatural bird, the Mikhinisch, said to resemble a female mallard duck, is a potent source of luck in hunting. The Ahmashk, already referred to, is a kind of forest ogre, evidently related to the Nulini, or Fool-dancer, of the Kwakwath; his usual mask is valued as an amulet forcredulity. The Chinai was brownie-like woods-focks who do all sorts of strange things, such as hunting for sea-carcasss as though they were real; they give point to those who are fortunate enough to see them. The Pokumis are wild and elusie beings, transformed from persons who have become possessed of wild and human ways or overcome by intense cold. The Pokumis are often represented in the pantomimic dances of the Wolf ritual. The Shalichik is a kind of animal-like monster, who is a sort of mountain and whose red hair is a powerful amulet for success in war. A child of this race is more than one yard in colour and with a tail attached to each of his heads, is particularly virulent as ‘medicine’; a small part of his body is a powerful charm for both war and hunting. The Tulituk, the Nutka equivalent of the Sisloti so often represented in the art of the Kwakiutl Indians. The Tsakoakta is an enormously strong being with red, shaggy hair and with his right foot large, his left extremely small. The earth of his tracks is a strengthening ‘medicine’ for the most important of all the supernatural, natural powers, in ritual and legend as in the acquisition of medicine; he is the original of the class of beings represented by, but not actually believed to be identical with, quartz crystals. They have the power of incredibly rapid flight and make a loud noise when they appear. They have become associated in Nutka belief with the Wolf ritual, their characteristic sound having being identified with the supernatural whistling that is believed to emanate from the wolves and that is imparted to the initiates of the ritual. It is therefore not surprising that the quartz-like Hena is held to be found also in the body of a wolf, of whom it forms a sort of subsidiary soul.

It is remarkable that the power emanating from most of these forms of animal and of man is intimately bound up with some amulet-like or fetish-like object, generally some part of his body that is, often with considerable violence, taken from him. The conception of a benevolent attitude towards these animals or divinities and the spiritual guardianship over him—a conception that prevails among so many American Indian tribes—is, on the whole, signally absent here. It is present in some degree in the legendary accounts of ancestral experiences of the acquisition of power, yet even here the chief emphasis is always placed on the supernatural object acquired and handed down or on the privilege of ceremoniously representing such an experience, not on the notion of a mystical relationship.

2. Prayer.—Prayer is often held to represent religious feeling at its purest, particularly when the prayer is of individual and of a non-ritual form. Among the Nutka Indians prayers are, so far as known, always of strictly standardized form. They are either sacred songs sung at a ritual by an individual and in the presence of the community (such prayers, e.g., are addressed to the Wolves of the Wolf ritual or in the rites of exorcism in the same ritual) or they are private, addressed to the Sky Chief to the sky. The latter class have more of a magical
than purely religious connotation, and this in spite of the fact that they are addressed to the nearest approach that the Nutka have to a generalized Supreme Being. They are self-seeking in tone; more, in fact, than directly so. For a superiorit in success at the expense of others.

Generally the secret ritual prayers are for some special gift, as wealth, success in hunting or fishing, protection against the malevolent influences of the supernatural, or the performance of a ritualistic act, or whatever else, good or evil, one may desire the fulfillment of. As a rule, however, the specific prayer is preceded by a more general or less exacting prayer.

A typical example of such a 'life-prayer:': 'Look down on me, O Chief, have pity on me. Cause me to be alive. Cause to be sent back whatever evil words may be said of me by any one. If at any time one prays in secret for my death, may I cause his curse to recoil on himself; may I cause him to swallow his own (evil words). Cause me to be without affliction, O Chief. Grant me, O Chief, thy wealth (or whatever else one desires) . . .'

While the private prayers of the Nutka are strictly standardized in form, the texts of the public prayers seem to differ considerably according to the varying family traditions. Here, as throughout Nutka life, family exclusiveness in matters of privilege and property is respected.

3. Acquisition of power; secret rituals.—Like so many other primitive peoples, the Nutka feel the necessity of continuous supernatural assistance in the pursuit of the ends of life. The individual must, whenever possible, evoke his own powers by the support of some of the mysterious influences that surround him. Prayer can do much for him; the more possession of an amulet or fetish or 'medicine' probably more; still more efficacious is a token resulting from an encounter with a supernatural being. The handling of all such tokens, as well as of all supernatural objects or animals not actually controllable with spoken words, is regu-

larly hedged about by various tabus. Generally fasting and a period of sexual continence are required, also absence from the home. A token may not be lightly rejected, if disaster is to be avoided. One must also know beforehand just how it is to be utilized, what one must do or say in order to secure the benefits of its supernatural influence. Frequently one must be careful to take only the right half. Frequently, too, it may not be taken into the house, but must be kept in a secret spot in the woods. Its power may be communicated by rubbing or other handling, or a small piece of it may be kept as a charm. Thus a bit of it may be inserted in the cedar-bark wrapping of a sealing or whaling harpoon. Every Indian possesses a considerable number of 'medicines,' for various purposes and of different degrees of potency. Their possession is generally a secret to all but the immediate heirs of their acquirer or inheritor; certain 'life medicines' may even be kept entirely secret until the approach of death. It is interesting to note that the mere possession of secret or magical lore is itself 'good medicine.' As one parts with knowledge, his power of resistance to adverse influences is lessened.

It is not always possible to secure the special assistance derived from supernatural helpers or inherited fetishes. Hence the main reliance of the Nutka Indian for the success of his hunting, fishing, or other ventures is on the punctilious performance of certain private magical ceremonies that we have termed 'secret rituals.' There is an astonishing number and a bewildering variety of such rituals. Every family possesses, by secrets in their hands, medicines or 'natural magic' sufficient to bring success.

Sometimes several versions of a magical ritual— 

one derived, say, from the paternal, the other from the maternal, tradition—are known by an individual, but they may never be combined or confused. The secret rituals are always performed in a hidden spot at a considerable distance from the house; for the more elaborate rituals the various families have prepared spots deep in the woods, often in or close to the edge of swamp. They range in complexity from comparatively simple magical performances, prayers, and spell-pronouncements lasting but a single night to elaborate ceremonies that may last months or more. The former are either abbreviated versions of more elaborate rituals or relate to the easier quests, such as salmon-trolling; the latter are concerned with the more hazardous or exacting pursuits, such as whaling, sea-sonal hunting, or sealing. Each secret ritual is in effect a prayer and magical compulsion toward some desired end—success in trapping fish, spearing cod, harpooning sea-otter, whaling, acquiring wealth, acquiring love, warding an enemy; even the satisfaction of such unusual desires as success in stealing or the learning of a raven's speech may be compassed by the performance of a ritualistic act. The details of each ritual differ according to special family tradition and the nature of the end sought. The constant features seem to be prayer, the pronouncement of secret words, the delivery of talismans, the taking of tokens, the rubbing down of talismans, the taking of medicines, bathing and rubbing down with hemlock branches (until the skin peeled, in the practice of the hardier aspirants for success), the wearing of cedar-bark and feather regalia and the laying on of symbolic face-paints, and most important of all, the performance of magical actions. In principle these actions are dominated by the philosophy of sympathetic magic and by the symbolic efficacy of imitation and the handling of effigies.

Thus, the aspirant for success in whaling may spend hours diving into a pool and coming up to the surface and blowing into imitation of a whale, by means of the growths on the underside of the whale, or by the skin that gorged out (a symbolic representation of the whale that is blind to his pursuer and allows himself to be caught). Needless to say, these secret rituals have no real, no purely social bearing.

The magic ritualist may, however, be accompanied by a close relative, say a son or nephew—frequently, in the more elaborate types, by his wife. Not the least interesting thing is that they all insist on their dependence for success on a proper calendrical placing. The most auspicious season for their performance is the period between the winter and summer solstices, when the days are progressively longer; during a given month it is the days of the waxing moon that should be chosen. This symbolism of this is as obvious as it is world-wide. Indeed, there is every reason to believe that what little precision of solar and lunar observation the Nutka Indians attained was conditioned by the necessity of correctly delimiting the span of auspicious days.

4. Shamans. —The Nutka, shaman, or medicine-man, is such by virtue of supernatural power personally acquired by him or, at least theoretically, by right of inheritance from an ancestor who acquired it himself (or herself) acquired such power. Properly speaking, the acquirement of shamanistic power is on a par with the acquirement of any other type of supernatural power, as for hunting or fishing. In either case the possession of power may be due to the magical maneuvers in the performance of a secret ritual, to the acquirement of a supernatural token or amulet-like object ('medicine'), with or without the inter-
position of a supernatural being, or to the inheriting of a family 'medicine.' What distinguishes the medicine-man is the function exercised by his 'powers.' These are derived from spirits, that is, from entities which are, in a way, the personification of the power, and the manner of holding and exercising this power.

The main functions of the medicine-man are the location of disease, the cure of disease, and the prevention of misfortune. With the former he is expected to be successful, and failure is regarded as a disgrace.

The supernatural beings and 'medicines' that bestow shamanistic power are rarely the same as those that give power for other purposes. There is a long list of eerie or unusual objects whose discovery and retention are believed to make a man a shaman—a title limited to a limited extent, for a really powerful shaman has generally a number of sources of supernatural guidance. The specific beings that grant shamanistic power belong to 'birds' and 'birds' mates,' Certain birds—e.g., ducks—certain land animals, and certain fish are believed to be powerful shamans themselves and to meet once a year in a doctoring contest. The leader of the 'birds' is a supernatural bird known as Khvini, or Khvili, who is said to belong to the Sky Chief; the leader of the 'fish' is a small eel-like marine fish. The former has the greatest shamanistic power of all. The shamanistic being (animal) bestows power not so much by way of a dream, as so commonly in aboriginal America, as by the amuletic virtue of his own body. This is in accord with the general materializing tendency that pervades Nutka religion.

The power of the 'medicine' amulet or being is, in the case of the Nutka shaman, exercised by virtue of its actual presence in his body. A shaman's supernatural power (manitu [q.v.]) is not a mystical influence that guides him, but resides in a concrete object that he is believed to keep inside his hand or chest. A powerful shaman may have half-a-dozen or more such 'medicines' in his chest, in supernaturally reduced form. These are never made visible to the laity except on special occasions, such as at a very severe illness or during the transition of the shaman's ghost. The shaman is put on display for inspection. The shamans are believed to have the power of causing their 'medicines' to fly through the air to any place or person desired. The wide-spread conception of the 'flying' or 'shooting' of disease-causing substances seems, by an easy transition, to have been transferred to the Nutka materializations of the manitu concept. The modus operandi of the Nutka shaman differs according to circumstances. The usual methods are: sucking of the part affected (actually or supposedly), manipulation after rubbing the fists against the hands, resuscitation by uttering certain syllables in a conventional manner, and the singing of specific medicine songs. These songs are often dreamt during the performance of a secret ritual for the attainment of shamanistic power.

2. Soul beliefs and supernatural phenomena.—The Nutka Indians say that the course of life is like the walking of a man on a straight line as thin as a hair. If he misses a single step, he drops down into the grave. The soul or life essence of a human being is conceived of as a wee mannikin, a shadowy doublet, which can be held in the palm of a shaman. It may leave the body through the crown of the head, but may either return of its own accord or be brought back through the ministrations of a shaman. If it fails to return, it means that it has reached the land of disembodied spirits, that its human component or other words, is dead. It is then referred to by a term, cheka, which may be rendered 'ghost,' but which is more freely used to refer to any discarnate spirit and even to any spirit taken to reside in other objects such as an elephant. The ghost is always thought of as evil, and great efforts are taken to rid of its malign influence in a house in which a person has died.

Distinct from the soul is the hlimaksti, often translated as 'paint,' but more correctly as 'the spiritual body,' or more properly, the anatomical heart, but the mind or 'soul' in its psychological, not theological, sense. It is the seat or principle of intelligence characteristic of human beings alone, and is generally localized in the heart or breast.

According to one legend, the creator Kapkimliya made a vertical column of ten faces, stuck close together, and put it into the bridegroom's hand as a seal of intelligence. This is the hlimaksti of to-day. If all ten faces look in one direction, the man with whom the bride is to be married; if five look one way, five the other, he is in a state of evenly-balanced hesitation. The first woman had no hlimaksti put beside of her; hence women are believed to be more forward than intelligent than men.

The life after death is supposed to be located in an under world, which is divided into a 'good' and a 'bad' section. In the 'good' quarter are little streams in which spring-salmon run and form the food of the ghostly inhabitants. The spring-salmon of the world of the living are believed to be sent up here by departed spirits. The occupants of the 'bad' quarter of the underground world eat like men. In the opinion of some Indians, the dead turn into wolves or owls. This belief does not necessarily exclude the other.

As among all primitive peoples, there is a vast number of beliefs current among the Nutkas in regard to supernatural phenomena and relations. Only a very few of these need be touched upon here. An eclipse of the sun or moon is caused by a supernatural being known as Codfish-in-the-sky, who holds the luminary in his mouth. During an eclipse each of the Indians would rush off to perform a secret ritual for rolling fish. The magical concept at the basis of this practice is evident: the fish eventually trolled for was to bite just as the Codfish was biting the eclipsed sun or moon. Another very curious belief is referred to by the term 'going off to another place.' The Indians believe that at two unknown periods during the day, twins of the same age are transferred from the world of the living to the recesses of everything in the village, houses and all. After a short time, during which it is difficult to keep awake, everything is shifted back to its proper place. Should one be lucky enough to keep awake during this periodic shift, and be engaged in a secret ritual, he is certain to prove successful in whatever he is praying for.

Perhaps the most interesting belief concerning the relation of the human being to the supernatural world is that which regards twins as salmon incarnations. So much is this taken as a matter of course that it is believed that a twin child involuntarily bursts into tears when it sees a salmon being treated cruelly. Both twin children and their father are subject to many onerous tabus, and the children are not expected to live long. The significant thing about twin fatherhood is that it makes the father an instrument of the salmon-world. The appearance of twins is looked upon as a harbinger of an unusually big salmon run, and the father devotes all his energies during the fishing-season to the singing of songs, the performance of secret rituals, and the observance of tabus intended to propitiate the salmon and provide his fellow-villagers with a maximum catch. Should he disregard the injunctions of the
salmon-world implied by the birth of twins, dire misfortune is certain to befall him.

6. Rituals.—Ceremonialism, both social and religious in character, is very prominent in Njuka life. It is somewhat arbitrary to divide ceremonies into the two classes, as, on the one hand, a religious quality (some sort of legendary or supernatural background) is rarely absent from even the most matter-of-fact or casual ceremony (say, a naming ceremony). On the other hand, every properly religious ceremony, such as the elaborate and peculiarly sacred Wolf ritual, is given the setting of a secular potlatch (giving feast) and regularly contains numberless features that have a purely social, not religious, significance. The major two ceremonies of primarily religious connotation are the Wolf ritual (known by the natives as N dowanna) and a shamanistic performance termed tseyek. The former undoubtedly has a native Njuka nucleus, but has been much influenced by the winter feast of the Kwakutl Indians. The latter ceremony is primarily at home among the more southern Njuka tribes; it is also found among the Coast Salish and Quileute (north-west coast of Washington). The Wolf ritual differs considerably among the various tribes, and is of interest both for its origin and in its ceremonial details. In essence it is a quasi-dramatic representation, at least in native theory, of certain legendary occurrences.

Just as a young man or woman, in the legendary past, is believed to have been carried away by wolves to their supernatural home, to have been taught many religious dances and songs, and then released to his or her people with these immaterial gifts, so, in the ceremony of to-day, the novices, who are expected to be initiates of the ceremony, are represented as seized by wolves that break into the village and carry off into the woods, there to teach particular dances, which, after they are learned, are performed and learned by the community among their own people in a state of religious frenzy. The dances vary greatly in character, but are largely pantomimic, referring either to animals, occupations, or supernatural beings. Many of them are inspired by a spirit of savage recklessness that may take the form of self-torture or ceremonial killing. The association of all those (novices and old initiates) who dance a particular dance into a "secret society" is a very much more weakly developed concept than among the Kwakutl. On the other hand, the individuals who are fed out together throughout the ceremony as wolf-peers, by hereditary right, may be looked upon as constituting a true confraternity.

In a rather vague way the Wolf ritual may be interpreted as a kind of placation of the powerful supernatural beings that appear as wolves, but there can, in actual fact, be no talk of a definite function of the ceremony. It is a complex historical growth that serves as a traditional setting for the public expression of a particular emotional state or exaltation and for the satisfaction of certain artistic needs. Even the spirit of ribald humour finds expression in it. To a large extent, also, the purely religious and artistic moods are overlaid by the desire, so characteristic of West Coast culture, to enhance one's social prestige by display and a lavish expenditure of wealth. As usual with great tribal ceremonies, it undoubtedly means different things to different temperaments.

The tseyek ceremony is ostensibly undertaken, like so many other great tribal ceremonies among American Indians, for the cure of a sick person who has been injured by others, or by shamanistic treatment. The main feature of the ceremony is the singing of a peculiar type of songs, accompanied by beating of sticks and certain conventional gestures, by the whole group. Each dance takes part in the ceremony as a number of such tseyek songs that have become his property by family inheritance. Novices who are to be initiated into the tseyek ceremony sing these songs for the first time, and the performance is more advanced type of initiation takes place—that of those who have had some supernatural shamanistic experience, or who have a hereditary shamanistic right, into the formal status, often theoretical rather than actual, of shaman. This part of the ceremony offers suggestive parallels to the well-known Midé-wiwin of the Ojibwa and other Algonquian tribes. Indeed, the two types of initiation, through propitiation and shamanistic, may be looked upon as constituting a series of degrees not unlike the more intricately developed system of shamanistic degrees current among the Algonquian tribes.

EDWARD SAPIR.

VANNIC RELIGION.—See Aremia.

VASUBANDHU.—VASUBANDHU (c. A.D. 420-500), the second of three brothers of a Kausika Brahman family, was born at Purnapura (Pesh- war) in Garh自在 (Kandahar), and one of the most prominent figures in the history of Buddhism. His not less celebrated elder brother, Asanga, is well known as the first propounder of the Yogachara school of Buddhism, i.e. Buddhist idealism. Of the youngest brother, Virūchikshās, we know nothing.

VASSUBANDHU.—VASUBANDHU was the second-century Indian Buddhist scholar of the Mahayana school who, along with the Chinese Buddhist scholars Fa Hsien and Xuan Zang, introduced Buddhism to China. He was an important figure in the transmission of Buddhist scriptures to China. Vassubandhu's major work was the "Vasubandhu's Treatise on the Doctrine of the Middle Path," which was translated into Chinese and became a key text in the development of Chinese Buddhism. Vassubandhu's work emphasized the use of Madhyamaka philosophy to resolve the contradictions and paradoxes of Mahayana teaching. His influence was significant in shaping the development of Chinese Buddhism, particularly in the development of the Tiantai school, which was founded by Hui-neng. Vassubandhu's work was also influential in the development of Tibetan Buddhism, where it was used as a foundation for the development of philosophical systems, such as the Paitrika and the Debakara. His work on the "Great Madhyamaka System" was instrumental in the development of these philosophical systems, which were used to systematize the teachings of the Buddha and his later disciples. Vassubandhu's writings are also significant for their contribution to the development of the "Golden Mean" (Golden Mean) system of ethics, which emphasized the importance of balance and moderation in ethical practice. This system of ethics was influential in the development of Chinese moral philosophy and continue to be influential in Chinese thought to this day.

to acquire a thorough knowledge of the Saṅkrāntika doctrines. With this object he went to Kaśmira (Kashmir), the headquarters of the study of the doctrine, carefully disposing himself to study under a false name, lest scholars of that country should be jealous and refuse to instruct him. There, for two years, he studied with Kaṇha-bhadra, he studied the doctrine, against which he would, however, frequently dispute, hazarding his objections on the teachings of his master, and bestowing on them such a lucid and facile manner that the teacher of Saṅkhyā, Kaṇha-bhadra, had his suspicions aroused by the extraordinary ability of the uninitiated student. Vasubandhu, who was named Nandaprajñā other than Vasubandhu, whenupon he advised him secretly to go back to his own land, and after some time he should kill him. Vasubandhu therefore returned to his home, where he composed a poem of 600 verses called the Abhidharmakosā,1 a commentary on the Abhidharmakosā of Buddhabhadra, and sent it to Kaśmira. The king of Kaśmira and the scholars were at first delighted with it, imagining that he was expounding and propagating their doctrine; but, on the advice of Skandita, who knew that the compendium was not quite favourable to their sect, the author was asked to write an explanation. So he expounded the verses in a prose commentary, with the addition of seven verses and one chapter on the non-ego. These verses together with the commentary are called Abhidharmakośa-bhaṭṭācārya.2 Vasubandhu afterwards travelled to Ayodhya (Oudh) and was converted by his brother Anagha to the faith of the Mahāyāna, and composed many treatises in defence of his new creed, with commentaries on various Mahāyāna works. He died there (in Nepal, according to Tibetan tradition) at eighty years of age.4

2. Works. — Vasubandhu’s first literary undertaking seems to have been the composition of his Paramavasthepati (‘Seventy Verses on the First Principle’), in which he refuted and destroyed all the ground principles of the Sāṅkhyā philosophy as given in the Śāṅkhyakārikā-sūtra. Sāṅkhyakārikā-sūtra, by whom Buddhāvīrama, Vasubandhu’s teacher, had been defeated in an ecclesiastical dispute. This fact gave general satisfaction, and King Vikramaditya rewarded him with three lacs of gold.

Before turning to his Buddhist works, we may make a few additional remarks. First, it must be borne in mind that about the 2nd cent. B.C. Kaṇṭhāyānputra founded the Sarvāstivāda school and composed the ‘Ājñāntik论文 (‘First Steps to Knowledge’), a simple catalogue raïsonts of the technical terms of his doctrine as contained in previously published ‘six-branch-treatises’ (patañjali-sūtra). He thus laid the foundations of the Sarvāstivāda canon. A.D. 260, a very detailed commentary on this work, called Abhidharmakosa-mahāvīhiḥ (‘Thorough Discussion of the Abhidharma’), was composed by 500 arhats of Kaśmira. In this work we have not only a detailed explanation of the text, but also a minute discussion of each topic, so that the commentary became immediately a mine of dogmatics and the sole authority for the sect, by whom it was called Kaśmira in India. Hence, its special name Kaśmira-vijñānabhūṭa (‘Vijñāna-follower of Kaśmira’). This Sarvāstivāda doctrine is realistic and teaches a direct perception of external objects. Its rival doctrine is that of the Saṅkhyāks, which, though also realistic, asserts an indirect perception instead of a direct one. The two doctrines were the most influential in Mahāyāna. Vasubandhu, though originally a Sarvāstivāda, was a free-thinker, and did not blindly follow either his orthodox tenets or his lately adopted Saṅkhyākārikā ideas. Scholars designated his guiding principle ‘a preference of reason, and his eclecticism is shown in his celebrated works Abhidharma-kosa, called by native scholars ‘the ingenious treatise’.

It is divided into eight treasure-houses (bhūjanātha): (1) Elements (bhūjanātha); (2) Worlds—effect; (3) Words—effect; (4) Passions—auxiliary-explanation; (5) Sages—auxiliary-explanation; (6) Causality—auxiliary—cause; (7) Meditation—auxiliary—cause; (8) Special.

Pūddatīlālīkāya (‘Exposition of Personality’), is devoted to the argument of the non-ego. This he composed when invited by the Emir to compose a treatise on his work. To the first chapter a dogmatic explanation of the word Abhidharma is prefixed. It says that Abhidharma means ‘conclusions’ or ‘inferences’, and that the process is confronted with a two-fold kind. The one aimed at is nirvāna, or final consummation, which is said to be mediated by the realist character of things; the other is the apparent characters of things. This confronting of things, i.e., insight, is called pure. It is the Final Abhidharma. This insight is in the state of pure insight is in the state of pure, where the realist is the mediant by his own speculation. This is the state of apparent or apparent doctrine. Hence, Vasubandhu in his work sums up the essential contents of the Abhidharma literature of his predecessors, and as this literature is the main source of his treatises, his work is entitled Abhidharmakosa (‘Repository of the Abhidharma’). In this way he set forth concisely all the elements and phenomena and the rationale of the non-ego, derived chiefly from the sources of the Sarvāstivāda school, but some tenets were taken from the Saṅkhyākārikā school and sometimes he introduced his own views.

Although Vasubandhu sympathized in his work with the Saṅkrāntika and showed his preference for it, he was more realistic and satisfied with these realistic speculations, in which he was immersed until he came to the second stage of his philosophical development. When converted to Mahāyāna, he adopted the subjective idealism of that school and he was completely merged in his not less celebrated epic composition Viśīṣṭātṛatā-trīśūla (‘Thirty [Verses] on Pure Ideals’).5 The philosophical school based on this treatise teaches that all phenomena, both material and non-material, originate in mind, which is divided according to its action into eighteen pure ideals (viśīṣṭa-viśīja), viz. (1–5) five ideas belonging to the five sense organs, (6) idea of mind (maṇo-viśīja), (7) idea of mind of idea (maṇo-maṇo-viśīja), (8) receptacle-idea (ālaya-viśīja). The seeds (bjûja) or possibilities of all phenomena are retained in the eight ideal, whence comes the so-called objective world, in consequence of which all are disturbed and rove about in painful efforts after peace. If we once fully understand that nothing else exists but mind, then the objective world ceases to exist for us, and those eight confused ideas are turned into eight kinds of enlightened wisdom (viśīja) by means of which we can unite in the tathatā (‘truthness’) which transcends sense and thought.

The Abhidharma-kosa and Viśīṣṭātṛatā-trīśūla are the two most celebrated of Vasubandhu’s twenty odd works, and represent the successive development of his philosophical views. It seems to claim that the end of his life was reached in a quite different phase of belief. He composed 24 verses entitled Lontag for the Birth (in Sukhārī, i.e., the Paradise of the West), being a summary of the Apārāmitāsūtra,6 to which he subsequently added a commentary. These verses with the commentary, regarded as one work, are called the Apārāmitā-sūtra-āṭāyadāsika. From them we see that he believed in the Aṃtiṇāh or Apārāmitāsūtra,7 to which he subsequently added a commentary. These verses with the commentary, regarded as one work, are called the Apārāmitā-sūtra-āṭāyadāsika. From them we see that he believed in the Aṃtiṇāh or Apārāmitāsūtra,7 to which he subsequently added a commentary.

VEDANTA

VEDAS.—See Literature (Vedic and Classical Sanskrit), Vedic Religion.

VEDANTA.—Vedanta in Sanskrit signifies the ‘end or final aim of the Vedas.’ The word was employed at first to denote the older Upanisads (see art. Upanisads), but generally serves as the name of the system of the six philosophical systems of the Brähmans (i.e. Śāṅkhya, Yoga, Mīmāṁsā, Vedānta, Vaiśeṣika, Nyāya). In the Vedanta the pantheistic doctrine of the Brahman, the All-One, is systematically developed, and placed on a firm foundation. The founder of the Vedanta, or rather the first teacher who made a formal presentation of it (in the Vedāntasūtras or Brahma-sūtras) was Bādarāyaṇa.1 Since, however, his treatise is set forth in the form of aphorisms—precisely like the śūratra or ‘clues’ of the other philosophical schools of India—wherein they are completely unintelligible, it is impossible to gain a satisfactory knowledge of the system from his work alone. This is first supplied by the expositions of the numerous native commentators, of whom the most important was the renegade Saṅkarā, who lived in A.D. 800. Besides expounding the Brahma-sūtras, Saṅkarā composed a large number of commentaries on the Upanisads, and wrote several independent treatises on the Vedanta philosophy. It is reasonable to suppose that the conceptions of Saṅkarā agree in all essentials with the views set forth by Bādarāyaṇa. Nearly all educated Hindus in modern India, except in so far as they have embraced European ideas, are adherents of the Vedānta; and three-fourths of these accept Saṅkarā’s interpretation of the Brahma-sūtras, while the rest are divided among the varying explanations of the system offered by one or other of the remaining commentators.

The fundamental proposition of the Vedānta philosophy is in agreement with the doctrine of the ancient Upanisads, viz.: ‘the atman (i.e. our self or our soul) is identical with the Brahman, the All-Soul.’ Since, then, the eternal and infinite Brahman, the power that works in everything, cannot consist of parts, or be subject to change (for everything that consists of parts, and is liable to change, is perishable), it follows that every one is essentially not a part or an emanation of the Brahman, but is Brahman entire and indivisible. Not to absurdize the doctrine (there is one only, without a second). Therefore in India the Vedānta doctrine in the form in which Saṅkarā has presented it is called the ‘doctrine of nonduality.’

In opposition to the fundamental thought of the Vedānta, as thus set forth, is arrayed not only experience, which teaches the existence of a manifold variety of persons and things, but also the ceremonial law of the Veda; for the latter is based upon the belief in transmigration and retribution, and therefore takes for granted a multitude of individual souls. This twofold contradiction is refuted by the assertion that both experience and the ceremonial law of the Veda depend upon the ‘ignorance’ (avidyā) natural to every man, by which the soul is prevented from distinguishing itself from the body, the psychical organs and other controlling influences, and from recognizing that the empirical universe is an illusion (māyā). In truth, the entire world of phenomena is merely a delusion, comparable to a jata mārgaṇa, which dwindles on closer examination; or like a dream-image, which seems real only to the sleeper, but vanishes in waking hours.

There is only one thing in the universe which is made manifest by the power of illusion, viz. the soul. This self admits of no proof, but it also stands in no need of proof, for it is in itself the basis of all argument, and therefore is already established in the evidence of the intellect. Similarly, also, it cannot be denied, for every one in denying it assumes and testifies to its existence. The self, moreover, cannot be anything distinct from Brahman, since Brahman alone exists. Every thing that is associated of the body, sense, spiritual nature, omnipresence, eternity, etc.—holds good, therefore, of our soul. Here in our inner self we must seek for knowledge. In himself alone, in the depths of his own being, can man find the solution of the riddle of the universe, and know the only true real.

Whence ‘ignorance’ arises, by which the true condition of things is hidden from us, the Vedānta philosophy does not inquire. It tells us only that ignorance is removed by ‘knowledge’ (vidyā), or ‘universal perception’ (svāyāgya-dharmena). If this universal perception has been attained, and each man by the illusionary nature of everything that is not soul, and the absolute identity of the soul with Brahman understood, the determining conditions for the earthly existence of the soul are removed. For this existence is understood as only an illusory appearance. He who knows ‘I am Brahman’ has gained emancipation from the saṁskara.

Since Saṅkarā recognizes the unconditional authority of the Upanisads, he is compelled to take account of their entire contents, to which a considerable extent are in opposition to the doctrine here set forth. He accomplishes this by setting up two systems side by side with one another—(1) the higher or esoteric knowledge (parā vidyā), which adopts the metaphysical standpoint, and proclaims the doctrine of the nondualistic Brahman, as it has just been stated, to be the absolute truth; and (2) the lower or esoteric knowledge (uparā vidyā), which takes its stand at the popular empirical point of view, and offers a popularly religious explanation of the universe. While in the ‘higher knowledge’ the Brahman is free from all attributes and qualities (mārgaṇa), in the ‘lower knowledge’ it appears endowed with the attributes of personality (saṁskara). It is owing to ignorance that these attributes are ascribed to the Brahman, for men who cannot rise to the height of the metaphysical standpoint are necessarily attached to the world. In the lower knowledge, therefore, the Brahman appears as a personal God, who creates and rules the universe, and rewards or punishes men according to their deeds. The universe also is looked upon as real, and the statements of the Upanisads with regard to the wandering of the soul through innumerable bodies hold good. The lower knowledge teaches that the soul is constrained by the psychical organs, the bodily senses, the vital principle, and the moral determination, that under such limitations it completes the cycle of metempsychosis, and that by believing worship it may attain to the lower personal Brahman. Union, however, with the lower Brahman, the Brahman of attributes, is merely an inferior temporary lot. Complete deliverance is attainable from the metaphysical point of view solely by the knowledge of the higher Brahman, the Brahman without attributes. Everything that is taught in the lower knowledge is worthless to him who has learnt to know himself as the eternal indivisible Brahman; for he understands that these attributes are but a product of ignorance, that qualities are attributed to it merely for the purposes of worship which do not really belong to it, and in the light of the supreme knowledge, he is without them. He who has attained to this knowledge is no
longer led astray by the delusive appearance that surrounds him. In complete indifference towards the course of the world he awaits the end of his life. I shall not dwell on exactly the same principles as in the Sākhya (see the art. SĀKHYA). At death the wise man is lost in Brahman.

Among the commentators who dissent from Sākhya's interpretation of the Vedānta, and who represent one or other of the philosophical and religious viewpoints of various sects, the most renowned is Rāmānuja, who lived in the 11th cent. after 1000, and who has the advantage of possessing enough Vedānta works (e.g. the Kāraṇādipikā) of the system approximates to the lower exoteric knowledge of Sākhya, and as an adherent of the Pancharātra doctrine introduces into Bādarāyana's treatise views which are nearly related to the Christian standpoint, but are alien to the true Vedānta doctrine. In his view the individual souls are not identical with the supreme soul, i.e., as he represents it, with God, but are separate and independent of him. This point of view is the same. The cause of their earthly existence is not 'ignorance,' but unbelief; and deliverance is union with God, to be gained not by 'knowledge,' but by believing love. According to this history of the Vedānta philosophy, therefore, the same theistic tendency makes its appearance which may be observed under the form of the system of Yoga in the further development of the Sākhya doctrine.

R. Garbe.

VEDDAS.—I. Geographical distribution and mode of life.—The Veddas, the aboriginal inhabitants of Ceylon, are to be regarded as the island representatives of the short, long-haired, pre-Aryan aboriginal tribes of India. They are a tribe that has extended over the whole island (for there is no reason to doubt that the Yakkas of the Mahāvamsa were Veddas); now the few surviving relatively pure-blooded Veddas who do not practise agriculture are to be found in the park country of Uva, while communities carrying on a rough cultivation, whose members have more foreign blood in their veins, exist in the poorer part of the game, honey, yams, and fruit, they are still able to collect these in sufficient quantity not only to support life, but to leave a surplus to barter with the 'Moormen' on their annual visits or to take into the nearest Sinhalese village to exchange for iron, cloths, pots, and occasionally rice and coco-nuts. So long as this sort of life is possible, communities are necessarily small and the old mode of habitation in caves and rock shelters persists, but where the country is less wild the Sinhalese have killed down the game to such an extent—even where they have not settled them—that it has been necessary to abandon cultivation, and for this purpose they have organized themselves in villages and at the same time have commonly intermarried with the Sinhalese. It is in this way that the second class of Veddas, the villages, who have originally adopted the Sinhalese process has been going on for hundreds of years, and there is evidence that centuries ago there were 'Vedda' communities—i.e. communities with Vedda blood—by whom the Veddas and their contemporaries—politically organized and having chiefs who were in constant relation with the Sinhalese court. This process of contact metathesis has had as its most striking result the complete loss of the original Vedda (non-Aryan) language, while the identity of the relationship systems of the Veddas and Sinhalese is presumably to be attributed to the same cause. The coast Veddas, who have intermarried with the local Tamilis, whose physical type they have acquired and whose beliefs they largely share, though they alone among the Veddas, 'must be taken to mean forest Veddas, unless village Veddas are specifically mentioned.

The Veddas have never been metal workers, and, although they have no traditions concerning the use of stone implements, the quarts artifacts described by the couples Sarath and others must, at least provisionally, be attributed to them. The iron bladed tools they possess, their axes, knives, 'flint and steel' strike-a-lights, are the only metal tools they use. These arrow heads and axes were noted in the 17th cent. by Robert Knox, who mentions the silent trade for metal in exchange for flesh and honey practised by the wilder Veddas. Apart from their skill as hunters the Veddas show the bare beginnings of a few arts and crafts. They make no pottery except where they have learnt it from the Sinhalese. Personal ornaments scarcely exist, yet the rocks of some of the caves bear very rough drawings of men and animals and the skin bag in which honey is collected. They are drawn by women and were said to have no religious or other special significance. The Veddas have no musical instruments, but during their dances they frequently beat time with their hands on the abdomen; and G. S. Myers, who has examined phonographs of their songs, considers that they are simpler in structure than any other native songs hitherto published, and indeed represent the very beginning of melody-building.

2. Social organization.—The Veddas have a clan organization with descent in the female line; the clans are exogamous, though this rule is not strictly adhered to. Two intermarrying clans, the Mörane and Unapane, are considered superior to the others, with whom they should not intermarry. If, however, the marriage is at all in doubt, the unknown, the correct marriage being the cross cousin, especially with the daughter of the mother's younger brother. A high standard of sexual morality is maintained in both the married and unmarried. There is close comradeship between a man and his wife's father; an unmarried man assists his mother's brother, his actual or potential father-in-law, in most activities, and this association continues after marriage. A man's bāna (sister's son, daughter's husband) is always welcome to hospitality in cave or hut, when other relatives would not intrude. Though descent is in the female line, through the male line the Vedda has little personal property, his axe and bow and arrows being his most important possessions, but land, or, more strictly speaking, hunting and fishing rights, the tenure of certain caves, as well as the right to the combs of the rock bee on definite tracts of land, descend from father to son, or are presented to a son-in-law on his marriage.

The Veddas have no regular chieftainship, but the oldest man of each small group exercises considerable authority, the importance of such men being enhanced by the Sinhalese and other officials,
who naturally make a point of dealing with the most intelligent and authoritative member of a group.

3. Religion.—The basis of the Vedda religion is the cult of the dead, and the Vedda point of view on life after death is determined by the customs observed when a death takes place. When a man, woman, or child dies, the body is left in the cave or rock shelter in which death from sickness occurred. The body is not washed, dressed, or ornamented in any way, but is allowed to lie in the natural supine position and is covered over with leaves and branches. The cave is then deserted for some years, and, if any bones are left when the Veddas return, they are thrown into the jungle. When an attempt is made to discover the reason for the desertion of the place of death, the usual answer is to the effect that 1 if we stayed we should be pelted with stones; and some Veddas, including at least contaminated, definitely stated that it was the spirit, or yaku (fem. yakini, pl. yaku), of the dead man who would cause stones to rain on anybody staying near the corpse. Although fear of the dead (expressed by leaving the site of death) occurs among all the wilder Veddas, a few old men were by no means convinced that any particular individuals were more in danger, no doubt the spirits of important and influential men survived, but whether this applied to quite ordinary individuals was more doubtful, and in one community there was a special ceremony the object of which was to settle this point.

Each Vedda community consists of a small number of families who, since cousin marriage prevails, are doubly related by blood and marriage; the yaku of the recently dead, called collectively the Nae Yak, are supposed to stand towards the surviving members of the group in the light of friends and relatives who, if well treated, will continue to show loving kindness to their survivors, and only if neglected will show disgust and anger by withdrawing their assistance or even becoming actively hostile. 1 Hence it is generally considered necessary to present an offering to the newly dead, usually within a week or two after death, though a few Veddas stated that they would not hold a Nae Yak ceremony until they specially required the help of the yaku, or until misfortune threatened or occurred to them. Among those offering must consist of cowpea and coco-nut milk, the food that every Vedda esteems above all others; but betel-leaves and areca-nut are often added, and the offering is a small group of ‘wild’ Veddas said that this offering would in the old days have consisted of yams and water, if, as was often the case, coco-nuts and rice could not be obtained.

In each community there is one man, called kapurale or duggana, who has the power and knowledge requisite to call the yaku; and in the ceremony of presenting the offering called Nae Yaku Natanama (literally, the dancing of the Nae Yak) this man calls upon the yaku of the recently dead man to come and take the offering. The kapurale (who may conveniently be spoken of as the shaman) becomes possessed by the yaku of the dead man, who speaks through the mouth of the shaman in hoarse, guttural accents, saying that he approves of the offering, that he will assist his listeners in hunting, and often stating the direction in which the next hunting party should go. Besides the shaman, one or more of the near relatives of the dead man may become possessed, but this, though common, is not invariable. The yaku leaves the shaman soon after he has promised his favour and success in hunting, the shaman always collapsing as the spirit goes. After the death of all the men, women, and children of the group who are present, the offering, usually on the spot on which the invocation took place, though this is not absolutely necessary. It was clear that this eating of food which had been offered to the yaku was an act of communion, and an essential part of the ceremony which was thought to bring health and good fortune; for some communities even anointed the heads of their dogs with the milk of the offering, explaining that this was done because of their value.

Besides the yaku of the recently dead there are other important yaku, chief among whom are Kande Yaka and his brother Bilindi Yaka. Kande Yaka is the spirit of an ancestor, a mighty hunter in his day; he is invoked to give success in hunting, and during the ceremonial dance given in his honour a realistic pantomime of tracking and killing a deer is performed. Spirits of the dead were believed to go to Kande Yaka and become his attendants until death, and it was necessary for a spirit to resort to Kande Yaka in order to obtain permission to accept offerings from his living relatives, and to obtain power from him to assist them in return for their offerings, or to cause the community either to continue or to change their habits of food and behaviour. Thus Kande Yaka, who is of especial assistance in hunting, becomes lord of the dead.

We have, however, little doubt that to the majority of Veddas Kande Yaka is especially the yaku who gives success in hunting, and that his relation to the dead does not leap to their minds on the mention of his name as does the idea of his helpfulness in hunting; for Kande Yaka was essentially a friendly and helpful yaku, who, unlike many other yaku usually beneficent, never sent sickness; in fact, Kande Yaka the spirit scarcely differs as patron of hunters from Kande Wanniya the mighty hunter, still living and showing kindness and helpfulness towards the people among whom he dwelt.

The Nae Yaka, Kande Yaka, Bilindi Yaka, and certain other spirits who belong to the primitive Vedda culture, and to this day these are the important yaku among the wilder Veddas. But centuries of contact with Sinhalese and Tamils have led old Veddas to regard some of Sinhalese and Tamil demons (or gods) as yaku. Thus, running roughly parallel with the three stages of development can be recognized in the Vedda religion: (1) the cult of the dead, including the cult of the spirits of recent ancestors, i.e. of the Nae Yak and the yaku of certain Veddas who have been long dead and may well be regarded as heroes; the most important of these is Kande Yaka; (2) the cult of foreign spirits, who have become naturalized and have taken the friendly protective nature of the Vedda yaku; the cult of the yaku of a number of names of Veddas’ may be considered to belong to this stratum; one of these, Panikkik Vedda, is the canonic spirit of one Panikki Vedda, i.e. Panikki the Vedda, who is mentioned in a 16th. cent. manuscript; this man, who seems to have been the chief of a group of mixed Vedda and Sinhalese blood, was in fairly intimate contact with the Sinhalese court; (3) the cult of foreign spirits which is not generally regarded as such, have retained their foreign nature and are, in the main, terrible or even hostile. Another feature of this stratum of thought is the endorsement of true Vedda yaku.
VEDDAS

with foreign attributes. The god Skanda, or Kandyan, as he is often called, is a Coylon, worshipped at Kataragam in the south of the island, chiefly by Tamils. There are no Veddas in this district now, but formerly the forests in the neighbourhood were inhabited by Veddas who were known as the Kovil Yamathan Veddas, i.e. Veddas of the temple precincts, and they cannot but have been much influenced by the worship at the great temple. In the Eastern province the present inhabitants are Veddahs who were known by the same name, and witnessed a dance performed seven days after the death of a member of the community. Here the yaka of the dead man was said to go to the Kataragam God before joining Kande Yaka. Among most village Veddahs Indigolae Yaka had taken the place of Kande Yaka; he gives good fortune in hunting and is looked on in the Nae Yaku ceremony. Gale Yaka was also important among village Veddahs, but possibly in some localities this is only another name for Indigolae Yaka. Among the wilder Veddahs Gale Yaka was never mentioned, and Indigolae Yaka. If Knoll was killed, he was looked upon as a foreign spirit attendant upon Kande Yaka.

The kirimanna, literally 'the grandmother,' are the spirits of Veddah women; many are named and seem to be linked with the seasons and their topics. From one aspect they have a malignant character, for, though they are said to love children, they often steal them and cause their death through sickness. Veddans gathering rock-honey will usually propitiate them by an offering of honey.

The worship of the yaka consists essentially of ceremonies during which the shaman or chief performer dances himself into an ecstasy—a condition, we have no doubt, of genuine dissociation of consciousness—during which he is thought to be possessed by the yaka whom he invokes. These dances are often pantomimic, and, though in different localities the ceremonial varies, especially as regards elaboration, the ritual of each dance is fixed by tradition. Various objects are proper to certain yaka, the most important being the aude, a ceremonial representation of an arrow, the blade from 8 to 16 inches long, hafted into a wooden handle considerably shorter than the blade. Ordinary arrows are also used in dances, while for each yaka a special set of arrows is required. It was noticed that, once an article was used in connexion with the yaka, it was not placed on the ground. The kiriborkra, literally 'milk bowl,' a vessel filled with the white juice squeezed from cocco-nut meat, was a necessary part of the ceremonies in which Kande Yaka, Bilindi Yaka, or the Nae Yaku were invoked, and the main features of the dance centred round this bowl. No attempt is made here to describe all of these ceremonies; it may, however, be mentioned that women never take part in the dances, though they are always present, and may become possessed by the yaka.

The method of invocation of the yaka is essentially the same in all Vedd ceremonies; an invocation is sung by the shaman and his disciples, as he in olden days, slowly dances, usually round the offering that has been prepared for the yaka. Sometimes the invocations are quite appropriate and consist of straightforward appeals to the yaka for help, or recite the deeds and prowess of the yaka when he too was a man. But at other times these are very largely leaping. Probably in many of these instances they are merely the remnants of old Sinhalese charms that are not only displaced from their proper position, but also, in places, altogether neglected in the process as to have become inexpressible. As the verses are recited, the dance is performed, and the shaman, more and more quickly, he unites his hair, which falls over his face as he throws his head forward, his voice becomes hoarse, his speech staccato, his body in unison with the dance. The dance and the expression; he is then possessed by the yaka, and, although he does not lose consciousness completely and can co-ordinate his movements, he does not remember this. There is a recollection of what he has said and has only a general idea of the movements of the dance performed. With this condition, another member of the community always follows him, often with hands upon his waist, ready to support him if he should fall. Whatever happens, the ceremony ends apparently unconscious; the condition does not, however, last long, the shaman gradually coming to and continuing to dance. Troubling and shivering—which certainly occurs—is said to mark the entry of the yaka into the shaman. When the yaka leaves the shaman, the latter always falls back exhausted. Partial collapse during the ceremony does not necessarily indicate a bad performance.

The invocations by which the Veddas call upon the yaka fall into two main groups: the first, distinguished by their simple form, are straightforward requests to the spirits of the dead to provide game and yams, or to show their loving kindness by partaking of the food provided by their descendants; the second group, embracing a considerable range of beliefs, are all longer and more complicated and often contain references to events which happened before the spiritual beings to whom they are addressed attained their full power as yaka. In nearly all the invocations animals and articles of food are not mentioned by their usual name, but described by periphrases. Only the simplest invocations have been selected as examples; many are very complicated and undoubtedly the Veddas themselves either give them meanings quite different from those of the texts or have lost the significance entirely and are content to intone sounds almost or quite meaningless to them.

The two following invocations (nos. 15 and 16) to Nae Yaku are from a forest and a village community respectively:

(1) †Salutation! Salutation! Part of our relatives! Multi- tude of relatives! Having called (you) at the (right) time (we gave you) white sandal (rice); (you ate, you drank. Do not think any wrong of us); we also eat (and drink).

(2) Our father who went to that world come to this world. Take the rice. Come quickly to place (for us) the sambar deer, to place the spotted deer. Take this betel leaf. Come very quickly. Come quickly my mother's people. Take the rice, take the rock honey, take the betel leaf. To place the sambar deer, to place the spotted deer, come very quickly.

The next (no. 16) is an invocation to Kande Yaka, and the fourth (no. 24) is sung when collecting rock-honey:

(16) King of the hills, who continues to go from hill to hill, cause rain. (He is) the Wanniya of the Chief of the hill, who causes to fall the horns of excellent sambar deer, from foot to (print), from Ranné Damana (the grass plain of yaka) to Kandyan, to their proper places.

(24) Lady New Goddess, (you) must show (me) a bee-hive to-day. Having chopped (it out) I will hide (it) and go.

As already stated, the possession by yaka is to be considered as due to a dissociation of personality; the traditional movements, words, and music all tend to bring about a more or less automatic condition which seems to be more easily induced the longer the practitioner has been shamanizing. Nor must the somewhat prolonged training of the shaman be forgotten. The present writers are convinced that there is no trickery about these ceremonies.

The shaman invoking a yaka holds or exhibits the special object (e.g. the aude) proper to that yaka, and it seemed to be thought that the yaka first comes into possession of the shaman. Each yaka has his traditional mode of behaviour. The shaman possessed by Kande Yaka goes through the pantomime of tracking and killing sambar deer; Bombara Yaka spars a wild boar and is wounded by it before he succeeds in killing it; Dola Yaka smokes out rock-bees' nests and collects the honey. These pantomimes are often extremely dramatic. The yaka examine the offerings and allow them, and express approval, some straightforward prophecies.

The numbers preceding the invocations here given refer to those in ch. x. The present writers' manuscript where all the invocations collected are printed and their meaning discussed.

1 See for these C. G. and B. Z. Seligman, The Veddas.
good hunting (each in his own department); for, though Kande Yaka is patron of all food supplies, there are certain deities separately invoked for help in getting yams, rock-honey, and tree-honey. The yaku have their methods of showing approval of the offerings; usually they scatter some of the food, sometimes they feed a favoured member of the community or place leaves dipped in the sacred food upon his chest, or, putting his arms on his shoulders, the shaman, gazing and making a mystic incantation, disappears with the food upon the yaku. Sometimes a yaka asks why he has been called. Is it because any one is sick? And, if any one is brought forward, he will feed him or anoint him with sacred food which is thought to cure the sickness.

The manifest object of most ceremonies is to obtain food, but there is no suggestion that any of them are performed to increase the food supply, as are the takaciums ceremonies of Australia. They are also performed to cure sickness, and it is in this connexion that the Pata Yaku ceremony may be mentioned. This ceremony is held for a pregnant woman, that she may have safe delivery. Baskets of fruit are used on all the various occasions for the purpose, but the reason not demonstrated. It is certainly no exaggeration to say that the yaku beliefs, to whose influence usual or unusual events are alike attributed. No creation traditions of any country belonging to the natural features of the country could be discovered among the wilder groups of Veddas.

LITERATURE.—John Bailey, 'Wild Tribes of the Veddas of Ceylon,' The Jour. of Ethnol., x., 1889; 

VEDIC RELIGION.—DEFINITIONS.—With a view to avoiding confusion, it is advisable to define at the outset the sense in which each of the three terms 'religion,' 'mythology,' and 'magic' (witchcraft) is to be employed in the present article. Religion means, on the one hand, the body of beliefs entertained by men regarding the divine or supernatural powers, and, on the other, that sense of dependence on those powers which is expressed by word in the form of prayer and praise, or by act in the form of ritual and sacrifice. Mythology means the body of myths or stories which give an account of gods and heroes, describing their origin and surroundings, their deeds and activities. Mythology is thus included in, though not coextensive with, that aspect of religion which is concerned with belief. Magic means that body of practices which, instead of seeking to gain the goodwill of divine beneficent powers by acts of worship, is largely directed against demoniac and hostile agencies, and aims at obtaining certain objects by magic means, without the intervention of deities. Magic as such, being essentially different from religion and representing a more primitive stage of belief, is excluded from the scope of this article except where, as is sometimes the case, it is inextricably mixed up with religious ritual.

I. MEANING AND IMPORTANCE OF THE SUBJECT.

By the general term 'Vedic religion' is here understood the religion of the Vedic period of Indian literature, which extends from some time after the Aryan immigration into the north-west of India, that is, from at least as early as B.C. 1500, down to about B.C. 200.

Vedic religion is peculiarly important as a branch of study. It is not only the earliest body of religious beliefs preserved in a literary form, but it also represents a more primitive phase of thought than is recorded in any other literature. It can, moreover, be traced step by step through the various stages of its development. It is, finally, the source of the religion of the Modern Hindus, which can thus be historically followed up to its origin throughout a period of well over 3000 years. As a natural result of its value to the investigator of religious thought in general, the study of Vedic religion gave birth, in the latter half of the 19th cent., to the sciences of Comparative Mythology and Comparative Religion.

2. STAGES OF VEDIC RELIGION.
